SUPPLEMENT

THE BRITISH FLEET AT SPITHEAD IN JULY 1853

THE ILLUSTRATED
LONDON NEWS
VOL. 23
JULY. TO DEC. 1853
LONDON:
WILLIAM LITTLE 198 STRAND

CHRONOLOGY.

FROM JUNE 27 TO DECEMBER 31, 1853.

JUNE.

27.—Two earthquake shocks felt at Portland (U.S.)

28.—Died, aged 81, the Earl of Wemyss and March.—Died, Rev. G. Faussett, D.D., Margaret Professor of Divinity in the University of Oxford.

JULY.

1.—Two colliery explosions: one at the Bent Grange Colliery, near Oldham, by which twelve lives were sacrificed, and many persons seriously injured: the other at Soft-shaw-bottoms, near Bradford, causing the death of two boys.

2.—Another passage of the Pruth by Russian troops, and simultaneous possession taken by them of Moldavia and Wallachia; prefaced by a manifesto from the Emperor Nicholas, stating that the occupation of these principalities was indispensable to guarantee Russia the re-establishment of its rights, and was not to be considered as a declaration of war.

4.—The seventy seventh anniversary of American Independence celebrated with great rejoicings throughout the United States.

5.—Died, in his eighty-fifth year, Admiral Sir C. Bullen (the last of the captains engaged at Trafalgar), having been seventy-four years in the service.

6.—Laid, at Epsom, the foundation-stone of a college for the reception of decayed medical men and their widows; towards which £20,000 had been collected, mainly through the exertions of its founder, Mr. Propert.—Died, at Cape Town, Lady Sale, the renowned wife of the gallant General Sale.

7.—An Asylum for Idiot Children founded at Baldovan, near Dundee: the expenses of the building to be defrayed by Sir John and Lady Jane Ogilvy.

8.—Death of the Marchioness of Anglesey, aged 72.

9.—Bursting of a waterspout in Breconshire, and overflow of the Wye and the Usk, with their tributary streams, causing terrible disasters in the counties of Hereford, Brecon, Radnor, Salop, &c.; twenty-two bridges destroyed, and eight lives lost.

11.—Serious riot (resulting from a religious fund) between Irish and Italian Roman Catholics in Clerkenwell-lane, London: the Irish, armed with bludgeons and pokers, attacking the Italians; who defended themselves with large clasp-knives. Several persons passed carried away bleeding and dangerously wounded, and with broken limbs. (An attempted renewal of the brawl on the 17th promptly put a stop to by the police.)

12.—The opening day of the Annual Exhibition of the Royal Agricultural Society of England, at Gloucester (concluding on the 15th).

13.—Termination of the protracted siege of Buenos Ayres, and dispersion of Urquiza's army.

14.—Conversazione given by the Lord Mayor and the Lady Mayoress, at the Mansion-house, to 2000 persons of both sexes connected with science, literature, and the fine arts.—A protest issued by the Sublime Porte against the occupation of the Danubian Principalities by Russia.—Inauguration of the Crystal Palace at New York by the President of the United States.

15.—The greater part of Cumana (the first city built on Terra-firma by the Spaniards) destroyed by an earthquake; many of its inhabitants killed.

18. New parochial school opened at Deal.

19.—The *Lady Evelyn*, on her passage from Hong-Kong to San Francisco, with Chinese emigrants, wrecked off the island of Tpaisan: more than 200 lives lost.

20.—A gold escort from the M'Ivor Diggings, Australia, having in charge 2222 ounces of gold and £700 in money, attacked by robbers: three of the guards seriously wounded, and the treasure taken.—Mr. Mechi's annual lecture and feast held at Tiptree Farm with more than ordinary éclat.

21.—Launch of the *Conway* (an 80-gun screw steamship) at Chatham Dockyard.

22.—The 77th birthday of Lord Kenyon celebrated, with great rejoicings, at Hanmer, Flintshire.

23.—Banquet by the Lord Mayor, at the Mansion-house, to her Majesty's Ministers, and 300 distinguished guests.

25.—Tenth annual meeting of the British Archæological Association, at Rochester, began (closing on the 31st).

26.—The tercentenary commemoration of the Tonbridge Grammar School concluded with great festivity: the Grace the Archbishop of Canterbury taking an active part in the day's proceedings.

27.—Died, Lord Huntingfield, aged 80.—At the London Summer Poultry Show, £1000 asked for a pen of Cochin-China fowls: one egg being valued at five guineas.—Strike of the London cab proprietors and drivers, in consequence of a law recently enacted affecting their interests: on this and the two following days, very few cabs in the streets.

29.—Terrible thunder-storm at Dieppe: two persons killed by the lightning.—Intelligence received in London of the loss of the barque *Argyle* off Newfoundland on the 19th of May: of the sixteen survivors (men and women) who took to the long boat, only a few were saved, the others having perished from starvation, and from the hardships suffered for nine days and nights in an open boat, exposed to a strong westerly gale.

30.—Died, the Earl of Seafield, aged seventy-four.

AUGUST.

1.—Degrett's coat and badge won by Fennis.

2.—The village of Romalo, in the Tyrol, set on fire by lightning: fifty-seven houses reduced to ashes, and four lives lost.—Edouard Raynaud committed to Newgate on a charge of conspiring to kill the French Emperor. (His trial, on the 16th, ended in a verdict of "Not guilty.")—Exhibition of Industry at Moscow closed: 668 persons had exhibited: the number of visitors having also been great, on one day amounting to 35,000.—Information received in London of the almost total destruction (on the 31st April last) of Tchiraz, in Persia, by an earthquake: 12,000 lives lost.

3.—A bazaar held on this and the two following days at Carisbrooke Castle (under the patronage of the Queen), in aid of the funds for rebuilding St. Thomas's Church, Newport, attended with most satisfactory results.—Jubilee of the Reading and Essex Bible Society commemorated in Carnarvon Castle by the auxiliary societies of Northern Wales.

4.—Opening of a new Grammar-school at Colchester.

6.—An iceberg (more than 600 feet above the water, and about half a mile long), passed close to by the *Marlborough*, off Cape Horn.

7.—Died, aged sixty-seven, Lieut.-Col. P. Hawker; for many years a contributor to the public press on various subjects more especially on the art of shooting.

8.—Opening of the annual Art-Union Exhibition of prize pictures (178 in number).

11.—Grand review of the Queen at Spithead, of a 81-ann-fleet, consisting of 50 vessels, 56,071 tons burthen, 14,420-horse power, carrying 1151 guns, and manned by 11,600 men.

12.—Permanent enlargement, from this day, of the ILLUSTRATED LONDON NEWS by eight additional pages.

14.—Grant fire at Dover, on the premises of Messrs. Walker and Co. (estimated damage, £50,000); on which occasion the heat detached a large mass of the chalk cliff, which fell, killing several persons.—Died, Sir F. Hamilton, aged 76.—Opening of the Tomb of the Emperor Napoleon, at the Church of the Hôtel des Invalides.

15.—Fête Napoléon at Paris: the cost (including 80,000 francs distributed in alms) being 700,000 francs.—Fall of a scaffold 170 feet high, in the premises of Messrs. Walker and Co. (estimated damage, £50,000); on which occasion the heat detached a large mass of the chalk cliff, which fell, killing several persons.—Died, Sir F. Hamilton, aged 76.—Opening of the Tomb of the Emperor Napoleon, at the Church of the Hôtel des Invalides.

16.—Fête Napoléon at Paris: the cost (including 80,000 francs distributed in alms) being 700,000 francs.—Fall of a scaffold 170 feet high, in the grounds of Messrs. Sydenham; killing ten men on the spot, two others subsequently dying of the wounds received, and several being severely hurt.—On the Thursday following, the remains of eight of the men were interred in Sydenham Churchyard; each coffin followed by the relations of the deceased: the mournful cortège being closed by the whole of the men employed on the works, headed by Messrs. Fox and Henderson.—At the Ferii Regatta, an English boat, having broken two of the row-locks, started with two instead of four men: took the lead, and kept it; beating fifteen four-oared boats, and winning the silver medal.

17.—Died suddenly, while entering a railway carriage, General Sir F. Adam.—Damage to the amount of £7300 obtained of the Lancashire and Yorkshire Railway Company for accidental injuries during their line.—Cricket: Match, Kent *v.* England (begun on the 15th) concluded; England being the victor by one innings and 179 runs.

18.—Died, aged 68, Lord Saltoun: th's veteran, noted for his gallant defence of Hougoumont, received the thanks of both Houses of Parliament for his conduct in the Chinese war; and had the distinguished honour of being held up by the Duke of Wellington as a pattern to the army, "both as a man and as a soldier."—Died suddenly, Mr. Bransby Cooper; known for his many valuable contributions to surgical knowledge.

19.—Died, in his eighty-second year, Admiral Sir G. Cockburn; who, besides having taken a prominent part in a train of the most important and brilliant achievements, will be remembered as having been selected to convey Napoleon to St. Helena.

20.—Parliament prorogued by commission: during this session the House of Commons sat 160 days (each sitting averaging more than seven hours), 130 of which were after midnight.—Closing of the seventh session of the Royal Italian Opera, during which there had been sixty-four performances and eighteen operas.—Breaking up of the Punch and Judy Clubhouse: only one instance of serious misconduct on the part of the troops during their stay there having been reported.

22.—Marriage (civil and religious) of the Duke de Brabant with the Archduchess Maria of Austria celebrated with great pomp at Brussels.

24.—On this and the following day, at a sale of Earl Ducie's stock of cattle, &c., the biddings were run up to an extraordinary pitch: 700 guineas having been given for a bull, £750 for a heifer, £1050 for a ram, and £80 for a Cochin-China fowl: the entire sale realising nearly £13,000.—Commencement of a new harbour, with steam ferry, between Salop, &c.; twenty-two bridges destroyed, and eight lives lost.

11.—Serious riot (resulting from a religious fund) between Irish and Italian Roman Catholics in Clerkenwell-lane, London: the Irish, armed with bludgeons and pokers, attacking the Italians; who defended themselves with large clasp-knives. Several persons passed carried away bleeding and dangerously wounded, and with broken limbs. (An attempted renewal of the brawl on the 17th promptly put a stop to by the police.)

12.—The opening day of the Annual Exhibition of the Royal Agricultural Society of England, at Gloucester (concluding on the 15th).

13.—Termination of the protracted siege of Buenos Ayres, and dispersion of Urquiza's army.

14.—Conversazione given by the Lord Mayor and the Lady Mayoress, at the Mansion-house, to 2000 persons of both sexes connected with science, literature, and the fine arts.—A protest issued by the Sublime Porte against the occupation of the Danubian Principalities by Russia.—Inauguration of the Crystal Palace at New York by the President of the United States.

15.—The greater part of Cumana (the first city built on Terra-firma by the Spaniards) destroyed by an earthquake; many of its inhabitants killed.

18. New parochial school opened at Deal.

19.—The *Lady Evelyn*, on her passage from Hong-Kong to San Francisco, with Chinese emigrants, wrecked off the island of Tpaisan: more than 200 lives lost.

20.—A gold escort from the M'Ivor Diggings, Australia, having in charge 2222 ounces of gold and £700 in money, attacked by robbers: three of the guards seriously wounded, and the treasure taken.—Mr. Mechi's annual lecture and feast held at Tiptree Farm with more than ordinary éclat.

21.—Launch of the *Conway* (an 80-gun screw steamship) at Chatham Dockyard.

22.—The 77th birthday of Lord Kenyon celebrated, with great rejoicings, at Hanmer, Flintshire.

23.—Banquet by the Lord Mayor, at the Mansion-house, to her Majesty's Ministers, and 300 distinguished guests.

25.—Tenth annual meeting of the British Archæological Association, at Rochester, began (closing on the 31st).

26.—The tercentenary commemoration of the Tonbridge Grammar School concluded with great festivity: the Grace the Archbishop of Canterbury taking an active part in the day's proceedings.

27.—Died, Lord Huntingfield, aged 80.—At the London Summer Poultry Show, £1000 asked for a pen of Cochin-China fowls: one egg being valued at five guineas.—Strike of the London cab proprietors and drivers, in consequence of a law recently enacted affecting their interests: on this and the two following days, very few cabs in the streets.

29.—Terrible thunder-storm at Dieppe: two persons killed by the lightning.—Intelligence received in London of the loss of the barque *Argyle* off Newfoundland on the 19th of May: of the sixteen survivors (men and women) who took to the long boat, only a few were saved, the others having perished from starvation, and from the hardships suffered for nine days and nights in an open boat, exposed to a strong westerly gale.

30.—Died, the Earl of Seafield, aged seventy-four.

AUGUST.

1.—Degrett's coat and badge won by Fennis.

2.—The village of Romalo, in the Tyrol, set on fire by lightning: fifty-seven houses reduced to ashes, and four lives lost.—Edouard Raynaud committed to Newgate on a charge of conspiring to kill the French Emperor. (His trial, on the 16th, ended in a verdict of "Not guilty.")—Exhibition of Industry at Moscow closed: 668 persons had exhibited: the number of visitors having also been great, on one day amounting to 35,000.—Information received in London of the almost total destruction (on the 31st April last) of Tchiraz, in Persia, by an earthquake: 12,000 lives lost.

3.—A bazaar held on this and the two following days at Carisbrooke Castle (under the patronage of the Queen), in aid of the funds for rebuilding St. Thomas's Church, Newport, attended with most satisfactory results.—Jubilee of the Reading and Essex Bible Society commemorated in Carnarvon Castle by the auxiliary societies of Northern Wales.

4.—Opening of a new Grammar-school at Colchester.

6.—An iceberg (more than 600 feet above the water, and about half a mile long), passed close to by the *Marlborough*, off Cape Horn.

7.—Died, aged sixty-seven, Lieut.-Col. P. Hawker; for many years a contributor to the public press on various subjects more especially on the art of shooting.

8.—Opening of the annual Art-Union Exhibition of prize pictures (178 in number).

11.—Grand review of the Queen at Spithead, of a 81-ann-fleet, consisting of 50 vessels, 56,071 tons burthen, 14,420-horse power, carrying 1151 guns, and manned by 11,600 men.

12.—Permanent enlargement, from this day, of the ILLUSTRATED LONDON NEWS by eight additional pages.

14.—Great fire at Dover, on the premises of Messrs. Walker and Co. (estimated damage, £50,000); on which occasion the heat detached a large mass of the chalk cliff, which fell, killing several persons.—Died, Sir F. Hamilton, aged 76.—Opening of the Tomb of the Emperor Napoleon, at the Church of the Hôtel des Invalides.

THE ILLUSTRATED LONDON NEWS

No. 632.—VOL. XXIII.] FOR THE WEEK ENDING SATURDAY, JULY 9, 1853. [SIXPENCE.

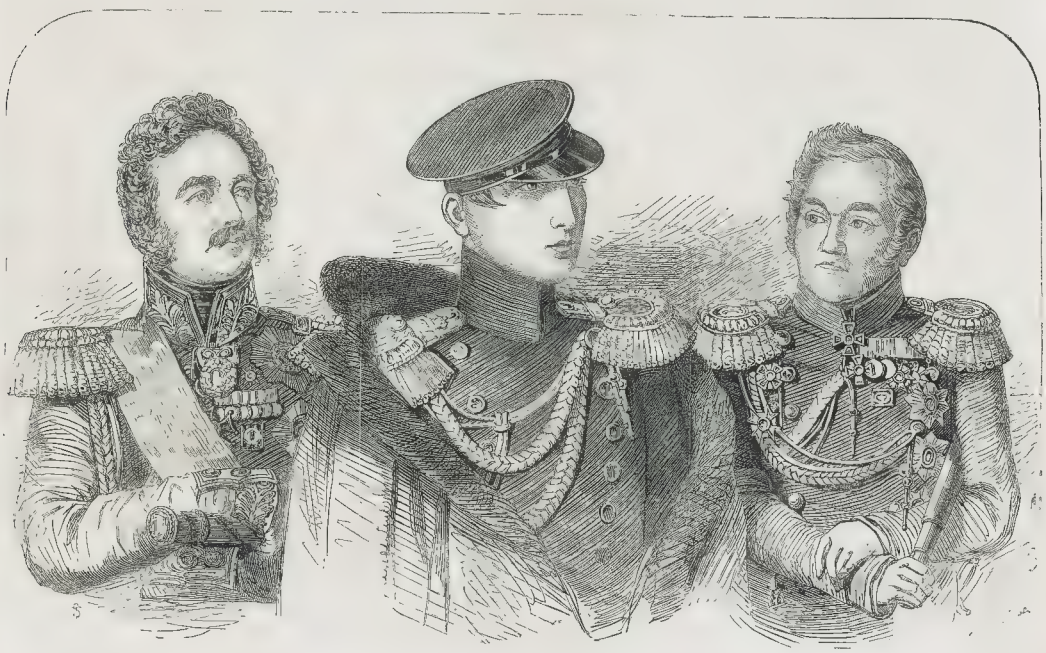
THE IMPENDING WAR.

THE Emperor of Russia has taken the decisive step. He has directed the passage of the Pruth and the occupation of the Danubian provinces of the Turkish Empire by the Russian army. Positive intelligence of the consummation of this act of hostility has reached London and Paris. Public opinion in every part of Europe, except in Russia, was long disinclined to believe that a man with so high a character for prudence and sagacity as the Emperor Nicholas had earned in his past career could so wantonly involve the world in warfare. But it is no longer possible to doubt. The Emperor has chosen his course, and must abide the consequences. There is a lingering hope in some quarters that war may yet be averted, and that the Emperor will express his readiness to negotiate as soon as the occupation of Moldavia and Wallachia shall have been completely effected. But this hope we consider baseless and pusillanimous, even if it should be well founded. It would not be for the interest of any state of Europe that peace should be bought of so rapacious a conqueror by so cowardly a sacrifice. A peace purchased by such means would be unworthy of the name. It would be at best a truce or a cessation of hostilities; during which the Emperor, encouraged by impunity, and by the weakness of the great Powers of Europe, would employ himself in making preparations for another and still more formidable aggression upon his neighbours. Austria herself, that even now only exists by Russian sufferance, might possibly be a fellow-victim with Turkey the next time that it pleased the Czar to desire an extension of his territory or his influence. France and England would, in such a case, run the risk of becoming second-rate Powers, or of waging for their independence a still more uncertain and deadly struggle. We may depend upon it that NOW is the time for resistance. If the Czar do not withdraw his troops from the Turkish soil as a preliminary to all negotiation upon the fancied points of dispute which he has chosen to raise, it will be the sacred duty of all the Powers of Western and Central Europe to form an alliance with Turkey, and to punish the daring bigot who imperils the best interests of civilisation to feed his miserable vanity and his insatiable ambition.

Neither little individuals nor mighty nations can ever commit a wrong with impunity. The sword of Nemesis never fails to strike where punishment has been merited. The blow may be delayed, but it is certain to fall; and the longer it is delayed the more terrible the stroke. In the war into which the Czar has thus wilfully rushed, it is impossible that he can prevail. The sense of right and the spirit of humanity are against him. Self-interest and a common danger will arm all nations against the wrong-doer. Great Britain and France can no more permit the political assassination of Turkey than the passengers in Cheapside or in the Rue St. Honoré could permit a murder to be perpetrated under their eyes without taking means either to prevent it or to punish the malefactor. The law of nations is, in this respect, the same as the law of individuals. It has its authority in the Decalogue and in the human heart, and all history shows us that no state can afford to disregard the mighty lessons of over-ruling Justice.

There is no longer room to doubt the cordiality which exists between the Governments of Great Britain and France. Austria and Prussia appear to be less decided; but, in such a war, they cannot be allowed to remain neutral. They must take their side, or pay the penalty. Gratitude for past favours may possibly render the Emperor of Austria averse from any act of decided hostility to his ally and protector. But such considerations, powerful as they are, must yield to higher reasons of policy and of right. Among the consequences of the war, which the Emperor of Russia ought to have foreseen, must be placed, the ultimate opposition of the German powers. The anti-Russian alliance must be a quintuple one. Austria cannot fail to remember, even if the Czar should have forgotten, that it needs but a word from England to arouse both Hungary and Lombardy. There is still a nation to back Kossuth, and still a Kossuth to lead it to independence, should so fair an opportunity arise; and there is still a smouldering vengeance under the ashes of Italy, to burst out into a flame, should a Mazzini re-appear to fan it, supported by the influence and the strength of England and France. Prussia, on her part, cannot forget that, in a war between the spirit of Despotism, represented by Russia, and the spirit of Constitutional Liberty, represented by the great nations of the West, it would be an obvious and a wise policy to attempt the restoration of the ancient kingdom of Poland, and thus to raise a formidable barrier against the barbarism and despotism of the East. For these reasons, it is not probable that the Russian Emperor will have any allies. He will have to fight Europe alone, and will find not only external opponents for whom he is prepared, but internal enemies where he least expects them. "Order" may cease to "reign at Warsaw;" and the Circassians may find abundance of money to assist them in their long and brave struggle against their oppressor.

It is difficult to speak with calmness of the personal conduct of the man who has brought Europe into this perplexity and peril. Upon the supposition that he is a sane man, acting with full knowledge of what he is doing, and with a due calculation of the consequences, words fail to express the wickedness of his ambition. Any amount of execration that might be levelled against his name would not stigmatise him as he deserves. Even upon the supposition that he is acting conscientiously; that a zeal for the religion of which he is the temporal head has impelled him in his dangerous career; and that fanaticism, and not the lust of conquest, has urged him to attempt the supremacy of his church and the expulsion of the Mussulmans from Europe, it is equally difficult to regard his character with forbearance. His ambition or his fanaticism is alike the curse of the world. His fanaticism, indeed, would be the worse and more pestilent quality of the two. Reckless as Ambition may be, we may trust it more safely with the sword and the torch than we can trust



FIELD MARSHAL PRINCE PASKEWITSCH. THE GRAND DUKE CONSTANTINE, GRAND ADMIRAL OF RUSSIA. ADMIRAL LAZAREFF, COMMANDER OF THE RUSSIAN SQUADRON IN THE BLACK SEA.

Religious Bigotry. Ambition sometimes weighs consequences, but Fanaticism never; and it is the most ominous incident in this unhappy dispute between Russia and Turkey, that it possesses so much of the religious element.

The capture of the Russian fleet in the Black Sea, by the combined fleets of England, France, and Turkey, will doubtless follow the occupation of Moldavia and Wallachia as effect follows cause. For such a result the Emperor is reported to have expressed himself prepared. Whether the Russian people are prepared for it, or would look with complacency upon it, remains to be seen. We know little in this part of Europe of the real sentiments of the Russian nobility or populace. We only know that revolution has often been attempted in that country; that despotism is tempered by the fear of assassination; that the natural death of an Emperor is not a common occurrence in the history of Russia; and that the Emperor Nicholas dreads the great magnates of the land, and finds it necessary to rule them with a rod of iron, as a means of preventing them from becoming dangerous to his supremacy. Like our own King John, it is his policy to rely for support upon the brute and uneducated masses, rather than upon the intellect and the wealth of his country. Whether a war, with all Europe against him, will not lead to some sudden and violent changes in his own dominions remains to be seen. Perhaps, the Emperor has calculated even this amongst the chances against him: if so—and if he persist in spite of it—the world will wonder all the more at the greatness of his fanaticism and the littleness of his judgment.

THE GRAND DUKE CONSTANTINE, PRINCE PASKEWITSCH, AND ADMIRAL LAZAREFF.

We this week present our readers with three Portraits of Russian celebrities, who, each in his way, would be likely to play an important part in the event of a European war.

THE GRAND DUKE CONSTANTINE.

His Imperial Highness the Grand Duke Constantine, Grand Admiral of Russia, is the second son of the Emperor. He was born September 21, 1827. His mother, the present Empress of Russia, is the sister of the present King of Prussia. Much against the wish of her brother, she changed her religion from the Lutheran to the Greek communion, on becoming the wife of the Emperor.

The Imperial family of Russia derive their descent from the clerical family of Romanoff; but their blood has been so repeatedly mingled with that of the Germans in Royal and Princely marriages, that little of Russian origin remains in their veins, and their sympathies may be said to be German rather than Russian. The eldest son of Nicholas, and heir to the throne, the Grand Duke Alexander, is not unknown in England. He is of mild, tractable, and amiable disposition, but his talents are said to be of a mediocre character. The young Grand Duke Constantine, of whom we give a Portrait, is said to possess more genius than any member of the Emperor's family, and to be possessed of great intellectual powers. The Emperor has devoted great attention to his navy, and in the hope of making it popular among young men of family and fortune, has caused his second son to enter it. In his character of Admiral, he took pleasure in arresting his elder brother, who was on board his ship, for which he was himself put under arrest for a considerable time by his father. His Imperial Highness visited England in June, 1847, when his Portrait was engraved in this Journal, Nos. 266 and 267.

On attaining the age of 21, he married (Sept. 11, 1848) the Princess Alexandra, daughter of Joseph, Duke of Saxe-Altenburg, then in her eighteenth year. By his marriage with this Princess the Grand Duke has two children—a boy and a girl. In addition to his title of Grand Admiral of Russia, the Grand Duke Constantine is Commandant of the Fourth Brigade of Infantry of the Guard, Colonel of the Regiment of Admiral of the late Grand Duke Michel Pawlowitch, a member of the Council of Military Schools, and a member of the Grand Council of the Empire. It will be seen by our foreign intelligence that the Grand Duke Constantine has allied himself to the Muscovite national party, whose fanaticism has brought Europe to the verge of war.

PRINCE PASKEWITSCH.

General-Field-Marshal Prince Paskewitsch, Prince of Warsaw and Count of Erivan, has obtained European celebrity, and enjoys an indisputable military reputation. Paskewitsch first distinguished himself in the war between Russia and Persia in 1826. After the massacre of the Russian garrison of Erivan, Abbas Mirza, heir to the Persian throne, invaded the province of Elizabethpol, at the head of 50,000 men. Count Ivan Yermoloff, one of the best Generals of Russia, who was in command of the Russian army in Persia, was in disgrace at Court, and Paskewitsch was sent with a subordinate command to watch over his conduct. Yermoloff planned his ruin, and sent him with a division of 5000 men against the whole corps of Abbas Mirza, following him with the main body to repair the check which the other might suffer. But Paskewitsch defeated Abbas Mirza, with great slaughter, at Elizabethpol; and Yermoloff was immediately recalled. Paskewitsch was appointed Commander-in-Chief in the room of Yermoloff, and then entered upon a career of brilliant military success. He drove the Persians across the Araxes, and, crossing the river in pursuit, defeated the enemy's army at the battle of Ivan Bulak. In this battle the "victorious standard" of the vanquished fell into the hands of the Russians. Erivan was also taken after a six days' siege. The Persians sued for peace, and Russia demanded the cession of the provinces of Erivan and Nakitchevan, and an indemnification of twenty millions of silver roubles. Paskewitsch was obliged to resume hostilities before the Shah of Persia consented to ratify this treaty. Paskewitsch received as a reward for his conduct in this campaign, a million in money and the title of Count of Erivan.

The war with Persia was scarcely ended before that with Turkey broke out. Turkey reproached Russia with having countenanced the insurrection of the Greeks, and with having fomented troubles in Moldavia and Wallachia. Russia, on her part, accused the Divan of having stimulated the Circassians to revolt; of having fettered the commerce of the Black Sea; and supported the resistance of Persia. Field-Marshal Prince Wittgenstein placed himself at the head of a Russian army of 140,000 men; and on the 7th of May, 1828, crossed the Pruth at three points. Jassy and Bucharest were immediately occupied. General Paskewitsch opened the campaign in Asia; on the 8th of July he took Kars; and, on the 6th of September, gained a complete victory over the Turks under the walls of Akhaltzik, which surrendered to his army on the 5th, after a vigorous resistance.

On the 1st of July, in the following year, Paskewitsch, anticipating the junction of the Seraskier of Erzeroum, Hagi Pasha, in the valley of Zevine, marched against the former, whom he put to flight, and, on the next day, defeated the latter, whom he took prisoner. Thirty-one pieces of cannon, nineteen standards, and 1500 prisoners were the trophies of this twofold victory. On the 8th of July he took Hassan-Khale, the key of Erzerum, the capital of Turcomania, which surrendered on the 9th. Adrianople having been taken by the Russians, Turkey consented to a treaty of peace, which was signed at the Russian head-quarters, on the 14th September. Russia retained the conquered territory bordering on Imeritia and Georgia; and the Dardanelles were thrown open to the commerce of all nations. The Porte engaged to pay eleven millions and a half of Dutch ducats in the course of eighteen months, and to give its assent to the treaty of the 6th July, 1827, concerning Greece. Lastly, it bound itself to restore to the principalities the establishments on the left bank of the Danube. The Hospodars were to be appointed for life, and the taxes hitherto paid in kind were henceforward to be paid in money. In February, 1830, two Turkish ambassadors arrived in St. Petersburg, who obtained a deduction of three millions from the contribution imposed on their country.

The revolution of the 30th July, 1830, at Paris, was the spark that kindled the elements of discord that existed in Poland, in consequence of the tyranny and atrocity of the Grand Duke Constantine, the brother of the Emperor. Constantine fled from Warsaw with his troops, a spiritual government was formed, and the Polish diet declared that the Emperor Nicholas had forfeited the throne. The Russian army under Diebitsch entered Poland in February, 1831. On the recall of Diebitsch in July, it was necessary to have recourse to Paskewitsch, to conclude the war in Poland. His arrival alone raised the spirits of the army. He took the command of the troops, and passed the Vistula on the 29th July. Seeing his approach at the head of an overwhelming force, a retreat or surrender was proposed by the Poles: those who recommended the latter course were shot dead by their infuriated countrymen. Paskewitsch appeared before Warsaw, and on the 6th of September made his memorable assault upon the capital. After a desperate and hopeless resistance on the part of the gallant but ill-fated Poles, Warsaw yielded to Paskewitsch, who entered in triumph on the 8th. He spared the city. There was little to destroy, for the youth, the pride, and the beauty of the capital had died upon the field of battle or had fled. The kingdom of Russian was fearful. The Poles were sent in droves to Siberia or the Caucasus, or draughted into the Russian army. Poland was incorporated with Russia, and, contrary to all treaties, became a province of that empire. Having been appointed Governor of Poland, Paskewitsch has vested himself of many of the opportunities he has enjoyed to moderate the cruelties of his master. The Emperor has acknowledged his long and distinguished services by decreeing that Prince Paskewitsch shall be received by the military with honours hitherto only paid to the Russian Empress or Princes of the blood Royal. Upon the exact degree of military renown to which the Prince is entitled, competent judges differ in opinion. His campaign in Persia was admirable, and that in Asiatic Turkey was a severe criticism upon the war carried on upon this side of the Bosphorus, where the Russians, badly officered, met with many reverses. It is true that in these two countries he was opposed by troops but little inured to war. The faults committed by the Poles were evident; but it is to the credit of Paskewitsch, in a military point of view, that he turned them to advantage as he repaired his own. The Russian Generals are said to be ignorant of the art of concentrating and handling large masses of troops. Paskewitsch, almost the only living Russian General, showed, in the campaign of Poland, that he is a master of this important branch of military tactics.

ADMIRAL LAZAREFF.

Admiral Lazareff has been for many years the Commander-in-Chief of the Russian squadron in the Black Sea, with the navigation of which he is intimately acquainted. He served in the English navy, and has the reputation of being a good seaman and a severe disciplinarian. It is said that Admiral Lazareff is not desirous of being opposed to the English fleet, but is very eager to encounter the French. This speaks more for his courage than his judgment, for failure would be equally certain with either.

Most of the Russian ships of war, built in the Black Sea, are laid down from the lines of English men-of-war, the drawings for which are obtained from England. The ships, however, are soon seized with the dry rot, owing to the new materials used in their construction; and half the fleet would not be able to stand the weather in the Black Sea in the winter. The administration of Admiral Lazareff appears to be as good as the nature of the Government and the chicanery and venality of the *employés* will allow. But the crews of the Black Sea fleet are inefficient; and the fleet itself, although it comprises many sail of the line, being unprovided with steamers, would be unable to meet either the English or French fleet now in the Dardanelles. The greatest activity prevails at the present moment amongst Admiral Lazareff's squadron in the Black Sea. Ships of war are constantly leaving Sebastopol to maintain strict watch along the coast. The *Koluwna* Russian frigate, on the 20th ult., advanced and tacked within three miles of the entrance to the Bosphorus.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

If circumstances allow, it is supposed that the Emperor will pay a short visit to the Camp at Helfaut, previous to his departure for the Eaux Bonnes, which is to be paid, is likely to take place between the 18th and 20th of this month. All the preparations for the latter journey are being actively pursued, and a variety of articles have been despatched from the *Garde Meuble* to complete the furnishing of the Chateau de Pau.

The same mysterious silence continues to exist respecting the numerous arrests made within the last few weeks. Most of these measures have fallen upon members of the working class; but among the latest cases have been those of the *curé* of St. Joseph, a small parish in the neighbourhood of the Faubourg du Temple, and a *chocolatier* of the Rue du Helder. It is probable that ere long some explanation of these measures will be given.

A project is talked of for constructing monster omnibuses, each capable of containing fifty persons, which are to convey passengers from the Barrière du Trône to the Barrière de l'Etoile—that is to say, from one end of Paris to the other—at the rate of three halfpence a piece, on a railway, the carriages being propelled, not by steam, but each by a single horse. A trial is to be made of this mode of conveyance in the Champs Elysées, and on its success depends, we are told, the authorisation of the Government.

It is said that Rossini was quite decided on coming to Paris, and is about shortly to quit Florence for that purpose.

The fête of Louis Napoleon—the 15th of August—is expected to be held with extraordinary magnificence this year; and Paris will, no doubt, be fuller than ever, numerous persons coming from abroad and from the country to be present for the occasion. The Emperor and Empress return from their excursion in time for the event.

Few of the theatres give new pieces at present, and none of any importance appear, with the exception of the Théâtre Historique, the *reprise* of the "Damon et Pythias," of the Marquis de Belloy, is hailed with considerable satisfaction. Hardly any dramatic author of the present day possesses, in the same degree as M. de Belloy, the requisites for treating classic subjects. His perfect knowledge of the habits, manners, and customs of the times of which he treats, his exquisite and delicate mode of handling them, his singular command of language, his powerful and harmonious versification, all combine to raise him to the highest point of excellence in this peculiar style; and "Damon et Pythias," like the "Mal'Aria," and other similar productions of his, stands a perfect chef-d'œuvre of purity, finesse, and elevation.

At the Vaudeville, "Les Filles de Marbre," even at this season, continues to attract hundreds, and the house is every night full to overflowing. On Tuesday, the Emperor and Empress, and the Duc and Duchesse d'Alberg, attended the Opera Comique. The audience, which was most numerous, applauded, for the first time, Grisar's new work, which, at French theatres, with the exception of the Grand Opéra and the Italiens, is only adopted on state occasions. Madame Mario Huchard (the charming actress of Français, Madeleine Brohan) whose marriage we recently announced, has, we regret to state, met with a most fatal accident, the consequences of which may possibly, it is feared, prove serious. Entering a room darkened to exclude the sun, she hastily approached the window, and, unperceived by her, a *parapluie* which was protruded, she ran against it with such force as to produce a most severe wound in the chest. Dr. Cabarrus, the celebrated homœopathic physician, was immediately called in, and it is hoped that dangerous effects may be prevented.

The tardy arrival of summer within the last few days is greeted with infinite satisfaction, the reports from the provinces of the state of the crops of all descriptions having hitherto been most alarming—so much so, that, even if the heat lasts, but a very indifferent harvest can be expected.

ALLEGED ATTEMPT AGAINST THE LIFE OF THE EMPEROR.

Paris is, of course, ringing with accounts of the plot against the life of the Emperor, organised for execution on the night of his appearance at the Opéra Comique. It was, it appears, discovered by the accidental circumstance of a pistol slightly protruding from the pocket of one of the conspirators, of whom there were discovered in the house no less than seventeen, all armed with pistols and poignards. Upwards of a hundred persons have been arrested, and it is likely that more will be. Louis Napoleon displayed his usual courage and *sang froid* on this occasion, and wished to leave the Opera with only the very small escort usually accompanied him; but was prevented by some of the Ministers, who, in order to prevent suspicion or disturbance, gave directions that the *entr'actes* should be prolonged, to give time for the troops sent for to arrive to conduct the Emperor and Empress back to St. Cloud. A heavy fall of the Bourse has been the consequence of this event.

The manifesto of the Emperor Nicholas has filled the French Cabinet with indignation. It seems that he has now completely flung off the mask entirely, and proclaimed a religious crusade, and arrays Russian against Musselman fanaticism. The favourable meaning at first attached to the mission of M. Ozeroff has given way to one of a less encouraging kind. It is now feared that if the ultimatum be not accepted, the Russian army will not stop in the provinces, but will cross the Danube just as they crossed the Pruth.

The *Moniteur* of Wednesday published the following:—

The Government has received the following telegraphic despatch, dated Bucharest, 2nd inst. On this day the *corps d'armée* which is to occupy Wallachia, passes the Pruth by Leova. It is commanded by General Dannenberg. General Gortschakoff is expected at Bucharest. To-morrow, the corps destined for Moldavia will also pass the Pruth by Skouleni. M. Ozeroff is on his way to Constantinople to open fresh negociations. As assurance has been given to the Hospodars that no modifications will be made in the Governments of the Principalities.

The French Government has in its turn drawn up a note, or manifesto, by way of reply to the Nesselrode note. Seldom has public opinion been so clearly manifested as it is on the conduct of Russia. Even the *Assemblée Nationale*—which, to the very last, either openly approved or refrained from censure—has abandoned the cause of Russia altogether.

The Paris papers are, of course, engrossed with the subject of Eastern affairs. The *Moniteur* contradicts the sale of 40,000 muskets to the Porte, but admits the cession of 40,000 muskets to that power. The official Journal also denies that the Minister of War had given French officers permission to serve in the Turkish army. A decree convokes the Council General for the 22nd of August. The sessions will close on the 7th September. Another decree orders that the vacation of the Council of State shall commence on August 1st, and last till October 1st.

Lyons has been declared the second military city of the empire.

The *Moniteur* of Friday publishes long details of the operations of the expedition against Kabylia up to the 22nd ult. It appears that the tribes were generally making their submission.

The *Moniteur* contains a decree reducing the price of tobacco for the army. This measure will be hailed with delight, and will put soldiers in good humour. The *Moniteur* also publishes two decrees founded on a report of the Minister of Public Instruction, by which a teaching Chair of Paleontology for that of Rural Botany now vacant at the Museum of Natural History, and which is suppressed; and the other appointing M. Alcide d'Orbigny to the said chair.

The Bourse, which was firm on Tuesday, was considerably agitated on Wednesday with various discouraging reports. It was said that a dozen individuals had been arrested on Tuesday evening, who had surrounded the Emperor's carriage on his arrival at the Opéra Comique, crying "Vive l'Empereur!" The surrounding crowd, by police instructions, those persons were arrested and searched, and poniards and fire-arms were found on their persons. It was further said that the Emperor of Russia's manifesto was not regarded as satisfactory by the French Government. The Three per Cents opened at 77f. 75c., and fell to 76f. 40c.; they closed at 76f. 60c. for the end of the month.

AUSTRIA.

General Gyulai has left Vienna for St. Petersburg on a special mission. No doubt is entertained of its being connected with the affairs of the East.

The *Vienna Lloyd* publishes the following opinions in a leading article:—

If Russia should incorporate the Danubian Principalities she would make an open enemy of Austria, and it is notorious that a hostile corps of 30,000 men in Transylvania would force the Russian army advancing upon Constantinople to retreat. Should a war ensue Austria would be in a fearful position. Inclination and gratitude bid her make common cause with Russia, but prudence appears to forbid this. If she cannot remain neuter, she ought, for reasons which are so obvious as not to require mention, to go with the West Powers and Germany. When Joseph II. was urged to assist Louis XVI., the unfortunate sister, he is said to have replied, "Alas! the State has no sister."

ITALY.

Letters from Florence, announce the decision of the Court in the affair of Guerazzi and others. MM. Guerazzi and Petrucchi are sentenced to twenty years' imprisonment, in the Val di Magna. Three years' surveillance, and M. Montagio, journalist to 90 months'. M. Romanelli, former Minister of Justice, is the only one acquitted. Of the contumacious, nine are sentenced to hard labour for life; among them are MM. Montanelli, Mazzoni, Marmochi, Franchini, and Mordini, all former Ministers of the Grand Duke. The effect produced by the sentence was bad.

The seventy of the Roman police has been exercised, by orders of the Cardinal-Vicar, upon the originator of the pretended miracle, the blood-exuding image of Christ, in the Via di Ripetta. This is a young girl, a protegée of Princess Wolinsky, by whom she was withdrawn from a bad course of life, and placed in a house of education, where, either from fanatical excitement or a love of notoriety, she got up a story of the miracle too gross to deceive the scrutiny of the authorities.

RUSSIA AND TURKEY. OCCUPATION OF THE DANUBIAN PRINCIPALITIES BY RUSSIA.

Since our last, every event that has taken place in Eastern Europe has brought us one step nearer to the danger of war. The hostile act which has been so long apprehended has been committed; and, by a double passage of the lumitary river, the Russian troops have taken possession simultaneously of the two provinces which they possessed on this side beyond the Danube. The population of the two provinces of Moldavia and Wallachia, as our readers are aware, divided from Russia by the Pruth, and from the rest of Turkey by the Danube, occupies a territory about the extent of Portugal, and has hitherto formed, in some respects, a neutral community between the Muscovite and the Moslem empires, enjoying certain rights of self-government, and placed under the protectorate of the Czar, though owing fealty to the Sultan. Two Russian corps, by a concerted and rapid operation, have passed the Pruth at distinct places—the one by way for the occupation of Moldavia, and at Leova for the occupation of Wallachia. It is believed that General Gortschakoff has ere this, entered Bucharest, the capital of the latter province. All this was expected from the letter of Count Nesselrode to Redschid Pacha. The Minister of the Sultan was informed by M. Nesselrode that the Russian troops would receive orders to pass the frontiers of the empire, "not to make war," which it was then pretended would be repugnant to the Emperor, "but in order to have material guarantees up to the moment when the Ottoman Government shall give to Russia moral securities she has demanded." The "material guarantees" are the two provinces between the Danube and the Pruth, and these were to be seized upon and held, until the concessions called "moral securities" were yielded by the Porte.

The Emperor of Russia has issued a manifesto stating that he has no intention of declaring war, or of proceeding beyond the occupation of Moldavia and Wallachia. The following is a translation of the manifesto issued by the Emperor of Russia for the occupation of the Danubian Principalities:—

By the Grace of God, we, Nicholas I., Emperor and Autocrat of all the Russias, &c., &c.,

MAKE KNOWN

To our faithful and well-beloved subjects, that from time immemorial our glorious predecessors took the vow to defend the orthodox faith.

From the moment that it pleased Divine Providence to transmit to us the hereditary throne, the observation of these sacred duties which are inseparable from it has constantly been the object of our cares and solicitude. Based on the glorious treaty of Kainardji—confirmed by the solemn transactions concluded afterwards with the Ottoman Porte—those cares and solicitude have always had for object to guarantee the rights of the orthodox Church.

But, to our profound affliction, notwithstanding all our efforts to defend the integrity of the rights and privileges of our orthodox Church, latterly numerous arbitrary acts of the Ottoman Government attacked (*portés atteinte*) those rights, and threatened finally to destroy entirely the whole order of things sanctioned by centuries, and so dear to the orthodox faith.

Our efforts to dissuade the Porte from such acts have been fruitless, and even the solemn word which the Sultan had given to us on the occasion has been violated.

Having exhausted all the means of persuasion, and all the means of obtaining in a friendly manner the satisfaction due to our just reclamations, we have deemed it indispensable to order our troops to enter the Danubian Principalities, to show the Porte to how far its obstinacy may lead it. Nevertheless, even now, it is not our intention to commence war; by the occupant on of the principalities we wish to have in our heart a pledge which will guarantee to us, in every respect (*au tout état de cause*), the re-establishment of our rights.

We do not seek conquests. Russia does not need them. We demand satisfaction for a legitimate right unduly infringed. We are ready even now to stop the movement of our troops, if the Ottoman Porte engages to observe religiously the integrity of the privileges of the orthodox Church. But, if obstruction and blindness obstinately deter the contrary, then, invoking God to our aid, we will leave to His care to decide our difference; and, placing our full hope in His all-powerful hand, we will march to the defence of the orthodox faith.

Given at Peterhoff, the 14th (26th) of the month of June, 1853, in the 28th year of our reign. (Signed) NICHOLAS.

Redschid Pacha has replied officially in the name of the Sultan to the note of Count Nesselrode. His language is moderate and dignified. He is willing to refuse the Emperor of Russia only what is incompatible with the honour and independent sovereignty of Turkey. He terminates his reply by a proposition that a Turkish Ambassador Extraordinary should be sent to St. Petersburg, there to resume negotia-

tions, and seek by a common accord the bases of an arrangement which can be accepted. The news from Constantinople, dated June 23, states that armaments were carried on with great zeal, and the excitement of the populace had risen to such a height that the Government scarcely ventured to mention the word "negotiations." Whenever the news arrives in Constantinople that the Russians have crossed the Pruth, the fleets of Great Britain and France will forthwith enter the Sea of Marmora, and take the position assigned to them off the Island of Princes. Admiral Mustapha Pacha has left Constantinople for the Bay of Besika to settle with the British and French Admirals as to the most convenient arrangements for the anchoring of the fleets in the Dardanelles.

Selim Pacha leaves Constantinople upon an extraordinary mission for Batoumi, which is on the frontier of the mountainous district whence Schamyl defies the Russian army, and no doubt the mission of Selim is connected with the Circassians. Arms and ammunition have been supplied to these hardy mountaineers. Another letter from Constantinople of the same date (23rd) says:—

Not a day passes without the Grand Vizier and the Minister for Foreign Affairs having an interview with the British and French Ambassadors. Lord Stratford de Redcliffe had a private audience of the Sultan a few days previously. Although the letters received at Constantinople from various parts of Europe are filled with reports of a mediation, no belief is attached to them amongst the Turks. It is believed that Russia has advanced too far to recede without disgrace; and, on the other hand, the pretensions of the Turks has risen to such a pitch, that it would be dangerous for the Porte to speak of a compromise. Even the proposal contained in Redschid Pacha's note to Count Nesselrode to send an Ambassador to St. Petersburg has produced a very bad effect.

The Sulina mouth of the Danube has only 7½ feet of water, although elsewhere the river is full, and at some points overflowing. Steam communication between Galatz and Constantinople is cut-off. Two hundred vessels, laden with grain, are unable to get away

It is stated that Russian agency is busy exc ting discontent among the Christian population of Servia and Montenegro against Turkey; and which, it is calculated, will be still further encouraged by the passage of the Pruth by the Russians

The *Times* gives the following information on the two parties into which Russia is divided, which are broadly distinguished by their respective attachment to the German or Baltic provinces of the empire, or from the old Muscovite stock:—

A large proportion of the statesmen who have done honour to the policy of the Empire belong to the former class—among them Prince Lieven, Count Nesselrode, M. de Benkendorf, M. de Meyendorf, Baron Brunow, Baron Rudiger, and many others. The noble house of Russ a is largely divided by only two generations from its German origin, and the Emperor Alexander never concealed his predilection for men unsophisticated his connection with the manners and ideas of Western Europe. The Emperor Nicholas has pursued an opposite course. His policy has been to identify himself with the passions, the peculiarities, the political aspirations, and the religious fanaticism of the Muscovites, and, far more than his ministers, he has adopted the spirit which he chose to represent. His second and favourite son, the Grand Duke Constantine, has espoused the same great national party, with even greater fanaticism and intensity than the Emperor; and in both of them the cause of the Church and of the Empire finds a champion, and perhaps an instrument. It is certain that the strong ambition of this party, inflamed by religious enthusiasm and the pride of a dominant race, has for years past been directed to the present year as the fourth centenary of the overthrow of the Greek Empire, and to Constantinople as the prize of war

It is further stated that the advance of the Russian army is accompanied with fresh appeals to the pride and daring of the nation.

The Russian Government had despatched a courier extraordinary to Teheran, to make a special demand on the Schah of Persia. It was considered probable that the Russians would invest Bulfrouch, a port on the Caspian Sea, and the entire of that portion of the coast of Mazanderan.

AMERICA

By the *Arctic* we have advices from New York to the 25th ult. President Pierce had recovered from rather severe indisposition. He called, in his carriage, upon Sir Charles Lyell, the English geologist, and took him to the most prominent points of interest about Washington. The weather was intensely hot, and many persons had died from the effects of *coups de soleil*.

According to telegraphic accounts from Boston, the Newfoundland papers contained bitter complaints of the manner in which the French cruisers drove the British fishermen from St. George's Bay. They state that the British vessels were compelled to put to sea, leaving behind all their nets and fish; and that, when some of them put back from stress of weather, they were fired upon by the French vessel. The French commander, when remonstrated with, is reported to have said that they might thank their own Government, which had driven the French from Salvador. The subject was to be brought before the Legislature of the colony

CAPE OF GOOD HOPE

The intelligence from the Cape is of a satisfactory character. The frontier, and the tribes on the extensive borders of Cape Town colony, remain tranquil. The Kaffa tribes are being located under the direction of the Governor General. Confidence in the Government was on the increase. In the colony the Constitution has been accepted by the great body of the colonists with lively joy and gratitude. The exceptions are few, and consist exclusively of men of English birth or extraction.

AUSTRALIA.

We have intelligence from Sydney, April 3rd; Melbourne, April 8th; and Adelaide, April 10th. The position of all the Australian colonies, and more especially of Victoria, was most satisfactory. During the first three months of the present year upwards of 600,000 ounces of gold had been exported from Melbourne alone. The following is a comparison of the colony in the years 1851 and 1852:—

		1851	1852
Population	..	95,000	200,000
Shipping (inwards)—vessels	..	669	1,697
Ditto—tonnage ..	..	120,000	408,000
Imports ..	..	£1,056,000	£4,044,000
Exports ..	..	£1,424,000	£7,400,000

Taking into consideration the large amount of gold which has left the colony without being recorded, the total amount of exports is not, probably, less than £15,000,000 per annum—that is, every man, woman, and child in Victoria produces an export to the amount of £75 per head. Eighteen years ago the province of Victoria was a savage and unknown wilderness, inhabited by a few barbarous tribes, and contributing no more to the wealth and progress of the world than it would have done if its shores had been submerged beneath the waves of the Southern Pacific. But even in the above magnificent array of figures, the Legislature vote sums for public works with patriotic munificence. Population flows upon the shore faster than the channels for its distribution through the country can be opened up. But provisions of all kinds are enormously high-priced, and decent accommodation scarcely to be procured. Romantic as is the brief history of our southern empire, and brilliant as are its prospects, hardship must be the present lot of those who would share the golden fortune in its proximal future.

VESSELS IN DISTRESS.—In consequence of a communication received from the Board of Trade, the Commissioners of Customs have issued orders to the collectors and comptrollers, at the several ports throughout the United Kingdom, directing them to report whether vessels driven into their respective ports by stress of weather are exempted from all dues, both on the cargo and the ships, and what are the regulations as regards the cargoes of ships entering in distress, and condemned as unseaworthy, in the event of reshipment and exportation in other vessels.

LORD ELDON AND CHANCERY.—An application to Chancery was made on Friday, on behalf of a certain society, of which Lord Eldon was one of the trustees. The application was made to have power to substitute another trustee in his Lordship's place; but, as the affidavits were deficient, the case was postponed

THE SETUBAD FLEET: THURSDAY.—A large concourse of visitors have frequented Portsmouth to-day, expecting to witness a review of the fleet by her Majesty. Excursion-trains from London and other places brought in about 1000; and the steam packets from Southampton, Lymington, and the Isle of Wight were full of company: but there was no movement in the fleet to see. The noble ships lay in quiet dignity at their anchors, and their canvas remained close furled. Most of the ships, however, were inspected by the excursionists, which yielded them a large amount of satisfaction. The weather was very fine, and the water like a lake. To compensate, however, there was an inspection on Southsea common of the Royal Marine Artillery, which drew a considerable attention of the strangers from the more immediate objects of their visit. The evolutions in gunnery were executed in most finished alacrity. There was a well practised, too, from the ramparts of Southsea Castle and the gunboats of the *Excellent*, which contributed the quota of noise and smoke to the general stock. The dockyard was also honoured with marked attention by a large party, when they found there was no review, and the ... closed without any ebullition of popular disfavour

THE DANUBIAN PROVINCES.

MOLDAVIA.

(Extract from a letter dated Galatz, Moldavia, June 5, 1853.)

AFTER leaving Tultcha, we arrived at Galatz on the same evening, in forty-six hours from Constantinople. From Tultcha upwards, the waters of the Danube, confined to one single bed, spread out at times to a mile in width, and possess a grandeur worthy of the Mississippi of Europe; but the northern bank, and in general the southern, continue to be flat, and the waters in many places were overflowing its banks. The Russian side bore no evidence of life, with the exception of the perpetually-recurring quarantine condor, a stray horse or a cow, and an occasional Cossack horseman passing from one station to another.

Galatz, the great commercial port of Moldavia, owes its origin to the fact that it is the only place where the province of Moldavia touches the Danube; and that here alone there is a bluff elevation for a part of the town, of from fifty to seventy-five feet above the water. It is about two hours distant from the renowned river Pruth on the east, and from the river Sereth on the west; and these rivers serve as natural canals to discharge at its quays the products of the two provinces. There is a stagnant lake, derived from the overflowing waters of the Pruth, and several marshes in circumference, which spreads out just behind the town, and is the fertile source of pestilential miasms during the whole summer. The population of the town is about 15,000. Nearly all the commercial operations are carried on by the Greeks, generally under the protection of passports of Greece, Russia, England, or Austria. Three thousand vessels from foreign ports, on an average, come here every year, of which from 500 to 700 are English; and 19-20ths of their cargoes are composed of grain, chiefly wheat. By a simple arrangement, these ships are loaded and cleared while yet in quarantine. For half a mile in front of one portion of the town a brick wall separates it from the river. At a hundred places in this wall, holes are pierced, through which the grain is thrown from the town side, by means of spouts, into bags held by quarantine porters, who carry their loads through the water on board the ships which are loading. The appearance of the town has little that renders it inviting for a residence. There are some comfortable stone houses for the rich merchants and the Consuls; but the larger part of the houses are miserable frames, covered with unpainted pine-boards. There are no promenades under the shade of trees, or inviting drives for those who own carriages. The grand absorbing topic of conversation, and the grand of pleasure in residing here is the making money from grain speculations.

I formed the acquaintance of several noblemen, whose rank is always indicated in the Western languages by calling them Princes. There may be little that is princely in their origin, or in their present position; yet it is hard to refuse calling a man by the title that he gives himself, and by which he is addressed by his neighbours. Many of them, however, bravely trace back their pedigree to an affinity with the Emperors of the Lower Empire, and bear as their surnames the high-sounding ones of Cantacuzene, Commenes, and Paleologus. As there are also 3000 of this class of Boyars (nobles), who claim to be *princes*, when they begin to travel more in Europe, their commonness will contribute to cause a depreciation of respect for the title. In Russia the Princes take great delight in the fact that among the nobles there are so many impoverished men bearing the rank of *prince*, and they count greatly on the impression that the contrast of their poverty with their title will one day produce. Our modern Moldavian nobles, unable to amass money as formerly, from the unrequited labour of their peasantry, are endeavouring more wisely and generously to gain the same end by more scientific methods of agriculture, by introducing various kinds of manufactures on their estates; and, at the same time, not wishing to be behind the more civilised nations, it is to be regretted that they are establishing distilleries on their estates to convert grain into spirits. This is the only thing in Turkey, as a rival to American rum, which, however, I saw at Galatz. They endeavour to send all their children to the European capitals to obtain their education, under the charge of Wallachian professors. Every effort is made by Russia to induce them to give the preference to St. Petersburg, and to check a higher kind of education in the provinces. The Princes of the Danuban provinces, when travelling on Europe, are noted for the profuseness with which they spend money, and for their constant attendance at the public gambling houses.

Both nobles and peasants appreciate liberty under organic law. The revolution among them in 1848 was sympathised with by nearly the whole mass, and was only crushed by the arms of Russia, and the timidity of the Turkish Government, to which the provinces owe allegiance. It has been said that the treatment they received from Russia on this occasion has alienated them from her, and that they alone, of all the nations appertaining to the Greek Church, are hostile to the Russian rule. This is but a partial statement of the truth. The fact is, that the enlightened Wallachians well appreciate their own position. They see that, in the 9,000,000 of people of their race, geographically contiguous to each other, though under three different despotisms, there are enough to constitute a powerful nation, if united under one independent Government; but they regard it as futile to anticipate any such happy result in the present state of Europe. The two provinces, therefore, of Wallachia, in the contingency of a war between Russia and Turkey, will have to choose to which of the two powers they will incline: and they will infallibly choose Russia, while they do not like her institutions or rule as well as those of Turkey. Turkey, they say, never has had, and never will have, the courage to sustain their interests and rights against Russia. Even if they should bear arms in behalf of Turkey, they believe she would let them fall a sacrifice to their devotion; but that, if they become bonâ fide subjects of Russia, they may anticipate a measure of progression much better than the corrupt system under which they are now compelled to live—sustained by neither power. Hating Russia, they will accept her rule in despair.

I was shown a copy of the Constitution, or organic laws, adopted previous to 1830 by a diet of the two provinces. It was published in French, in a volume of 250 pages, and on the imprint it bears, "Printed at New York." The work has been published that all Europe may know what kind of a Constitution belongs to these provinces, and that Russia might never succeed in destroying all the copies of it which existed in manuscript. After the adoption of the rules, it was signed by all the members, leaving a blank page for the Emperor. The paper was afterwards surreptitiously filled up by the President with an additional article, which robbed the country of all right of self-government, by requiring all changes to have the approbation of Russia

One important and benevolent measure that has been brought into operation within a few years, is that of securing freedom to the slaves. While the peasants were in general like serfs, the gipsies, who were very numerous in both provinces, have, by a recent decree, been put on a new law, to receive their freedom. A fund has been created, which is continually increasing, by which proprietors will be compensated for the loss of their slaves; and no proprietor can sell his slaves except to the Government. Large numbers immediately obtained their freedom by the operation of this law; and in twenty-five years it is hoped that slavery will cease among them. Wallachian gipsies, with permits to travel, are found in Turkey; and one band of musicians of gipsy slaves was the most popular last summer of all at Constantinople. Freedom was given to the large number of slaves belonging to the hospitals and churches, and the profits of the tax laid upon them annually furnishes the fund applied to the purchase of other slaves, for the purpose of granting them their freedom.

The Wallachians and Moldavians, as is well-known, use as their national name among themselves the appellation of Romani, as being descendants of the old Roman colony in Dacia. They flatter themselves that their national physiognomy has retained the type of the old Roman, and certainly there is a large proportion of eagle-beaked noses; but a more marked distinction than their faces is that of their language—nineteen-twentieths of the words of which are Latin or spring from them. The remaining words are about 700 Sclavonian, 500 Turkish, 300 Greek, and even 150 of gipsy dialect. If the people had not adopted the Sclavonian alphabet, the resemblance of words to their Latin originals would be still more apparent.

We left Galatz and arrived at Ibrails in two hours, by a steamer which runs daily. This steamer belongs to another Austrian Steam Navigation Company, which has taken under its care the northern confines of the mouths of the Austrian *Lloyd's*. Latin origin. The remaining of the sea shores of Turkey. Although the size of the Austrian Danube Company's boat is small, yet their numbers probably surpasses that of any other. They own eighty-seven steam-boats, with about four hundred barges of about 200 tons each, for the transportation of freight. Most of these boats and barges are made at Pesth, under an English superintendent, while the engines are made in England. The engineers are all of them natives of Austria. The names of many of the boats are those of Hungarian Kings and heroes, the Imperial Governments having seen no wisdom in proscribing these symbols of a nation's past glory.

The Danube is not confined to navigating the Danube from Galatz to Vienna; but they also steam several days up the Drauo, the Sane, and the Theiss rivers. The new line of passenger-boats which they have commenced this month, will carry passengers in a shorter time by two days from Vienna to Constantinople, than they can be carried by the way of Trieste: the fare is about £13, all expenses included

Ibrails is a town like Galatz, on the north bank of the Danube, and is the chief port for the exportation of the products of Wallachia, as Galatz is for Moldavia. Its population is also very identical in character; and it has the same convenient system of loading vessels while yet in quarantine. Its attractions for a residence are still less, the lean assembly of speculators from the Levant, for the purchase of grain, not being sufficient to compose all the requisites of the most agreeable society.

THE GOVERNOR OF HONG-KONG.—Dr. Bowring has arrived in this country from China, and is staying at Exeter. He is said to look remarkably well, and is anxious to obtain a higher appointment, likely soon to be vacant, as the representative of British interests in China.

SLAVE-TRADE AT CUBA.—A letter from the Havannah says:—"A ship called the *Lady Suffolk* appears to have been the most successful in her voyages, and this vessel generally refits in the United States. The commander, Eugenio Vinas, is represented to have committed the most frightful atrocities during his career, and is said to have realised a fortune of 300,000 dollars. There were doubts expressed whether the ship would again venture to the United States, her character being well known. The sailors who made the last voyage in her state, that out of 1200 put on board in Africa, only 1160 arrived at the Havannah; the rest, comprising the sickly or dead, having been thrown overboard. There are very full details upon all this matter in some of the American journals, and they seem to deserve attentive consideration."

NEW AMERICAN YACHT.—A new yacht named *Silvie*, of 105 tons, sailed from New Rochelle for England on the 18th ult., for the purpose of contending for the 100 sovereigns at the Cowes Regatta on the 2nd of August next. The *Silvie* was built by Mr. George Steers, the builder of the *America*, and is said to be a much faster sailer than the latter vessel.

THE ARCTIC EXPEDITION.—In the last Number of the ILLUSTRATED LONDON NEWS we mentioned the putting to sea, on the 26th of May, from Queenstown, the expedition to the Arctic Sea, consisting of the *Phœnix*, and her two transports, with the *Barracouta* and *Dove* in tow to attend them to the edge of the ice. On the night of the 6th ult., during a very heavy gale, the *Barracouta* parted company, and searched in vain for eight days for her companions. On the 16th, Cape Farewell bearing N. 52 W., distant 30 miles, weather clear, they found themselves completely surrounded by floating ice. They immediately bore up and ran to the southward, but with great difficulty; by seven a.m they were out of danger, when a very heavy gale from the N.W. commenced: at night the ship was under storm sails, and by morning the sea was tremendous. The *Barracouta*, however, behaved nobly, and confirmed all the reports of her admirable sea qualities. After passing four days more without sighting a ship, on the 21st they got up steam, and shaped their course for England. They arrived off Plymouth on the 1st, and at Sheerness on the 3rd inst. The *Barracouta* has not, during her passage out and home, received any damage to her hull, rigging, or machinery. During the time she was amongst the ice, the crew were put to target practice, making some of the most conspicuous parts of the bergs the targets. On one occasion, on the top of one of the bergs, there was to all appearance (formed by the snow) the hut of an Esquimaux, with a small hole in the side for entrance, several shots were put through the aperture, until the whole hut was destroyed; and that at a distance of 1,000 yards. The average temperature was 36 degrees. Immense quantities of wild sea fowl were constantly (during moderate weather) following the ship; some were caught in the rigging, and notes braced to them, with the date of their liberation from the ship, the ship's name, and from whence sent off. This was not done for mere amusement, but in the hope that the birds might be taken by some of the brave unfortunates of our former expeditions. One very large bird which had kept company with the ship for some time, taking his meals daily as the refuse was thrown overboard, was caught, and a note braced to him with a ribbon. On being set at liberty he immediately took his flight forward of the ship, flying due north as far as the eye could sight him; previous to this, he had regularly every night taken up his berth in some part of the rigging. The *Barracouta* crew have expressed themselves delighted with their barque, and say they would not hesitate weathering any storm in her.

A CLIPPER SHIP.—The fine American clipper ship *Sovereign of the Seas*, Captain M'Kay, arrived in the Mersey on Saturday evening last, from New York, having made the fastest passage ever accomplished by a sailing vessel between the two ports. She sailed on the afternoon of the 14th, and arrived in the river as stated. On the 20th she logged 307 miles, on the 18th, 344; and on the 20th, 340 miles. She was out 13 hours running from the Grand Banks to Cape Clear, a distance of 1668 miles, being an average of 396 miles per day. We shall engrave this fine ship.

THE YORK AND NORTH MIDLAND RAILWAY COMPANY *v.* HUDSON.—The Lords Justices gave judgment in this case on Thursday, which came before the Court on appeal against the decree of the Master of the Rolls, fixing the liability of Mr. Hudson in respect of the sale and appropriation of certain shares, and directing a reference for the taking of the accounts. The main question was, in what manner in which the accounts were to be taken. Their Lordships affirmed the decree of the Master of the Rolls, but made some important variations in the directions contained in the decree as to the taking of the accounts. The costs of the appeal to be costs in the cause

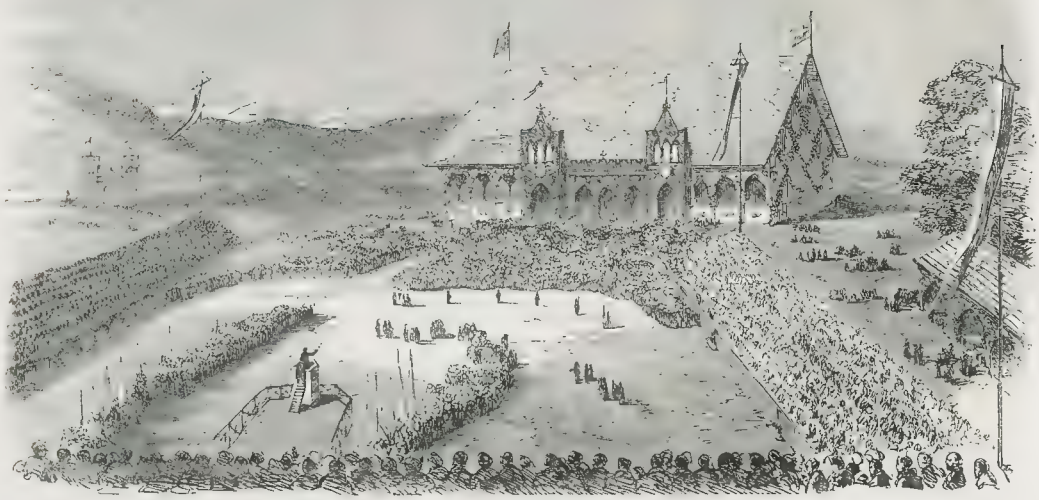
HONESTY REWARDED.—On Monday an insolvent found, in the court of Mr. Commissioner Phillips, where he was heard, a pocket-book containing notes to upwards of £100. He communicated the fact to an officer of Whitecross-street Prison, and it was placed in safe custody. The property has been owned, and £5 was left for the insolvent as a reward for his honesty

FIFTH GRAND CENTENNIAL FETE AT BERNE.

FIVE centuries have rolled away since that great event in the political history of Switzerland—the admission of its largest and most populous canton, Berne, into the Swiss Confederation. The population, among whom [illegible] resolved that so memorable an epoch of their liberation should be [illegible] by a celebration of fitting magnificence. Accordingly, the Bernese [illegible] use a somewhat artificial term, this year "got up" a very imposing spectacle in honour of the national event. The Swiss are conspicuous for such observances of their calendar of freedom; but the commemoration which has just been enacted at Berne, appears to have eclipsed in festal gaiety and splendour all the ceremonials of its class.

The days set apart for this great celebration were Tuesday and Wednesday, the 21st and 22nd of June. The city of Berne is situated in the centre of the plain, in a commanding position above the Aar, which nearly encircles it on all sides. Fine and ancient woods reach almost to the gates of the city, bearing a noble, and even majestic, aspect. It suggests the idea of a Roman town, although its handsomest houses and most sumptuous edifices date all since 1762. The Gothic cathedral, the Church of St. Esprit, the Mint, and the Hospital, are among its principal public buildings; while private mansions are solid rather than showy. Nevertheless, its arcaded streets and its classical fountains—many of them ornamented with historic sculpture, render Berne a fit scene for such a fête as we are about to describe; and when to this we add that it is pre-eminent for its wide and lofty terraces, commanding the most superb views over the plains beneath, and the entire range of the Alps—while the artificial stateliness of the city is relieved by its majestic avenues of trees—the reader may imagine how greatly this sublime scenery, this grandeur of nature, must aid the multitudinous impersonations of art, by assimilating their painted pomp with the picturesque features of the town and its environs.

Pleasure-hunting tourists usually vote Berne a dull city; and its Burgerlichen (bear-dish), with its state family of bears, may not advance the Bernese in "the gaiety of nations." Upon the present grand occasion, however, the usual gloomy character of Berne had entirely disappeared. The houses, without exception, were hung with festoons of roses, flowers, and ribbons from all the windows; triumphal arches were erected at the several entrances to the town; and the whole place was alive with fluttering flags and gay garlands. The numerous public fountains were also decorated with flowers. The Fête may be generally described as consisting of a religious ceremony, processions, martial exercises, wrestling, and singing; all which were admirably conducted. On the eve of the Fête (Monday), the various deputations from the Cantons were received by the authorities of Berne, and the "billets de logement" were distributed. Tuesday was ushered in, at five a.m., by the firing of cannon, and a general ringing of all the church bells in the town. This was followed by a service at the Catholic Church at half past six; at eight o'clock, the Federal Council and the Bernese authorities, attended by their officers, clad in red and black cloaks, entered the cathedral by the great door, through the square lined with people and soldiers. Immediately afterwards, a procession was formed of an exceedingly picturesque character, which reached through the principal streets to the great rampart, at the extremity of the town; on its arrival, the members of the procession defiled, and seated themselves on



THE FIFTH GRAND CENTENNIAL FETE, AT BERNE,—THE RECEPTION PAVILION, AND TUESDAY'S CEREMONY.

long rows of benches erected for their accommodation on two sides of a square, shown in our first View—taken from the topmost seat of the tier devoted to the singers. Here, also, was the grand reception pavilion The immense crowd of children of the Fatherland (there must have been from 40,000 to 50,000 persons present), all animated with the desire to glorify their nation, and bind still closer the union which dated from five centuries back, sang with great feeling. Over all, in the extreme distance, the eternal snows of the Bernese Alps were visible, and added much to the solemnity of the scene; increased, also, by the singing of a hymn by a thousand voices, "Lobet den Herrn." This was followed by an address, or rather oration; by M. Fischer, President of the Judicial Council; and afterwards by M. Zehnder. The proceedings terminated by the singing of "Rufst du mein Vaterland;" the procession then returning to the town.

In the afternoon, a Military Fête of Swiss boys—interesting on account of the extreme youth of most of the little warriors—was sadly damped by the rain, which appears to be a constant visitor at Berne—the covered pavements of the streets giving warning of it to a stranger.

In the evening, in all the streets might be heard the peculiar Alpine falsetto-calls of the Swiss peasantry—in most cases excellently performed; apparently, for the mere love of the performance.

We shall not detail the several classes which formed the cortége, although the printed programme would readily enable us to fill a column; for interminable appeared the host of councils, delegates, and deputies; the clergy and professors; the bodies of officers, singers, gymnastes, the wrestlers, and members of the *corps historique*, who assembled upon the great platform.

Wednesday's Fête (June 22) was, however, of a much grander character than its predecessor. At half-past nine o'clock in the morning the cortége left the Hotel de Ville, at a given signal, and commenced its march amidst the ringing of bells and a salvo of twenty-two cannons.

But the grandest affair of the day was the procession or *cortége historique*, which paraded the principal streets of the town in the afternoon; and which our Correspondent facetiously says, will be best described to an English reader, as about ten Lord Mayor's Shows rolled into one, and very much better done. The Bear, and Tell with his son Jemmy, were, of course, personified. Then came men on horseback and on foot, in armour, and in ancient costume, of the brightest possible colours—yellow, red, blue, white, and black, in vivid contrast; many bands of music; waving plumes; the armorial shields and banners of the Cantons in brilliant array—our old friend Bruin, again prominent; with a strong touch of chivalric character; and, says our Correspondent, a most extraordinary sight, a national theatrical entertainment of a most romantic description, such as would almost cause the Nimrond fires of the Princess' Theatre to pale.

This day the sun shone out bravely, and the whole population of Berne seemed in as high a state of excitement as it is possible for natives of Switzerland to be. The second Engraving shows the Fête at its highest festive point, in the market-place of Berne: here is the tower of the town-hall with its huge clock. The spectacle terminated with a grand supper in the Pavilion, shown in the first Illustration. The crowd of visitors to Berne was immense; it being estimated that upwards of 12,000 persons over and above the ordinary number of visitors slept in the city on Tuesday night.

THE FIFTH GRAND CENTENNIAL FETE, AT BERNE.—PROCESSION OF THE CORPS HISTORIQUE, IN THE MARKET-PLACE, ON WEDNESDAY.

ILLUSTRATED LONDON NEWS

THE CAMP AT CHOBHAM.

LIEUT.-GENERAL LORD SEATON, G.C.B., &c.

THIS noble and gallant veteran, who has been honoured with the chief command of the troops in Camp at Chobham, is now in his 77th year, having been born in 1776. He entered the army in the year 1794, being then in his 18th year, as Ensign Colborne. After passing through the usual military gradations with the highest distinction, and having been present in some of the most important battles in the Peninsula, this distinguished officer became more familiarly known as Sir John Colborne. His services at Corunna, under Sir John Moore, won for him the honour of a Cross and three Clasps. At Albuera, he had the honour, in conjunction with Lord Hardinge, of retrieving the fortunes of the day, and regaining a battle which had been given up as lost. He was also in the battles of Ciudad Rodrigo, Nivelle, Nive, Orthes, Toulouse, and Waterloo; and he wears one of the old war decorations, so long withheld, and but lately distributed through the persevering exertions of his Grace the Duke of Richmond. But it is not in his own country alone that Lord Seaton enjoys the highest military distinctions; Austria has conferred on him the Order of Maria Theresa; Russia, the Order of St George; and Portugal, the Order of the Tower and Sword; and he has received the honour of the Guelphic Order from Hanover. His Lordship served in Holland, Egypt, the Mediterranean, the Peninsula, France, and the Netherlands. In 1838 he was made Lieut.-General and Colonel at the same time of the 26th Cameronians, on which occasion he was invested with the Grand Cross of the Order of the Bath. Lord Seaton has been no less distinguished as a statesman and civil governor than as an able and successful General. As Lieut. Governor General of Guernsey; as Commander-in-Chief, and afterwards Governor-General of Canada; and as Lord High Commissioner of the Ionian Islands, his Lordship—on successive occasions, in each and all of these capacities gave convincing proofs of the profoundest sagacity and the possession of the higher order of governing power and administrative ability. It was reserved, however, for his career in Canada to procure for him the honours of elevation to the peerage, with a seat in the House of Lords, and a pension of £2000 a year. This took place during the Melbourne Administration, a period of great difficulty in Canadian affairs; and when the Home Government was considerably embarrassed by the unexpected return of the Earl of Durham from his post as Governor-General of Canada. The exciting debates which took place in both Houses of Parliament on that extraordinary occasion must still be fresh in the recollection of most of our readers. Lord Seaton was then Commander of the forces in Canada, and was also appointed Governor-General and Vice-Admiral So firm, yet conciliatory, was his administration in this double capacity, that, notwithstanding a great portion of both the Canadas was in open rebellion, he succeeded in establishing the permanence of British rule, conciliated the disaffected, and, by his wise policy, re-established peace and order In recognition of these services, in 1839, he was created Baron Seaton, of Seaton, in the county of Devon, in the peerage of the United Kingdom. From 1843 to 1849, he filled the office of Lord High Commissioner of the Ionian Isles.

LIEUTENANT-GENERAL LORD SEATON, G.C.B., COMMANDER OF THE TROOPS ENCAMPED AT CHOBHAM.

Lord Seaton is a member of an old Devonshire family, and Lady Seaton is a native of the same county. His Lordship has five sons—three of them in the army, one of whom is Aide-de-Camp to the present Governor-General of Canada; and four daughters.

His Lordship's skill as a military tactician, has excited unbounded admiration during the evolutions of the troops at Chobham. His resemblance to the "Great Duke" on horseback has been the theme of general observation.

We resume our report from last week's Number, with the details of the evolutions of

SATURDAY,

Which being, as usual, a parliamentary holiday, a large number of the members of both Houses visited the Camp. The day was also distinguished by the attendance of the Prince Lucien Bonaparte; the Duc de Montebello, Aide-de-Camp to the Emperor; and other eminent officers representing the various branches of the French military service. This remarkable and brilliant body of visitors added considerably, by their display of costume, to the pictorial effect of the scene; and they seemed to evince the greatest interest in the evolutions of the British troops. Lord Hardinge was present, and accompanied the French visitors during the greater part of the day. The command of the troops was entirely in the hands of Lieut.-General Lord Seaton. About eleven o'clock the troops were paraded in point of their several encampments. The cavalry were the first to move in masses of columns, decreasing their front as they approached the little bridge on the right, adjoining Colonel Challoner's demesne. The Horse Artillery proceeded along the northern height, and took up its position near the cavalry. The infantry corps, with the Rifles in front, assembled in contiguous column in the centre. The Guards followed in columns on the right of the Rifles The field-batteries occupied the extreme left. A series of skilful manœuvres, to change position, followed, previous to any determined advance towards the enemy which consisted on this occasion of a company of Grenadiers, and a company of Sappers and Miners posted on a hill opposite the artillery encampment. The enemy was commanded by Prince Edward of Saxe-Weimar, and Colonel Vicars, of the Engineers: they opened fire, which was replied to by the skirmishers of the Rifles. The cavalry advanced in columns of troops, passed over the ridge of the hill, and, with his Royal Highness the Duke of Cambridge at its head, charged the enemy in front of the infantry. The main body of cavalry then fell back from the fire of the enemy. The Carabineers having taken ground on the left of the main body, in column of troops, wheeled rapidly round into line, made a most dashing charge by itself, and turned the tide of battle on the right wing of the army, routing and pursuing the enemy in all directions. This gallant charge was the theme of universal admiration for its precision and steadiness. The Carabineers then retired by alternate squadrons, re-formed line, took ground to the right, and, with the other portions of the brigade, formed two gigantic columns at the rear of the infantry. The whole army, at the same time, falling back, and having for a short time borne the enemy's fire, the Rifles, flanked by the 38th and 33rd, advanced, covered by the Artillery on the [illegible] and supported by General Fane's Brigade and the Guards, with the cavalry in the rear. This was a moment of intense interest. The contending armies, having been each repulsed in turn, seemed for a short space to be almost motionless, and eagerly watching the weak point and opportunity of attack. The battle re-commenced by a sharp fire from the left wing of the enemy, who fell back as the Guards appeared against them *en echelon*. The Sappers and Miners were called in to support the left wing of the enemy; whereupon the cavalry deployed into two lines. Carabineers and Light Dragoons in front, supported by the Guards and Lancers and the Horse Artillery, who advanced on the right flank, which had been weakened, as already described. The enemy, thus attacked on right and left, fell back, and endeavoured to extend their front to cover both positions. But the whole of the Light Infantry Brigades, preceded by the Rifle skirmishers, and supported by the artillery on right and left, dashed on with impetuosity, pouring forth such a terrible fire as to sweep the spectators as well as the enemy from the heights. The retiring foe, however, still kept up a galling and continuous fire on the outposts of the advancing army, and, having concentrated their forces on the right wing, made a gallant rally, and once more repulsed a light brigade of infantry, which was forced to fall back under cover of the artillery. The other wing, however, continuing its steady advance, soon outflanked the foe, and forced them to retreat in double quick time to the shelter of a natural redoubt formed by the inequality of the ground. After some further manœuvres, the enemy, according to the received doctrine of sham battles, was considered defeated, and the victorious army returned home in triumph. Prince Lucien Bonaparte, and the French officers who accompanied him, seemed to take a deep interest in the proceedings of the day, and enjoyed a close view of the whole evolutions; after which, under the direction, and escorted by Lords Hardinge and Seaton, with a brilliant staff, they posted themselves on an eminence in front of the artillery encampment, in order to see the troops defile before them. This display was similar to what took place on the occasion of her Majesty's first visit to Chobham. The open space in front permitted the troops to march past in open column. The infantry marched in columns of battalions, and advanced in double files from centres of companies, re-forming into column as they defiled past. The cavalry marched past in column of troops. The whole of the regiments, but especially the Highlanders, attracted the marked attention and approbation of the foreign visitors, which was frequently expressed in audible and flattering terms. Amongst the other distinguished visitors who enjoyed this military spectacle, we observed the Duke of Atholl, Sir George Grey, the Earl of Cardigan, Viscount Jocelyn, the Earl of Lucan, and a large circle of fair equestrians.

SUNDAY.

The day being exceedingly fine, a considerable number of country-folk

THE CAMP AT CHOBHAM.—VISIT OF PRINCE LUCIEN BONAPARTE.

visited the Encampment; but the Londoners mustered by no means so largely as was expected. The religious services were precisely similar to those observed on the previous Sunday. Of course no military evolutions took place.

TUESDAY.—VIRGINIA WATER.

This being the day for the Virginia Water pontoons, an immense assemblage of spectators crowded at an early hour by road, rail, and river, to witness the event. Great apprehensions were entertained that in the presence of such a multitude it would be impossible to preserve the fences in the neighbourhood of the Royal demesne; but this emergency was provided for with their usual foresight by the authorities, who brought down two hundred additional constables by the seven o'clock train, on Tuesday morning, from the Waterloo-station. Lord Hardinge and General Lord Seaton also travelled by this line, leaving Waterloo-station by the express train, a little after seven o'clock. Her Majesty the Queen and his Royal Highness Prince Albert, accompanied by the Prince and Princess of Prussia, and the Prince of Holenlohe, with their respective suites, travelled to Windsor by the Great Western Railway, and proceeded to Virginia Water by the Royal carriages.

At the Camp the troops were under arms at half past eight o'clock, and were supplied with an additional amount of rations and ammunition. The troopers were supplied with forage for the horses. On the arrival of Lord Hardinge and Lord Seaton at the Camp, at a quarter to nine o'clock, the troops were immediately put in motion, and commenced their march towards Virginia Water, adopting the precautions usually observed with a supposed enemy in front, and in an unfriendly country. The Rifles, the 95th Regiment, the 50th, and the 42nd, under the command of General Bane, marched from their cantonments across Cattle's Valley, and entered the road leading through Colonel Challoner's plantation. The Life Guards, the 17th Lancers, the Carabineers, and the 15th Light Dragoons, commanded by his Royal Highness the Duke of Cambridge; together with the three bands of household troops, commanded by Colonel Bentinck, took a different route but leading to Virginia Water by the Egham road. The third division, under Gen. Sir De Lacy Evans, took what is called the Upper-road, marching to Blacknest-bridge, which was the attacking line from Bagshot, and the commencement of the battle. The enemy, which was composed of nearly 400 men (much larger than on any former occasion), consisted of a detachment of the 3rd Battalion of Grenadiers, a party of the 23rd Regiment of Fusiliers, and two companies of Sappers and Miners, which, as on Saturday, were under the command of Prince Edward of Saxe-Weimar and Lieutenant-Colonel Vicars. The various divisions of the army entered the grounds around Virginia Water almost at the same time, near to the spot appointed for the pontoon operations.

On a sloping eminence leading to the water's edge, commanding a good view of the forthcoming operations, were congregated a large number of distinguished fashionables in carriages and on horseback, amongst whom we observed the Earl of Gresford, the Earl of Sefton, the Duke of Beaufort, the Duke and Duchess of Montrose, the Duke of Atholl, the Marchioness of Ailesbury, Lord Dufferin, the Countess of Wilton, the Ladies Grey de Wilton, &c. Lord Hardinge and his staff occupied a position near to this aristocratic group; and was joined by Lord Raglan, in his uniform as Master-General of the Ordnance; the Duc de Montebello, and the other French officers. The Earl of Cardigan and Lord Gough were present in plain clothes.

The picturesqueness of the scene was greatly increased by the appearance of her Majesty and the Royal party in a splendidly gilt barge, which rowed about on the Ornamental Water to such points as commanded the best view of the operations.

Preparations were now made for the distribution of the attacking forces. The enemy was posted on the western side of the Ornamental Water in a strong situation, in which he could be attacked by only three approaches, all of which were highly desirable. The right wing, commanded by General Sir De Lacy Evans, had access to the enemy by Blacknest bridge, thrown across the western extremity of the lake. The centre and principal force was posted to defend the arm of water in the rear of the Wheatsheaf Inn, over which the pontoon-bridge was to be thrown. The other approach was by a narrow path, which led by the water's edge from the Egham road to the rear and left of the line. It should be mentioned that her Majesty and her Royal visitors witnessed the arrival of the troops from the fishing temple at the side of the lake.

The movements commenced by a feint on the part of General Evans's brigade to draw the enemy away from his position towards Blacknest-bridge, whilst the pontoon-bridge was being constructed under the protection of the other brigades. At eleven o'clock, General Evans, supported by a field battery, but without the Rifles, commenced the attack on Blacknest-bridge, which lasted for upwards of an hour, with short quarters of an hour. In the meantime, the cavalry, with a portion of the 95th and 50th Regiments, had gone round by the Egham road, to force the path which led to the enemy's left and rear. Whilst the attention of the enemy was diverted to these points, four rafts, formed of india-rubber pontoons, were constructed, by which four companies of the Rifle Corps were conveyed to the enemy's side of the water, where, unobtainguishable from the foliage by their green uniforms, they lay concealed until their services were required. At this moment the Queen's barge, with its light and elegant canopy, and the Royal standard floating at the prow, approached the immediate scene of action on the water for the purpose of enabling her Majesty and the Royal visitors to witness more closely the great practical feature of the day—the construction of the pontoon-bridge. A company of Sappers and Miners now started from a concealed position among the trees, and proceeded, at double quick time, towards the lake, followed by the pontoon waggons. On arriving at the spot appointed for constructing the bridge, half of the Rifle battalion ran forward and helped the Sappers and Miners to take the pontoons from the waggons, and launch them into the water. The enemy now evidently awakened to a sense of their danger, made a vigorous onslaught against the attacking force, but they were repelled by a brisk fire from the concealed riflemen, as well as by the field batteries from the opposite side of the lake. The whole of the fifteen pontoons or rafts, were got into the water in two minutes, and in less than twenty-five minutes the pontoon-bridge was fixed. The fire during this period from all sides was truly deafening. The instant the bridge was fixed, the Rifles rushed across and occupied the wood on the other side, compelling the enemy to give ground. The whole brigade of Guards next crossed the bridge six abreast, followed by three batteries of artillery at a walking pace. The Carabineers was the regiment of cavalry selected for the honour of crossing the bridge in the presence of her Majesty, which they did in single files at a walking pace, in the face of a heavy fire. The field batteries and 42nd Highlanders crossed the bridge immediately after the Carabineers, and, rushing on the enemy, a dreadful scene of imaginary carnage ensued, which ended in the enemy being surrounded, and ultimately taken prisoners. General Evans's brigade having crossed Blacknest-bridge, joined the other brigades, and, with their vanquished enemies, proceeded to an open space of ground known as Smith's Lawn, whither they had preceded by the Queen and Royal party in a barouche, attended by the generals and a brilliant staff, for the purpose of seeing the troops pass in review before her Majesty.

After the troops had marched past they piled arms and proceeded to partake of their rations. They then marched back to the Camp.

Her Majesty and the Royal party had previously proceeded to the Lodge, where luncheon was served. The Queen and Prince Albert, and the Royal circle then returned to London.

WEDNESDAY.

This was a holiday at the Camp; yet, notwithstanding the fatigues of the previous day, the soldiers evinced the utmost vivacity, and indulged in the games peculiar to their respective countries. A number of footraces, wheelbarrow races backwards, hop-and-jump races, and jingling matches, took place amongst the Grenadier Guards; whilst the Highlanders and other regiments amused themselves with similar sports. Amongst the Grenadiers prizes were contended for, which were appointed to be adjudged on the following evening.

THURSDAY.

The rumour that her Majesty intended to review the fleet at Spithead, on today, had the effect of lessening in some degree the number of visitors in the Camp. It transpired, however, that her Majesty had changed her intention, if she ever entertained it, and a rumour of his Royal Highness Prince Albert being slightly indisposed, had the effect of inducing many persons to divert their journey to Chobham, who otherwise intended to visit Portsmouth or Southampton. The number of visitors by the early trains was very considerable; and, from the absence of watering-carts, along the road from Chertsey to the Camp, the clouds of dust created by the numerous vehicles were absolutely stifling.

At ten o'clock the troops were paraded and inspected in the usual manner, and then defiled by the left along the Bagshot road, in the direction of the Chobham heights, the scene of so many previous rencontres. The enemy was composed, as usual, of a detachment of Grenadier Guards, and a company of Sappers and Miners, who proceeded in the same direction with the attacking party, but one novel feature in the movement was, that whilst the troops of the Camp took to the heights, the enemy occupied the plain. General Evans's brigade occupied the centre, with the Grenadier Guards and field batteries on the right; having Colonel Fane's brigade, with the Horse Artillery and squadrons of cavalry on the extreme left. It is unnecessary to go through the various movements and evolutions that ensued—the brilliant charges of cavalry, the roar of artillery, the roll of volleys of musketry; which ended in the total rout and discomfiture of the enemy at the early hour of half past twelve o'clock. The troops marched home to their quarters about one o'clock

The Duke of Beaufort was on the ground all day.

Lord Seaton gave a grand entertainment in the evening at Highman's Lodge, to upwards of 200 officers of the army, at which the band of the 93rd Regiment attended

At half past two o'clock the prizes were distributed to the men of the Grenadier Guards who had distinguished themselves in the games on the previous evening. The first prize of £1 was awarded to Corporal Buckle, Grenadier Guards, in a foot-race of non-commissioned officers; and the second to Corporal Hill. The first prize for privates was won by Campbell, Scotch Fusilier Guards.

In a foot-race of a hundred yards, for non-commissioned officers, the first prize was awarded to Sergeant Chalmers, Scots Fusilier Guards; and the second to Sergeant Craig, of the same regiment. The prizes were adjudicated by Captain Cartwright, of the 1st battalion of Grenadier Guards; Lieutenant-Colonel Steele of the Coldstreams; and Captain Hepburn, of the Fusiliers, who were the principal promoters of the sport.

An entire change in the regiments, with the exception of the corps of Royal Sappers and Miners, will take place at the Camp on the 14th of July, when the present regiments under canvas will be relieved by the following:—

CAVALRY.—The 1st Life Guards, by the Royal Horse Guards (Blue), from Hyde-park; the 6th Dragoon Guards (Carabineers) by the 2nd Royal North British Dragoons (the Scots Greys), from Birmingham; the 13th Light Dragoons by the 4th Queen's Own Light Dragoons, from Ipswich; the 17th Light Dragoons (Lancers), by the 8th King's Royal Irish Light Dragoons (Hussars), from Nottingham.

FOOT GUARDS.—The 1st battalion of the Grenadier Guards, by the 2nd battalion, from Wellington Barracks; the 1st battalion of the Coldstream Guards, by the 2nd battalion, from St. George's Barracks; the 1st battalion of the Scots Fusilier Guards, by the 2nd battalion, from the Tower of London.

INFANTRY.—The 38th Foot, the 42nd (Highland), the 50th, the 93rd (Highland), the 95th Foot, and the 2nd battalion Rifle Brigade, by the six following regiments—the 7th Royal Fusiliers, from Birmingham; the 19th Foot, from Gosport; the 35th, from Plymouth; the 79th (High landers), from Edinburgh Castle; the 88th, from Portsmouth; and the 97th, from Walmer.

ARTILLERY.—Capt. Taylor's troop of Royal Horse Artillery, at Woolwich, will relieve Capt. Wood's; Capt. Shakespeare's nine-pounder field-battery, at Chatham, to relieve Capt. Price's and Capt. Weadhouse's light 6-x-pounder field battery; and Capt Papillon's ditto will relieve Capt Campbell's and Capt. Leroy's similar batteries.

CALENDAR FOR THE WEEK.

SUNDAY, July 10.—7th Sunday after Trinity. London-bridge burnt, 1212.
MONDAY, 11.—Jack Cade killed, 1450. Prince of Orange murdered, 1584.
TUESDAY, 12.—Confederation of the Rhine, 1806. Erasmus died, 1536.
WEDNESDAY, 13.—Duke of Orleans killed, 1842.
THURSDAY, 14.—The Bastille destroyed, 1789.
FRIDAY, 15.—St. Swithin. French Revolution commenced, 1789.
SATURDAY, 16.—Sir Joshua Reynolds born, 1723.

THEATRE ROYAL, DRURY-LANE.—MR. SIMS REEVES has the honour to announce to nobility, his friends, and the public, that his annual BENEFIT will take place on WEDNESDAY EVENING, JULY 20, on which occasion will be performed, for the last time this season, the Opera of MARITANA. Mrs. Sims Reeves; Lady Alcash, Miss Julia Harland, Lord Alcash, Mr. Weiss, Lorenzo, Mr. Harrison Pierpo, Mr. H. Corri, Gherardino, Mr. F. Smart; Matteo, Mr. S. Jones; and Don Pizarro, Mr. Sims Reeves. After which, Herr Wallace, the celebrated flautist, will perform his CANARY, being the last occasion previous to his departure for [illegible] and with the Musical Forces of THE WATERMAN. Tom Tug, Mr. Sims Reeves; who will on this occasion for the only time in his character. The overture will be entire and complete, selected from the two Parliamentary bands. Conductor, Mr. Balfe. Private Boxes and Tickets for the Pit may be had at the Box-office of the Theatre, of Messrs. Keith, Prowse, and Co., 48, Cheapside; and of Mr. Allcroft, Opera Office, 15, New Bond-street, next to Long's Hotel. Doors open at seven o'clock, performance to commence at half-past seven o'clock.

MR. JULLIEN'S TESTIMONIAL CONCERT.—The Committee of Management have the honour to announce that the above CONCERT will take place at the THEATRE ROYAL DRURY-LANE, on MONDAY NEXT, JULY 11th (Sandford Manners' Night, Mrs. Dolby, Madame Sainton-Dolby, Mr. Sims Reeves, and by kind permission of the Directors of the Royal Italian Opera) Madame Castellan, Herr Formes, and Signor Tamberlik. Instrumentalists: Messrs. Bottesini, Kuntz, Richardson, Baumann, Wallis, Winterbottom, &c. The Orchestra will consist of 250 Performers, including Jullien's Military Band. Conductor, M. Jullien. Prices of Admission: Dress Circle, 5s.; Promenade, 2s. 6d.; Gallery, 1s. Private Boxes, £1 1s., £2 2s., and £3 3s. Tickets, Plans, and Programmes to be had at the Box-office of the Theatre, and of the principal Musicsellers and Libraries.

M. JULLIEN'S FAREWELL BAL-MASQUE, THEATRE ROYAL, DRURY-LANE.

M. JULLIEN has the honour to announce that, in compliance with the suggestions of several of his Patrons, he has determined to take advantage of the magnificent New Saloons recently prepared for his Testimonial Concert at the Theatre Royal, Drury-lane, and to give a FAREWELL BAL-MASQUE previous to his departure for AMERICA. This Grand Entertainment will take place on THURSDAY next, JULY 14th.

Tickets for the Ball, 10s. 6d. The Audience portion of the Theatre will be set apart for SPECTATORS.—Dress Circle, 7s.; Boxes, 5s.; Galleries, 2s. and 1s.; Private Boxes, £3 3s. upwards.

Tickets and Places to Boxes may be secured at the Box-office of the Theatre, also at the principal Libraries and Musicsellers.

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—Under the Management of Mr. CHARLES KEAN.—SARDANAPALUS will be performed EVERY EVENING during the week, and on SATURDAY next, JULY 16, the play of HAMLET will be repeated for the FIFTY-FIRST TIME on WEDNESDAY NEXT, JULY 20th.

GERMAN PLAYS.—ST. JAMES'S THEATRE.—THIS EVENING, Saturday, July 9th, will be produced WIDERSPENSTIGE, Monday, July 11th, a new comedy, entitled DONNA DIANA. On Wednesday, July 13th, WILLIAM TELL. Friday, July 15th, the new play of FREDEGA. Saturday, July 16th, Goethe's FAUST. Boxes and stalls, at Mr. MITCHELL'S Royal Library, 33, Old Bond-street, and at the Box-office.

MUSICAL UNION.—H. R. H. PRINCE ALBERT, Patron. EIGHTH and LAST MATINEE, TUESDAY, JULY 12th, at Half-past Three o'clock. Quartet in C. Op. 163—Spohr; Sonata in D, Op. 10, pianoforte—Beethoven; Quartet, B flat, No. 6—Beethoven. Solos, piano, Pauer; violin, Sainton; violoncello, Piatti. Duet, violin and violoncello—Bazzini (his first appearance). Goethe, H. Blagrove, Webb, Platti, Lutgen, &c. Pianist, Charles Halle. Tickets, 10s. 6d. each, to be had of CRAMER and Co., Regent-street; CHAPPELL and OLLIVIER, Bond-street. Members are requested to deliver their tickets at the door. J. ELLA, Director.

MR. BRINLEY RICHARDS' EVENING CONCERT.—WEDNESDAY NEXT, JULY 13.—HANOVER ROOMS.—Eight o'Clock.—Miss Messent, Madame Weiss, Signor Gardoni, and Mr. Weiss; Herr Molique, M. Benedict, and Mr. Brinley Richards. Reserved Tickets, 10s. 6d.; Single Tickets, 5s.—To be had at CRAMER and CHAPPELL'S.

MESSRS. MACFARLANE and CUNNINGHAM having completed their First Series of Six representations of their BUDGET, at Willis's Rooms with the greatest success, beg to announce that they will give their SECOND SERIES at the MUSIC HALL, STORE-STREET, commencing on THURSDAY next, JULY 14, when, in addition to Mr Macfarlane's wonderful performance of Duets on Two Brass Instruments at the same time, various attractions will be added to the programme of their Budget.—Admission, 1s.; Reserved Seats, 2s.; Stalls, 3s.—To commence at half-past Eight o'Clock.

THE AZTEC LILLIPUTIANS.—First public appearance in Europe, at the HANOVER-SQUARE ROOMS, of this new Race of People, discovered in Central America, who had the distinguished honour of appearing before her Majesty the Queen and his Royal Highness Prince Albert, by special command, at Buckingham Palace, on Monday Morning last, July 4; and were honoured by their Royal Highness the Prince of Wales, the Princess Royal, Princess Alice, and the other members of the Royal Family; the Prince and Princess of Prussia, the Prince Hohenlohe Langenburg, the Duke and Duchess of Saxe Coburg.

ON MONDAY, JULY 11, and Morning and Evening until further notice, these extraordinary Lilliputians WILL APPEAR in their NATIVE COSTUMES, as Natives of Zelmopan.

The Aztecs are from the great and mysterious city Otumaya in Central America, described by those standard authorities—Humboldt, Prichard, Prescott, and Stephens. These unique, strange, and beautiful creatures, so unlike in form and feature to all other members of the human family, have produced the greatest interest amongst the savans of the metropolis, and are pronounced to be the greatest living wonders yet discovered, and to have no other alliance in species—traceable by comparative anatomy or otherwise—than to the ancient races whose portraitures are found on the antique Sculptured Obelisks and Hieroglyphical Pictures brought from the Ruins of Nineveh, Egypt, and Central America.

Admission: Reserved Seats and Promenade, 5s.; Second Seats, 2s. 6d. Children: Reserved Seats, 1s. 6d.; Second Seats, 1s. 6d. An Illustrated History of the Aztecs, 1s.

THE ADMISSION for ARTIZANS, &c., on MONDAYS is reduced to 1s. at the EXHIBITION of WORKS of ART, LITERATURE, SCIENCE, and MANUFACTURES, at Messrs. Cox and Greenwood's Gallery, 313, Regent-street, from 10 in the morning until 10 at night. Admission on all other days, 2s. 6d.; Saturdays, 1s.; Morning Performances every Tuesday and Saturday, at Three o'clock. A View of this popular MEDIEVAL VILLAGE from Montmorency has been added to the Illustrations. Egyptian Hall, Piccadilly.

GALLERY of GERMAN PAINTINGS.—The FIRST ANNUAL EXHIBITION of the WORKS of MODERN GERMAN ARTISTS is NOW OPEN each, from 9 till dusk. Admission, 1s. Lessing, Sohn, Achenbach, Hildebrandt, Leutze, Jerwer, Weber, Hildenand, Gude, Bunker, Macke, Rosenthal, &c., &c., have contributed to the above collection. Several new works have this week been added.—168, New Bond-street.

ZULU KAFIRS.—ST. GEORGE'S GALLERY, HYDE-PARK-CORNER.—OPEN every MORNING and EVENING. Doors open at Three o'clock.—Stalls at MR. MITCHELL'S Royal Library, 33, Old Bond-street. Five pounds' worth of books to be had as the Gallery. Admission, 1s.

POULTRY SHOW.—The FIRST ANNUAL LONDON GREAT SUMMER POULTRY SHOW will be held at the BAKER-STREET BAZAAR on Wednesday, 27th Thursday, 28th; and Friday, 29th July, 1853. In consequence of the Royal Agricultural Society's show at Gloucester, the time for exhibitors sending their pens has been changed to the 18th inst. JAMES SENNY CARLING, Secretary.
Offices at the Bazaar.

ROYAL POLYTECHNIC INSTITUTION.—On TUESDAYS and FRIDAYS, at Four o'Clock, and every Evening (save Saturday), at 8, the FIRST PART of an HISTORICAL LECTURE on the THAMES, by GEORGE BUCKLAND, Esq., assisted by Miss Bunche Younger; in addition to the varied Scientific Lectures and Exhibitions. Open Mornings and Evenings.—Admission, 1s.; Schools and Children under Ten years of age, Half-price.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The Collection of LIVING ZOOPHYTES, MOLLUSCA, FISH, and other Marine Animals, is now OPEN to Visitors. The Band of the Scots Fusilier Guards will perform on Monday, Wednesday, and Saturday next, at Four o'Clock. Admission, One Shilling; on Monday, Sixpence.

MEDICAL BENEVOLENT COLLEGE.—The Council are anxious to urge upon medical men and the public generally, who may be blessed with the means, to assist a work so eminently calculated to mitigate the sorrows, and to help, in time of need, a laborious and useful portion of the community, who, in despite of a liberal, scientific, and expensive education, are in many instances prevented by limited incomes from making any adequate provision for their widows and families, or even for themselves should they be unhappily visited by illness or infirmity.

Subscriptions will be received by the Treasurer, John Propert, Esq., No. 6, Stanhope-street, and the following bankers:—Goslings and Sharpe, 19, Fleet-street, Coutts and Co., Strand, Drummonds, Charing-cross, Cocks, Biddulph, and Co., 43, Lombard-street, Sir Claudius Hunter, Bart., Fauconberg-square, Hearn and Co., Fleet-street, the Union Bank of London, Regent-street, Barnetts, Hoares, Messrs. Williams, Deacon, Labouchere, and Co., Birmingham; and by Cunliffe and Co., Manchester.

Office, 4, Hanover-square. June 30th, 1853. By Order of the Council, JOHN PROPERT, Treasurer.

OF

THE BRITISH FLEET AT SPITHEAD,

BY E. DUNCAN

TO CORRESPONDENTS.

G. G., Canonbury-square.—The Savings Banks Annuities Bill has passed through committee of the House of Commons without much opposition, and will, doubtless, receive the Royal assent during the present session. The Savings Banks Bill has been reprinted by the trustees of many Savings Banks, who object to the regulation which renders it necessary for some trustee always to be in attendance at the Savings Bank, and to sign his name in the depositor's book whenever a deposit is received. As the bill now stands, the Chancellor of the Exchequer declines to be responsible on the part of the Government for any money deposited in a Savings Bank the receipt of which is not acknowledged by the signature of a trustee, as well as of the receiver or treasurer. Government Annuities.—Will our correspondent be good enough to forward us sketches of the subjects mentioned in his note?

A CORRESPONDENT, Devizes.—The coin-impression sent is from an angel, of Henry VI., value about 7s.

EPHESUS, Surrey.—The coin-outline sent is from an old Nuremberg counter, of no value.

MILITIA OFFICERS.—We are of opinion that militia officers ought not to style themselves by the title of their militia military rank if they are in civilian occupations; but, on the other hand, militia officers who have no civil employment have a right to assume the rank to which they have been gazetted. We have not space to discuss further this *vexata quæstio*, and must decline any future reference to it.

SIGMA, M. W. T.—A Knight Bachelor is not a Knight *ipso facto*, although, possibly, his rank on the scale of precedence may be higher. Bachelors of Arts, and the sons of Captains of Yeomanry, and of Justices of the Peace are not Esquires

TO OUR SUBSCRIBERS.

As soon as the proposed New Law on Newspaper Supplements shall come into operation, we shall publish GRATIS, every week, with the ILLUSTRATED LONDON NEWS, a SUPPLEMENT of Eight Pages.

TO ADVERTISERS.

The present RATE of CHARGES for ADVERTISEMENTS in the ILLUSTRATED LONDON NEWS will be REDUCED ONE-HALF immediately on the New Taw for the Alteration of the Advertisement-duty and Stamp-duty on Supplements coming into operation.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 9, 1853.

THE price of corn rose suddenly and considerably in Mark-lane, last week; and the rise, which has since extended to flour, has continued and increased in the present week. Since last Monday wheat has risen at least 5s. per quarter, and flour 3s. a sack; and a further rise is expected. All the provincial markets have followed the lead of the metropolis. At Hull on Tuesday, for example, the advance was from 3s. to 4s. per quarter; and millers gave from 58s. to 60s. for good red wheat. The rise, though sudden, is not unexpected. The consumption in England is enormous, as shown by the immense quantity of work done, of manufactures exported, and of revenue collected. Last month a greater quantity of wheat was imported than in any one month—except two, immediately after the Corn-law was repealed; and the whole of it was immediately taken by the millers, for whose wants it was barely sufficient. A comparatively great consumption, too, has been going on abroad, particularly in France. Stocks have, accordingly, everywhere become low; and the harvest prospects not being favourable, a rise in price has been for some time expected. It was immediately occasioned, however, by large purchases made in our market on French account—and, there is no doubt, on account of the French Government. Alarmed at the possible consequences of a dearth of food, the Emperor and his advisers have come with the national purse into the corn market, and have purchased, here and abroad, upwards of 200,000 quarters of wheat. For the last three years France has continually sent us large quantities of flour; and all

surprise at the rise of price ceases when circumstances are so changed, that, instead of sending us corn, she comes hither to buy it. A much more surprising matter is that England has corn to sell to France. But, since the Corn-laws were repealed, England has opened and promoted a large corn trade with almost every part of the world; and continually imports great quantities from Egypt, the coasts of the Black Sea, Turkey, Moldavia, and Wallachia, Greece, and many ports and places that were never before heard of as having any trade. England has become, in consequence, a great *entrepôt* for corn. She has before supplied Germany when in need. At this moment, when France is likely to want food, and the French Government is alarmed, there are vessels from most of the corn-growing countries of the world on their way hither with supplies of grain. From the Mediterranean alone seven hundred sail are coming, or have very recently arrived off the coast. Here corn accumulates from all quarters; and more is now at the command of our merchants than is anywhere else to be found. Hence, the French Government has come hither to buy, and has really bought the cargoes of more than fifty vessels forming part of the fleet of seven hundred. Thus our corn trade, the consequence and the growth of the abolition of our Corn-laws, has really become the means of increasing the productions of corn, and of supplying other countries with food when their harvest fails. At the same time this corn trade extends our manufactures, and increases our exports; it benefits us in every way; and it benefits, also, not only France and Germany, but Russia, Turkey, Egypt, and all the other countries in which our demand encourages the growth, and from which we procure supplies, to distribute them wherever they may be needed.

AT each customary period for the publication of the national balance-sheet, the country sees reason to congratulate itself that the late Sir Robert Peel was wise and courageous enough to repeal the Corn-laws. Year after year since that time obnoxious taxes have been modified or abolished, and large sacrifices of revenue have been made; yet year after year the national resources, instead of diminishing or remaining stationary, have increased. Thus, the confident predictions of national ruin that was to result from Free-trade, have not only been falsified; but an extraordinary, a continuous, and an increasing tide of prosperity has proved—even to the false prophets—that the new commercial system was better than its own most sanguine friends anticipated. It has been urged that the concurrent discovery of the gold of California, and more especially of Australia, has, to some extent, contributed to this happy result; but it is at length admitted on nearly all hands that the influx of gold and the impetus given to trade and commerce merely augmented a prosperity which they did not cause. In the Customs, in the Excise, and in every branch of the national revenue, that may be taken as a gauge of the real state of the people, there is an increase; showing that they are better fed, better clad, and, of necessity, more permanently and profitably employed than they were under the exploded system of restricted trade. The revenue-tables for the year and the quarter ending on the 5th instant, show these facts in a remarkable manner:—

	Year ended July 5, 1853		Quarter ended July 5	
	Increase.	Decrease	Increase	Decrease
	£	£	£	£
Customs	..	57,412	441,173	..
Excise	531,195	..	329,101	..
Stamps	474,487	..	48,322	..
Taxes	51,585	..	6,776	..
Property-tax	625,169	..	..	3,964
Post-office	25,000	..	21,000	..
Crown Lands	172,388	..	140,888	..
Miscellaneous	..	143,086	..	111,552
Total Ordinary Revenue ..	1,480,084	200,498	1,010,260	115,516
Imprest and other Moneys ..	163,785	..	44,071	..
Repayments of Advances ..	479,583	..	207,221	..
Total	2,123,452	200,498	1,262,252	115,516
Deduct Decrease	200,498		115,516	Deduct Decrease.
Increase on the Year ..	1,922,954		1,146,736	Increase on the Quarter.

An increase of nearly two millions upon the financial year, and o considerably upwards of one million upon the quarter is highly gratifying as a justification of the past and encouragement for the future. Let us hope that the fearful evil of a European war may yet be averted; or, if such a consummation be not possible, that the calamity may be of short continuance; that the disturber of the public peace may be speedily made to feel that even Autocrats are responsible to their contemporaries as well as to posterity; and that the nations, relieved from the scourge, may have leisure to thrive and to imitate the great example of Free-trade which we have set them.

METROPOLITAN NEWS.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the barometer increased from 29.79 inches at the beginning of the week to 30.20 inches by 9h. a.m. on the 3rd, and decreased to 29.84 by the end of the week. The mean reading for the week, at the height of 89 feet, was 29.972 inches. The weather during the week has been fine: the mean daily temperatures have varied from 6° below, to 7° above their average values. During the five days that the mean daily temperatures were below their averages—viz., from June 30 to July 4—the average daily deficiency of the temperature was 4°·8. The mean daily temperature on the 2nd was 55·2°, and is the lowest mean temperature recorded as having happened on that day since the year 1833, when it was 54·8°. The mean temperature of the week was 61·9°, being 1·2° above the average of thirty-eight years. The highest reading of the thermometer was 83° (on the 7th); the lowest 48° (on the 1st): their difference, 34°, shows the range of temperature in the week. The mean daily range of temperature during the week was 19·2°. Rain fell during the week to the depth of nearly three-tenths of an inch.

Lewisham, July 8th, 1853. JAMES GLAISHER.

Erratum in last Week's Report.—The mean reading of the barometer for the month of June, at the level of the sea. For 21·515 inches, read 29.515 inches.

HEALTH OF LONDON.—During the week ending July 2, the births of 1721 children were registered in the metropolitan districts: of these 886 were boys, and 835 were girls. In the eight corresponding weeks of the seven preceding years the average number was 1338. In the ten corresponding weeks of the ten preceding years the average number of deaths, corrected for increase of population, was 1014. The actual mortality of last week exhibits an increase of 89 upon the estimated amount, the number of deaths from all causes amounting to 1103. The Registrar-General remarks that the increase of mortality is due to the influx of cases which had been permitted during the quarter to accumulate upon the coroners' books. To zymotic diseases 203 deaths are attributed (their average is 222): of these 47 are due to hooping-cough (in excess of its average by 17). To dropsy, cancer, &c., 49 (their average is 46). To tubercular diseases, 217 (their average is 186): of these, 158 are due to consumption (in excess of its average by 23). To diseases of the brain, nerves, &c., 101 (their average is 110): of these, 23 are due to apoplexy, 13 to paralysis, and 14 to convulsions. To diseases of the heart and blood-vessels, 51 (their average is 52). To diseases of the lungs and of the other organs of respiration, 121 (their average is 99): of these, 47 are due to bronchitis (in excess of its average by 22); and to pneumonia, 54 (in excess of its average by 12). To diseases of the stomach, &c., 60 (their average is 66). To violence, privation, cold, and intemperance, 116 deaths are attributed, exceeding the average of ten years by 69.

EDUCATION CONFERENCE AT THE MANSION-HOUSE.—On Saturday about 150 of the trustees, managers, and secretaries of the various charitable schools in and around the metropolis attended at the Mansion-house, at the request of the Lord Mayor, to confer with his Lordship as to the means of promoting a more practical knowledge of science and art amongst all classes, in accordance with the recommendation of her Majesty at the opening of the present session of Parliament. The following resolutions were adopted:—"That it is highly desirable that, in all schools for the industrial classes, the pupils should be taught drawing and the elements of science." "That the Department of Science and Art be requested to furnish a clear and simple definition of its objects and intentions, with short suggestions as to the best means of forming new schools for the teaching of art and science." Thanks having been voted to the Lord Mayor, the business terminated.

THE THAMES EMBANKMENT.—On Monday the committee met, and passed the preamble of a bill to give to the Commissioners of her Majesty's Works and Public Buildings extended time and further powers for completing the embankment of the Thames between Vauxhall and Batterses Bridges, and a new street from Lower Sloane-street, in connection therewith. A new street is to be carried out in connection with the Chelsea Suspension-bridge now constructing—the works of which have been resumed, and the suspension chains and towers for which are in a forward state. The height of the embankments will be generally four feet above Trinity datum, and 70 feet wide in the rondway. It is understood to be ultimately the intention of the Commissioners of Works to extend the embankment as far below Battersea as Putney, and even to have a similar embankment on the Surrey side, with the further object in view—provision being made for the wharfs and river traffic—of furnishing a continuous river promenade, of which the portion in front of the New Houses of Parliament will eventually form part.

ROYAL DISPENSARY FOR DISEASES OF THE EAR, DEAN-STREET, SOHO-SQUARE.—A sermon was preached in aid of the funds of this institution, on Sunday last, by the Right Rev. the Lord Bishop of St. Asaph, at St. Peter's, Pimlico. The right rev. Prelate took for his text 9th chap. of St. Luke, and 6th verse. The sum of £82 1s. 9d. was collected for this excellent charity.

THE WAGES MOVEMENT.—On Monday night a public meeting of journeymen bricklayers took place at the National Hall, Holborn, to consider their position with regard to the wages movement, and to take steps to secure an advance of wages in their branch of the building trade. Mr. W. Fisk occupied the chair, and justified a demand for increased wages upon the ground of the great advance which has lately taken place in the price of provisions. A resolution was unanimously carried, claiming an advance of 6d. per day upon this ground, and a deputation was appointed to confer with the masters.

THREATENING THE EARL OF ABERDEEN.—On Monday, Thomas Whitehead, about fifty years of age, and described as an artist, was examined at Bow-street, before Mr. Henry, the magistrate, relative to sending a threatening letter to Lord Aberdeen. The defendant denied that there was any passage in the letter which could be construed. The magistrate differed, and read the following—"I shall be goaded on to do that which my soul abhors." The defendant said he had been under the strict espionage of the police for years. He was evidently labouring under a delusion, and was remanded to St. Giles's workhouse for the present.

PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday last a meeting of the Royal National Institution for the Preservation of Life from Shipwreck, was held at the offices, John-street, Adelphi—the Duke of Northumberland, K.G., in the chair, when a silver medal of the Institution was voted to Mr. Robert Sands, a man of colour, master of the schooner *Grande*, in consideration of his noble exertions in saving, under the most perilous circumstances, the crew of the emigrant ship *William and Mary*, of Bath, Maine, bound from Liverpool to New Brunswick, which was wrecked on the 2nd May last off the Bahama Islands. Several other life-boats were voted to the institution by the institution, to their stations during the past month; but we regretted to observe that, in order to pay for them, a considerable portion of the small funded property of the Institution was again compelled to be sold.

WESTMINSTER IMPROVEMENTS.—On Thursday the committee of the House of Lords passed the bill for the Westminster Improvements, the object being to carry out the formation of Secondary-street, in connection with Victoria-street, and to enable the Commissioners to obtain possession of the workhouse and lands required for that purpose. It is proposed to improve the sanitary condition of the parishes of St. Margaret and St. John by removing a mass of houses adjoining Victoria-street, and to erect a better class of houses in their stead. It will afford great accommodation to the public if the approach to Victoria-street is widened through the Broad Sanctuary, and a communication opened from Victoria-street to Palace-yard. A part of Castle-lane is to be widened and improved; Francis-street is also to be widened and improved, and continued into the Vauxhall-bridge-road and Victoria-street. The power for the compulsory purchase of land is limited to two years from the passing of the act. Secondary-street is to be completed by July, 1855, at a cost of £50,000.

THE LONDON UNIVERSITY AND CHARITABLE TRUSTS BILL.—This bill has been reprinted with amendments, and a clause has been added exempting the University of London and all its colleges from its operation. This, no doubt, is the result of a memorial recently sent to Lord Aberdeen, claiming to stand on the same footing as Oxford and Cambridge, which were already specially removed from the scope of the bill. The following are the names of the colleges signing the memorial:—University, Stepney, Downside, Hackney, Prior Park, Horton, Orsett, Wesley, Spring Hill, Huddersfield, Manchester New, Lancashire Independent, Western, New College, Cheshunt, Owens, Cheltenham, Airedale.

CONSUMPTION HOSPITAL, BROMPTON.—An evening concert in aid of the building fund of the above institution is appointed to take place on the 18th inst., at the residence of Mrs. Warner (one of the benevolent supporters of the hospital), in Grosvenor-place, Belgravia. Madame Viardot Garcia, Miss Dolby, Madame Clara Novello, Signor Gardoni, Signor and Madame F. Lablache, &c., are among the names who will assist on the occasion, and we trust the generous intentions of Mrs. Warner may be fully realised.

EAST LONDON WATERWORKS.—On Wednesday, the committee passed this company's measure for constructing new reservoirs at Walthamstow, for the supply of Enfield, Waltham, and the surrounding districts with pure water. The supply will be pumped from the river Lea into the reservoirs at Walthamstow, and be supplied by gravitation to the surrounding districts.

AGGRAVATED ASSAULTS AND THEIR REWARD.—Samuel Deighton, a well-dressed, but morose and dissipated looking man, was brought up at Westminster, on Monday, charged with a series of brutal and unprovoked assaults upon his wife, who had very severely been cut. Fined. Evidence having been given, Mr. Hammill (the magistrate) said that he should not exceed the duty which he did not impose upon the prisoner the utmost punishment he was empowered to inflict, under the act which had been recently passed for the better protection of women. He should order him, without imposing any pecuniary penalty, to be committed to hard labour for six months in the House of Correction; and, at the expiration of that sentence, he must find two responsible householders to be answerable for his good behaviour during a further term of six months.

THE CITY GUILDHALL STRUCK BY LIGHTNING.—During the thunder-storm which raged on Thursday night, one of the buttresses close to the stained glass window at the east end of Guildhall was struck by lightning, and a portion knocked off; there are also other marks, although of no great extent, on other portions of that part of the building.

STEAMER ON FIRE IN THE RIVER.—On Monday night, about seven o'clock, a dreadful fire happened on board that splendid steamship the *Trident*, only arrived in the afternoon from Leith and Berwick, loaded with a cargo of cotton and whisky. It originated in the hold of the vessel, near the funnel, and ere the first alarm could be raised, the flames had spread most furiously. In spite of all assistance, the operations of the firemen were all but useless, till a large hole was forced through her iron sides, and this, added to the water sent forth from the engines, in about three hours tended to prevent the flames spreading. The loss is supposed to be about £10,000.

MURDER AND SUICIDE.—An inquest was held on Monday at the St. Catherine's Wheel, Borough, before Mr. Carter, respecting the deaths of Jane Papson, aged 22, and her infant of two months. The bodies of the deceased were found in the Thames, near Southwark-bridge, last Thursday. The evidence went to show that the deceased had been abandoned by the father of the child, a man named Metcalfe, and that she had been in great distress. A letter was read from the deceased woman to Metcalfe, dated from Cloth-fair, Smithfield, in which she expressed her intention of committing suicide, and said her blood would rest on his head. The jury gave a verdict to the effect that the child was murdered by the mother, who at the same time committed suicide, to which she was driven by deprivation and poverty.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Royal assent was given by commission to the following bills, viz.—Excise Duties on Spirits; Cathedral Appointments; Malicious Injuries (Ireland); Soap Duties; Public Works Loan; Whichwood Forest; and several railway and other bills

The Lords Commissioners were, the Lord Chancellor, the Duke of Argyll, and Lord Stanley of Alderley.

The Savings Banks Annuities Bill was read a second time.

The Commons' Amendments to the Common Lodging-houses Bill were considered, and agreed to.

The Colonial Bishops Act Extension Bill, and the Patronage Exchange Bill were severally read a third time, and passed.

The Earl of SHAFTESBURY introduced a bill for the purpose of amending the law in respect to elections. He proposed by this bill to take the votes at the residences of the electors, under certain regulations. He thought that the provisions of his bill would have the effect of putting an end to bribery and corruption, and to induce a greater number of the electors to exercise their franchise than had hitherto voted

After a few words from the LORD CHANCELLOR and Lord BROUGHAM, the bill was read a first time.

RUSSIA AND TURKEY.

The Marquis of CLANRICARDE renewed his notice of motion on the subject of the affairs of the East for Monday next, with the understanding that, if the question was not brought forward in the House of Commons on that evening, he would not press his motion. Adjourned.

HOUSE OF COMMONS.—FRIDAY.

The House sat at twelve, and was occupied until nearly four o'clock in committee upon the Landlord and Tenant (Ireland) Bill, in which progress was made from the 32nd to the 70th clause.

In the evening sitting,

Sir J. PAKINGTON asked the President of the Board of Control whether he intended to introduce in the bill for the future government of India any provisions for the purpose of giving greater facilities for the importation of salt into India?

Sir C. WOOD said that any revenue measures for India could only be passed in India. He had, however, to observe that a great increase of importation of British salt had taken place in India.

AFFAIRS OF TURKEY.

Lord PALMERSTON appealed to Mr Layard to postpone his motion relative to the state of our relations in the East, without fixing any day for bringing it on. It was obvious that the discussion of the subject would, under present circumstances, be attended with inconvenience to the public service; and would, probably, defeat the efforts now making to bring those differences to a peaceable termination (Hear, hear) Both France and England were united in a course of policy, and were aiming at a common object. They were guided by common interests, and inspired by the most unreserved confidence in each other. He therefore, hoped that his hon friend would yield to this appeal, and pursue the course which had been taken in the other House of Parliament. When the proper time arrived her Majesty's Government would be prepared to give all the information in their power (Hear).

Mr. LAYARD said it was his own conviction that, so far from the discussion producing any dangerous results, it would prove of the utmost importance in bringing this momentous question to a satisfactory issue. What was the state of the case? A powerful potentate had sent a numerous army, without provocation, into a neighbouring country; and had published a manifesto in which an appeal was made in the name of religion to influence the millions to rise and fight for that religion. Such proceedings had never before taken place on the continent of Europe, without the Government having received some information directly upon the subject: but it appeared that the only information which her Majesty's Ministers had received upon the subject was through the French Government. But if the noble Lord said that this motion would be injurious to the public service, he would not press it; but the Government must take the whole of the responsibility of its withdrawal.

Lord PALMERSTON said he thought he had already stated so

Mr. DISRAELI said that early in the week Lord John Russell declared that it would be no inconvenience to take the motion that night. It was therefore to be inferred that something very alarming had taken place since then, which caused the Government to change their whole policy.

Mr. BRIGHT said he thought that Mr. Layard would exercise a very wise discretion in postponing his motion. He (Mr. Bright) had the greatest confidence in the course which the Prime Minister was disposed to take upon the question, as he, no doubt, wished to preserve peace, so long as the country be preserved consistently with the character and independence of the country.

Sir G. GREY expressed his dissent from the inference drawn by Mr. Disraeli from the course taken by the Government on that occasion—an inference which might give rise to a strong feeling of alarm in the country. On the contrary, he thought that there was a better chance of bringing the negotiations to a peaceful termination now, than there was a week ago (Hear).

Mr. HUME urged upon Mr. Layard the propriety of acceding to the request of the Government.

Lord D. STUART said that he could not see the injury likely to arise from a discussion upon this question.

Mr. LAYARD ultimately acceded to the request of the Government, hoping that an opportunity would be given him of bringing the question forward as soon as possible, consistently with a due regard to the interest of the public service.

The motion was then withdrawn.

INDIA BILL.

The House having resolved itself into a committee upon the India Bill, proceeded to discuss the clauses of the same.

DIFFERENCE IN THE CABINET.—A rumour prevailed yesterday (Friday) that the frequent Cabinet Councils held during the last few days are partly in consequence of a difference in the Cabinet. It is said that Lord Aberdeen is for peace, "at all hazards," and that other members of the Ministry are of an opposite way of thinking.

MRS. STOWE, the authoress of "Uncle Tom," is now at Geneva, where she intends remaining some time

FOREIGN.

PARIS, Friday.—There is a talk here, among the peace party, of a proposition by Austria and Prussia to the Sultan, which, it is pretended, Russia would agree to—namely, that he should give to the Powers generally, and not to Russia in particular, the guarantee which Russia has demanded, in the form of a diplomatic note, which would have the force of a convention. If some better contrivance than this cannot be found to settle the question and prevent a war, the maintenance of peace will be impossible.

Nothing new of importance has transpired respecting the arrests of Tuesday in front of the Opéra Comique, except the fact that in the night and yesterday, several members of secret societies were arrested in different parts of Paris.

There has been a fall of only a few centimes to-day at the Bourse, but the market was very heavy.

RUSSIA AND TURKEY.—The following telegraphic despatches have been received from Trieste, under date of the 7th inst

CONSTANTINOPLE, June 27.—Prospects of a peaceful solution are held out through the joint mediation of England and Austria. The Russian demands will not be admitted in form, but in tenor. The Porte has declined the offer of the formation of a foreign legion. The Circassians assembled near Trebisond are to be commanded by Schamyl. The garrison of Batum is to be reinforced

The Turkish posts have been advanced as far as Tschekun. Exchange on London, 121 to 122.

AUSTRIA.—The court-martial at Pesth has sentenced the Countess Bianche Tekely to ten years', and Miss Clara Lovei, a governess, to fifteen years' imprisonment. The thirteen months during which a certain Eliza Bernvalmer, a chambermaid, was under examination, is considered a sufficient punishment for her. The crime of which these three females, "and others whose trials are still pending," were accused, is "an attempt to cause the violent separation of Hungary from the Empire, to secure its independence, and to bring about and further a new revolution." When the Emperor was in Upper Austria the other day, he pardoned Messrs. Rudniansky and Lonovitch, two high dignitaries of the church, who were implicated in the revolution.

THE TURKISH FLEET AT ANCHOR AT BUYUKDERA,

THE TURKISH FLEET.

We are enabled, by the courtesy of the Correspondent whose letter appeared in our Journal of last week, to present our readers with the accompanying Illustration from the seat of impending war—a view of the Turkish fleet at anchor at Buyukdera, in the Bosphorus, a short distance from the Black Sea. The sketch is taken from "the Giant's Hill," on the Asiatic side. The ships are anchored in such a position that the three line-of-battle ships would fire up the Bosphorus, towards the opening of the Black Sea; and the large frigates would fire across the river. They have springs attached, to enable them to swing round, and fire their other broadside on the enemy.

The Turkish Fleet consists of fifteen sail: three are very large line-of-battle ships; the remainder being 64-gun frigates and corvettes. Thirteen are shown in the Sketch; a large frigate and corvette lying opposite [illegible] rapis. There are likewise several small corvettes and brigs at anchor different parts of the Bosphorus.

The Turkish Fleet is altogether composed of 35 ships, two of them th decckers, three two-deckers, ten frigates, four corvettes, eight brigs, and ei steamers, four of which are of large dimensions. This force will be

...ised by ships recalled from different stations, and by eight others ...ch are in course of equipment in the arsenal. Besides the Captain ...ha, the fleet will be under the special command of the Vice-Admiral ...emet Pacha, who arrived from Montenegro for that object. The ...r principal officers are Mustapha Pacha, Muchava Pacha, and Osman ...ha.

THE COMBINED ENGLISH AND FRENCH FLEETS.

THE accompanying Illustration, sketched by the same hand as the preceding View of the Turkish Fleet, was taken from on board the Peninsular and Oriental Company's steam-ship *City of London*. The high land on the left is Cape Janissary; that on the right is some portion of the plain of Troy. The English Fleet, at the period of our Correspondent's Sketch, consisted of six line-of-battle ships, seven steamers, and one frigate. The French Fleet consisted of eight line-of-battle ships, and four steamers. The boats coming from the English Fleet are bringing to the *City of London* despatches for Malta and England; and the signals on the steamer communicate to the Fleet that there are despatches on board from Constantinople for the Admiral.

...NCH FLEETS IN BESIKA BAY. ENGLISH FLEET.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Lord BROUGHAM presented a petition from London merchants concerned in trade with Scotland, complaining of the Scotch Bankrupt Law

The EXCISE Duty on Spirits Bill was read a third time

The Earl of HARROWBY moved that the House go into committee on the Church Buildings Act Amendment Bill. By this bill it is proposed to invest Bishops with power to order the destruction of useless churches, the sale of the site (including the grave-yard) and materials, and the removal of fabric, clergyman, and endowment, to a district where he may judge them to be more needed. The present law gives the Bishop power to effect such a removal by "a faculty"—which is held to be a cumbrous process—and to unite contiguous benefices, which is objected to as an unreasonable limitation. The bill also provides for the sale of CROWN livings for the creation of new benefices. It is proposed to empower the Lord Chancellor to dispose of livings worth less than £250 per annum, of which he has 310; and to fill which, it is said, it is difficult to find clergymen—and to apply the purchase-money to improving the value of such livings. His LORDSHIP added that there were also some other persons who would be enabled by the bill to part with their patronage; not for the sake of pecuniary advantage to themselves, but for the purpose of promoting accommodation for public worship. The Earl of POWIS raised some objections, to which the Bishop of LONDON replied; and the bill passed through committee without amendment.

HOUSE OF COMMONS.—MONDAY.

Lord PALMERSTON announced his intention to bring in during the present Session a bill for the regulation of the medical profession, not so much with the view of passing it this Session as with the view of submitting its provisions to consideration.

The House went into committee on the Succession-duty Bill, upon some of the technical legal questions connected with which much discussion and several divisions took place. On reaching the 46th clause the Chairman was ordered to report progress.

In a committee on the Customs, &c., Acts, two resolutions were agreed to, one continuing the Stamp-duties in Ireland, and the other reducing the terms on which the Land tax in Great Britain should be redeemed or purchased.

The Savings Bank Bill was committed *pro formâ*, and ordered to be recommitted. The CHANCELLOR of the EXCHEQUER stated that the bill would not come on for discussion until the week commencing July 18.

The House then went into committee upon the Stamp-duties Bill, from which the controverted portions were withdrawn and reserved for separate consideration.

Mr. LOWE, in moving the second reading of the Assistant Judge (Middlesex Sessions) Bill, stated the reasons for the introduction of the bill; the object of which was to increase the salary of the judge from £1200 to £1500 a year, in consideration of additional duties cast upon him. Lord D. STUART and Mr. BOWYER opposed the bill, which was defended by the ATTORNEY GENERAL. The second reading was carried, upon a division, by 61 against 47.

SAVINGS BANKS ANNUITIES BILL.

On the order of the day for the third reading of this bill, Mr. COWAN thought it would have been more respectful to the House if the Government had stated the reasons which had induced it to commence a system of life assurance. The measure proposed in clause twelve and other clauses to make a charge upon the Consolidated Fund, and he should like to obtain the opinion of the Speaker as to whether a bill which proposed that object should not have originated in a committee of the whole House? He begged to move that the bill be read a third time that day three months.

Mr. FELLATT said, that as far as the principle of granting life annuities had been practised by the Government it had given satisfaction, and parties were anxious that the amount should be increased, and that £30 should not be the limit. The proposal in the bill as to life assurance, however, was quite a different principle from that already in operation.

Mr. WILSON thought the main object of the bill was to confer upon the Commissioners for the Reduction of the National Debt, through the medium of savings banks, larger powers to carry out the principle at present in operation, and to convert the deposits in savings banks into a variety of forms and shapes more convenient to depositors. The Government had no intention of entering into the general subject of life assurances, and the bill was confined entirely to savings-banks. He hoped his hon. friend would not, at that stage of the bill, press a motion of which he had given no notice.

The SPEAKER said, that if the bill proposed any additional charge on the Consolidated Fund it ought to have originated in a committee of the whole House; but, unless there was an additional charge beyond what the law at present contemplated, it would not be necessary that the bill should originate in that way.

Mr. WILSON said there could be no such additional charge upon the Consolidated Fund. There was at present a charge upon that fund as to all the savings bank deposits.

Mr. W. LOCKHART moved the adjournment of the debate.

The House divided, when the numbers were—For the adjournment, 19; against it, 47: majority, 28. The bill was then read a third time and passed.

The Public-houses (Scotland) Bill was read a third time.

HOUSE OF LORDS.—TUESDAY.

The Earl of ELLENBOROUGH brought in a bill for enabling the EAST India Company to increase their European force to 20,000 men. The bill was read a first time.

After an able speech from Lord SHAFTESBURY, the Juvenile Mendicancy Bill, No. 2, passed through committee *pro formâ*, on the understanding that the opinion of the Poor-law Board is to be taken as to the measure.

HOUSE OF COMMONS.—TUESDAY.

The House at the early sitting, was occupied in committee with the details of the Merchant Shipping Bill.

From a conversation that took place, it appears that Lord J. Russell's Education Bill is not to be pressed to enactment in this session; but his Lordship intends having its principle affirmed in the House of Commons by a second reading

At the evening sitting,

Mr. COLLIER moved for leave to bring in a bill to transfer the testamentary jurisdiction of the ecclesiastical courts to the courts of common law, and to the County Courts. Finding that the Government did not intend to introduce any measure upon this subject during the present session, he asked the House to deal with a part of the jurisdiction of those courts—namely, testamentary, which—namely, the granting probates of wills and administrations in intestacies. He proposed to abolish the testamentary jurisdiction of the ecclesiastical courts altogether; and that all wills, disposing of real as well as personal property, respecting which there was no dispute, should be proved in the County Court of the locality, the County Court being required to transmit the original will to a registry-office in London. Mr. COLLIER explained other subordinate parts of the measure, Lord PALMERSTON supported with pleasure the motion for leave to introduce the bill. But in the state of public business it would be impossible for them to launch a measure upon this subject with any hope of carrying it through during the present session. Besides this, a commission was sitting, for whose report they thought it would be better to wait; and at an early period of next session he trusted they would be able to propose a measure, after having had the benefit of the report of the commission. Leave was given to bring in the bill

Mr. CORBETT then moved for leave to bring in a bill to limit the hours of labour of women, young persons, and children, in factories, to ten hours a day during the first five days of the week, and seven hours and a half on Saturdays, and to provide for a more perfect inspection of factories. He had framed his bill, he said, upon the suggestions of inspectors and practical manufacturers; it proposed to restrict the labour of all persons employed in factories to ten hours a day, and to stop the motive power from half-past five in the afternoon of the first five days in the week until six o'clock the next morning for all manufacturing purposes. He concluded with some very startling details respecting the high rate of mortality among factory operatives, which he attributed to excess of labour. Mr. FEILDEN seconded the motion, bearing testimony, as a large manufacturer, to the necessity of such a bill for the protection of the operatives. Lord PALMERSTON did not oppose the introduction of the bill, reserving to himself the power of expressing his views upon the subject at the second reading. He intended to ask leave to bring in a bill for limiting the hours of employing children, who, he proposed, should not be allowed to work earlier than six in the morning, nor later than six in the evening. His opinion was that mill owners were not pursuing their real interests in dealing with their servants as if they were mere machines; that they would do better to reflect that they were moral and intelligent agents. Sir G. GREY deprecated the re-agitation of th s subject as regarded adult labourers, and trusted that Lord Palmerston would give no sanction to the dangerous principle of interfering with the motive power in factories. Lord J. MANNERS, Mr. I. BUTT, and other members, asserted that the law had been systematically evaded. Lord J. RUSSELL did not think there was any necessity for restricting the labour of adult men. Leave was given to bring in the bill

Mr. KEATING moved a resolution, "That, during the administration of the late Board of Admiralty, the patronage of the dockyard promotions and the influence of the Admiralty were used for political purposes to an extent calculated to reflect discredit on that department, and to impair the efficiency of the service." He adverted to the disclosures made before the Select Committee with reference to the employment of dockyard patronage during the late Administration He insisted that the evidence proved that unworthy persons had been promoted to serve political ends; and that such a dispensation of patronage brought discredit upon the Administration, and tended to damage all Government in the opinion of the country. Sir J. PAKINGTON moved the adjournment of the debate. He offered a brief vindication of the Duke of Northumberland, and pledged himself that, had time been afforded him, he could adduce ample evidence to prove that the late Board of Admiralty was entitled to the grateful approval than unworthy censure of the House. Mr. DISRAELI likewise defended the Duke of Northumberland. Lord SEYMOUR, the Chairman of the Select Committee, vindicated the impartiality of its proceedings and the fairness of its report. Upon a division, the motion for adjourning the debate was negatived by 85 to 79. Two other divisions were taken upon the question of adjournment; and Mr. HILDYARD next moved the adjournment of the House, which, on a division, was carried by a majority of 41, and the House adjourned at the unusually late hour of twenty minutes to four o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

The House went into committee on the Election Expenses Bill.

On the order for the House resolving itself into committee upon the Probates of Wills and Grants of Administration Bill, Mr. HADFIELD, before consenting to withdraw his bill, wished to ascertain from Mr. Henley, a member of the commission, what prospect there was of a measure upon this subject. Mr. HENLEY was bound to say that, if this bill became law, it would make confusion intolerable; that, so far from its being an improvement of the existing law, it would be a perfect plague to the country The SOLICITOR-GENERAL had a bill ready, which would be brought in next session. The consideration of the bill was then adjourned.

Mr. R. PHILLIMORE moved the second reading of the Simony Law Amendment Bill. The evil it was intended to meet, he observed, was of the gravest character—the making a solemn trust, the cure of souls, matter of barter and commercial speculation. His bill proposed to prevent the sale of a presentation on the next avoidance, its operation being prospective only. Mr. G. BUTT denied that it was simony for a layman to exercise a right which the law gave him. Since the Reformation, by the law of England, a layman might purchase the next presentation to a living, buy, sell, settle, and dispose of it. This bill, therefore, affected the rights of property, and Parliament might as well interfere with the title to all chattels real. He thought that, generally speaking, layman had exercised their ecclesiastical patronage creditably, and the fitness of the presentee was always examinable by the bishop. A question now arose as to whether the debate should be adjourned, which was discussed, with some degree of acrimony, until the very verge of six o'clock, when it was agreed that it should be adjourned.

HOUSE OF LORDS.—THURSDAY.

RUSSIA AND TURKEY.

Lord BROUGHAM called attention to a motion by Lord Clanricarde, standing on the paper for to-morrow evening, upon the subject of the affairs of Russia and Turkey, and asked whether the question could be discussed without injury to the public service?

The Earl of CLARENDON said the time had certainly not arrived when the subject could be discussed in that House without the danger of injury to the public interests. The Government had no intention, however, of asking Lord Clanricarde to postpone his motion; but inasmuch as a notice had been given for a similar motion in the House of Commons to-morrow evening, and as it would very probably be postponed until Monday, in consequence of the illness of Lord John Russell, he thought that it would be convenient if the noble Marquis would postpone his motion until Monday, in order that the discussion upon the subject should take place in both Houses on the same evening.

The Earl of DERBY, Earl GREY, and the Earl of MALMESBURY severally concurred in the propriety of the postponement of the motion, upon the understanding that the motion pending in the House of Commons would also be postponed.

The Marquis of CLANRICARDE stated his willingness to bow to the general wish of the House, and would withdraw his notice

Lord COLCHESTER, in moving the second reading of Wilson's (Hampstead) Estate Bill, complained that rents were abroad respecting it; for no power was given in the bill to inclose Hampstead heath, or to stop up any public road whatever. The bill only gave Sir T. Wilson power to grant larger leases of his property. The Earl of SHAFTESBURY opposed the second reading of the bill, as he believed that it would prove prejudicial to the convenience of the public, and detrimental to the health of the inhabitants. After some further discussion, the House divided, when the bill was thrown out by a majority of 21 against 19.

SOAP-DUTIES BILL.

Upon the motion for the third reading of this bill, the Earl of ELLENBOROUGH and the Earl of DERBY severally opposed the repeal of £1,200,000 of taxation at a time when the continuance of peace was most uncertain

The Earl of ABERDEEN did not think that, under the circumstances, the House of Lords would be justified in refusing to pass a bill which would benefit 4,000,000 of people.

After some further discussion, the bill was read a third time and passed.

The Convicted Prisoners' Removal and Confinement Bill was read a second time.

The Public Loan Fund Bill was read a third time.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The HOUSE sat at twelve o'clock, and was occupied until near four o'clock in committee upon the Landlord and Tenant (Ireland) Bill. The Chairman then reported progress, and asked leave to sit again at twelve o'clock on the following day (Friday).

The House again met at six o'clock.

AFFAIRS IN THE EAST.

Mr. LAYARD stated the terms of the motion of which he had given notice for to-morrow (Friday). He complained of what he considered was an irregular proceeding in connection with his motion. He had yesterday received a note requesting him to postpone his motion He had been prevented from answering the note until this morning, and was, therefore, surprised to find on the minutes of the proceedings of yesterday an intimation that he had postponed his motion until Monday. He thought that such a proceeding as this, without his sanction, was exceedingly improper. It was his fixed determination, unless good reason was shown to the contrary by the Government, to submit his motion to the House to-morrow (Friday) evening

The CHANCELLOR of the EXCHEQUER, in explanation, said that the notice of the postponement of the hon. member's motion had been placed upon the minutes through a misunderstanding. With regard to the propriety of bringing on the motion to-morrow night, he thought that it would be sufficient to remind the hon. gentleman of the illness of Lord J. Russell, which would prevent the noble Lord from attending in the House on Friday.

Mr. DISRAELI said he had been just informed that a similar motion to that of the hon. member for Aylesbury (Mr. Layard) had been postponed in the House of Lords, which could not have been occasioned by the illness of the noble member for London. It was exceedingly important that a full statement upon the subject should be made by the Government as early as possible, to put the country into possession of the real state of the case. He wished therefore to know whether the question would really come on on Monday.

Mr. LAYARD said he would certainly bring forward his motion on Monday, unless good reasons were given by the Government to justify him in the eyes of the country in still further postponing it.

Mr. LIDDELL asked Lord Palmerston, in the absence of Lord J Russell, whether any instructions had been sent out by her Majesty's Government to inquire into the case of British vessels at present detained in the Danube, owing to the imperfect state of the navigation of that river? And whether, in the event of hostilities with Russia before such ships could be liberated, a sufficient force would be sent out to that part to prevent their falling into the hands of hostile powers?

Lord PALMERSTON said that the recent obstructions at the mouth of the Danube had been greatly owing to accidental causes, as the river had overflowed its banks, so as to extend its channel to a double its usual width. The effect of this was to diminish the force of the current, so that the mud had deposited itself in the bar in more than its usual quantity. At the same time he felt bound to say that for many years past the Russian Government had neglected the duty imposed on them by the treaty of Adrianople, of keeping in a proper state the delta of the Danube. While Foreign Secretary he had had to make frequent complaints upon the subject, as the depth of water on the bar had decreased from sixteen feet, which it was under Turkey, to eleven feet under Russia, besides a considerable narrowing of the channel, owing to wrecks taking place, and never having been removed. The condition of the place had sometimes made it difficult and dangerous for vessels to pass at all. Russia had always admitted that it was its duty to keep the passage clear; but it had always neglected to do so, although an attempt had been made, by a steam dredge brought from Odessa, to clear the river, which had failed. With regard to the latter part of the question, he must remind the hon. member that, according to the statements received, there was a number of British vessels which could not get out of the Danube for want of water, so that even in the event of a war with Russia—a misfortune which he saw no reason to anticipate—it would be impossible for our ships of war to enter the river (Laughter).

In reply to Mr. A. Pellatt, Lord PALMERSTON said that the Attorney-General would shortly introduce a bill for the suppression of bettings-offices in the metropolis, which he hoped would be passed in the present session.

SUCCESSION-DUTY BILL.

The House then went into Committee on the Succession-duty Bill, resuming it at the 46th clause.

On clause 48, which empowered Commissioners to demand the inspection of all documents and title-deeds relating to property, being put,

Mr. MULLINGS expressed his objections to giving the Commissioners the power to inspect title-deeds, as he thought that the compulsory production of such documents would shake half the estates of the kingdom, and create considerable litigation. He therefore moved that the clause be expunged

After a good deal of discussion, the committee divided, and the amendment was lost by a majority of 78 to 72

The clause was ultimately agreed to.

On clause 55, which fixed the period for the tax coming into operation, Viscount GALWAY proposed the following amendment, to limit the duration of the tax to seven years, being the time fixed for the duration of the Income and Property-tax.

After some discussion, the amendment was negatived, by a majority of 105 to 125.

The clause was then agreed to; as was also the 56th and last clause of the bill

The postponed clauses were then brought under discussion, and their consideration occupied the committee for the remainder of the night.

LIVERPOOL ELECTION: FRIDAY.—The Conservative members are returned: the close of the poll stood thus—Horsfall, 6154; Liddell, 5859; Perry, 5627; Moore, 1,256.

THE CLARE ELECTION has terminated in the return of the Liberal candidates: the numbers on the poll being—Mr. O'Brien, 1,374; Sir F. Fitzgerald, 1,350; Colonel Vandeleur, 1,297.

TRADE IN MANCHESTER.—The following were the numbers at the close of the poll on Wednesday.—Daniel O'Connell, 140; Thomas Fitzgerald, 9. Mr. O'Connell was declared duly elected on Thursday.

THE COURT.

The gaieties of the Court have been brought to a close with the entertainments of the past week. The State Ball on Friday se'nnight was a very brilliant affair. Her Majesty returned to the ball-room after supper, and for the third time danced in a quadrille.

On Saturday last, the Queen gave a dinner party, the company at which included their Majesties the King and Queen of Hanover, their Royal Highnesses the Prince and Princess of Prussia, his Royal Highness the Duke of Cambridge, their Royal Highnesses the Duke and Duchess of Saxe-Coburg-Gotha, the Serene Highness the Prince of Hohenlohe-Langenburg, the Duke and Duchess of Norfolk, Count Kielmansegge (the Hanoverian Minister), the Earl of Aberdeen, and the Earl and Countess of Clarendon.

On Sunday the Queen and Prince Albert, the Princess Royal, the Princess Alice, the Princess Louise of Prussia, the Duchess of Kent, and the Prince of Hohenlohe-Langenburg, attended Divine service in the private chapel of Buckingham Palace. The King and Queen of Hanover were present at the service.

On Monday the Queen and Prince Albert, with her Majesty's visitors, inspected in Buckingham Palace the two Astleys from General Amerios. Her Majesty and his Royal Highness, with their illustrious guests, took a drive in two open carriages-and-four during the afternoon, and in the evening honoured the concert of the Philharmonic Society with their presence, at the Hanover-square Rooms. The Duke and Duchess of Saxe-Coburg-Gotha took leave of the Queen and the Prince on Monday evening, and left town by the mail-train for Dover, *en route* to the Continent.

On Tuesday the Queen and Prince Albert, accompanied by the Prince and Princess of Prussia, and the Prince of Hohenlohe-Langenburg, left town for Windsor at twenty-five minutes before ten o'clock. Her Majesty and the illustrious party travelled by the Great Western Railway; and, on reaching the Windsor station, proceeded in several of the Queen's carriages to Virginia Water, and afterwards went to the Royal Lodge, where luncheon was served. The Queen and Prince Albert, and the Royal circle, returned by the same route to London, arriving at Buckingham Palace at half-past four o'clock The Queen, accompanied by the Prince and Princess of Prussia, subsequently honoured the Royal Italian Opera with her presence.

On Wednesday the Queen gave a State Concert at Buckingham Palace. The absence of the Prince Consort from the Opera on the previous night, and again from the concert this evening, disclosed the fact of his Royal Highness's indisposition, and on the following morning it became known that his Royal Highness was suffering from a mild attack of measles

On Thursday the Prince and Princess of Prussia and the Prince of Hohenlohe-Langenburg and the Princess Adelaide took leave of the Queen on their return to the Continent. The Duchess of Kent dined with her Majesty on Thursday evening

The Prince of Wales left town on Monday for Windsor Castle his medical attendants having recommended a change of air.

Lord Camoys has relieved the Marquis of Ormonde in his duties as Lord in Waiting to the Queen; and Lieut.-Colonel the Hon. Robert Boyle has succeeded Major-General Berkeley Drummond in his duties as Groom in Waiting to her Majesty. Lord Alfred Paget (Clerk Marshal) and Lieut.-Colonel the Hon. Alexander Gordon, have relieved Lord Charles Fitzroy and Captain the Hon. Dudley de Ros, in their duties as the Equerries in Waiting to the Queen and Prince.

THE QUEEN'S CONCERT.

The Queen gave a concert on Wednesday evening, at Buckingham Palace. The invitations numbered about 400, and included the Royal family, the Foreign Ministers, the Ministers and Officers of State, and a large party of the nobility. Refreshments were served in the usual style, and, at the conclusion of the concert, the illustrious and distinguished party proceeded to supper in the State Dining room.

ROYAL VISIT TO IRELAND POSTPONED.

We understand that her Majesty's visit to Dublin is postponed, owing to the indisposition of his Royal Highness Prince Albert.—*Globe.*

THE KING AND QUEEN OF HANOVER.

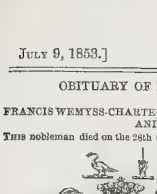
Their Majesties the King and Queen of Hanover, accompanied by the Crown Prince and the youthful Princesses of Hanover, and attended by the members of the Royal suite, left the residence of the Hanoverian Legation at six o'clock on Monday morning, for the London-bridge Station of the South-Eastern Railway, on their return to the Continent. His Majesty, on taking leave of Lord Elphinstone and General Buckley, the Lord and Groom in Waiting appointed by the Queen to attend on her illustrious relative, presented each of them with a very handsome gold snuff-box, bearing upon the lid his own likeness, set with brilliants.

The Countess de Neuilly and the Prince de Joinville visited the Princess of Prussia on Wednesday, at Buckingham Palace; and afterwards called on the Duchess of Kent, at Clarence House.

Her Royal Highness the Duchess of Kent, accompanied by his Serene Highness the Prince of Hohenlohe-Langenburg, and the Princess Adelaide, went to Claremont, on Saturday, and visited the Countess de Neuilly.

OBITUARY OF EMINENT PERSONS.

FRANCIS WEMYSS-CHARTERIS-DOUGLAS, EARL OF WEMYSS AND MARCH.



THIS nobleman died on the 28th ult. His Lordship was born 15th April, 1772, the only son of Francis, Lord Elcho, by Susan, his wife, daughter of Anthony Tracy-Keck, Esq., of Great Tew, county Oxford, and succeeded, at the decease of his grandfather, 24th August, 1808, as seventh Earl of Wemyss. In two years after, by the death of William, the eccentric Duke of Queensbury, he inherited from his Grace the Dukedom of March, the Viscounty of Peebles

and Barony of Douglas of Niedpath; and in 1821 was enrolled amongst the Peers of the United Kingdom as Baron Wemyss of Wemyss. His Lordship married, 31st May, 1794, Margaret, daughter of Walter Campbell, Esq., of Shawfield, and by her (who died 25th January, 1850) had an only son—Francis, Lord Elcho, who succeeds to the family honours —and eight daughters.

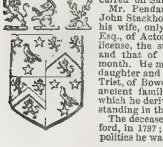
The house of Wemyss is one of great antiquity in North Britain, and occurs frequently in historic annals of that country. David, the third Earl of Wemyss, Lord High Admiral of Scotland, and one of the Commissioners for concluding the treaty of Union, married Lady Anne Douglas, daughter of William I., Duke of Queensbury, and thus arose the connection with the illustrious house of Douglas

The late Earl was Lord-Lieutenant of Peebles-shire.

THE REV. GODFREY FAUSSETT, D.D., MARGARET PROFESSOR OF DIVINITY IN THE UNIVERSITY OF OXFORD.

THIS learned divine, Canon of Christchurch, Oxford, and Margaret Professor of Divinity, died on the 25th ult. Dr. Faussett was born in 1780, the eldest son of the late Henry Godfrey Faussett, Esq., of Heppington, in Kent, by Susan, his first wife, only daughter of Richard Sandys, Esq., of Canterbury, and grandson of the Rev. Bryan Faussett, of Heppington and Lydd, an antiquary of some note. Through his great-grandmother, Mary, daughter and heir of Henry Godfrey, Esq., Dr. Faussett represented the old Kentish family of Godfrey, of Lydde, a scion of which was Sir Edmund Berry Godfrey, who was murdered in the evil times of Titus Oates. Dr. Faussett succeeded to the family estates at the decease of his father, in 1835. He married first Marianne Elizabeth, eldest daughter of Thomas Bridges, Esq., of St. Nicholas Court, Kent, by whom, who died in 1839, he had two sons, Bryan and Godfrey, both in Holy Orders; and two daughters, Susan and Anne. He married secondly, Sarah, eldest daughter of Thomas Weatherd, Esq., of Great Marlow; and by her leaves six sons and one daughter.

EDWARD WILLIAM WYNNE PENDARVES, ESQ., M.P. OF PENDARVES, COUNTY CORNWALL.



THE death of this much-respected gentleman, who was one of the Knights of the Shire for Cornwall since 1826, occurred on Sunday, the 26th ult.

Mr. Pendarves, eldest son and heir of the late John Stackhouse, Esq., of Pendarves, by Susannah, his wife, only child and heiress of Edward Acton, Esq., of Acton Scot, Shropshire, assumed, by Royal license, the surname of Wynne 4th January, 1815, and that of Pendarves on the 28th of the next month. He married, 4th July, 1804, Tryphena, third daughter and eventual heiress of the Rev. Browse Trist, of Bowden, in Devon, but had no issue. The ancient family of Pendarves of Pendarves, Cornwall, which he derived in the female line, is of centuries' standing in the parish of Camborne, Cornwall.

The deceased graduated at All Souls College, Oxford, in 1797; and took his M.A. degree in 1801. In politics he was a stanch Whig.

M. GALANOS.

M. DEMETRIUS GALANOS, who was the most learned linguist that modern Greece has produced, and who for more than twenty years occupied with distinction the chair of Sanscrit at the college of Benares, in Hindostan, has recently died in that city, at the age of sixty-nine. His numerous works on the different idioms of Asia, the fruit of forty years' research, which are all unpublished, M. Galanos has bequeathed to the University of Athens, on condition of its causing them to be brought out: he himself gave sufficient proofs for the generosity of his intentions. The University accepts the gift and office, and has appointed its rector, Dr. Georgios Typaldos, to conduct the publication. The works will make about ten folio volumes.

WILLIAM RAMSHAY, ESQ.

THIS gentleman, who was the scion of a highly respectable family in the north of England, was called to the bar in Michaelmas Sessions of the Society of the Temple, the 22nd Nevem'er, 1823. Mr. Ramshay went the Northern Circuit, and obtained a fair and constant practice there, both at Assizes and Sessions. He was a lawyer of considerable learning, skill, and industry. In 1838, he published a volume of the decisions of the Courts of Westminster on the then new rules of pleading a useful work at the time.

On the subject of Mr. Ramshay's appointment as County Court Judge at Liverpool, and of his removal therefrom. It is needless here to enter, as the matters of very recent and general knowledge. Through an unfortunate infirmity of temper, aggravated by ill health, Mr. Ramshay failed in giving satisfaction, and raised an angry and violent local opposition against him. Both sides were, to some extent, in the wrong; yet no one could be dissatisfied with the last decision of the Earl of Carlisle, who acted most temperately and benevolently in the investigation over which he presided, and which ended in Mr. Ramshay's deprivation of office.

Mr. Ramshay died at his chambers in the Temple, on the 16th ultimo. Mr. Ramshay bore the character of being a man of high honour and much good feeling: his failing was in temper only.

DEATH OF ADMIRAL SIR C. BULLEN.—This old and distinguished officer died at Shirley, near Southampton, on Saturday last, at the age of 86 years. Being Admiral of the White, extensive promotion will result from his death. He was almost the last man living who commanded at Trafalgar.

PROTESTANTISM IN THE HOLY LAND.—The Protestant community, composed of 217 families, has been established at Ram-Allah, near Jerusalem; and another at Beyruth, in Syria. The formation of these two communities is due to the zealous and intelligent labours of the Lutheran Bishop of Jerusalem.

COLD WATER STEAM-ENGINE.—We visited the machine shop of Messrs. Burge and Johnston, to witness the performance of a new engine, styled as above, and recently invented by Mr. Edward D. Tippett. The steam is produced without boilers, by simply injecting cold water into generators. The amount of steam required to force out or return the piston rod is made by the introduction to the influence of the fire at each moment of precisely the quantity of water needed, thus doing away with the necessity of boilers. It is claimed that there is no possibility of an explosion, that power is obtained, and at less room occupied for the necessary machinery. The water falls into the engine, being first raised by a force pump into a reservoir, situated above the engine, and thence inducted down as wanted. The engine is a singularly-constructed piece of mechanism, both in appearance and mode of operating.—*Cincinnati Gazette.*

STATE OF TRADE.—There is a highly favourable return of the trade of the United Kingdom during the month to the 5th ult., the total exports being £7,123,191, or an increase of £1,187,568 over the corresponding month of last year. The increase was pretty generally distributed over all our staple manufactures.—During last month the vessels employed in the coasting-trade of the United Kingdom, represented a tonnage of 1,349,276 for the entries inwards, against 1,208,771 tons in the same month last year. For the clearances outwards the totals are 1,141,877 tons, against 1,181,622 tons last year.

THREE SHIPS DESTROYED.—Letters by the *Melbourne* announce the loss of three English ships two by fire, and the other, from Adelaide, on a reef of rocks two hundred miles westward of the Cape of Good Hope. The latter, the *Barbara Gordon*, of Swansea, was attended with lamentably fatal results to five passengers—viz., Mr. and Mrs. Radish, and son, of Liverpool; Mrs. Hay, belonging to Yorkshire; and Mrs. Dalton, of Wansworth. The other ships were the *Alcope*, Captain Lewis, bound to Liverpool; and the *Gondor*. The former, when in lat 11 N., long. 88 E., was struck by lightning, which set fire to the cargo. The crew escaped, and were picked up by the brig *Geneva*. The destruction of the *Gondor* took place at Charlestown, on the 18th ult., while she was loading. She had on board at the time 1600 bales of cotton, and 373 barrels of resin. The crew all escaped.

CHESS.

TO CORRESPONDENTS.

F. H. They are too simple.

G. G. H.—Your problem wants point.

R. B. W. of Oxford — Many thanks. Your contributions are always entitled to a welcome.

Y. O. of Oxford.—Five games are very lively and pleasant. We shall be glad to see the others mentioned, whenever you have leisure to transcribe them.

E. H. of Norwich.—The Solution of Enigma No. 465, is—1. R to K 8rd (ch), 2. Q to K 6th, and mate next move. The key move to the other mentioned is—1 Q to her 3 Rad.

K. C. of Devon.—There is no difference whatever in reality: the difference of name is merely to distinguish them which are published on diagrams from those which are not.

NEVIAN of Hotton.—Yes quite wrong. What is to prevent the Kt returning to K 5th, when you check with the Bishop?

E. A. M. of Inch. *Mille Grazie.* Your thrice welcome budget of beautiful Problems has at last reached us.

ET. ALPIN of Leeds.—The Problems on diagrams are generally more difficult than those published by us under the head of Chess Enigmas: but this is not always the case.

DELTA. Your last communication shall be replied to by letter in a few days.

J. M. J. Scarborough. It admits, unfortunately, of more than one solution.

R. W. H., of Limerick.—We have not space to publish the Solutions of our Chess Enigmas.

No. 687, by Bridport appears correct. Look at it over once

SOLUTIONS OF PROBLEM No. 686, by R. W. H., Peter, Clarissa, A. Z., Calonna, are correct.

SOLUTIONS OF PROBLEM No. 685, by Colonna, R. W. H., Sigma, are correct.

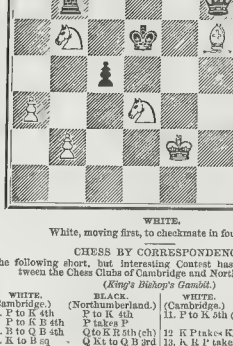
SOLUTIONS OF PROBLEM No 461, by D. J., N. B., J. S. H., J. P., Sussex, Civis, M. P., Ernest, Joseph A. Denton, Bath Dan, F. C. W., Mr. Jolley, Agnes, C. G., F. W. C., Ricardo, Jack of Shrewsbury, Laura Foot, Rugbeensis, are correct.

SOLUTIONS OF ENIGMAS, by Dawson, S. T., R. W. H., Colonna, A. T. E., Perseus, M. P., D. D., L. S. D., Ernest, Old Boy, D. F., Bath Dan, Rugbeensis, are correct. All others are wrong.

*** The replies to numerous Correspondents are deferred, from want of room.

PROBLEM No. 492.
By W. BIGLAND, Esq.

BLACK.



WHITE.

White, moving first, to checkmate in four moves.

CHESS BY CORRESPONDENCE.

The following short, but interesting Contest has just terminated between the Chess Clubs of Cambridge and Northumberland:—

(King's Bishop's Gambit.)

WHITE. (Cambridge.)	BLACK. (Northumberland.)	WHITE. (Cambridge.)	BLACK. (Northumberland.)
1. P to K 4th	P to K 4th	11. P to K 5th (d)	Q B to K Kt 5th (e)
2. P to K B 4th	P takes P		
3. B to Q B 4th	Q to K R 5th (ch)	12. R P takes K B P	K Kt takes P
4. K to B sq	Q Kt to Q B 3rd (c)	13. K R P takes P	Q B takes Kt
5. P to Q 4th	P to Q 3rd (b)	14. Q takes B (f)	Kt takes Kt
6. Q K Kt to Q B 3rd	P to K Kt 4th	15. Q takes Kt	Q takes Q B P
7. K Kt to K B 3rd	Q to K R 4th	16. B takes P	Q takes Q Kt (g)
8. Q Kt to Q 4th	R to Q sq	17. R to Q sq	Kt to K 2d (h)
9. P to K R 4th	P to K R 3rd (c)	18. Q to K 4th	Q to Q Kt 5th (i)
10. K to K Kt sq	Q to K Kt 3rd	19. Q B to K 5th, And Black surrendered.	

(a) Major Jaenisch has alluded to this variation in the May number of the *Chess-player's Chronicle*, and presents a variation, to prove that it involves the loss of the Gambit Pawn. However this may be, it is certainly surprising that the move should have attracted so little attention, as it is unquestionably more sound than that which the first player has at command, when the Gambit is declined, especially if Black instead of taking the Pawn, should play Q to K B 3rd.

(b) This appears to have been an error. They should rather have played P to K Kt 4th, we believe.

(c) We should have preferred moving the K Bishop to K Kt 2nd.

(d) White plays the attack with great spirit and accuracy. The present is a strong move, and effectually locks up the Pawns on the Black King's side.

(e) A note worthy variation comes here if Black, instead of the move in the text, should play the K Kt Pawn to Kt 5th, by the following moves:—

11.	P to K Kt 5th
12. Q Kt takes P or K B 4th	Q to K B 4th

If White now moves away the Kt which is attacked, Black may win also the K Pawn with Pawn, and will have the better game. White's only move the other is—

13. B to Q 3rd	Q to Q 2nd	14. P takes Kt	P takes K Kt P
14. P to K 6th	Q to K sq	17. R to K R 2nd	
15. P to Q 5th	P takes Kt		

If now 17 (Black) B takes K P, White may capture the Q Kt Pawn, and then take Pawn with Rook, threatening to win a piece afterwards by playing Rook to K 7rd sq; and (Black) if Kt P takes P or (to stop it) R P, White can take the Pawn with Rook, and will apparently maintain his troublesome King's Pawn.

(f) A still more interesting variation presents itself at this point. Suppose Cambridge to have played—

14.	Kt takes K B P	B takes Q
15.	Kt takes Q	P takes Kt (best)
16.	R takes B	K Kt to Q 3rd

White is inferior in force, but has what many would deem a counterpoise in position.

(g) The two last moves of Black are very ill-advised, and irretrievably compromise the North-umberland players' game.

(h) It is very difficult to find any satisfactory move for Black at this stage. Q to Q B 7th, attacking the Rook, would have been answered by Q K to K 4th; and then, if the Q retired to K Kt 2rd, followed by R to K 6th with an overwhelming attack.

(i) The Northumberland players soon have to have seen upon the principle that "sudden extinction is preferable to lingering torments." They had, however, no means of doing more than prolong the contest.

CHESS IN ITALY.

This sparkling little Gambit was played in Rome between Mr. BROOKE GREVILLE, one of our best players, and Signor LUCHINI, one of the chief masters of Italy.

(Evans's Gambit.)

WHITE (Sig. L.)	BLACK (Mr. B.)	WHITE (Sig. L.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	14. Q takes Kt	P to Q 4th
2. Kt to K B 3rd	Q Kt to Q B 3rd	15. B to Q 3rd	B takes K P
3. B to Q B 4th	B to Q B 4th	16. P to B 5th	B to Q 2nd
4. Castles—K to R sq	P to Q 3rd	17. Q to K 5th	Q to K B 3rd
5. P to Q Kt 4th	B takes Q Kt P	18. Q Kt to Q B 3rd	Q Kt to his 5th
6. P to Q R 3rd	B to Q R 4th	19. B to Q Kt sq	B takes Q P
7. P to Q 4th	P takes P	20. Kt takes Q P	Kt takes Kt
8. P takes P	B to Q Kt 3rd	21. B takes B	Q takes B
9. B to Q Kt 2nd	Kt to K B 3rd	22. P to B 6th	Kt takes K B P
10. K to his 5th	Castles	23. R takes Kt	P to K Kt 3rd
11. P to K B 4th (b)	P to K R 3rd	24. Q to K B 3rd	Q takes Q R
12. P to K 6th	Kt to Q 2nd	25. Q to K B 5th	B to K B 4th
13. P to K 6th (c)	P takes Kt	26. R takes B	P takes R
		27. Q takes K B P	Q to K Kt 2nd
		And White surrendered.	

(a) The Italians, it will be remembered, claim the license of castling thus, or in our way.

(b) Casting a *Hibernian* is an undoubted advantage in the Gambit attacks, from the facility it affords for advancing this Pawn.

(c) Ingenious; but Black gets the best of the manœuvring here.

THE POST-OFFICE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

AS I believe that many of the subscribers to your paper are unwittingly sufferers from the below-mentioned Post office regulation, I beg to call their attention to it. "All newspapers addressed to the Colonies must be posted *within* one week from the date of their publication, or otherwise they are destroyed at the General Post-office." My family have been in the habit of forwarding the ILLUSTRATED LONDON NEWS to a relation in Australia every week, and have received intimation that the papers have missed for months. Unless a mail is immediately about to sail, I should say the papers are usually quite a week old before they are posted; under the above order, we gather what their fate has been. Surely the Post office authorities ought to take some pains to apprise the public of their proceedings in this matter, especially as they require a stamp upon all these papers; otherwise they lay themselves open to the charge of receiving money for services unperformed.

Apologising for troubling you, I am, &c.,

A VICTIM TO THE OBSCURE DEALINGS OF THE POST-OFFICE

July 6th, 1853.

MEDICAL BENEVOLENT COLLEGE.

THE foundation-stone of a new College for the reception of decayed medical men and their widows, and for the education of their children, was laid on Wednesday by the Right Hon. Earl Manvers, President of the Institution—in the absence of H.R.H. Prince Albert, who was prevented from being present by indisposition; Mr. Propert, the treasurer of the society, announcing that his Royal Highness had been attacked with measles the previous evening.

The building will be pleasantly situated at Epsom, about a mile from the railway station, and only a short distance from the main road leading to the Downs. The Asylum is to be erected in the third pointed style, of brick, with stone facings. It will form three sides of a quadrangle; the front being nearly 1000 feet in length, and comprising a common hall, school-room, apartments for the wardens and other officers, and the pupils. The wings are to be divided into suites of three apartments, each with all necessary conveniences for the inmates: accommodation being provided for one hundred—decayed medical men and the widows of medical men, who must be in the possession of an income of at least £15 a year; it being hoped, however, that the funds will shortly admit of accommodation being also afforded to the entirely destitute. The school is intended for the reception of one hundred pupils; the great majority of whom are to pay for their board and education £25 or £30 a year, on the plan of the Royal Naval School; the remainder being orphans, who are to be wholly supported from the funds of the society—it being necessary in every case that the pupils should be the children of regularly-qualified medical men. The building, when completed, will also comprise a chapel; but it is not included in the present contract, which is for £22,000, and only forms about two-thirds of the frontage.

The ceremony of laying the foundation-stone having been performed with the accustomed ceremonies, about 180 ladies and gentlemen sat down to a dejeûner in a tent prepared for the purpose; and the subscriptions of the day, including about £800 laid on the stone in purses by ladies, amounted to nearly £3000. Earl Manvers subscribed £52 10s.; Sir R. H. Horne, £100; Mr. Wintborne, £526; the London and Brighton Railway Company, £100; and Dr. Forbes, £100.

The College has only been projected about two years; and already —principally through the exertions of one gentleman, Mr. Propert, the founder of the Institution—upwards of £20,000 have been collected; leaving, however, yet much to be done for its proper foundation.

The College, which is engraved upon the next page, is building by Mr. Glenn, of Islington; the architect being Mr. Clifton, of the Excise-office, Broad street

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Minor Canonry:* The Rev. J. F. Clark, to, in Gloucester Cathedral. *Rectories:* The Rev. F. H. Du Boulay, to Headington, near Caine, Wilts; the Rev. J. Marsh, to Tingewick, near Buckingham; the Rev. J. Moore, to Kilverstone, near Thetford, Norfolk; the Rev. C. Robinson, to Bishop Burton, near Beverley; the Rev. L. Thomas, to Eglwys-Brewis, near Cowbridge, Glamorganshire; the Rev. A. Bond, to Preston, near Ipswich, the Rev. S. Walton, to Pennington; the Rev. J. Prior, M.A., to Kirkharton, near Bedale. *Vicarages.* The Rev. W. J. Clarke, to Eagle, Lincolnshire; the Rev. R. W. Gleadowe, to Neston, Cheshire; the Rev. F. Westmoreland, to Leominster, Herefordshire; the Rev. R. Wynne, to Cheadle, near Leek, Staffs.

MARGARET PROFESSOR OF DIVINITY AT OXFORD.—The Rev. C. A. Heartley, B.D., was chosen for this professorship on Saturday last.

TESTIMONIALS.—A silver salver has been presented to the Rev. R. Eddie, on his resigning the Curacy of Middleton-on-the-Wolds, near Beverley. The Rev. L. L. Nesbitt, has received a testimonial of respect from the parishioners of Barnsley, Gloucestershire.

ROCHESTER CATHEDRAL.—The Bishop has issued a formal citation to the Dean and the other members of the Church, to attend a visitation of the Cathedral, on Tuesday next (the 12th), to be holden in the chapter-room, in conformity with the requirements of the statutes. Such an event has not occurred during the last twenty years, and only once during the last forty years.

THE AZTEC CHILDREN.

We have been favoured with a visit from these two children, who have recently arrived in London from the United States. They were introduced to the Queen, on Monday last, at Buckingham Palace; there were present at the interview the Prince of Wales, the Princess Royal, and the Princess Alice, the Prince and Princess of Prussia, the Duke and Duchess of Saxe-Coburg, Prince Hohenlohe, the Countess of Mountedgcumbe, and many leading ladies of the Court. So interested was her Majesty that she remained with the "Aztecs" for nearly an hour, and previous to their departure expressed herself much gratified with their visit.

Professor Anderson, by whom the children are accompanied, has arrived at the conclusion that the boy is seventeen years of age, and the girl eleven. The boy is the type of the pair: his retreating forehead and strongly-marked acquiline nose give his head a bird-like appearance; the upper jaw projects, while the lower jaw recedes; and the countenance produced by this strange combination of features is, at the first glance, idiotic; but the boy's large and bright eyes bespeak great intelligence, and glisten at the sound of music; and the visitor who sketches any object upon paper with pencil is sure to attract the little fellow's curiosity, indeed, he is generally restless, and, by his looks, of a strongly inquiring turn. The hair is black and glossy, and falls in small ringlets—somewhat reminding one of the sculptured Assyrian hair. The girl has the same characteristics, less strongly marked than in the boy; and her features are more of the Jewish cast than are those of her companion. She is very playful, and fond of being noticed: she sat for several minutes upon our knees, and seemed nothing loth to do so; but, we were informed that she is more irritable than the boy, and, when in a passion, is extremely violent. The complexion of both is dark, similar to that of a Hindoo.

These children are stated to have been brought from the place of refuge chosen by the Aztecs, when driven from Mexico by Cortez; and it is added that they are among the last surviving relics of that ill-fated race. The remarkable fact, with whose history we have recently been made familiar by the researches of Mr. Prescott and Mr. Stephens. The children certainly resemble very closely sculptured figures of Aztec origin; and they are said to have recognised a Mexican work which was shown to them during their stay in New York. The boy is some three feet in height; the girl is less, and, it is said, weighs only seventeen pounds. This smallness of stature is accounted for by a well-known cause of degeneracy namely, a prohibition against marriage with strangers, or members of an inferior caste. It is the case in India, which would rank like that of the Brahmins in India, that the children are assigned; and, so rare have the individuals of this race become, that it is said they have been advanced from the position of priests to that of gods—no very difficult advance under a system of theocracy. Their diminutive stature may justify the children being termed "Lilliputians," but we had rather that a fabulous name had not been applied to the children who are referred to in illustration of a great ethnological and historical question.

Next week the Aztec Children will be publicly exhibited at the Hanover-square Rooms. Meanwhile, we quote a portion of the statement of their history, which has been published by the exhibitors.—

In 1845, Mr. Huertis, of Baltimore, and Mr. Hammond, of Canada, attempted to explore Central America. They arrived at Belize in the autumn of 1848, and, turning south-west, arrived at Coban on Christmas-day. They were there joined by Pedro Velasquez of San Salvador, a Spaniard. From Coban they proceeded in search of the ancient city. From Velasquez alone is any account of their travels to be obtained. Huertis and Hammond have never returned to their friends. According to the statement of Velasquez, on the 19th of May they reached the summit of the Sierra, at an altitude of 9950 feet, in lat 15 deg 48 min. N., and behold in the distance the dome and minarets of a large city, apparently of an Egyptian character, and about twenty five leagues from Coban, in the same latitude, and in the direct course of the river Lacantun. The city they eventually reached was found to be a place of vast proportions, with heavy walls and battlements, full of temples, gigantic statues, and Pagan paraphernalia; the people having Peruvian manners combined with Assyrian magnificence, and bound to remain within the walls, seeking no intercourse with the world around. The name of the city is Izmaya. The travellers were informed that white men had previously entered it, but that no white man had ever returned. Hammond and Huertis were both slain—the former in entering the city, the latter in endeavouring to make his escape. Velasquez, being more wary, halted his captors into security, and not only escaped himself, but brought with him two children belonging to the priests—the two now in this country.

The Portraits on the following page are from a Daguerreotype. We are anxious to hear the opinions of *savans* as to these children; more especially as the science of ethnology is now a popular study.

THE MEDICAL BENEVOLENT COLLEGE, EPSOM, FOUNDED ON WEDNESDAY LAST.—(SEE PRECEDING PAGE.)

OPENING OF THE NEW STAND-HOUSE ON THE CURRAGH.

(From our own Correspondent)

THE opening of the new Stand-house on the Curragh, recently erected by the Great Southern and Western Railway Company, was an event such as is seldom witnessed in the Sister Country. Irrespective of the company who usually attend the Curragh Meetings, there was an assemblage of rank and fashion, which upon this occasion was more than ordinarily brilliant. The Lord-Lieutenant and the Countess St. Germans, accompanied by several noble and distinguished visitors, honoured the meeting with their presence; and nothing was wanting but a little more propitious weather to render the day one of the most memorable in the history of Ireland since the visit of George IV.

The circumstance of the Directors of the Railway Company having issued a large number of invitations to the *élite* of the nobility and gentry of Dublin, and the adjoining counties, to meet the Lord-Lieutenant at a magnificent déjeûner, given to celebrate the inauguration, also proved an additional attraction; and, in order to accommodate the throng of visitors, two large trains were started from the King's-bridge terminus, both of which were filled to repletion.

The Viceregal party were conveyed in a special train, consisting of the exceedingly tasteful state carriage, belonging to the Company, and several first-class carriages, drawn by a powerful engine, which was profusely adorned with bouquets of flowers and flags. Their Excellencies were accompanied by Lords Howth and Bective, the Hon. Mr. Elliot; Sir E. Macdonnel, Chairman of the Board of Directors; Alderman Roe, Mr. J. Pennefather, and other directors. Mr. Dargan was also with the party. A body of the constabulary was stationed as a guard of honour on the platform, to receive the distinguished visitors on their arrival, and to escort them to the Stand house.

The building which our Engraving represents has been erected by the Railway Company, with the consent of the Turf Club, instead of certain works they were bound to execute in consequence of the line running through the Curragh: the building is large and commodious, and is admirably suited for the purposes for which it was designed. It stands in a commanding position, so that a complete view of the entire course can be obtained from its balconies, which are conveniently arranged. The attendance of the country people, however, was by no means large; nor was there a tithe of the ordinary concomitants of a race-course in England—the handsome vehicles, the queer traps, the originality of character, the vast conflux of money-spending power, in fact the middle-class substance, which so largely predominates on these occasions with us, and which may be termed the life and soul of them.

The course, which is remarkable for its beauty and extent, was well kept by a body of the Dublin police; and, during the intervals between the races, the bands of the 1st Dragoon Guards and the 90th Infantry performed selections of first rate music. The rough and gusty weather, however, threw a gloom over the sport; in other respects there was nothing wanting to render it an enjoyable event.

THE AZTEC CHILDREN.—(SEE PRECEDING PAGE.)

After the first two races, the Viceregal party and the general company were conducted to the old Stand-house, in which the déjeûner was served in admirable style. Sir Edward M'Donnell presided. On his right was seated the Lord-Lieutenant, the Earl of Howth, &c.; and, on his left, the Countess St Germans, the Marquis of Waterford, Earl of Bective, &c. Breakfast being over, the Chairman rose, and proposed "The health of our Majesty," which was drunk most cordially. The next toast given was "The Lord-Lieutenant," who acknowledged it in a suitable and grateful reply. The Lord-Lieutenant then proposed the health of Sir E. M'Donnell; who was equally prompt in returning the compliment, by drinking the health of the Countess St. Germans, which was responded to by the Viceroy. The next honoured guest was the Marquis of Waterford, who closed the scene in a terse and suitable reply. Their Excellencies soon after took their departure, and were conveyed to town by the special train; the mass of visitors returned to the New Stand, the weather having cleared up, to witness the remaining races, after which they were conveyed to Dublin by two trains. The whole affair was admirably managed, and too great praise cannot be given to the directors, especially to Mr. Ilberry, whose attention and tact were uniformly admired.

The following is an account of the running:—

TUESDAY.

The Scurry Stakes was won by Lord Waterford's Redmond O'Hanlon.
The Sweepstakes, by Mr. Rynd's colt, Summer-hill.
Her Majesty's Plate of 100 guineas for 3 and 4 years old, by Mr. Watts' Chit chat.
Railway and Turf Club Free Handicap, by Lord Waterford's Redmond O'Hanlon.
Match for 500 sovs, 200 forfeit (gentlemen riders), by Mr. Gray's Clairvoyante, rode by Major Bell.

WEDNESDAY.

Her Majesty's Plate of 100 guineas, by Mr. Copperthwaite's colt, Deformed.
The Nursery Stakes, by Mr Copperthwaite's Early Bird.
The Scurry Corinthian Stakes, by Lord Waterford's Lambay.

THURSDAY.

The Sweepstakes, by Mr Rynd's Summerhill.
Her Majesty's Plate of 100 Guineas, by Mr. Watts's Hunting Horn.
The Stewards' Free Handicap, by Mr. Quin's Fuze.
Match (gentlemen riders) for 50 sovs, by Mr. Anderson's Arab Robber.
The Maiden Stakes, by Mr. Reilly's Roxburgh.

FRIDAY.

Match for 100 sovs, by Mr. Copperthwaite's Ellen Tree
Her Majesty's Plate, by Mr. Atkinson's Psaltery.
The Sweepstakes, by Lord Waterford's Redmond O'Hanlon.
The Stewards' Stakes, by Mr. Moore's Oastfrage.

OPENING OF THE NEW RACE-STAND ON THE CURRAGH OF KILDARE.

SALE OF FANCY-WORK IN THE GROUNDS OF HARLESDEN HOUSE, FOR THE BENEFIT OF THE UNITED SOCIETY FOR IRISH CHURCH MISSIONS.

UNITED SOCIETY FOR IRISH CHURCH MISSIONS.

ON Tuesday and Wednesday (last week) the very pleasant grounds of Harlesden House, Willesden (the residence of Captain Huish, the general manager of the London and North-Western Railway), were thrown open for the benevolent purpose of aiding the funds of the United Society for Irish Church Missions. This was sought to be accomplished by the sale of some beautiful fancy work, for which purpose eight marquees were erected on the lawns; and the conservatory was fitted up for the display of the costly articles

The Sale was got up under distinguished patronage; and a large number of the nobility and neighbouring gentry were present. Among the ladies who took stalls were the Marchioness of Ormonde, and that great friend to Ireland, the Countess of Eglinton; Lady Vivian, the Ladies Boyle, Lady M'Caskill, Lady Valiant, Mrs. Huish, Mrs. Swift, Mrs. Carbonell, Mrs. Hamilton Cooke, Mrs. Denham, and Mrs. Hodge, and there were present in the grounds—the Countess of Albemarle, Lady Radstock, Lord and Lady Clinton, the Baroness North, Lady Lurgan, the Countess of Desart, the Marquis of Bristol, Sir F. Maitland, the Hon. Charles Howard, the Hon. Miss Waldegrave, &c.

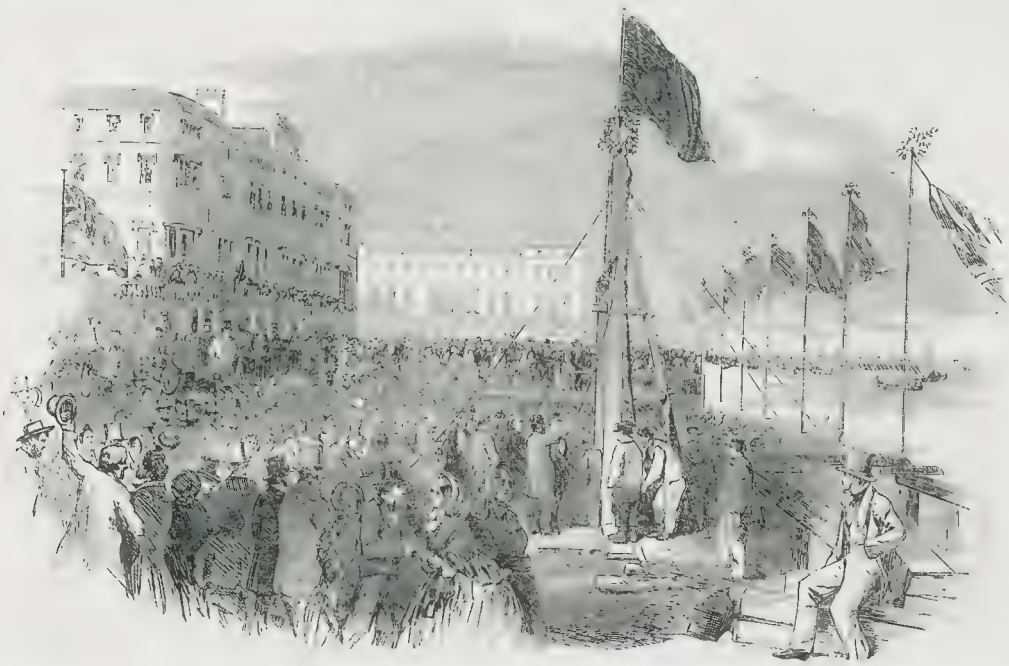
The weather, on the first day of the Sale, was very unpropitious; but we learn that the two days' Sale produced above £800. The grounds were to have been opened a third day; but, in deference to numerous applications, it was decided that the last Sale should be held in WILDE'S Rooms, on a day to be named hereafter. A large amount of work, of the most costly description, remained unsold; so that there will be ample opportunity for a considerable accession to the amount already received. Altogether, the assembly was a brilliant one. The refreshments, supplied by Mr. Withers, were of the best description.

THE WELLINGTON PIER, GREAT YARMOUTH.

THIS undertaking, of so much importance to Yarmouth, and the recreation and convenience of its visitors, has now been fairly commenced; the first pile having been driven by the Mayor (S. C. Marsh, Esq.) on Tuesday, the 28th ult.

Immediately to the south of Kimberley-terrace, and nearly opposite the Victoria Hotel, the pier, in its full length, will extend 623 feet, carrying a broad oaken flooring, protected by ornamental railing; the sea-point terminating in a lateral projection, or balcony, upwards of hundred feet in length from north to south, and capable of accommodating, when necessary—such as on the occasion of aquatic fêtes, &c.—an immense body of spectators. The land entrance will be ornamented with a lodge, and closed by gates, similar to the Lowestoft pier. There will be convenient stairs descending to the water, at about half the length of the new structure; and at the termination will be four flights of similar steps. The pier is to be well lighted.

The necessity of such a structure at this point has long been felt and urged. In 1843, Mr. Charles J. Palmer proposed the erection of a Promenade and Landing-pier in connection with the Victoria-terrace, but sufficient encouragement was not given to the project. The promoters, however, did not abandon the design; and, on the death of the Duke of Wellington, Mr. Charles J. Palmer, in a published letter addressed to the then chief magistrate of Yarmouth, Captain Pearson, R.N., suggested the idea of associating a new pier with the memory of the great commander. The design attracted the notice of Mr Peto, M.P., who expressed his willingness to lend his influence to so useful an undertaking; suggesting that the idea of donations should be abandoned and the funds raised by shares, Mr. Peto being of opinion that the un-



CEREMONY OF DRIVING THE FIRST PILE OF THE WELLINGTON PIER, AT GREAT YARMOUTH.

dertaking would answer as a commercial speculation. The project then proceeded, and hence its name.

The management of the works has been entrusted to Mr. Peter Ashcroft, Engineer of the Eastern Counties Railway Company; and it is calculated that the entire expense will not exceed £3000.

The arrangements for Tuesday were well carried out. The line of the pier was marked out by flags, and, at the highest point inland, a pile had been partially driven, and the huge beams suspended above. Beyond, and nearer the Victoria Hotel, a marquee was erected, from whence a large number of ladies viewed the proceedings; and from this tent a railed or guarded gallery reached to the platform.

The town flags flaunted bravely in the front of the Town-hall, Custom-house, and the Church; and the streets were thronged with spectators. At half-past twelve, the Mayor, accompanied by his friends, walked in procession from the Town-hall up Regent street, along King-street, down St. George's-road, along the Victoria-terrace, at the south end of which the entrance to the Victoria Hotel, a marquee was erected, from whence a large number of ladies viewed the proceedings; and from this tent a railed or guarded gallery reached to the platform.

The ten

The poem of "Faust," on Wednesday, was connected with an inferior cast, in consequence of Devrient's indisposition. The part of *Faust* was undertaken by Dessoir, while *Mephistopheles* fell to the lot of Herr Engelken, who played it but respectably. We were, however, compensated by the character of *Gretchen* being admirably impersonated in Fraulen Fuhr—an actress charmingly supple in her style, and of uncommon promise.

OLYMPIC.

Mr. Talfourd has brought out at this theatre another Shakspearian travestie, and furnished Mr. Robson with another opportunity for illustrating his peculiar style of burlesque. "Shylock, or, the Merchant of Venice Preserved," is the title of the new piece, which, like its predecessors, abounds in recondite puns.

Mr. Talfourd has been exceedingly fortunate in getting this better acted than any of his previous productions. Mr. Robson's genius is unique. In *Macbeth* his burlesque was an exaggeration of the ideal of the character: his *Shylock* simply reduces the Jew to a Holywell-street type, and then trusts the rest to the natural development of passion. In this way, many of his bursts are truly tragic, and might have done credit to Edmund Kean in his best days. The coincidence is so striking as almost to tempt us to a dissertation on affinity between burlesque and tragedy. Is there, after all, but a step from the sublime to the ridiculous?

SURREY.

Meyerbeer's "Robert le Diable" has been a great hit at the above English lyric establishment. The opera has been mounted with remarkable care as to the musical *ensemble*, and the *mise en scène* is splendid. Miss Romer's *Alice* has been long known as one of her best assumptions—musical and histrionic. Her acting in the cavern scene, at the Cross, is admirable. There is much merit in Miss Lowe's *Isabella*; and the *Robert* of Travers and the *Bombaldo* of Mr. G. Bruce are carefully sustained. The *Bertram* of Drayton is quite an important feature in this cast.

HAYMARKET.—Miss Katherine Bell, announced as a pupil of Mr. Sheridan Knowles, appeared on Tuesday as a débutante, in the character of *Julia*, in the "Hunchback." The result was unsatisfactory.

ADELPHI.—"The Camp at Chobham" furnishes the title to an agreeable *pièce de circonstance* at this house.

NATIONAL SPORTS.

NEWMARKET JULY MEETING. TUESDAY.

A very scanty supply of sport, and a thin attendance of company. The weather was warm and sunny.

Handicap Sweepstakes. Petrel, 1. Cheddar, 2
July Stakes.—Maryan, 1. Mirabeau, 2
Match, £80. G. by Dromedary, 1. Cavan, 2.

WEDNESDAY

The sport was short, but interesting; the race for the Handicap Plate—for which, by-the-by, only Newmarket horses ran—producing a dead heat. The attendance of company was thinner than on the previous day.

Town Plate.—Nutpecker, 1. Nervous, 2
Handicap Plate. A dead heat between Sharavogue and Musician. Sharavogue afterwards walked over.
Sweepstakes of 10 sovs.—Mary, 1. Ip by Paragon, 2.
Sweepstakes of 10 sovs.—Chorus, 1. Waverley, 2.

THURSDAY.

Sweepstakes of 10 sovs.—Mirabeau, 1. Conmore and Hazlenut a dead heat for second
£50 Plate.—Dear Me, 1.
Chesterfield Stakes. Spinaway, 1. Brother to Mountain Deer, 2.
Handicap Plate.—Scandal, 1.
Handicap Sweepstakes.—Hazelnut, 1. Azael, 2.

WORCESTER SUMMER MEETING.—TUESDAY

Severn Stakes.—Octavia, 1. Osbaldeston, 2
Two-Year-Old Stakes. Balmoral, 1. Wave, 2.
Worcestershire Stakes.—Inathe, 1. Misdye, 2.
Tradesmen's Handicap.—Oldham, 1. Seeming Partner, 2
Selling Stakes.—Theorem, 1. Prism the Third, 2

WEDNESDAY.

Innkeepers' Stakes.—Lady Townley, 1. Chilton, 2
Flying Stakes Handicap.—Le Juif, 1. Grief, 2
Railway Handicap Stakes.—Warwick, 1. May-day, 2.
Sweepstakes of £10 each.—Mirabeau, 1. Allington, 2.
Ladies' Plate.—Counsellor mare, 1.

CARLISLE RACES. TUESDAY.

The Corby Castle Stakes was won by Garrulity.
The Grand Stand Plate was won by Agnes Wickfield.
The Cumbrian Hunters' Stakes was walked over for by **John Dory**.
A Maiden Plate of 10 sovs was won by Monckton.

WEDNESDAY

Speculation Plate.—Solyman, 1. Mistress Dodds, 2.
Cumberland Plate.—Lady Bawn, 1. Lucy, 2.
Tradesmen's Plate (heats) was not run out, and the stewards decided that the added money be withheld, and all bets are off.

THURSDAY.

Commercial Travellers' Stakes.—Scandal, 1. Solyman, 2.
Her Majesty's Plate.—Red Lion, 1. Gucowar, 2
Lottery Stakes.—Lough Bawn, 1. Friars' Hall, 2.

LANCASTER RACES.—THURSDAY

Handicap Plate.—Filly by Game Boy, 1. Sir Robert, 2.
Lancaster Cup.—Trifle, 1. Allegro, 2.

FRIDAY

Vale of Lune Handicap.—F by Gainsboro, 1. Patience, 2.
Revival Handicap.—Allegro, 1. Jack, 2. Ham, 3.
Her Majesty's Plate—Red Lion, 1. Mirabeau, 2.

LATEST BETTING AT TATTERSALL'S.

LIVERPOOL CUP.

9 to 1 agst Cooranh (taken) | 20 to 1 agst The Alp (taken)
CONSOLATION STAKES.

20 to 1 agst Prince Arthur (taken) | 20 to 1 agst Dervish (taken)

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The great abundance and low value of money, the large arrivals of bullion from Australia and elsewhere, and the activity in all branches of our home and foreign trade, have, in a great measure, counteracted the influence which the somewhat warlike tone of our advices from the East would otherwise have had upon the national and other securities. Since we last wrote a full average business has been transacted in Consols, the prices of which, though they have rapidly fluctuated, have been fairly supported. The leading quotation for the Three per Cents. for the Account, has been 97¾ to 98. On Monday Bank Stock was done at ——; the Three per Cent Reduced marked 98⅝; the New Three-and-a-Quarter per Cents, 101¼ to 102⅝; Long Annuities, 1860, 8 13 16 ⅞; India Bonds, 23s.; Exchequer Bills, 1s to 4s prem.; and Consols, for Account, 97⅞ to 98. Prices were a shade higher, but on Tuesday and Wednesday (On Thursday the market was fixt. The Three per Cents were done 97⅞ to 98⅛, closing at 97⅞ 98. After business hours, owing to a report that the Earl of Aberdeen had left the Cabinet, the price went down to 97¾. The New Three-and-a-Quarter per Cents marked 101 to 101¼; and the Three per Cents Reduced, 98⅛ to 98⅜. Bank Stock was heavy, at 223½; and India Stock, 256; Exchequer Bills were 1s to 4s.; and India Bonds, 22s. prem.

The Board of Trade returns, for the month ending on the 5th of June, are very favourable. As compared with the same month last year, they show an increase in the value of the exports of £1,487,888. The aggregate value of our exports during the first five months of 1853 has been £35 093 824, against £27,730,296 in the like period in 1852; showing an increase of £3,363,528, or 9½ per cent.

The imports of bullion have amounted to £2,500,000 from Australia, £200,000 from Mexico, the West Indies, &c.; and 700,000 dollars from New York. The shipments to the Continent have not been large; but £82 000, chiefly in silver, has been forwarded to the East.

The public are now in the receipt of the dividends upon the Three per Cent Consols.

Money has been very abundant in the Stock Exchange, and advances have been made upon Government securities as low as two per cent. In Lombard-street, first-class business has been done at three per cent.

During the present quarter, upwards of £600,000. will be invested in Stock, on account of the Sinking Fund for the Reduction of the National Debt.

The market for Foreign Bonds has been tolerably firm. The last packet brought only 21 000 dollars for the Mexican dividends. The accounts from the capital are very unfavourable as regards the interests of the bondholders. We understand that £201,000, as the net produce of the guano sales, has been handed over to the Peruvian agent in London. This sum will be retained to pay the interest upon the debt. The amount required for the dividend is £92,000, consequently there is a large sum at the agent's disposal, which will, possibly, be used in the shape of a sinking fund. Brazilian Five per Cents have marked 99 to 100; the Four-and-a-Half per Cents, 98⅞; the New Five per Cents (small), 103; Mexicans, 26⅞ to 27¼; Russian Five per Cents, 116¾ to 117⅛; Sardinian, 89¾; Spanish Three per Cents, 46¾ to 46½; the New Deferred, 22¾; Passive, 5⅜; Certificates, 8⅝; Belgian Four and-a-Half per Cents, 96⅛; Dutch Two-and-a-Half per Cents, 63½; and the Four per Cent Certificates, 94¼; Greek Bonds, Red, 9½; ditto, Blue, 8¾; Cuba, 102¾.

The average weekly circulation of the private and joint-stock banks in England and Wales for the four weeks ending on the 11th of June was £6,759,463, being a decrease compared with the preceding return of £247,695. Compared with the corresponding period in 1852, the increase is £444,066.

A steady business has been doing in Miscellaneous Shares, the value of which has relied steadily. Australasian Bank have marked 78 to 80; English, Scottish, and Australian Chartered, 9⅜; London Joint-stock, 23½; National of Ireland, 2¼ ex div.; Oriental Bank Corporation, 49½ to 50¼; South Australian, 11¾ to 11⅝; Canada per cent bonds, 103; do. 6 per cent do., 116½; do., 114¾ ex. div.; City Navigation, 32; Hudson's Bay, 22¼; Royal Mail Steam, 77.

The market for Railway Shares has ruled tolerably firm. In prices we have no material change to notice. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS. Caledonian, 67¼; Dublin and Belfast Junction, 48; Eastern Counties, 12⅜; Eastern Union, Class A, 11¾; Ditto, B and C, 6¾; East Lancashire, 73; Edinburgh and Glasgow, 71¾; Edinburgh, Perth, and Dundee, 58; Great Northern, 89; Ditto, B Shares, 104½; Great Western, 88¾; Lancashire and Yorkshire, 70½; London and Blackwall, 8¾; London and North-Western, 114¾; London and South-Western, 89¾; Manchester, Sheffield, and Lincolnshire, 29; Midland, 69¾; North British, 33¾; North Staffordshire, 12½; North and South-Western, Hampstead, and City Junction, par; Oxford, Worcester, and Wolverhampton, 48; South-Eastern, 69¾; West Cornwall, 10; York, Newcastle, and Berwick, 68; York and North Midland, 58¾.

LINES LEASED AT FIXED RENTALS.—South Staffordshire, 8¾; Buckinghamshire, 102

PREFERENCE SHARES.—Caledonian, 108; Eastern Counties, 5¾ per Cent Stock, 15; Eastern Union, Six per Cent, 14½; Edinburgh, Perth, and Dundee, Five-and-a-Half per Cent, 1[illegible]; Glasgow, Paisley, and Greenock, Five per Cent, 108; Great Northern, 5½ per Cent, 128; Ditto, five per Cent, Redeemable at par per cent premium, 112¾; Great Western Redeemable, 49; Lancashire and Yorkshire, 5 per Cent, 130; Ditto Irredeemable, Four per Cents, 101; Lancashire and Yorkshire, 5 per Cent, 1[illegible]; Manchester, Sheffield, and Lincolnshire, 5 per Cent Shares, 107; North British, 10½; North-Eastern, 5½; Ditto, 4½ per Cent, 105

"GAVAZZI RIOT," AT MONTREAL.—(SEE PRECEDING PAGE.)

The town, however, has since flourished, and its streets have become every year more numerous, and filled with busy traders.

By the stipulations of the treaty of Adrianople, in 1829, the principalities of Moldavia and Wallachia were occupied by the Russian troops until the payment of the expenses of the war with Turkey. General Kiseleff was invested with the command of the army of occupation, and the government of the principalities; and from this period, according to the Russian accounts, the moral and social regeneration of Moldavia and Wallachia commenced. Situated on the confines of Europe and of Asia, these two provinces had been for many centuries exposed to invasion and devastation, and deprived of the advantages of peaceful and regular government. In the year 1835, Constantinople was threatened by Ibrahim Pacha, and the Porte implored the aid of Russia. Kiseleff, who was then at Jassy, was chosen to command the army, which was to proceed by land to the assistance of that capital, while the fleet of the Black Sea advanced under the direction of Count Orloff. The treaty concluded at St. Petersburg in 1834, stipulated for the evacuation of the Russian troops, and the installation of the Hospodars. The first Hospodar, or Sovereign of Moldavia, was Prince Stourdza, who owed his position to election, and laboured to put in practice the laws of government originated by Count Kiseleff. For these particulars relative to Moldavia and its capital, we are indebted to the "Travels of M. Demidoff in Southern Russia and the Crimea," in two volumes, just published, in an elegant form, at an opportune moment, by Mr. Mitchell, Old Bond-street.

Mr. Urquhart pointed out, years ago, the danger which Wallachia, Servia, and the whole of Turkey ran from the ambitious projects of Russia. Nor is it now for the first time that travellers have observed the attempts of Russia to undermine the fidelity of the subjects of the Sultan professing the religion of the Greek Church, by the claim of supremacy and protection, and the corruption of an ignorant priesthood. By the Treaty of Akermann, Bessarabia was given up to Russia, and with it the command of the mouths of the Danube. Still more recently Russia extended her protection, under the plea of similarity of religion, to the other two provinces, and obtained a declaration of their independence from the Porte, in which Russia and Turkey were named as protecting powers. Moldavia and Wallachia were, by this act, allowed to elect their own princes, to vote and levy their own taxes, and to govern themselves, provided that nothing were done contrary to the interests of the protecting powers. Mr. Paget, in his interesting work "Hungary and Transylvania," asserts that, from the moment this act was signed, Russia has never ceased to endeavour to extend her own influence, and destroy that of Turkey in these provinces; and for several years they have appeared to be in danger of falling into her hands. Bessarabia can only be valuable to Russia because it gives her the command of the mouths of the Danube, and tends to make the Black Sea a Russian lake. Far sighted men have said, that whenever Russia wished to prepare the way for future conquests in the south of Europe, she would take possession of Moldavia and Wallachia, as the high road to Constantinople. These countries have no force which would enable them to resist her invading army a single day. Besides being the pathway for future conquests; there are other reasons why Russia should covet these two principalities: for, while the population number about 1,500,000 souls, the two countries are rich in productions, and fruitful in resources. The land is of the richest quality, and the climate extremely favourable for production.

JASSY, THE CAPITAL OF MOLDAVIA.

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JULY 9, 1853.

THE ILLUSTRATED LONDON NEWS.

No. 633.—VOL. XXIII.] FOR THE WEEK ENDING SATURDAY, JULY 16, 1853. [SIXPENCE.

THE RUSSIAN MANIFESTOES.

WITHIN the last few days three remarkable and important documents have been published in the name, and by the authority, of the Russian Government. The first emanates from the Czar himself; the second is a proclamation from Prince Gortschakoff, the General in command of the Russian forces which have occupied the Turkish provinces of Moldavia and Wallachia; and the third is a diplomatic circular from Count Nesselrode, addressed to Russian representatives at foreign Courts, for communication to the several Governments to which they are accredited.

A similar spirit pervades the whole of these manifestoes. It is difficult to say which of them is the most offensive to Europe, or the most insulting to Turkey. Each bespeaks a foregone conclusion; each considers the peace of the world as depending solely upon the pleasure of the Emperor of Russia—a fact which is unfortunately too true; and each betrays a spirit of rapacious domination to which the other states of Europe cannot submit either with self-respect or with safety.

The manifesto of the Czar claims the first attention. The fanaticism which has latterly developed itself so strongly in the Imperial mind is apparent in every line of it. Nothing less than a holy war or new crusade seems to be intended by the potentate who is head of the Greek Church as well as Autocrat of all the Russias. Although the Christians of all sects and denominations in Turkey enjoy the fullest toleration; although they make no complaints; and although the Sultan, by a firman which does him infinite honour, has confirmed and extended all the pre-existing rights and immunities of his Christian subjects, the Emperor declares himself bound to be their defender and their protector. He states that the "defence of his faith has always been the sacred duty of his blessed ancestors;" and that, "from the day it pleased the Almighty to place him on the throne of his fathers, the maintenance of the holy obligation with which it is inseparably connected has been the object of his constant care and attention." He accuses the Porte of numerous acts of wilful infringement of Christian liberty, "that threaten finally the entire overthrow of the ancient system so precious to orthodoxy;" and, at the same time, charges the Sultan with having "faithlessly broken his word." The Emperor, however, does not specify in what these acts and this alleged breach of faith consisted. Disclaiming all intention of conquest, he offers to withdraw his armies upon certain conditions, which he knows the Sultan cannot accept with any regard to his own honour, or to the independence of his dominons, and threatens "that if obstinacy and blindness will it otherwise, he will call God to his aid, leave it to Him to decide the quarrel, and in full confidence in the right hand of the Almighty, move forward in the defence of the Orthodox faith."

Before commenting upon this impudent, if not impious, avowal of an intention to coerce and conquer Turkey, we must consider the military and diplomatic documents which support and explain it. Prince Gortschakoff, as might have been expected from a military leader, is as precise, emphatic, unreasonable, and dictatorial as his master. He states that "the Emperor, in his magnanimity, *will avoid an offensive war against Turkey as long as his dignity and the interests of his Empire will allow him to do so.*" The dignity of the other Powers of Europe and the mighty interests of civilisation are not at all to be considered. It is a personal question from first to last. The Muscovite Colossus is to bestride the world as he pleases, and smaller nations are to creep under his huge legs, and to humbly implore that he will be graciously pleased not to trample upon them. But it is in the circular of Count Nesselrode, that the insolence and *mala fides* of the Czar and his agents are most flagrantly displayed. This circular contains a summary of the whole dispute between the Emperor and the Sultan; coloured, of course, with the Russian colour, and with the refractions and distortions which we owe, not to the facts, but to the medium through which they are presented. Count Nesselrode attempts to conceal that the occupation of Moldavia and Wallachia was meditated, if not arranged, long before Prince Menschikoff set out for Constantinople; and would fain make the world believe that Great Britain and France are mainly if not entirely to blame for this act of hostility. "In presenting an ultimatum to the Porte," says the Russian diplomatist, "we particularly informed the great Cabinets of our intentions. We more especially notified to France and Great Britain, not to complicate by their attitude the difficulties of the situation, and not too soon to take measures which on the one hand would have the effect of encouraging the opposition of the Porte, and which on the other would implicate still more deeply the honour and dignity of the Emperor." Such a notification, though Count Nesselrode does not seem to be aware of it, was an insult to the British and French Governments; and his confession of it shows, as plainly as human language and acts can do, the position which the Emperor is desirous to assume; and the small account he makes of the rights and the interests, to say nothing of the "dignity" of powers, that are quite as much entitled to stand upon their dignity as he is. But the worst is yet to come. "The two maritime powers," says M. Nesselrode, "have not thought fit to defer to the considerations which we recommended to their serious attention. Taking the initiative before us, they judged it indispensable to anticipate immediately, by an effective measure, those which we had announced to them as simply eventual. They at once sent their fleets to the Constantinople

OPENING OF THE BLACK SEA, FROM THE BOSPHORUS.—SKETCHED FROM THE GIANT'S HILL.—(SEE NEXT PAGE)

waters; and occupied the waters and ports of the Ottoman domination, within reach of the Dardanelles."

M. de Nesselrode cannot forget, though he deems it politic to conceal, that Turkey has a perfect right to invite the fleets of her allies into the Turkish seas; that her allies have a perfect right to accept the invitation; and that Russia has no right, moral or legal, to send her armies into the provinces of her neighbour—unless indeed, the right of the "strong arm" be held to include all rights—in which case the world would speedily relapse into barbarism. It is in vain that Russia attempts to justify her own preconcerted act of offensive hostility, by the strictly legal and defensive act of England and France; and it is in vain for her to expect that the public opinion of Europe is so blind and foolish as to entertain the belief that if the British and French fleets had not approached the Dardanelles, the armies of the Emperor would not have crossed the Pruth or menaced the Danube. Common sense is not extinct in the West; and the statesmen of London and Paris are not afflicted with so deplorable a fatuity as to be deceived by such assertions. The whole of these state papers lack even the merit of good special pleading. Never in modern times has so bad a cause been so badly defended. M. de Nesselrode is fairly entitled to the pre-eminence of being the worst logician of the three. Having more to say, he made more blunders—a consequence that generally follows when a second or third-rate advocate attempts to make the worse appear the better reason.

There is, however, one passage in the diplomatic note which, taken by itself, might excite a faint hope that the Emperor may yet reflect on the fearful mischief which it is in his power to cause or to prevent.

We have said it, and we repeat it (says M. de Nesselrode) that it is no more the wish of the Emperor to-day than it was his wish in the past to overthrow the Ottoman Empire, or to aggrandise himself at its expense. After the very moderate use he made in 1829 of his victory of Adrianople, when that victory and its consequences placed the Porte at his mercy; after having, alone in Europe, saved Turkey in 1833 from inevitable dismemberment; after having in 1839 taken the initiative with the other powers in the propositions which, executed in common against, prevented the Sultan from beholding his throne make place to a new Arabian empire—it becomes almost insidious to give proof of this truth. On the contrary, the fundamental principle of the policy of our august master has always been to maintain as long as possible the actual *statu quo* of the East. He wished it, and still desires it, because much is definitively the best interest of Russia, already too vast to need an extension of territory; because, prosperous, peaceful, inoffensive, placed as a natural mediator between powerful neighbours, the Ottoman Empire arrests the shock of rivalries which, if it fell, would rush against each other to fight for its fragments; because human foresight vainly endeavours to discover the combinations best calculated to fill the vacuum which the disappearance of that great body would leave in the political balance.

All this is true, and admirably said; but the next sentence destroys the favourable sensations which it is calculated to create —

But if such (adds the circular) are the real, avowed, sincere views of the Emperor, that he may remain faithful to them, it is also necessary that Turkey should act towards us in a manner to offer us the possibility of co-existing with it. Let it respect our private treaties, and the consequences derived from them; let not acts of bad faith, secret persecutions, perpetual vexations against our worship, create a situation which, intolerable at last, would oblige us to trust the remedy to the blind chances of hazard.

"If such (we all know the value and virtue of an IF) are the real and sincere views of the Emperor," a war may yet be averted in Europe; but the expression of these sentiments neither accords with his past reasonings, nor with his present acts. It is because we disbelieve in the sincerity of the Czar, and because a solution of all the difficulties of the question would be easy even now if war had not been his object from the beginning, that we rejoice to see England and France, determined to uphold, at all risk and cost, the independence of the Turkish Empire. No one in any part of England wishes for a war; but the best way to avoid war, when there is such a man as the Emperor of Russia to deal with, is to be fully prepared for it.

OPENING OF THE BLACK SEA FROM THE BOSPHORUS.

On the preceding page will be found a View, taken from the Giant's Hill, representing the Opening of the Black Sea from the Bosphorus. There are three corvettes on the European side, and two small steamers on the Asiatic side, nearest to the spectator. These vessels may be considered as the advanced ships of the Turkish fleet, and the Sketch may be considered as a continuation of the view of the Turkish fleet in our last week's Number. The incomparable channel of the Bosphorus, which commences at the spot illustrated by our Artist, is one immense panorama extending on both sides of the vessel for a distance of five leagues, studded with forts, towns, villages, and palaces. The eye grows weary with following out the splendid landscapes and admirable prospects alternately revealed and shrouded from the sight. As the traveller advances nearer to Constantinople, the houses become more numerous, until at last they present a complete row of brilliant and fanciful edifices. At length a mass of red roofs, varnished panels, gilt bands, rounded walnut trees, ancient cypresses, and white spires of the mosques heaped together in the most picturesque disorder, announce to the traveller that he has reached the enchanting city of Constantinople.

NAVAL AND MILITARY INTELLIGENCE.

Portsmouth.—The *Duke of Wellington*, 131, screw steam line-of-battle-ship, Capt. H. B. Martin, C.B., steamed away from Spithead early on Tuesday morning, on a trial cruise to the westward. Her speed, from her anchorage to Portland Bill, averaged 10½ knots, but she proved to be lightly supplied. The remainder of the fleet are still at Spithead. —The *Neptune*, 120, Capt. E. H. Scott, is ready for orders to move, but it is not expected she will change her present moorings unless the fleet leaves Spithead.

Naval Coast Volunteers.—The bill just brought in by Sir James Graham proposes to empower the Admiralty to raise 10,000 men, to be called the "Royal Naval Coast Volunteers," for any time to be entered for five years, and trained and exercised on shore and ship, and in case of invasion or imminent danger called into service; and, in that event, seafaring men in public departments are to be liable to serve in the navy.

The New Screw Fleet.—The following is a list of the new screw fleet, and the ports at which they are to be built: LINE-OF-BATTLE SHIPS: *Conqueror*, 81, Chatham; *Repulse*, 80, Pembroke.—FRIGATES: *Forte*, 50, Deptford; *Topaze*, 50, Devonport; *Aurora*, 15, Pembroke.—SCREW CORVETTES: *Pearl*, 20, Woolwich; *Pylades*, 20, Sheerness; *Esk*, 20, Millwall.—SCREW SLOOPS: *Racer*, 16, Deptford; *Falcon*, 16, Pembroke; *Ariel* 8, Pembroke. Total addition to the screw fleet, 12 ships, to mount 580 guns.

Major-General Sir Joseph Thackwell, G.C.B., whose tour of duty has just expired in India, arrived at Southampton last week, where he received every attention from the authorities. This gallant officer has held high commands in all the armies actively employed in India since 1808, and particularly distinguished himself at the battle of Sobraon and other actions in the campaigns against the Sikhs. He served throughout the Peninsular war, and lost an arm at Waterloo. (A portrait of Major-General Sir Joseph Thackwell, appeared in the ILLUSTRATED LONDON NEWS, No. 353.)

Monument to the late Sir Walter Raleigh Gilbert.—On Thursday, a meeting of the friends and admirers of this late gallant officer was held at White's Rooms, and was attended by the Commander of the Forces, and several other distinguished Generals; when it was resolved to collect subscriptions in England and in the East Indian Presidencies for the erection of a monument on which to inscribe his military virtues and achievements.

Enlistment of a Young Nobleman.—The Marquis and Marchioness of Londonderry have been greatly annoyed by a very foolish act on the part of their youngest son, Lord Ernest Vane, who, after having had a serious quarrel with a clergyman with whom he was a private pupil, in the neighbourhood of the Andover-road station, came to London on Thursday last, and adopted the absurd alternative of enlisting in a dragoon regiment (4th Royal Irish). The young Lord has since been restored to his friends, and sent to a military academy.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent)

Paris, Thursday.

The papers say so little respecting the plot of the Opéra Comique, or treat it so lightly, that the public, both here and elsewhere, have very little idea of its extent and gravity, which are, in reality, of a nature to excite the utmost uneasiness, and to call for all the attention and vigilance that it is possible to exercise. The following details we give on authority which leaves no doubt as to their authenticity. On the night of Tuesday, the 5th inst., a number of persons, armed with pistols and poignards, were stationed in different parts of the Opéra Comique, with the intention of assassinating the Emperor, when a convenient occasion should present itself. The appearance of a pistol point projecting from the pocket of one of the conspirators led to the detection of the whole affair. Seventeen persons were arrested one a surgeon, with his case of instruments: an eighteenth has been subsequently seized; and, on Monday, another was taken near Moulins. These, it is believed, are all, or nearly all, of those who were in the theatre, with the intention of taking an active part in the assassination; though it is impossible to say how many more were to follow up the step. It appears that the intention was, had the plan succeeded, for a whole mass of the conspirators to take possession of the body of the Emperor, and parade it through the streets, with cries of "Vive la République!" and a number of placards ready printed, thus headed and banners with Republican mottoes were discovered by the police in their researches. It is believed that this plot, the ramifications of which are evidently prodigious, originates with the Legitimists and Orleanists, who put forward as catspaws a certain body of turbulent and exaggerated Democrats, who have as little in common with the calculating Republicans of Cavaignac as they have with the Royalist partists. As may be supposed, these events cause a general sensation of alarm and uneasiness among all classes and opinions, as none but the most unworthy, whatever may be their politics, can regard without reprobation and horror, a state of things so terrible in its progress and results. Nothing is yet known of the measures to be pursued towards the persons arrested, nor is it probable that much will transpire on the subject, every means being pursued, with the policy now always adopted on these occasions, to keep all details concerning the whole affair as much in the dark as possible.

A further cause of uneasiness is the tone of the manifesto of M. de Nesselrode, which, in the insolent mode of expression adopted with regard to England and France, tends to destroy the hope so long cherished that the Turkish question would result in tranquility. This hope is not yet abandoned; but it is greatly weakened, even among those who held to it the most confidently before the appearance of the document in question.

Notwithstanding these events, no change is as yet announced respecting the intentions of the Emperor and Empress to undertake the journey to the Eaux-Bonnes. The Comte Edgar Ney and the General Cotte, two of the Imperial aides-de-camp have already arrived at Tarbes, on their way to the Pyrenees, to make preparations for the arrival of the expected guests, whose departure seems decided for the 20th inst.

A report, originating from St. Cloud, states that the Empress is again in a condition to fulfil the earnest desire of the *Chef de l'Etat*. If this be true, it may, perhaps, influence his plans as to the projected excursion.

As may however, be supposed, Paris, *pour se distraire* in the midst of all these grave pre-occupations, finds means to amuse herself, even in the heart and heat of the, the dead season, when we are assured "nobody is in town." The Bal d'Artistes, given last week at the Jardin d'Hiver was got up with the utmost *luxe*, taste, and brilliancy, and was remarkably well attended.

The Paris Journals express doubts as to the part Austria is playing in the Russo-Turkish dispute. She is suspected, notwithstanding her offers of mediation, to be secretly the ally of the Czar of the Czar, in the hope that, thereby, she may ultimately gain Servia and Bosnia. The *Constitutionnel* of Wednesday had a warlike article, which rumour attributes to the imperial Foreign office. Our Paris contemporary, after remarking on different parts of the note, says

M. de Nesselrode well knows that the presence of the fleets in Besika Bay does not constitute, on the part of England and France, a maritime occupation of a part of the states of the Sultan. He is well aware that France and England ask nothing from Turkey, and that it is not against her and to her injury that the ships approached Constantinople. M de Nesselrode, moreover, knows very well that, far from being within sight of the capital of Turkey, the fleets, from a feeling of moderation which does honour to France and England, abstained from entering the Straits of the Dardanelles and remained in the open roads of the Archipelago. All the sophistry in the world will not, therefore, make it appear that the sending of the fleets to Besika Bay was other than the consequence of the threat of occupation by certain day, which threat was very punctually executed; and when the Russian note, interpreting all characters and trampling facts under foot, represents the occupation of the Ottoman provinces as a consequence of the sending of the Anglo-French fleet, it certainly cannot think that Europe will be the dupe of artifices of language so ill-dissembled. It is precisely this which gives us the most lively sentiments of peace; for when the back is thus turned on truth and equity, it is a proof that no attention is paid to them. We do not know what reply will be made by the French and English Governments to the magnificent offer of peace; for when the Russian troops will not recross the Pruth until Turkey shall have yielded, and the allied fleets have left the Turkish waters. We have full confidence in the Emperor as well as in the intervention of these two Governments, and we are certain that equity and the honour of the two countries will prevail under their shield. Hitherto the Cabinets of Paris and of London have done everything for peace; and, in case of need, they certainly will not do less for war. On such a subject high words would be an bad taste; we shall rely with full security on the prudence and vigour of the acts which may be assuredly considered necessary.

In announcing that instead of a treaty he will content himself with a simple note addressed to the Czar, M. de Nesselrode makes an important concession. Note or treaty, it is still, with more or less solemnity, the right for the Czar to be master in Turkey which is claimed. This right he can not and will not obtain. If, M. de Nesselrode says, this be not, in other words, this abdication of the Sultan, is the sole and true reparation which the Czar can accept; if such an act is indispensable for the maintenance of peace, every effort of conciliation has already declined. Let Russia was the first to speak of war and of invasion, and the whole responsibility of it will fall on her, and, if it so please God, the effects also

A telegraphic despatch, addressed by the Minister of the Interior to the Prefects, says, that "reports from all parts of the state a marked decline in the price of corn, and that the crops are everywhere satisfactory."

Business appeared to be paralysed at the Bourse on Wednesday, the speculators waiting the result of the last communication made to the Court of St. Petersburg. It is believed that the 3 per cents. rose to 76f. 80c., rose to 76f. 80c., fell subsequently to 76f. 20c., and closed at 76f. 25c. for the end of the month. The Four-and-a-Half per Cents closed at 101f.

RUSSIA.

The *St. Petersburg Journal* publishes a second despatch of Count Nesselrode's, addressed to the diplomatic agents of Russia at the different European courts. The object of this circular, which is couched in another portion of this Journal, is to explain the grievances of which the Emperor complains, and to vindicate the measures which he has thought fit to adopt with the view of obtaining redress. The preceding note, of the 11th of June, announced the departure of the principal Russian functionaries of the Court of St. Petersburg and the Porte, and attempted to justify the demands made by Russia on behalf of the Sultan's Christian subjects. We learn from this second circular that the Court of St. Petersburg, in its eagerness to obtain its object without provoking resistance, addressed representations to the Governments of France and Great Britain, in the hope of inducing them to refrain from offering any support to the Sultan. Those powers, however, did not view the matter in the same light as the Russian Government; and this circumstance has, we are assured, still further complicated the matter. But the grave charge made against them is, that they have despatched their fleets to Besika Bay. This proceeding Count Nesselrode affects to regard as hostile, or at least as menacing, and as justifying the occupation of the Principalities. The Western Powers have, he declares, taken the initiative; for whilst Russia only threatened to invade Turkey, the fleets of France and Great Britain anchored in the Turkish waters, "and within sight of the Turkish capital." It is pretended by Count Nesselrode, that this proceeding on the part of the Sultan's allies has made it more than ever impossible for Russia to recede. The Principalities have, therefore, we are told, been occupied, not with any hostile intention towards Turkey, and not with any view of territorial aggrandisement, but because the Emperor requires an immediate guarantee for the Sultan's compliance with his wishes respecting the Greek Christians, and because the presence of the French and English fleets outside the Dardanelles is tantamount to a "maritime occupation." Such are the grounds upon which the Imperial Minister seeks to establish the justice of the occupation of the Principalities. Nevertheless, we are informed that the Czar is actuated by feelings of clemency and moderation, and that, in the twofold event of all his demands being conceded by the Porte, and the withdrawal of the English and French fleets from the Turkish waters, his troops will withdraw.

Meanwhile, the presence of the Russian army in Moldavia and Wallachia is not to be a burden on the inhabitants of those provinces. The expenses of the army are to be paid out of the military chest, and Prince Gorschakoff has published a proclamation to the same effect at Jassy and Bucharest.

Letters from Warsaw state the preparations that have been made for war during the whole of the past winter are greater than those made in anticipation of the late Hungarian campaign. The army is now on the complete war footing, the reserves and the rear guard fully organised; the military colonies of the guard at Novgorod, and of the cavalry in Southern Russia, have been made *mobile*. Prince Paskewitsch, it appears, will remain nominally at Warsaw, in the neighbourhood of which, at Powana, a camp of 70,000 men is to be brought together. Amongst the various preparations for war by the military, numbers of officers travel to Czenstochow (a place on the Russian and Prussian frontier, not far from Cracow) where there is a miraculous picture of the Blessed Virgin, and there offer up to her their prayers for a successful campaign, and a happy return to their families. A solemn service is to be performed in the camp in the neighbourhood of Warsaw, and the Archbishop implored to protect "the Orthodox Faith" against the infidel Advices from Kalisch state that the imperial manifesto is to be read from the pulpit in all the churches in the kingdom of Poland, and also at divine service to the 65,000 troops encamped at Ponvonski.

THREATENED HOSTILITIES IN THE EAST. OCCUPATION OF THE DANUBIAN PRINCIPALITIES

The news from the Danubian Principalities confirms the intelligence of the occupation of the provinces of Moldavia and Wallachia by the Russian troops. The Divan of Moldavia met at Jassy on the 27th of June. The first act of the assembly was to vote an address of devotion to the Czar. The letters received at Vienna from Moldavia bear the imperial stamp, the Russians having taken possession of the Post-office.

By order of the Russian Consul, the Sultan's firman, by which fresh guarantees are granted to the Christians, has been prohibited in the Principalities. The Russian Consuls forbad the Hospodars to promulgate it, and reminded them that the armies of the Sovereign were at hand. The *German Gazette*, of Bucharest, has been suppressed, for publishing an article on Eastern affairs. The peasants of Wallachia are selling their draught oxen at any price, fearing their impressment, and the introduction of the murrain from Bessarabia

From Constantinople we learn that the Ambassadors of France, England, and Austria, at Constantinople, on learning the passage of the Pruth by the Russians, had an audience of the Sultan, for the purpose of praying him not to cause the fleets to enter the Dardanelles; and that the Sultan, having acceded to their prayer, limited himself to protesting against the violation of his territory. The English and French fleets were at Besika Bay at the date of the last advices.

The Porte having incurred heavy expense in the armaments and preparations for defence, had effected a loan of 45,000,000 of piastres (£400,000) with the founders of the Oriental Bank, and an instalment of 8,000,000 has been paid. It was believed that another loan of 40,000,000 was about to be negotiated with European bankers. Redschid Pasha has received a letter from the Russian Commander to assure the Porte that no attack on Turkish troops was at present intended, and that the occupation was a pacific one. The Russian occupying force is to be limited, for the present, to 25,000 men

It is said that the Porte will publish a manifesto in reply to the Russian proclamation. In this manifesto the Sultan will make a statement of all the acts of injustice which Turkey has for above a century suffered at the hands of the Russian Emperors

As a precaution against surprise, the Porte suspends the permission under which merchant vessels coming from the Black Sea now enter the Bosphorus by night

The Turks appeared to regard the invasion of the Danubian provinces in a different light from the European diplomatists. They did not be persuaded that the taking forcible possession of a portion of the Ottoman territory, in spite of existing treaties, was not a real declaration of war.

Serious disturbances had broken out at Adrianople, and in some districts of the province of Ismidt, near Constantinople. It was also reported that the Christian population had been insulted at Kubanssal, Adabazar, and Arast; and that the authorities had adopted energetic measures to keep down any fanatical movements of the Turks.

It is stated in a letter from Belgrade that the excitement in Servia is increasing, being stimulated by the active and ubiquitous emissaries of Russia. The Government hesitates to fulfil its treaty obligations to the Porte while a Russian army is on the right bank of the Danube

An event has happened at Smyrna which seriously complicates the relations of Austria and Turkey. Austria has vigorously availed herself of the incident to assume an unfriendly attitude towards Turkey. The affair is thus described by an English official:

An event which took place here on Wednesday last, the 22nd of June, has put all the European population in commotion. About half past five o'clock in the afternoon of that day, a Greek named Dominico Costa, hired by the Austrian Consul-General, M. Weebecker, with the sum of four thousand piastres (about £40), fell upon Martin Costa, a Hungarian, while sitting on the balcony of a coffee-house near the port, and, having cruelly beaten him, threw him into the sea. A boat belonging to the Austrian brig of war, the *Hussar*, had been waiting some hours for the issue of this diabolical plot, and, as the unfortunate Hungarian was endeavouring to swim ashore, he was seized by some Austrian marines who were in the boat, conveyed on board the brig, and put in chains. Martin Costa is a friend of Kossuth, and was with him both at Kutaya and in the United States; some time since he returned to Smyrna. The United States Consul here, believing that M. Costa had become a naturalised citizen of the United States during his residence there, stationed on board the Austrian brig, accompanied by the Pachs of Smyrna, and by Captain Ingraham, of the United states sloop the *St Louis*, now in this port. It is only with great difficulty that they were enabled to have an interview with M Costa. He replied to their questions so extraordinary a manner that they left under the impression that some drug had been administered to him. The Austrian Consul has since got the Turkish authorities at the castle at the entrance of the port, to prevent the Austrian brig from leaving, but we do not expect that these orders will be carried into execution. Should the brig leave, the fate of poor Costa will be sealed.

On the evening of the next day, whilst three officers of the Austrian brig were in a coffee-house near the sea, they were suddenly attacked by about twenty Hungarian refugees. One of the Austrians contrived to escape, a second was badly wounded, and the third, M. Hackelburg, having received a severe stab in the left loin, jumped into the sea. The Hungarians escaped. The next morning the body of the unfortunate Hackelburg was found by a boatman. A funeral service was performed for him yesterday. His body has been embalmed, and will be sent to Vienna. His father is a merchant in the Austrian service. These sad occurrences have created no small sensation here. The Austrian Consul has twenty marines to protect his premises, and is in great fear, as two Hungarians have sworn to take his life. He will, probably, be obliged to quit Smyrna.

Baron Bruck, the Austrian internuncio at Constantinople, threatened to break off the relations of Austria with Turkey if satisfaction for the affair of Smyrna were not rendered within twenty-four hours. The Porte thereupon deposed the new Governor of Smyrna, and sent a special commissioner to examine into the affair on the spot. All Pasha ascribes the origin of the affray to the Austrian Consul, who had kidnapped M. Costa. Later advices from Smyrna state that the Captain of the American frigate had laid his vessel close to the Austrian brig, on board of which the Hungarian Colonel, Costa, is imprisoned. The American Captain has declared that he will oppose the removal of the prisoner to Trieste. The Minister of the United States claims M. Costa, on the plea that he is a citizen of those states. It was said and believed at Constantinople that Lord Stratford de Redcliffe has claimed the Hungarian "in the name of humanity," with the object of sending him to the United States.

To this untoward affair M. de Bruck has added an additional embarrassment, in bringing on the question of the two ports, Kosek and Tultcha, and demanding the complete execution of the Leiningen treaty in what relates to the refugees. Austria demands the extradition or exclusion of all the refugees, Austrian subjects, in Turkey, who are to be sent to Asia. The conduct of M. de Bruck had given great discontent at Constantinople; and, contrary to what had been expected of him, he appeared to seek every pretext to detach himself from Turkey.

It is rumoured that a proposition has been adopted by the British Government to which France has given her assent, recommending the Porte to make a collective declaration to all the powers as to the rights of its Christian subjects, and its readiness "to renew by a fresh en-

gagement, though not to extend, the rights already claimed by Russia under existing treaties." There is some hope that we may hear from St. Petersburg, in the course of a week or ten days, that the basis of negotiation has been settled. This probability is confirmed by various circumstances—such as the complete accord of the French and English Governments; the firm attitude of M. Drouyn de Lhuys in his reply to the Russian note; the announcement that only 25,000 are, at present, to cross the Pruth; the refusal of the protecting powers to regard that act as an immediate *casus belli*; and the determination of the Sultan to protest without inviting the combined fleet into the Bosphorus.

AMERICA.

By the *Humboldt*, which left New York on the 2nd inst., we have a synopsis of the new Mexican tariff, and important intelligence from Havannah. It appears that a panic prevails among the slave-traders, in consequence of the arrest of their chief, Julian Zulueta, who was by orders of General Canedo imprisoned in the Castle of the Cabana. Zulueta is the owner of the slaver, *Lady Suffolk*. It is, however, remarked that the order for his arrest was not given until after the arrival of the European mail, notwithstanding that long previously all the circumstances connected with the arrival and disembarkation of slaves from the *Lady Suffolk* and the other vessels was the common topic of conversation at every place of public resort.

BRAZIL AND THE RIVER PLATE.

The Royal Mail steam-ship *Tay* has arrived with news from Buenos Ayres dated June 2, to the effect that the army of General Urquiza had neither advanced nor retreated. Blockade by the squadron was constituted, and this rendered provisions gradually scarcer. In fact, to starve the city now seems to be his object. The following is an extract from a private letter:—

We continue besieged by land and blockaded by water, altogether in a deplorable, but not by any means a desperate state. The besiegers decidedly lose ground, and Urquiza, with his Gauchos and the old cutthroats of Rosas, neither dare to make an assault, nor will they await a general action when General Paz is ready, as we think he soon will be, to go out and attack them. The sally would probably have taken place on the night of the 27th and the morning of the 28th ult., had not a heavy rain unfortunately interrupted the operations, and rendered the roads unfit for the purpose for several days. The weather has since been fine and we are now in expectation of a decisive movement. As to the blockade, we refer to the published correspondence; and need only add that the British authorities are in as bad odour with the natives as their own country men. We still think that the mock blockade must be abandoned; if so, a number of foreigners will undoubtedly take up arms and settle matters in a different way. There is nothing to be known from the negotiations of mediation, but the actual Government is firmly seated, public confidence buoyant, the National Guards decided, and the regular troops and foreign legions conduct themselves bravely. In a sally this morning one of our most distinguished officers was severely wounded; nothing else particular has occurred.

INDIA.

The following telegraphic despatch has been received from Trieste, dated Alexandria, July 7:—

"The Calcutta mail of the 3rd of June has arrived.

"Negotiations with Ava have been terminated by the Burmese envoys refusing to sign the treaty proposed to them by the British, and declaring that they would not sign away any part whatever of the Burmese dominions. They were ordered to receive their answer, or to leave our new territory within twenty-four hours. They left it in ten hours. It is said that Lord Dalhousie does not intend taking any other steps beyond exacting the frontiers and appropriating the country seized. Should an attack be made on the outer territory, an immediate advance will be made on Ava, and the King dethroned.

"Trade throughout India is dull.

"No news had been received from China, the steamer from Hong-Kong not having arrived at Galle in time for the Calcutta steamer."

PROVINCIAL INTELLIGENCE

THE REGISTRY.—Electors are reminded that the 20th of July is the last day on which claims to vote can be received to entitle the names to be on the ensuing register. The county qualification is divided into three—1st, Freehold, which includes the ancient title, the freehold; 2nd, Leasehold for a term originally created, not less than sixty years, of the value of £10 above rejairs, or twenty years of the value of £50; 3rd, Copyhold of the annual value of £10; 4th, Occupiers of land or buildings subject to a bonâ fide rent of £50 a year. The claims must be sent or delivered to the overseers of the poor where the qualification is situate.

EMIGRATION.—The ships *Statesman* and *Ellenborough* left Southampton on Sunday for Australia with about 700 Government emigrants—the former bound for Melbourne, the latter for Sydney. The emigrants on board the *Statesman* consisted of sixteen families, and 240 young and single Irish women.

OVERFLOWING OF THE WYE.—For the third time within the last twelve months, Hereford and the adjoining counties of Brecon, Radnor, and Salop, have been visited with terrible disasters by the overflowing of the Wye and its tributary streams. Early on Friday morning a thunder storm of unusual severity commenced, and continued all day in torrents of rain, occurred in the neighbourhood of Ledbury, Ross, and other parts of Herefordshire, where it raged for some hours with unabated violence. At Dymock, where the embankments of the Hereford and Gloucester Canal are higher than at any other point, the banks gave way, inundating the village and country for miles round. On Friday night the valleys were deluged by the overflowing of the mountain streams, which were swollen by the heavy rains occupying the thunder storm. Cattle, horses, sheep, and pigs were swept from its banks; trees were torn up, and hay and other property carried along. The villa residence of Mrs. Lawrence, at Aberddw, near Builth, with five inmates, was washed completely away. The roads in the neighbourhood of Builth have been flooded, and the mail was delayed about two hours. In Brecon the bridge over the river Honddu, at the point of junction with the Usk, has been carried away, and several other bridges seriously injured. The town was also flooded, and many of the houses were completely gutted.

THE ISLE OF WIGHT SAVINGS BANK.—William Wheeler Yelf, aged fifty-three, was tried on Tuesday, at Winchester, for feloniously forging and uttering various receipts in the savings bank at Newport, for sums of money; also for stealing certain other sums of money from the funds of the bank. The total of the prisoner's defalcations amounted to upwards of £8:0 according to the books of the institution, after due inquiry. He was convicted, and sentenced to transportation for life.

BRIGHTON CHURCH.—On Wednesday evening (last week) the remains of the late Sir Richard Phillips were removed from the vault in the old churchyard at Brighton, to the new family vault in the West Cemetery, by the permission and under the personal superintendence of the family. This painful ceremony was rendered necessary by the alteration and enlargement of the old church.

LITERARY PIRACIES.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

(From our Dublin Correspondent.)

I do not know whether it is worth my while calling your attention to the wholesale piracy of your Dublin Exhibition Supplement by John Cassell, in the "Illustrated Magazine of Art," July, 1853; *e.g.* see "Peat, or Turf;" and "Coal and Anthracite," page 441, transcribed literally from the ILLUSTRATED LONDON NEWS, without a word of acknowledgment.

[We beg to inform our Correspondent that we experience continually this sort of treatment. Whole columns are transcribed, in various publications, from our Journal, without the least acknowledgment. In consequence of the wide circulation of the ILLUSTRATED LONDON NEWS, these piracies are easily seen and detected by our readers; and, we believe, the proprietors of publications who copy so freely without acknowledgment bring discredit upon themselves, by showing so plainly that their contents are pilfered, and not original. We might, of course take proceedings against them in a court of law; but prefer—at least, for the present—to give them this public hint, that "honesty would be the best policy."]

THE ELLESMERE FAMILY IN AMERICA.—The Earl and Countess of Ellesmere, the Ladies Egerton, and the Hon. Captains Arthur and Algernon Egerton and suite, are expected to be present (the noble Earl in his capacity as Commissioner of her Majesty) at the opening of the New York Exhibition on the 15th inst.; shortly after which his Lordship, who, we understand, has suffered from gout since his arrival in the States, will proceed overland to Halifax, where the *Leander*, 50, ship-of-war, Captain St. Vincent King, will be in readiness to convey his Lordship to England.

FREE LIBRARY FOR FINSBURY.—Active measures are now being taken for the establishment of a free library in the borough of Finsbury. Subscription lists have already been opened, and sanguine hopes are entertained of the scheme being satisfactorily and expeditiously carried out.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Earl of ABERDEEN, in reply to a question put by Lord Malmesbury, said the Government had received no information of the entry of Austrian troops into Bosnia.

The Earl of HARDWICKE called attention to the Order in Council of June 25, 1851, regulating the promotion and retirement of officers in the navy, adding that the whole system of promotions and appointments was extremely objectionable. The Earl of ABERDEEN promised that the whole subject should be taken into consideration by Sir J. Graham. Lords BADDINGTON, COLCHESTER, and TALBOT urged the importance of amendment, and urged that the present regulations gave great dissatisfaction to naval officers generally.

The LORD CHANCELLOR, in moving the second reading of the Transportation of Offenders Bill, expressed his regret that the objections of the colonists rendered necessary the abolition of transportation, which he used to regard when a criminal judge as the best secondary punishment. The noble and learned Lord proceeded to describe the leading features of the bill. Western Australia consents still to receive our convicts. It can of commodate, however, not more than 800 or 1000 of the 5000 or 6000 annually sentenced, in the courts of the United Kingdom, to transportation. It is customary actually to deport only those sentenced to more than seven years' transportation—a number less than a moiety of the whole; the lesser half, too, being kept for one year "reformatory" confinement, for two or three years to hard labour, and then sent abroad with a ticket of leave. The average number annually sentenced to transportation for periods exceeding fourteen years, is rather within the limits of Western Australia's capacity. These sentences it is proposed, therefore, to pass after September 1, as now and heretofore, on persons convicted of such grievous offences as cattle-stealing, burglary, or violent assaults. The class of crimes at present punishable with penal servitude from seven to ten years, are to be punished with penal servitude for the term of six years and those now liable to more than ten and less than fifteen years' transportation, with penal servitude for not less than six or more than eight years. It will be optional to the authorities to substitute penal servitude for transportation in the case of the higher offences, which it is still proposed to visit as a rule, with the latter punishment. But to avoid the ill effect of pronouncing sentence which it is not intended to execute, the minor offences, now punishable with seven years' transportation, will be liable only to four years penal servitude. Earl GREY declared that experience had proved that transportation, as formerly carried out, had proved one of the most effectual preventives of crime, and complained that the Lord Chancellor had not sufficiently developed the system of secondary punishments which it was proposed to substitute for transportation. After some observation from Lord BROUGHAM, the Duke of NEWCASTLE expressed his entire acquiescence in the regrets expressed by Lord Grey at the cessation of transportation. The excuse, however, for that cessation was to be found in its absolute necessity; and the present measure had been introduced as a first step towards the improvement of our penal system. After some observations from Lords CAMPBELL and CRANWORTH, the bill was read a second time.

HOUSE OF COMMONS.—MONDAY.

GOVERNMENT OF INDIA BILL.

The House went again into committee upon this bill, commencing with the third clause, which enacts that her Majesty may, before April, 1854, appoint three persons, who shall have served ten years in India, to be, from that date, Directors of the Company for two, four, and six years, such persons having the same qualification in East India Stock as is now required for a Director. Mr. V. SMITH, condemning the principle of nomination by the Crown, moved to amend the clause by substituting election by the Court of Directors, subject to the approbation of her Majesty. Sir C. WOOD opposed the amendment. The Government had adopted this mode of rendering the Court of Directors more efficient, without destroying the independence of that body. After a discussion, the amendment was negatived by 193 against 111. Mr. BRIGHT moved the rejection of that portion of the clause which compelled the nominee of the Crown to be qualified with a certain amount of India stock. The amendment was adopted with the consent of the Government. The clause was then agreed to. The fourth clause was also agreed to, and progress was reported

The Stamp Duties on Public Libraries (Ireland) Bill, and the Land Revenue Bill, were read a third time and passed

The ATTORNEY GENERAL obtained leave to bring in a bill for the suppression of betting-houses.

HOUSE OF LORDS.—TUESDAY.

The Earl of CLARENDON stated, in answer to a question from Lord Lyndhurst, that he did not consider the presence of the English and French fleets in Besika Bay was at all similar to the occupation of the Danubian Principalities by Russia, and that we could not enter into any agreement making the continuance of the latter conditional on the withdrawal of the former. There was some difference between the document (Count Nesselrode's second note) issued for "home consumption" in this country by the Government and the translation sent abroad. He believed that the difference had reference merely to the word "ridiculous," applied to the violation of the Sultan's word. There was a Russian original in the Foreign-office, and he should not object to lay it upon the table.

On the motion for going into Committee on the Juvenile Mendicancy Bill, the LORD CHANCELLOR said he had been in communication with the President of the Poor-law Board on the subject of the bill, and he found that there were insuperable objections to it. The Earl of SHAFTESBURY replied to the objections urged against the bill, and said, in order to remove some of the difficulties which seemed to beset his path, he would be content to limit the operation of the measure for the present year to the metropolis. It appears from the statement of the noble Earl that there are 3098 young persons living on the streets of London as beggars and wanderers—of whom more than 2000 have parents able to keep them at least in decency, if they chose. The Earl of ABERDEEN acquiesced in the restriction of the operation of the measure to the metropolis, and consented to support it. After some conversation the bill passed through committee.

The Dublin Sewers (Scotland) Bill, Pimlico Improvement Bill, and the Bankruptcy (Scotland) Bill, were read a second time. The SAVINGS Banks Annuities Bill was read a third time and passed.

HOUSE OF COMMONS.—TUESDAY.

At the early morning sitting, the House resumed the consideration of the Merchant Shipping Bill at clause 29, which repeals the existing regulation as to the proportion of British seamen in manning a ship, and allows vessels to be manned entirely by foreigners. Captain ARCHDELL, having, at a previous sitting, moved the omission of the clause, a lengthened discussion took place, and the committee divided, when the amendment was negatived by 143 to 34; majority, 106. The clause was then agreed to, as were clauses up to 37 inclusive. The House adjourned at four, and resumed at six o'clock. Five minutes after resuming, it was moved that the House be counted. There were at that time no members on the Ministerial side of the House, except Sir J. Shelley, Mr. Mundy, and two or three others scattered over the back benches. The Opposition, among whom Mr. Disraeli, was conspicuous, mustered in sufficient numbers, however, to render the attempt to "count out" the House abortive.

Mr. I. BALL then presented a number of petitions for the alteration of the duties on malt; and, without a speech—evidently to take the Government by surprise—moved "that this House do resolve itself into a committee for the purpose of considering the duties on malt, with a view to report and inquire whether farmers ought not to be allowed to use their own malt for their own purposes free of duty." Sir J. SHELLEY, also, without speaking on the motion, seconded it: and the House went out to divide, when the CHANCELLOR of the EXCHEQUER, hurriedly entering the House, opposed the motion and defeated the attempted trick. He said, the abolition of this tax would lead to frauds upon the revenue, and to the substitution of a more exceptionable tax. The House then divided, when the motion was lost by 72 to 69

Mr. BILLS then called the attention of the House to the system of Poor-law medical relief at present existing in England and Wales, with a view to its revision. He suggested that there should be a medical superintendent at the Poor-Law Board, and that the drugs should be purchased by the unions instead of by the medical officers, whose salaries were insufficient for that purpose, and which led to great abuses. He also proposed an extension of medical relief to poor families. Mr. BAINES replied that the sums expended in the direction alluded to had been increasing yearly, and he would not object to a still further increase. He glanced at the past history of legislation on this subject, and contended that a gradual progress was being effected. After a short discussion the motion was withdrawn. The House was counted out at a quarter before nine.

HOUSE OF COMMONS.—WEDNESDAY.

Mr. M. GIBSON consented to withdraw the County Rates and Expenditure Bill for the present session, upon the assurance of Lord Palmerston that, if the bill were dropped, the Government would, in the next session, propose to Parliament such a measure as they should think fit to recommend, founded upon the principle of popular representation with respect to county-rates.

Mr. BADFIELD also consented to withdraw his Probater of Wills and Grants of Administration Bill upon a statement by Lord Palmerston that the Government intended to deal with the general subject, including the object of this bill, in the ensuing session.

The adjourned debate upon the second reading of the Simony Law Amendment Bill was resumed by Lord GODERICH, who supported the bill. Mr. G. BUTT moved that the bill be read a second time that day six months. Sir G. GREY supported this amendment. The bill, he observed, made such a trifling and insignificant change in the law as to be unworthy of legislation. If patronage was to exist, looking at its actual exercise, he thought it was as well dispensed for the interests of the Church by lay as by other hands. The bill disturbed in an infinitesimal degree a law which ought not to be altered without great consideration. The amendment was agreed to; so the bill is lost.

Mr ADDERLEY moved for leave to bring in a Bill for the Better Care and Reformation of Juvenile Offenders. It proposed, he said, me, to establish reformatory schools in England and Wales to which warrant children might be sent; and was, in fact, nothing more than a corollary to Sir J. Pakington's act. Leave to given to bring in the bill.

HOUSE OF LORDS.—THURSDAY.

The Archbishop of CANTERBURY laid upon the table a bill for the better regulation of the churches in the colonies, which was read a first time.

The Battersea park Bill, and the Westminster-bridge Bill, were severally read a second time. The Metropolitan Building Act Further Amendment Bill, and the Taxing of Common Law Business (Ireland) Bill, severally passed through committee.

On the report of the amendments on the Juvenile Mendicancy (No. 2) Bill, Lord CAMPBELL called attention to the number of children under ten years of age who were employed in sweeping crossings in the metropolis, and suggested that a clause should be introduced in the bill to put a stop to the practice, and to give power to take the children to the workhouse. Lord SHAFTESBURY stated that he would consider the suggestion, with a view of meeting the views of Lord Campbell. The report was then received and agreed to

The Convicted Prisoners' Removal and Confinement Bill was read a third time, and passed. The Bankruptcy (Scotland) Bill passed through committee. The Chancery Suitors' Further Relief Bill was read a third time and passed.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

On the motion for the second reading of the Universities (Scotland) Bill, Sir R. H. INGLIS said he considered the bill was a violation of the Act of Union, and that no change in the law was required for the Scotch Universities. He, therefore moved that the bill be read a second time that day six months. Mr. LOCKHART seconded the amendment. Lord ELCHO supported the bill. After a long discussion, the House divided, when the numbers were—For the second reading, 106; against it, 17: majority, 89. The bill was then read a second time.

In reply to Mr. Oliveira, the CHANCELLOR of the EXCHEQUER replied that the Government wished to proceed with the Savings Banks Bill as nearly as possible in its present form. He proposed to go into committee upon the bill on Thursday next

Mr. M. GIBSON called attention to the number of bills before the House, and asked whether the Government were prepared to make that "massacre of the innocents" which usually took place at that period of the session, in order that the House and the country might know what measures would really be proceeded with. Lord J. RUSSELL said, that if the right hon. gentleman would ask him about any particular bill he (the noble Lord) would give him an answer; but he could make no general statement on the subject, because the measures were so very few with which the Government did not intend to proceed.

Lord J. MANNERS expressed a hope that the noble Lord would not ask the House to sanction the second reading of the Education Bill this session. Lord J. RUSSELL said that his great object was to discuss the principle of the bill on the second reading, in order that he might be fully informed of the objections which might be urged against it; without a knowledge of which it would be inconvenient to re introduce the bill in the next session of Parliament.

RUSSIA AND TURKEY.

Mr. DISRAELI called the attention of the House to the different constructions put upon the circular note of Count Nesselrode, in this and the other House of Parliament; and said that assuming, as he did, that the negotiations now proceeding were only formal, and virtually at a dead lock, and believing that it would be for the advantage of the public service that there should be a discussion upon the question, he wished to know whether the noble Lord had any objection to fix a day for bringing on the motion of the hon. member for Aylesbury (Mr. Layard)? Lord J. RUSSELL said, that the views expressed by him on Monday night were formed upon every information in the possession of the public newspapers. He had said he could not believe it was the intention of the Russian Government to make the withdrawal of the English and French fleets from the Turkish coasts a condition of withdrawal of their troops from the Danubian Principalities, because he thought it impossible that two things so entirely unconnected should be associated together (Hear, hear). With regard to the question which had been raised by Mr. Disraeli was mistaken in supposing that the negotiations were at a dead lock. On the contrary, the English and French Governments were of the same opinion, that "there were proposals made which might be accepted by the Russian Power and the Turkish Government, and which might be the means of obtaining a peaceful termination to the present negotiations. Some time, however, must elapse, before the result could be known from St. Petersburg; and, while matters remained in their present condition, he did not think it desirable that any discussion should take place.

In reply to an hon. member, Mr. SIDNEY HERBERT said that the invalided soldiers, with their families, who had been recently sent home from Malta in a leaky vessel, had been put on board that vessel, when it was about to be sent home for repairs, at the instance, not of the Admiralty, but of the Admiral Superintendent on the station, it being thought advisable to send the invalids home before the hot weather. The attention of the Horse Guards was directed to the subject, and care would be taken to avoid the recurrence of such an event

SUCCESSION-DUTY BILL.

The House then proceeded with the consideration of the amendments made to this bill in committee.

The postponed timber clauses, with the amendments of the Government, having been agreed to, the report was received, and the third reading of the bill was ordered for Monday.

THE INDIA BILL.

The House then went into committee upon the Government of India Bill, when clauses 5, 6, 7, 8, and 9 were agreed to without opposition.

The House then resumed; the Chairman reported progress, and asked leave to sit again to-morrow (Friday).

The Newspaper Stamp-duties Bill was read a second time, the ATTORNEY-GENERAL observing that the object of the bill was to uphold the decision of the Court of Exchequer, and to define the publications liable to the Stamp Duty.

Some other bills upon the paper were advanced a stage, and the House rose.

CRICKET AND HORSE-RACES IN THE ISLAND OF CORFU.

THE accompanying pair of Illustrations show that our national sports are carried on at Corfu with as much zeal as at home; notwithstanding the almost tropical heat which prevails in the capital of the Ionian Islands. The Sketches have been taken by an officer of the garrison.

The grand object in the centre of the first View is the citadel of Corfu, whence a view unrivalled for extent and beauty may be obtained. The sea flows up to the walls on three sides: the esplanade being on the fourth. In the distance are the Albanian hills, enveloped in a purple haze, whose tops at this season (June) are still capped with snow. Between the avenue—which runs the whole extent of the esplanade—and the citadel, are the quarters of the 71st and 42nd Regiments, and of the Royal Artillery. The house on the right of the tent is the residence of the General. The incident of the Sketch is a Cricket-

CORFU GARRISON CRICKET-MATCH.

Match, played on May 28th, between the 57th Regiment, with Messrs. Creyke and Wright, and the garrison of Corfu and island of Vido; which, after some excellent play on both sides, terminated in favour of the former, by SIX wickets. The ground—though not quite equal to "Lord's" or "the Oval"—was in fair condition; and the scene was much enlivened by the presence of numerous Greeks and Albanians, in their national costumes, who appeared to take great interest in the game. His Excellency the Lord High Commissioner and party visited the ground during the afternoon, and watched the play for a considerable time.

The second Sketch represents the Garrison Races, which came off on the 2nd and 4th of June. The course is beautifully situated on the borders of a large estuary of the sea, about a mile from the citadel. In front, the Mountain of Santa Decca rises several hundred feet, clothed with olives and vines, which, at this season of the year, are in their finest verdure, and promise an abundant crop to reward the labours of the somewhat indolent contradini (or peasants), who have been suffering from the failures of several preceding years; and from the effects of the late hurricane (in February last), which destroyed many of the finest trees on the island. The picturesque village of Santa Decca appears amongst the groves of olives, on the face of the mountain.

His Excellency the Lord High Commissioner, and most of the principal families of the town and garrison of Corfu, honoured the races with their presence; while crowds of natives—in their varied and picturesque costumes, mixed with the scarlet uniforms of the English soldiers from the garrison—added life and brilliancy to a scene unrivalled in beauty even in an island which affords at every turn such charming scenery. The arrangements were excellent.

We append a brief account of the two days' sport—all gentlemen riders—Major Hunter officiating as clerk of the course:—

THURSDAY, June 2.

Trial Stakes, weight for age.—Mr. Carthew's Peacock won both heats.
Free Handicap.—Mr. Venables' Sultan was first both heats
Hack Handicap.—Mr. St. Clair's Sheepstealer was the winner.

Hurdle-race.—Won by Col. Finucane's Archie, beating Mr. Waller's Bluebeard. Capt. Conyer's Champagne could not be got off.

SATURDAY, June 4.

A Garrison Sweepstakes was won by Mr. Venables' Sultan, who walked over.
Handicap Sweepstakes.—Mr. Venables' Sultan, 1. Mr. Handcock's Pigeon, 2.
The Pony Race was won by Mr. Montague's Fly, in both heats.
The Forced Handicap for beaten horses.—Mr. Carthew's Peacock, first heat. Mr. H. Clair's Sheepstealer, second heat
After a beautiful race for second heat, Sheepstealer won by half a length, and objected to Peacock, who came in second, but was declared distanced, having fouled Sheepstealer when called upon with the whip to make his final effort for the race. Pigeon and Sheepstealer divided stakes.
There was a "Contradini" race, at which a dozen natives entered their horses, and afforded great amusement from the numerous "spills," the winner having been thrown before he got halfway round.
Foot-races, splendidly contested for by the soldiers of the garrison closed the sports of the day.

CORFU GARRISON RACES.

THE CAMP AT CHOBHAM.—THE SUTHERLAND GAMES.—(SEE PAGE 23.)

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

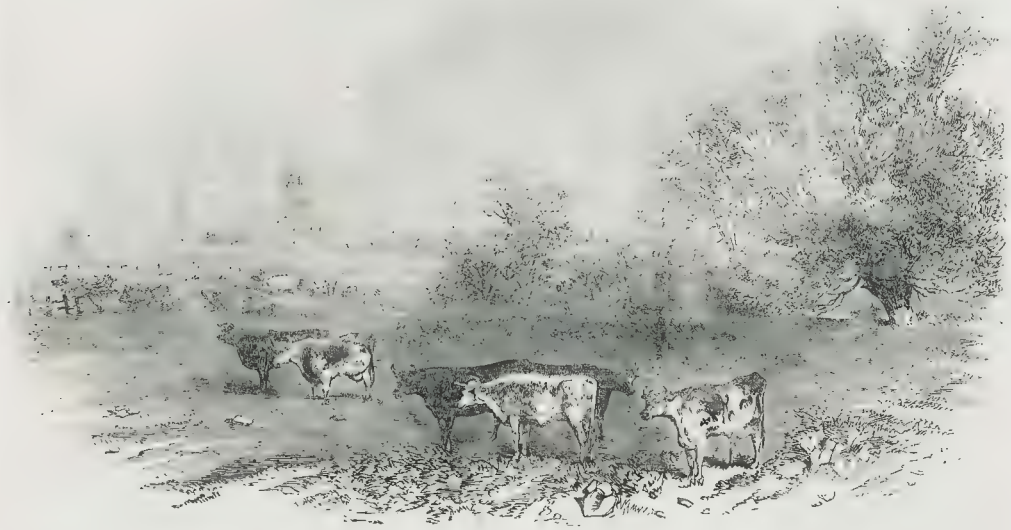
(From our own Correspondent.)

THE Annual Exhibition of the Royal Agricultural Society of England has taken place during the past week at the ancient city of Gloucester; of which we present a view to our readers, taken from the towing-path of the Castle Meadows, whereby an excellent idea, both of the docks and the city, may be obtained. Gloucester, with the single exception of its not very distant neighbour, Bristol, is the most ancient city in the west of England. It mainly consists of four streets, whose position is described by their names—the gates having been formerly planted at their extreme ends Northgate, Southgate, Eastgate, and Westgate. The antiquity of the city is evidenced by many of its old, overhanging houses and ancient churches. The number of its people is now little, if anything, short of 40,000. The iron and clothing trades were formerly carried on in this city to a considerable extent, but they have long since both died out.

The great attraction to the stranger visiting the city of Gloucester is its fine Cathedral, scarcely surpassed in size by any in the kingdom. It is 450 feet in length and 144 in breadth, and it possesses a tower built in 1457, in the Perpendicular style, 225 feet high. It being square and somewhat massive, this limited height would appear out of proportion with the rest of the building, but for the finish and beauty of its parallel tracery, which gives it at once lightness and altitude. The Cathedral possesses many monuments of considerable historical and scientific interest; amongst which may be mentioned those of Robert Curthose, Duke of Normandy, who was for so many years confined in Cardiff Castle; the unfortunate Edward II., and the philanthropic Edward Jenner; and, a short distance from the Cathedral, in St. Mary's-square, is a monument of Bishop Hooper, standing almost on the very spot at which he suffered martyrdom.

Gloucester was made a port in the reign of Elizabeth, when its first custom-house was built; but its trade was for a long time greatly limited in consequence of the want of return cargoes for the principal articles of its import, timber and corn: a want now no longer felt, in consequence of its direct railway communication with almost every part of the kingdom; and Gloucester is, therefore, yearly rising in prosperity and importance.

On entering the city on Tuesday we found it being busily arrayed in holiday apparel—numberless triumphal arches in course of erection, and flags, evergreens, and floral festoons decorating the great majority of the houses: the anniversary of the Royal Agricultural Society being evidently regarded as a kind of national holiday, and the selection of Gloucester as the *locus in quo* for the Exhibition as a great honour be-



THE CITY OF GLOUCESTER, FROM THE CASTLE MEADOWS.

stowed upon it. The site of the show-yard was about a mile outside the city; the yard being 1250 feet long, by 594 feet wide. The trial-yard was 340 feet long, by 120 feet wide; and the receiving-yard, 133 feet long, by 87 feet wide. The whole was surrounded by a nine-feet fence, and contained thirty-six sheds; twenty of which were devoted to the reception of implements, and the remainder for the cattle—each shed being 252 feet in length and 20 in width. In addition to these sheds, the fence also included numerous offices, poultry pens, refreshment booths, &c. Indeed, there was no want of the latter, as all round the show there was a complete fair, including not only refreshment booths, but Wombwell's menagerie, which entered the town in great state on Tuesday; theatres, peep-shows, and itinerant vendors of apples, oranges, ginger-beer, &c.

On Tuesday the judges made their trials of the various agricultural implements and their awards.

Though there were stated to be upwards of 2000 implements in the Exhibition, only one marked as "new" obtained a money prize—a one-horse cart, for general purposes. The cart has narrow tires, and the tires being rounded on the flat causes the cart to run lighter, so that it is not liable to cut the spine on meadow and pasture land. Of those obtaining medals, the first four are for new "implements"—viz., a revolving hoe, invented by Mr. Barmer, of Norfolk, with which it is stated the inventor hoed 120 acres of turnips with complete success; Mr. Samuelson's digging machine, which promises to prove of great utility, a telescope drainage level, the great merit of which consists in its accuracy and economy; a seed-cleansing machine, by Mr. Gillan, which appears to us to be both simple and efficacious; and the patent straw-shaker, of Mr. Brunsmead, which at one and the same time shakes the straw, collects the short straws that have dropped with the grain, and conveys it off with the long straw, works a riddle and the dressing machine, and conveys the grain that it shakes out of the straw back into the riddle.

The implement yard was thrown open to the public on Wednesday, when the principal source of attraction were the reaping machines—an attraction which was increased by its becoming known that the judges had declined to award a prize, not considering the trial of the previous day sufficiently satisfactory. In the trial there were twelve reaping-machines exhibited, of which six—viz., Bell's, exhibited by Mr. William Crosskill; McCormick's, exhibited by Messrs. Burgess and Key; Hussey's improved, exhibited by Messrs Dray and Co.; did to, exhibited by Messrs. Garrett and Sons; ditto, exhibited by Mr. Bernhart; and McCormick's, exhibited by Mr. Bernhard Samuelson, have been selected for a further trial of a week on Mr. Pusey's farm, in Berkshire.

The implements on the whole, appeared to give great satisfaction, and the yard was on Wednesday well attended from early in the morning until about three in the afternoon, the weather being all that could be desired; but at that hour it broke, and rained almost without intermission, for the next dozen hours.

At four o'clock about 800 of the friends of the Society assembled in the pavilion to dine—the dinner this year being held a day earlier than usual. The President of the Society, the Right Hon. Lord Ashburton, in the chair. The Hon R. H. Clive, M.P. (in the absence, from illness, of Mr. Pusey, M.P.), filled the chair; and among the noblemen and gentlemen present were—

Lord Berners, Earl of Powis, Earl Beauchamp, Lord Bridport, Viscount Hereford, Lord Berners, Hon. R. H. Clive, M.P.; Mr. Slaney, Colonel Challoner, Sir M. W. Ridley, Bart.; Mr. Darby Seymour, M.P.; Mr. Pusey, M.P.; the Bishop of Hereford, Rev. H. F. Rev. Sir Lionel Darell, Bart.; Sir T. D. Acland, Bart.; Mr. Sir Joseph Bailey, Bart.; Professor Symonds, Professor Ways, Mr. Blount, M.P.; the Hon. Mr. Ingersoll, Mr. Barnard Turner, Mr. Alcock, M.P.; Garde, Cumming, Esq.; Hon. G. C. Agar, Mr. Griffith, M.P.; Mr. Bagwell, M.P.; Mr. Rosselo, M.P.; General Arbuthnot; Messrs. Mr. Mr. Lambert Lucy, Judge Haliburton (of Nova Scotia), Captain Bruce, Messrs. Mr. Mr. Mr

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Earl of ELLENBOROUGH, in moving for a series of returns in connection with the Government of India, stated several objections which he had to the measure before the other House of Parliament; but declared his anxiety to render the measure as efficient as possible. After a brief reply from Lord GRANVILLE, the returns were agreed to.

The Earl of SHAFTESBURY having moved the second reading of the Felling at Exercises Bill, the Earl of ABERDEEN urged upon the noble Earl the propriety of not proceeding further with his bill, as the subject would be more appropriately dealt with in the measure of Parliamentary Reform, which the Government were pledged to introduce in the next session of Parliament. The motion was withdrawn.

The Summary Jurisdiction (Ireland) Bill, and the Petty Sessions (Ireland) Bill were severally read a second time. The Juvenile Mendicancy (No. 2.) Bill was read a third time

HOUSE OF COMMONS.—FRIDAY.

The House met at twelve o'clock, and from that hour until four o'clock it was occupied discussing the Merchant Shipping Bill, which was ultimately passed through Committee.

In reply to Mr. Bradly, Mr. B. OSBORNE stated that the Admiralty had issued instructions directing that Assistant-Surgeons in the navy who had served three years, and had passed their examination, should be entitled to mess with the ward-room officers, and to such suitable accommodation in every other respect as their vessels could afford.

Mr. HUME inquired whether, in consequence of the repeal of the Navigation-laws, the Custom-house officers in Canada, maintained by the Imperial Government at the cost of £30,000, were to be abolished? The CHANCELLOR of the EXCHEQUER said that a correspondence between the Home and Canadian authorities was in progress in connection with the subject; the result of which he hoped would be to save the greater part, if not the whole, of the sum referred to.

PARLIAMENTARY OATHS.

In reply to Sir G. Grey, Lord J. RUSSELL said he should certainly think it his duty to submit to the House in the next session of Parliament, a motion for the abolition of oaths taken by members at the table of the House. He, however, could not then say whether he should introduce it as a separate measure, or as part of a bill for the amendment of the representation of the people. It would not, however, be a measure for the special relief of the Jews; but, probably, in the form of a bill to shape the oaths administered so as to do away with the religious intolerance and practical absurdity which now prevailed.

On the motion for the adjournment of the House on its rising until Monday, Mr. MILES inquired whether it was the intention of Government to prosecute the Rev. John Burke and the Rev. Michael Clune, Roman Catholic priests, who had been reported by an election committee to have excited the people, and to have taken part in the riot which occurred at Six mile bridge at the time of the election for the county of Clare, in July, 1852. Lord PALMERSTON thought it was time to put an end to this question, which had been so often before the House. As was well known, it was originally the intention of the Government to proceed against the parties mentioned; but for reasons which had before been stated, that intention had been abandoned. Under any circumstances, it would be impolitic to proceed now, as the parties charged could not be prosecuted till 1854 for an offence committed in 1852. Another election had since taken place for the same county, when the same gentlemen were elected without misconduct upon the part of any one. He admitted that many of the Roman Catholic priests in Ireland had acted in an imprudent manner at the election of 1852, but there were causes of excitement prevailing at the time, which in some manner palliated their conduct. It was not the intention of her Majesty's Government to take any further steps with reference to the two priests and he hoped the House would suffer all the occurrences of the last election in Ireland to sink into oblivion. After some further conversation the subject dropped.

INDIA BILL.

The House then went into committee upon the India Bill.

On clause 10, which proposed that the six nominees of the Government in the Court of Directors should be eligible to seats in that House, and be removable from the Court at the pleasure of the Crown,

Lord JOCELYN moved an amendment to the effect that those directors could only be removeable from the Court by the address of both Houses of Parliament to the Crown.

After some discussion the amendment was negatived by a majority of 96 to 42.

Mr. BRIGHT then moved the omission of the clause altogether, on the ground that it involved a most dangerous principle, and would throw too much power into the hands of the Crown.

A lengthened discussion then took place, which resulted in the amendment being negatived by a majority of 179 to 130. The clause was then agreed to, as was also clause 11.

On clause 12, which provided the oath to be taken by the directors, Mr. HUME moved that a solemn affirmation be substituted for an oath. The amendment was, however, negatived by a majority of 136 to 96.

Mr. J. B SMITH then moved that after the word "oath" the words "or declaration" should be added. This amendment was also negatived by a majority of 124 to 85. The clause was then agreed to, as were also clauses up to 14.

The House then resumed, the Chairman reported progress, and obtained leave to sit again on Monday.

THE OVERLAND MAIL.—A telegraphic despatch announces the arrival of the India Mail at Marseilles. It will be delivered in London on Monday next.

PACKET SERVICE OF THE POST-OFFICE.—By a Parliamentary paper printed on Thursday, it is shown that £838,212 will be required for the packet service of the Post-office for the year 1853-54. The vote for the financial year 1852-53 was £570,158

DECIMAL COINAGE.—The Committee of the House of Commons having concluded their labours, a unanimous report in favour of the adoption of a decimal system is expected. Dr. Bowring was the last witness examined, and he gave a most satisfactory evidence as to the accuracy, rapidity, and ease with which all calculations are made and all accounts kept throughout the vast Chinese empire, with its 400,000,000 of dependent subjects. He produced to the committee the *abacus*, or instrument by which the art of reckoning is taught in all the elementary schools of China; and stated, that after a single month's instruction a Chinese youth is far more competent to apply the rules of arithmetic to all the business of life than is a learner in any of our common schools after the lessons of years. It was suggested that the general employment of the *abacus* (called *swan-pan* by the Chinese) in the education of the young, would greatly promote and popularise the introduction of a decimal system of currency and accounts

ASIATIC CHOLERA.—We have received information that this dreaded disease has re-appeared in an epidemic form in Copenhagen, where fatal cases appeared in a month. From that period the disease has been steadily increasing; and the official return for the 8th inst. states that, on that day, there were 51 new cases, and 18 deaths. From the first appearance of the disease there have been 270 attacks, and 142 deaths; so that this formidable pestilence, which for several months has been lingering in St. Petersburg, has now approached to within less than 500 miles of the coast of Norfolk.—*Globe.*

LOSS OF TWO LIVES.—While the *Prince Albert*, of Gainsborough, was returning down the river in ballast on Thursday, a sudden squall capsized her off Deptford, and she sank before Capt. Millingham's wife and child, who were in the cabin, could be rescued, and both, unhappily, were drowned.

FIRE AT DERBY.—A fire broke out on Wednesday night, in the great silk manufactory of Mr. Davenport, Albert-street, which destroyed the top story, and caused the loss of two lives, several others being injured. The damage done is about £2000.

THE NEW LAW TO PROTECT FEMALES.—Thomas James, a powerful-looking fellow, was placed before Mr. A'Beckett, at the Southwark Police office, on Thursday, for grossly assaulting his wife. The complainant is a hard-working woman, keeping a stall in the Borough-market: the husband earned nothing, but, when wanting money, abused and beat his unfortunate wife till she supplied his wants. This at length reached such a height, that she was compelled, somewhat reluctantly, to apply for redress. The magistrate lectured the prisoner very severely, and told him the ill-usage of females in this country had compelled the Legislature to interfere in their behalf; he should, therefore, commit him to the House of Correction for six months, with hard labour. The prisoner, who seemed quite thunderstruck at the decision, exclaimed, "Oh, dear! oh, dear! I did not expect that! It will be the death of me." He was then removed by the gaoler.

FOREIGN.

FRANCE.—PARIS, Thursday Evening.—The Funds have risen considerably on account of the statement about an exchange of notes between Russia and the Porte, which has come to Paris to-day from three sources—Vienna, Berlin, and Odessa. It is generally believed now that the proposition made to the Emperor of Russia will be accepted. The Three per Cents closed for cash at 76f. 20c., and the Four-and-a-Half per Cents at 102f.

The following remarkable paragraph appears in the *Estafette* of this day:—"We blame the Government for not having made public what we are assured was decided upon in the last Council of Ministers—namely, that, in the event of any misfortune happening to the Emperor, the pregnancy of the Empress shall be immediately declared, and Prince Jerome Regent."

The *Moniteur* publishes to-day the first circular note of Count Nesselrode, and the reply of M. Drouyn de Lhuys. It is inferred from this that the Government intends very soon to publish the second note of Count Nesselrode, and the second reply of M. Drouyn de Lhuys. When this appears, the only conclusions come to will be, that the French Cabinet has resolved to pursue an independent course in the Eastern question, and not to wait for the approbation of the English Government as regards publicity.

RUSSIA AND TURKEY.—The expectations of a pacific solution become more strengthened; and Russian diplomatists, both in London and Paris, express their belief that the Emperor will accept the alternatives suggested by the French and English Governments.

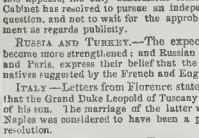
ITALY.—Letters from Florence state that it was again rumoured that the Grand Duke Leopold of Tuscany intended to abdicate in favour of his son. The marriage of the latter with a daughter of the King of Naples was considered to have been a preparatory step towards that resolution.

THE IONIAN ISLANDS.—VIENNA.—We have received the following authentic telegraph despatch, dated Corfu, July 10:—"A bloody outrage has been committed here by some political refugees. Two of them killed an Englishman. They were both arrested, tried, and sentenced to be hanged on the 11th." Five per Cent Metalliques, 93¾. Exchange on London, 10 46.

OBITUARY OF EMINENT PERSONS.

CHARLOTTE, MARCHIONESS OF ANGLESEY.

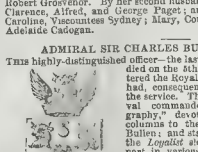
THE death of the Marchioness of Anglesey occurred on the 8th inst., at



Uxbridge House, London, at the age of seventy-two. Her Lady-ship was the second daughter of Charles Sloane, first Earl Cadogan, and sister of the present Earl, as well as of the gallant Lieutenant-Colonel Henry Cadogan, who fell at Vittoria, 21st June, 1813. She was born 12th July, 1781, and was twice married: first, in 1803, to the Hon. Sir Henry Wellesley, G.C.B., afterwards Lord Cowley, from whom she was divorced in 1810; and secondly, in the same year, to Henry Lord Paget, now Marquis of Anglesey. By her first husband, her Ladyship had three sons (the eldest, the present Lord Cowley), and one daughter, Charlotte, wife of Lord Robert Grosvenor. By her second husband, she leaves three sons—Lords Clarence, Alfred, and George Paget; and three daughters; viz. Emily Caroline, Viscountess Sydney; Mary, Countess of Sandwich; and Lady Adelaide Cadogan.

ADMIRAL SIR CHARLES BULLEN, G.C.B., G.C.H.

THIS highly-distinguished officer—the last of the captains of Trafalgar—



died on the 8th inst., aged eighty-five. He entered the Royal Navy on board the 44 1779, and had, consequently, been seventy-four years in the service. That admirable record of our naval commanders, "Marshall's Biography," devotes two of its closely-printed columns to the achievements of Sir Charles Bullen; and states that he was midshipman of the *Loyalist* sloop and the *Halifax*, and took part in various operations on the American coast, including the reduction of Chesapeake. In 1781; that he was acting Lieutenant of the *Culloden*, 74, at the attack on Martinique; that he shared, as Lieutenant of the *Zealous*, 74, in the fame of the memorable 1st of June; that he was senior Lieutenant of the *Monmouth* 64, at the battle of Camperdown; and that he served as flag captain to Earl Northesk, in the *Britannia*, 100, at the victory of Trafalgar. To this glorious summary we need only add that in 1810-11 he commanded the *Undaunted* 38 and 1809 was appointed, in co-operation with the patriots of Catalonia; in 1823, as Commodore of the squadron on the west coast of Africa, lent essential aid to Colonel Sutherland during the Ashanteo war; and in 1830 was appointed Superintendent of Pembroke Dockyard. In 1837 he attained the rank of Rear-Admiral, and at the period of his death was Admiral of the Blue. Sir Charles Bullen was son of the late John Bullen, Esq., Surgeon-General on the coast of North America, by Ruth, his wife, daughter of Charles Liddell, Esq. He married, in 1791, Miss Wood, a relative of his own, and by her (who died in 1842) has left issue. He obtained the Good Service Pension in 1833, and became G.C.B. in 1852.

DESERTION AT NEW YORK.—Her Majesty's ship *Leander* sailed from New York for Halifax on the 25th ult. Shortly before sailing, one of her boats was sent ashore, with eight men, in charge of a midshipman, to bring off stores. While at the wharf four of the men deserted. The midshipman attempted to prevent their desertion, but a crowd of bystanders threatened to throw him into the dock if he left the boat.

THE CAMP AT CHOBHAM.

FRIDAY.—THE SUTHERLAND GATHERING.

The plains of Chobham to-day presented a very different aspect from that which has hitherto characterised them since the present Encampment. Military combinations and the movement of masses of men were superseded by feats of skill and strength, in which each athletic competitor strove as intensely and as perseveringly for the palm of victory as though the fate of empires depended on his individual exertions. The lists were opened to all comers from the Scotch regiments; but, with one or two exceptions, none ventured to come forward to dispute with the 93rd their well-earned fame as skilful and powerful athletes. One or two men from the 42nd Highlanders, some from the Scots Fusiliers, and some from the Life Guards, did, it is true, enter the lists, but only to be thoroughly beaten. Even in the spirit-stirring Scottish dances for superiority of the 93rd was gallantly and gracefully maintained over the really excellent dancing of some of the 42nd and Scots Fusiliers. The results of the day clearly show to what an extent the cultivation and practice of these sports tend to the development of muscular strength and great power of endurance. We notice a few of the principal feats:—

The prize for throwing the hammer was carried off by Bell, of the 93rd, the distance thrown being 121 feet, the weight of the hammer 17 lbs. In putting the heavy ball Bell was also successful; the distance thrown was 32 feet 5 inches, and the weight of the ball rather over 23½ lbs.; the ball was picked up outside the ramparts of Quebec, in 1846, when the 93rd was stationed there, and it has ever since been used for this purpose. The light stone weighed 17 lbs., and was thrown by Bell 36 feet 8½ inches, and the prize awarded. Bell was again the successful competitor in tossing the caber. The first prize for the running high leap (5 ft. 8 in.) was awarded to Gow, of the 93rd. The first prize for the standing high leap (4 ft. 8 in.) was awarded to Forbes, also of the 93rd. The short foot race of 100 yards was gained by Sergeant M'Gillivray, and in the hurdle-race of 400 yards, with five hurdles, Corporal Motion was the winner. The other sports, such as sack-racing and wheelbarrow-racing blindfold were highly amusing.—(*See the Illustration at page* 21.)

SATURDAY.

This brilliant field day was abruptly terminated by a serious accident to Colonel Bentinck, commander of the Brigade of Guards. His horse going at a rather sharp pace stumbled into one of the narrow holes with which the common abounds; and, the rider pulling him up sharply, he reared, and fell back upon him. Colonel Bentinck was removed at once on a stretcher to Higham Lodge, Lord Seaton's residence, in the neighbourhood. In consequence of this melancholy occurrence the troops were ordered back to the Camp before the evolutions through which they were to have gone had been completed.

They had turned out at eleven o'clock on the sounding of the bugle, the previous part of the morning having been wet and unpromising. The scene selected for manœuvring was the north side of the valley in front of the Camp, which the troops, when they took up position, faced, and the operations differed in this respect from those on former occasions—that any representation of an enemy was entirely dispensed with. Visitors were therefore thrown back on their own imaginations for what the services of Colonel Vickers and his Sappers previously helped them to understand. Nevertheless, the troops were never seen to greater advantage, their evolutions being characterised by the utmost precision, and taking place within a space where, to the minutest details, they could be seen and comprehended from a convenient distance.

Lord Seaton began the manœuvres of the day by ordering the whole division to form line, which was instantly done, and presented, as may be conceived, a very brilliant effect. This was heightened when the line advanced, but the movement was not continued for more than a few yards, and then the brigades formed double columns of companies in rear of the two centre companies, which were thrown out to skirmish, and in that manner extended along the whole front of the position. Then ensued a series of beautiful movements, the front giving its fire, forming four deep, and withdrawing through the other two lines, which, in their turn, successively, and with admirable steadiness, repeated the manœuvre. Lord Seaton has (if we are not mistaken, for the first time in the practice of the British army) added a new feature to the already formidable square. The sides of it next the front attacked are thrown forward by him, so as to prolong that front, and in this way bring twice the ordinary amount of fire to bear upon the assailants. The guards, with their left shoulders thrown forward, formed line, and kept up a continuous fire on the brow of the hill, with the batteries supporting them; while the brigades of Generals Fane and Sir De Lacy Evans, in succession, and by a long movement, were also changing their front to the right, when the accident we have already alluded to happened. An artillery officer showed great promptitude in finding out and bringing up to where Colonel Bentinck lay one of the stretchers which always accompany the division on field days. Colonel Stanhope, of the Grenadier Guards, has been appointed to fulfil the duties of Colonel Bentinck as commander of the brigade of Guards, pending that gallant officer's illness

SUNDAY.

The day was passed in its usual quiet manner—nor were the visitors more numerous than usual.

MONDAY.

Their Royal Highnesses the Prince of Wales and the other Royal children now staying at Windsor Castle, visited the Camp about one o'clock.

Prince Lucien Bonaparte, accompanied by the Duke de Montebello and other French officers, also paid a visit to the Camp, and was conducted by Colonel Hamilton through the cavalry encampment, and afterwards through the quarters of the brigade of Guards. The Prince minutely examined all the appointments of the various regiments, and expressed himself greatly pleased with much that he saw.

The operations of the troops were confined to Virginia Water, where the pontoon bridge was again thrown over for the passage of such of the regiments as had not crossed it on Tuesday last. After an early parade, the 1st Life Guards, the 4th Light Dragoons, the 13th Light Dragoons, the 38th Foot, the 93rd Highlanders, and the Royal Artillery, marched from the camp, under the command of his Royal Highness the Duke of Cambridge, direct for Virginia Water. The foot regiments crossed Cattens Valley, and marched through Colonel Challoner's grounds, the cavalry and artillery passing down the Staines road. The only object of the troops going to Virginia Water being to practise them in the mode of crossing a pontoon bridge, no ammunition was served out, and no fighting took place. The foot regiment crossed the bridge first, especial care being taken by the officers to prevent the men "keeping step." After the bridge had been well covered with heather, the passage of the artillery and cavalry was commenced. With the artillery some difficulty occurred, owing to the restiveness of the horses attached to some of the guns. The cavalry crossed the bridge without accident, and all the troops having gained the Park side of the water, assembled on the upper ground—the same position occupied by the division on Tuesday last—when they went through several manœuvres, greatly to the satisfaction of their illustrious commander. The cavalry returned to the Camp by Blacknest-bridge, arriving at their quarters about five o'clock. The 38th and 93rd Regiments returned in the direction of the pontoon-bridge, which, on their arrival at the bank of the lake, they found had been broken up into "rafts." Upon these rafts the whole of the two regiments were transported across in little more than a quarter of an hour. Each company went on each raft, and without the occurrence of the slightest accident. These regiments returned to the Camp about half-past five o'clock. A portion of the pontoon operations was witnessed by the Princes and Princesses of the Royal family, on their way to the Camp.

TUESDAY.

The last field day of the troops at present encamped took place today. After the morning parade, the division assembled at eleven o'clock. A series of evolutions were then gone through in Cattens Valley, under the command of his Royal Highness the Duke of Cambridge, which lasted until half past two o'clock, when the whole division marched past the Duke of Kent, the Princess Mary and the Duchess of Cambridge. General Lord Seaton, and a number of distinguished officers, on the ground in front of the artillery encampment, and proceeded to their respective quarters. The total number of all ranks on the field that day was 9120.

His Royal Highness the Prince of Wales arrived at the Camp in the afternoon, at a quarter-past three o'clock. His Royal Highness drove along the cavalry quarters, returning along the line of the Guards' encampment until he arrived opposite to the quarters of the Scots Fusilier Guards, where his Royal Highness alighted, and inquired for Sergeant-Major Edwards, the non-commissioned officer who has the honour of instructing the young Princes in their practice of gymnastic exercises. The sergeant-major was soon in attendance. The Prince asked the sergeant to conduct him to his tent, upon arriving at which his Royal Highness minutely inspected its internal arrangements, and, after thanking his gymnastic preceptor for his attention, his Royal Highness presented him with a hand-some gratuity. The Prince next visited the Camp kitchens of the Scots Fusilier Guards, and after tasting the soup at one of them, presented the corps with a sovereign. His Royal Highness then paid his respects to Colonel Francis Seymour, Equerry in Waiting to his Royal father, who holds a command in this regiment; on taking leave of whom his Royal Highness drove along the whole line of the Encampment, visiting the quarters of the Sappers and Miners en route, and returning down the main streets of the Camp to the cheers of the private soldiers. His Royal Highness drove back to the Queen's pavilion, but did not alight; and left the ground on his return to Windsor at a quarter past five o'clock.

WEDNESDAY.

This was what may be termed a review day at the Camp. Nothing was done in the way of evolutions; but, individually, the whole force was astir. There was nothing but packing up and clearing out, with now and then the arrival of a detachment from some of the new regiments to occupy their allotted ground.

In the evening, H.R.H. the Duke of Cambridge gave a grand banquet to the officers of the cavalry brigade.

THURSDAY.

To day the troops were relieved at the Camp by the Royal Horse Guards, the 3rd Dragoons, the 4th Light Dragoons, and 8th Hussars; the second battalions of the three regiments of Foot Guards; and the 79th, 19th, 35th, 79th, 88th, and 97th regiments of the line. Lord Seaton continues to command, and the Duke of Cambridge will continue in command of the cavalry. Lieut.-Colonel Dupuis will command the Royal Artillery, consisting of one troop of Royal Horse Artillery and three field batteries. Colonel Thornton, Grenadier Guards, will command the brigade of Foot Guards. Major-General Sir Richard England will command the first brigade of infantry, consisting of the 7th, 19th, and 35th regiments of the line. And Colonel Lockyer, of the 97th, will command the second brigade, consisting of the 79th, 88th, and 97th regiments.

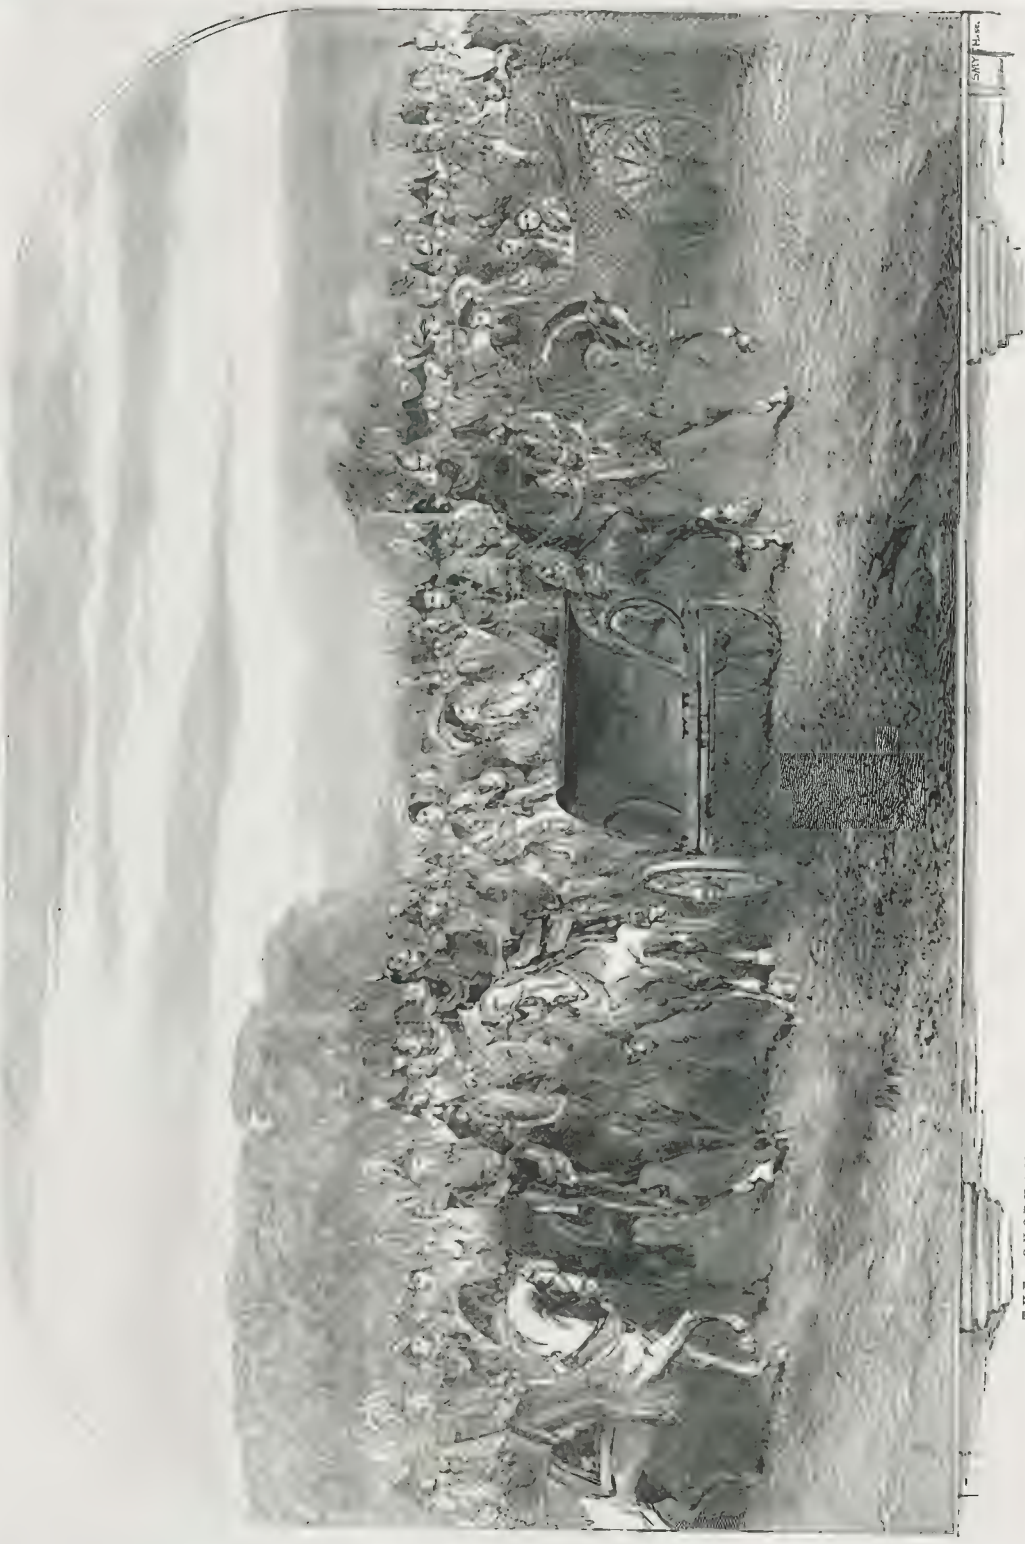
Very heavy rain having fallen during the last night and this morning, Lord Seaton directed that the tents should be left standing, and not struck as at first ordered. The whole field, by the evening, was in a frightful marshy condition.

Colonel Bentinck is going on very favourably. He still remains at Higham.

There is no intention of depoting Lord Seaton from the command he so worthily fills in favour of Sir Charles Napier, nor any other officer. The Brigadiers-General will also retain their commands over the new troops to be encamped.

Mr. Cooke, proprietor of Astley's Amphitheatre, has obtained permission of the Lieutenant-General to erect a circus near the Magnet-hill.

[The large Engraving upon the next page illustrates the troops passing in review before her Majesty, upon Smith's Lawn, in Windsor Great Park, on Tuesday, the 5th, as fully detailed in the ILLUSTRATED LONDON NEWS of last week, page 5.]



THE CHOBHAM ENCAMPMENT.—HER MAJESTY IN SMITH'S LAWN, IN WINDSOR GREAT PARK.

PRIZE PLATE AND FLOWERS, FROM THE GRAND EXHIBITION OF PLANTS OF ALL NATIONS, AT CHELTENHAM.

GRAND EXHIBITION OF PLANTS OF ALL NATIONS AT CHELTENHAM.

ON Tuesday the county of Gloucester and Cheltenham Horticultural Society held their annual Exhibition at Cheltenham. The fête was distinguished by a variety of splendid plants, fruit, flowers, &c., from the Continent—this being the first occasion of foreign contributions being received at such exhibitions in this country; and the success which has attended the experiment promises great additions to the attractions of our Horticultural Societies

The fête was given in the beautiful gardens of Pittville. The display of fashionably-dressed ladies, in the light summer costume, gave great gaiety to the scene. The banks of the lake, with its fountains playing, formed an agreeable promenade for the company, after gratifying the sight with the lovely flowers of all kinds, and from distant countries. There were contributions from Madame Legrelle, of Antwerp; M. Von Gert, of Antwerp; M. L. P. Baillieur, Ghent; from Messrs. Standish and Noble, Bagshot, Surrey; Veitch and Son, Chelsea, &c

Messrs. Rollison and Son, Mr Hodges, Miss Phillips, Mr. Head, A. E. M'Donnell, Esq., Courtland S Shaw, Esq, Mr. Clark, and Mr. Barrett, were some of the visitors, as well as the Continental competitors.

The Customs in London and Dover very politely forwarded the plants from the Continent off without opening them, and sent down an officer to inspect them on their arrival.

The general arrangements of the fête were under the superintendence of Mr. J. H. Williams, honorary secretary.

The approach to the gardens is either by the road or through two gardens divided by roads. On entering the last, in which stands the Pump-room, is a beautiful lake and a broad walk: on each side of the latter are parterres and shrubs; and a little beyond is a meadow. From the sides of the Pump-room projected two marquees, each 200 feet long and 30 feet wide; these were joined at one side each by another marquee, 40 feet long by 40 feet wide, forming three sides of a quadrangle. These marquees were supplied by Piggott and Co., of Fore-street, London; as were also the numerous flags which decorated the grounds, marquees, and pump-room. The bands of the Highlanders and 1st Royals played throughout the day, until past six in the evening.

The tents were occupied nearly as follows: In the long marquee to the right of the broad walk, were ranged the stove and greenhouse plants, and Standish and Noble's hardy plants. The long marquee on the left contained the fruits, and a miscellaneous collection of plants. The bouquets and vases of flowers, as well as some of the exotics, were placed in the Pump room. Small tents, appropriated to the visitors, were placed in various parts of the grounds.

We have not space for the list of prizes; but upon the preceding page we have Engraved the Prize Plate, and the exquisite productions for which they were awarded

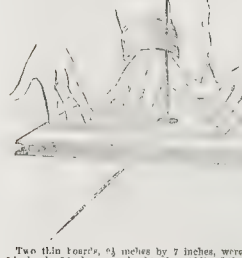
The group may be thus described:—The tall central Vase was given for the best stand of Cut Flowers; the Vase behind the centre for the best Cape Heaths; the Tankard, for exotic Orchids; the large two-handled Vase, the highest prize for the best Greenhouse Plants; and the small Challenge Cup for Roses.

The flowers composing the groups are—Orchids, Heaths, Roses, Fuschias, Chinese Clematis, the Erythrina Laurifolia, the Allemande Cathartica, the Erica Retorta, the Epacris Miniata, the Berberis Fortunea, the Oncidium Papilio, an exotic Orchid; the Angelos Clowesii, from Peru; the Pitcher Plant; the Dion Edule, reared in Ghent; the Petunia. The fruit consists of pine-apples, melons, grapes, peaches, &c

In one of the tents, with the cut flowers, were two baskets of paper flowers, which were remarked for their verisimilitude, in juxtaposition with the exquisite realities of nature. There were also exhibited some wax flowers, of equal excellence.

TABLE TURNING.

In illustration of Professor Faraday's letter in our Journal of the 2nd inst, we have engraved the "more perfect lever apparatus," the construction of which the Professor thus describes in the *Athenæum*.—



Two thin boards, 24 inches by 7 inches, were provided; a board, 9 inches by 5 inches, was glued to the middle of the under side of one of these (to be called the table board), so as to raise the edges free from the table; being placed on the table, near and parallel to its side, an upright pin was fixed close to the further edge of the board, at the middle, to serve as the fulcrum for the indicating lever. Then, four glass rods, 7 inches long and ¼ in diameter, were placed as rollers on different parts of the table-board, and the upper board placed on them; the rods permitted any required amount of pressure on the boards, with a free motion of the upper on the lower to the right and left. At the part corresponding to the pin in the lower board, a peach was cut out of the upper board, and a pin attached there which, being bent downwards, entered the hole in the end of the short arm of the index-lever; this part of the lever was of cardboard, the indicating prolongation was a straight hay stalk, 15 inches long. In order to restrain the motion of the upper board on the lower, two vulcanised rubber rings were passed round both, at the parts not resting on the table; these, whilst they tied the boards together, acted also as springs, and whilst they allowed the slightest tendency to motion to be seen by the index, exerted, before the upper board had moved a quarter of an inch, sufficient power for pulling the upper board back from either side, to resist a strong latera action of the hand. All being thus arranged, except that the lever was away, the two boards were tied together with string, running parallel to the vulcanised rubber springs, so as to be immovable in relation to each other. They were then placed on the table, and a table turner sat down to them; the table very shortly moved in due order, showing that the apparatus offered no impediment to the action. A like apparatus, with metal for cardboard, was also found under the hands of another person. The index was now put into its place and the string loosened, so that the springs should come into play. It was soon seen, with the party that could will the motion in either direction (from whom the index was purposely hidden), that the hands were gradually creeping up in the direction before agreed upon, though the party certainly thought they were pressing downwards only. When shown that it was so, they were truly surprised; but when they had fed up their hands and immediately saw the index return to its normal position, they were convinced. When they looked at the index, and could see for themselves whether they were pressing truly downwards, or obliquely so as to produce a resultant in the right or left-handed direction, then such an effect never took place. Several tried, for a long while together, and with the best will in the world, but no motion, right or left, of the table, or hand, or anything else, occurred.

MR. HOBBS AGAIN.—The Society of Arts offered a premium of £10 for the invention of a secure lock the result of the famous lock-picking crusade of Mr. Hobbs in 1851. A man named Sacley, of Sheerness, recently sent in one, and to him the prize was awarded by a committee; Mr. Chubb in the chair. But here the indefatigable Hobbs again appears; discovers that the new lock is constructed on an old principle; and actually picks it on the spot in three minutes

THE ARTILLERY AT CHOBHAM.—The firing of the great guns at Chobham has been heard at Aylesbury. The distance to Chobham is nearly forty miles by road, but the direction is round about. A straight line drawn between Aylesbury and Chobham cannot be less than 25 or 30 miles, and artillery can be heard at that distance.

SAN FRANCISCO, CALIFORNIA.

(From our own Correspondent.) MAY 16th, 1853.

THE last fortnightly mail from England by way of New York, brought as usual, numbers of the ILLUSTRATED LONDON NEWS, from former dates: and, as occasionally in them, and often in other London papers I have remarked passages concerning this country, which, from their want of accuracy, must tend to convey to the English public an incorrect impression of what California really is, and how we "live, move, and have our being in it." I propose, with your permission—especially as there are no regular correspondents here to any of the London newspapers—to give you with each mail a few jottings-down of passing occurrences. My letters will, I hope, illustrate the peculiarity of the manners and customs of our varied population, and will include business details, and the doings and prospects of the various English quartz mining companies. Your readers will thus be kept *au courant* in the history and interests of this last new state, which Americans boast as being the brightest star in the union, and to which they have given the motto of "Eureka."

But, first of all, let me give you a few words descriptive of San Francisco. The site of the city is in a bay, in, perhaps, the most extensive harbour in the world; the entrance to which, about four miles distant, is prettily and not inappropriately called the "Golden Gate." This bay in the year 1848 was deep, and embosomed in an amphitheatre of high hills, wooded with evergreen oaks and flowering shrubs. In order to meet the requirements of the shipping, which soon filled its waters in such vast numbers, it was necessary to run out long wharves; and, as the city increased rapidly in size, streets were projected across the hills from wharf to wharf. The "water lots," as they were called, were filled in with the sand from the hills: from time to time the wharves were further projected, and the city front extended; so that, at this day, almost the entire business portion of the city is built upon a foundation where ships of from 600 to 800 tons burthen used to ride; and at this time of writing, the hulks of two store-ships, in the very centre of the city, are being broken up—in order that their ribs and timbers may assist in making a foundation for another brick or granite building, similar to those on either side. Montgomery-street, which is long and wide, and devoted in its principal part to bankers and professional men, separates this part of the city, which we have already spoken of, from the upper portion where the public offices, theatres, and retail dealers are situated.

Picturesquely placed on the hill sides, and in the little valleys between them and above the city, are private residences, commanding a view of the district of country about the Mission Dolores; the vast and tranquil harbour, stretching away to the right towards San José; and on the left to the valley of the Sacramento; and the woods and hills of Contra Costa and the towering Monte Diavolo, which bound it on the opposite side.

San Francisco has a varying population of from 50,000 to 60,000, and not 240,000, as reported in several London papers. By far the larger portion of these, four-fifths, I should judge, are active, middle-aged men; and, during the bustle and business air of the numbers in the streets, a stranger would estimate the inhabitants at four times their amount; and this is one of the peculiar characteristics of Californian cities. There is as much crowding in Montgomery street, Clay-street, Long Wharf, and some other streets as in your Oxford-street.

But enough to-day of description; I must now give you the news.

On May-day the Superintendent of Public Schools made arrangements to give all the children under his charge a festival. The weather was most propitious: the order of the day indicated that all should assemble at one of the school rooms, and then walk in procession through the city to a valley in the environs, where the imposing ceremony of crowning the Queen of May was to be performed; then succeeded singing, games, and pic-nic festivities. About eleven in the morning the procession moved through the city, preceded by a fine German band School after school of boys and girls altern[illegible] passed the girls in white frocks, having abundance of flowers. After about half an hour had passed came an escort of little fellows, fantastically dressed after the costume of her Majesty's Beefeaters. Then came her august and most pretty Majesty, the little "Queen of May." She was every inch a Queen—robed in white satin, with flowers. The Queen of the day"—a smart young fellow—walked by her side, and held a parasol over her head; and proud enough he looked of his office. Fifteen little maids of honour, with dresses as pure and fair as themselves, followed; and, after them, school after school, in the same order as before, down to the little tiny tots that were too *petite* to walk, and so were borne along in waggons. They numbered altogether about 1600, and represented the "universal Yankee nation," of course; and also France, Germany, Chili, and Peru. I have not space to say about the enjoyments of the day, than that all passed off most happily; and that this first May-day festival in California will not be forgotten by those little ones in any phase of their chequered life.

Catherine Hayes and Herr Mengis leave us by the steamer to-morrow morning for South America, where it is their intention to give concerts previous to visiting Australia. Their career here has been to them most profitable, and to us very agreeable. Miska Hauser, the violinist, is also with us: he did not draw such houses as his talents ought to have commanded: at present he is making a tour in the mining districts.

Apropos of the mining districts, I was in the mines two or three years ago, and then the fare consisted solely of salt pork, "flap-jacks" (a kind of pancake, made of flour and water, and fried in pork fat), and bad rye whiskey. Now—*nous avons changé tout cela*—absolute luxuries fill the mines; fresh meat, eggs, milk, vegetables in abundance, good bread and beer, and even champagne and respectable-sized settlements call themselves cities and towns; hotels have their billiards and bowling-saloons, men dress decently, and are no longer the ragged, bearded rascals, as of old.

MAY 31st, 1853.

The news of the last two weeks present no feature of particular interest or importance beyond the adjournment *sine die* of our State Legislature, and the arrival by the last steamer of the new federal appointees.

The accounts from the various mining districts are very encouraging. New *placers* have been discovered, and others that hitherto could not be worked for want of water, are now in full activity, owing to the enterprise of various water companies, who, by means of canals, have brought a full supply round the bases of mountains, and in aqueducts over valleys, from the river sources fifty, sixty, and even a hundred miles distant. The yield of gold this year will equal, if not exceed, that of any former. The new companies themselves are paying a very handsome interest, and their stock is looked upon as a respectable-sized settlement call themselves cities and towns; hotels have their billiards and bowling-saloons, men dress decently, and are no longer the ragged, bearded rascals, as of old.

In the cities and towns all branches of trade are comparatively dull, and this state of things will, it is supposed, continue for some time. Immense stocks of merchandize are still in hand; and the daily arriving additions, together with the large fleet of clippers on the way, cannot fail to reduce even present prices to a much lower figure.

The agricultural prospects of the country were never in a more favourable condition. Vast tracts of land in the fertile valleys of the Sacramento, San Joaquin, San José, and Santa Clara, have been brought under cultivation, and the season has hitherto been most propitious—as, contrary to what has hitherto occurred, light rains have been constantly falling; so that the crops put on the appearance of giving a most abundant harvest.

In the theatrical world we have amongst us two celebrities—Lola Montes, and Mrs. Catherine Sinclair, the divorced wife of Edwin Forrest.

Lola Montes is drawing crowded houses nightly at the American theatre. True, she is neither a good actress, nor yet a good dancer; but her genius, her fascinating manners, her world-wide reputation, draw around her every night a crowded house of admirers, who insist upon waiting her before the curtain, and who seem perfectly ravished with pleasure at the little she condescends to give them in return. She is perfectly "well put" to the point, and full of graciousness. A play, called "Lola Montes in Bavaria," is in preparation, in which she is again to enact the *rôle* that made her so conspicuous in the court of that country.

Mrs. Sinclair is also drawing good houses at the "San Francisco" in her "great characters," as the papers say, of *Pauline Deschappelles* and *Mrs. Haller*. The city press speak of her acting in rather eulogistic terms. Both she and Lola Montes will make much money here; as did Catherine Hayes, who received 2000 dollars for her last two farewell concerts.

M.

SOCIAL PROGRESS IN ENGLAND.—Judge Haliburton ("Sam Slick"), speaking in public recently, said that, returning to England only about once in ten years, nothing had more astonished him than to see the great advance and improvement which had taken place in the condition and manners of the people, and seeing all classes intermingling together, without any of that jealousy and distrust which formerly unhappily existed.

THE IMPENDING WAR BETWEEN RUSSIA AND TURKEY.

THE interest and gravity of the events that are likely to occur in consequence of the unjustifiable aggression of the Emperor Nicholas on the Ottoman Porte, have induced us to dispatch Correspondents to the East of Europe. They have instructions to proceed to Constantinople, and to forward us letters and sketches by the way. Our readers will thus have the advantage of the latest exclusive intelligence from the seat of war, from the pen of an able and experienced writer; accompanied by faithful sketches of scenery and incident from the pencil of one of the most accomplished draughtsmen of the day. We this week commence the series, by the following letter from our Correspondent, written *en route* for the Danube:—

RANDOM NOTES AND SKETCHES MADE ON THE WAY TO CONSTANTINOPLE, JULY, 1853

(From our Special Correspondent.)

DRESDEN, July 6.

HAVING readily acceded to your flattering suggestion, that we should seize the occasion of the important political and social movements now going forward, and probably about to arrive very shortly at their solution, in the East, to make an artist e, literary, and philosophical tour through that quarter of the world, my friend S—— and myself, after a hasty preparation, and a brief deliberation upon the "order of our going," took our departure on board of the *Baron Osy*, bound for Antwerp, on Sunday, the 2nd inst.

The Russo-Turkish question was the all-engrossing subject of discourse and speculation amongst the few knots of passengers who had already got into conversation when we took our place on board the *Baron Osy*, and was discussed with more energy and interest than political questions generally are amongst a miscellaneous assemblage accidentally thrown together in course of travel. And, indeed, it was no merely political question that was now before us. It was not a question between the Emperor Nicholas and the Sultan, or between the likings or dislikings of his Imperial Majesty for one Turkish Minister or another; not a question of Russian aggrandisement, at the expense of the balance of Europe (a balance which, like that of the tight rope dancer, is so laboriously kept, and so constantly in risk); not a mere question between Christian and Turk; not, in fine, a question either of a religious or a political contest; but it was all these combined; and, in addition, the still more momentous question, whether Europe should consent to allow the question of peace or war to remain longer at the caprice of an individual irresponsible power, remotely situated in the far East and North, terrible only by its command of an immense mass of brute force, and having little or nothing in common with the sympathies which influence the more enlightened peoples of Central and Western Europe. It was plain to see, in the face of many who were associated on the deck of the *Baron Osy* this day, how interests were vitally paralysed by the continuance of this unseemly state of things; how many industrial and commercial engagements—in timber, in wool, in corn, in iron, in a thousand other matters of trade all employing and feeding industry—were imperilled or suspended, till the halfpenny which was tossing and twirling in the air should come down head or tail—for peace or war, all according to the divine will of the Czar; and it seemed to be resolved amongst them that war itself would be better than a longer continuance of so anomalous a state of suspense.

A great deal of learned discussion also took place as to what would be the actual state of affairs, when the necessary result, the opposing the Russians to have already crossed the Prut—, and entered Moldavia. Was it a *casus belli*; and, if so, what was a *casus belli*; and then of the declaration of war, and who was to make it: and, if a war, would it be a general war; and, supposing not *per se* and of necessity a general war, would it become a general war by the interference of other powers in defence of the Turkish territory; or at least a war so far as the powers so interfering were concerned? These and a thousand other similar questions were considered in various lights as we paddled our way through the Pool; but none of them were decided when the pilot parted from us at Gravesend, and left the disquisitionists, as it may be said, "at sea."

The *Baron Osy* being a favourite vessel, and her obliging commander (Captain Jackson) a favourite also, the deck and cabins were crowded almost to excess; so much so, that when dinner time came only half the passengers could be supplied at a time, and S—— and I were amongst the number of those who waited for the second "spread." It must be confessed we were wrong, and came off second best, and thus at starting from dear old England, whilst yet within her territory, we discovered that we had bidden farewell to beef and mutton for a season. English chops, however, were made for Belgian fare, cooked *à la Anglaise*, three shillings a head for dinner, three shillings for half a pint of sherry (though duty free), two shillings for breakfast, fare, twenty-four shillings, with two shillings and sixpence a head for steward's fees. An old officer on board, whose hair was grizzled with nearly fifty years' service, remarked upon this item, that the good-natured functionary, in whose name it was claimed, was better paid than a general officer. The passage being a smooth one, many of the passengers slept on mattresses on deck rather than brave the fumes of the engines below. Thus made up for the night, we might have enjoyed repose till five or six in the morning, if left to ourselves; but the regulations of the ship did not allow it (there is always a certain amount of tyranny on ship-board even in passenger vessels). At two o'clock we were roused by sundry rough looking sailors in wooden shoes, who commenced washing decks; and we had to dodge out of their way for about an hour whilst they amused themselves at this work; and then to enjoy a promenade on damp boards till breakfast time. I really think this comfortless operation might have been deferred till after our arrival at Antwerp, which took place at about seven o'clock.

At Antwerp, as usual here, the officials, both those of the Customs and of the police, were all smiles and civility, as if they were really glad to see us; and which, in truth, I believe to be the case, it being an understanding at head-quarters that travellers are to be encouraged at this port, inasmuch as they are a considerable source of revenue to the town and railway interests. However this may be, the whole bearing of the Antwerp *douaniers* presented a striking contrast to that of our Custom-house officers towards the travellers landing on our shores. And yet Englishmen permit themselves to be continually finding fault with the treatment they receive abroad, forgetting what is meted out to strangers on their side of the Channel.

After performing a brief toilette, and snatching a hasty refreshment at the Hotel St. Antoine—one of the finest and best regulated in Europe—we took a rapid survey of the interesting architectural features and pictorial treasures with which this town abounds, and with which on former occasions we had become well acquainted. The view from our hotel door across the little *Parc*, with the bronze statue of Rubens in the centre, and the magnificent Cathedral towering up beyond, was a picture worth all the journey to Antwerp to behold

There was rather a crush of folk at the railway-station, including two thirds of the *Baron Osy* passengers, all bound for Cologne; and as there was only one paying-place, the process of obtaining tickets, and then seeing to the weighing of luggage, and paying for the same, became a trial of patience, which, like the deck-swabbing at two a.m., might

have been spared by the exercise of a little forethought on the part of the authorities.

Our *conducteur*, as he walked along his footboard, looking in the carriage windows to examine the tickets, was the very picture of politeness and perfect felicity. He announced that he should quit our *coupé* at Malines, but that his place would be taken by a *confrère*, to whom he would recommend our carriage to be reserved for us all the way to Verviers, where a change of administration would take place; and he kept his word. Arrived at Malines we lost him, after another announcement of the occasion of his parting, and a most gracious bow and "bon voyage!" This is a trifling incident, hardly worth recording, perhaps, except for the novelty of the impressions it must have created upon some of our travelling companions who had never "railed" it out of England. Imagine the guard of the Great Western, or North-Western, or of any other railway to any other point of the compass out of London, wishing one "bon voyage," or even unbending from his official rigidity to recognise one's bare existence.

At Malines, we caught a glimpse of the stately square tower of the Cathedral, from which the tricolour flag floated. We remarked, also, that the railway engines, instead of being called "Vulcan," "Ajax," or "Spitfire," or other mythological or terror-inspiring names, are denominated after historical personages to whom interesting associations attach—as Pierre l'Ermite, Pierre le Bon, Saint Hubert, &c. Further on, when on the German lines, we found the names also for the most part those of distinguished personages or of cities; and amongst the latter our good city of "Manchester."

The train kept very good time all the way; but there was a little shaking and swinging to and fro occasionally, particularly between Tirlemont and Liege, which might have been alarming, but that the ground is so flat that any serious accident would be almost impossible. In truth, the journey up to this point, was uninteresting enough, except occasionally where a village or some old château occurred to relieve the monotony of the prospect. The ground being throughout the northern and western provinces almost as flat as a table, the engineer, in constructing his railway, had little else to do than to lay down the rails upon the surface as he found it, carrying his line through fields of corn, beans, cabbages, &c.; which, accordingly, fill up the view on either side of the line. But the case is different when we approach Liege, and enter the Valley of the Vesdre. Now, throughout his course to AIX-la-Chapelle, the engineer had to contend against difficulties which must have tried the highest resources of his skill, and the greatest lengths of his patience and powers of endurance. Here we enter a wild rocky district, the face of which is hewn by the hand of time and the accidents of nature into abrupt gorges and mountain piles, so capriciously interlaced, that there was no other means of getting through them than by successively cutting, embanking, and tunnelling, and, in some places, erecting viaducts of considerable length. There are upwards of twenty tunnels between Liege and AIX-la-Chapelle, measuring 630, 212, 180, and down to 20 metres in length. Of the bridges and viaducts, that of the Val du Benoit, across the Meuse, on leaving Liege—that at Dolhein, having 9 arches, 60 feet high and 240 feet of finish, near AIX-la-Chapelle, standing 140 feet above the level of the valley—are works of engineering skill worthy of old Rome.

The railroads in the Prussian territory appear to be of a superior class to those in Belgium—better appointed, and the carriages more steady when in motion. A curious contrivance is adopted for the purpose of notifying the approach of a train, with a view to the prevention of accidents. As the engine passes each station it touches some machinery in connection with the telegraph, which forthwith sets to work the clappers of sundry iron bells, affixed not only at the station itself, but at the next station also, and at every intermediate point (and they are many enough) where a road crosses the line. It should be added that guards are stationed all the way along the road, and wooden huts built for their accommodation at distances of about a mile. In short, every precaution seems to be taken to prevent accidents.

The day's journey closed at Cologne, where a safe arrival was effected at half past six p.m. This is such well-beaten ground that I will say nothing further about it than that the Cathedral is progressing towards completion; some very extensive additions having been made since last I saw it; and that it is expected that the interior will be completed by next year, or the year after.

The journey from Cologne (or rather from Deutz, on the other side of the river) to Leyden, a distance of 450 miles, is performed in about eighteen hours. Starting at six yesterday morning, we arrived at our present resting place at a little past midnight. The first part of the road was extremely uninteresting, flat, featureless, and teeming with dust, which nearly smothered us. This was the case until we came to Bielefeld—the centre of the Westphalian linen trade (a distance of 29 German miles)—which is rather picturesquely situated amid a low range of hills; the strange old Castle of Sparenberg overhanging it. At length Minden was reached at a quarter past one o'clock; and the weary travellers (those at least, who had not amused themselves by breakfasting at five in the morning) devoured their first meal for the day. And tough work we had of it! I did not think it was in steak of beef to be so obdurate. However, the excitement of changing carriages (we here entered the Hanoverian line) and *viewing* passports, made us forget our hunger; and we sped on, secretly threatening up to "write to the ILLUSTRATED LONDON NEWS" about it, and looking forward with tenacious hope, to what Leipsic or Dresden might afford.

I am sure you will not wish me to give you a detailed account of the streets and sights of the pretty little capital of the Saxon king dom; and if you did expect it, I could not gratify your wish, as I am not a sight-seer, in the professional sense—prepared to take things as they come, and make the most of them. For a list of matters "worthy of the stranger's attention" here, I refer your readers to "Murray's Handbook," or "Bradshaw's Handbook," where they will find them all cut and dry. For myself, whilst S—— sallied forth sketching, I contented myself with lounging about the streets and the beautiful gardens which abound in this happy looking town, admiring the quaint but somewhat heavy architecture (all of stone) of the former, and the thick foliage and blooming flowers perfuming the whole atmosphere the latter. I also loitered for awhile on the Bruhl Terrasse, which skirts the river, and is approached by a fine broad flight of steps, near the foot of the old bridge, on the left bank. This terrasse was formed after the destruction of the palace of the Minister of that name in the Seven Years' War, and leads to the gardens already mentioned.

TRIUMPHAL ARCH ERECTED AT DRESDEN, IN HONOUR OF THE PRINCESS CAROLINE OF WASA.

On our way through the town we came across a very handsome temple, which had been temporarily erected across the roadway in the Alte Markat, in front of the Bath Haus, in honour of the arrival of the Princess Caroline of Wasa to espouse the Prince Albert of Saxony. The arrival of her Royal Highness took place on the 18th ult., and the marriage on the 20th; and the town, we were told, had been brilliantly decorated and illuminated on the occasion. S—— took a sketch of the Triumphal Arch already alluded to; which, it will be seen, was very tasteful in design; the central tower, supported on four pillars, surmounted by figures of Virtue, Plenty, &c.; and these profusely decorated with wreaths and festoons of flowers, devices in coloured lamps, &c.

There are two bridges over the river, the current of which is here very rapid; and, in winter time, the passage is sometimes choked up with floating ice. Both structures are, therefore, of great strength. A singular police regulation applies to foot passengers passing over them—namely, that they are always to keep to the *right*; so that there are two continuous streams—one going to the south, on the lower footway; the other going to the north, on the upper. There is, consequently, no such thing as *meeting* friend or foe.

As a specimen of a style of street architecture, S—— sends a sketch of one of the numerous bay-windows—some square, some round, which occur in various parts of the town, and which have a picturesque and pleasing effect.

BAY WINDOW AT DRESDEN.

The only exception I made to my rule against sight-seeing was in the case of the Royal Gallery of Pictures, the celebrated "Dresden Gallery," so rich in works of art of every school, but so to an unrivalled degree in Dutch and Flemish art. S—— who accompanied me, made a sketch of the exterior of the building. The gallery is on the second floor, and is approached by a double flight of steps. On entering the portal we came at once upon the first room devoted to the pictures—those of the French school being hung in this apartment; but it is not my intention to say anything of the pictures at present. The principal point I had in view to consider was, the adaptation of the building to the purposes of a picture gallery—a subject in which you are all much interested at home at the present moment. And upon this point, I must confess, that I was grievously disappointed. The Dresden Gallery in its present arrangement, but particularly as regards the apartments and their mode of light, being, to speak the simple truth, as bad as can possibly be conceived—as bad as Marlborough House—as bad as Hampton Court (though on a larger scale), and infinitely worse than the much-abused National Gallery. The reason of this is that the light admitted from windows in the walls, instead of from the roof; which windows are between twenty and thirty feet high, and are rudely closed half way up from the bottom, by means of mattresses and matting. The quantity of light thus admitted is not sufficient for the size of the room; the upper parts of the lofty walls can scarcely be said to be lighted at all; whilst the lower parts near the windows are, perhaps, too much so. The light whatever be the quantity admitted, is not diffused, and falls harshly upon the objects nearest the windows; and often upon all in a bad direction. But the most serious objection is in respect of pictures hung up in the piers between windows, which there, as it were between two fires, are absolutely invisible. The smaller pictures of the Dutch and Flemish schools are hung upon screens between the windows, and upon the whole are seen to very fair advantage.

We now shut up our note and sketch books for the present, as we are off in a few minutes for Vienna, on our way to Constantinople.

AMERICA IN LESS THAN FOUR DAYS.—We are enabled to announce that, by a new and much-improved construction of vessels, it will be perfectly practicable to accomplish the voyage between the United States and the United Kingdom in considerably less than four days; in fact, in about three and-a-half the ports connecting the Old and New Worlds being Halifax and Galway. This is no speculative statement. It is grounded on experiments which have already been made to test the sailing capabilities of vessels constructed on the new principle. With the submarine telegraph which is about to be laid down between Halifax and Galway, and the passage of vessels in three days and a half across the Atlantic, America and Great Britain will virtually become one colossal country, inhabited and governed by the Saxon race.—*Advertiser.* [This appears a veritable Yankeeism!]

NEW LONDON DEPOT FOR BURTON ALES.

THE neighbourhood of Haydon-square, Minories, has of late been somewhat prolific in archæological discoveries, through the disturbance of a very old locality for new occupation. A short time since we had to record the finding of a sepulchral sarcophagus upon this spot; and now we have to chronicle the opening of an extensive Ale Dépôt, an association which reminds one of the noble dust of Alexander stopping a beer-barrel. In Haydon-square, too, resided, for a time, the illustrious Newton, in a house which has lately been swept away by the hand of improvement; a portion of which has been the completion of a vast depôt for the wor.d-renowned ales from the brewery of Messrs. Allsopp and Sons, of Burton-upon-Trent.

The new premises in Haydon-square were formally opened on the 6th inst. They consist of a range of warehouses occupying 20,000 square feet, and provided with certain mechanical appliances of great completeness. Thus, the warehouses are in immediate connection with the system of railways worked by the London and North-Western Company, which not only affords Messrs. Allsopp and Sons an immense advantage in the economy of material and transit, but enables them to bring their ales into the London market in perfect condition.

To give, however, a general idea of the magnitude of the commercial operations which are now carried on in this once-secluded locality, we must begin by stating that a branch of the Blackwall Railway has been laid down from the vicinity of the Minories station to the building of the Messrs. Allsopp. Some of the large warehouses of the East India Company, in Haydon square, have been converted to the purpose, while others have been added to them. Messrs. Allsopp's premises, which are in the same building, have an extreme length of 364 feet and an extreme width of 105 feet; and this large space consists mostly of cellarage, though a considerable extent of store is on the ground-floor. By the system of intercommunicating railways, to which we have adverted, ale sent from the brewery at Burton on any afternoon is delivered in Haydon-square by seven o'clock on the following morning, the train which conveys it actually entering their premises by the branch line. The massive East India storehouses had to be adapted to the reception of the rails at a level which brought them in on one of the high floors. This work has been admirably managed by Mr. Baker, the engineer.

The waggons are shifted, with a rapidity little less than magical, on moveable platforms; these platforms are lowered, waggons and all, into the cellars, by means of hydraulic cranes, constructed on the principle of Armstrong's patent, and the barrels are rolled away with surprising celerity and precision. Our Artist has pictured upon the next page a portion of the vast cellars, which are already stored with barrels of ale from the brewery at Burton.

AIR, WATER, AND GAS.

AN abundant and continuous supply of fresh air and pure water are essential to the health and well-being of society. However fully the necessity has been understood by those whose duty and profession it has been to study the animal economy, it is only of late years that the attention of Government has been drawn to the subject, and municipal authorities directed to consider such questions as a part of their necessary duties. It required men of heroic natures to do battle against the deadly poison emanating from city graveyards, and the pestilence steaming from our courts and sewers. Private energy, working through the public common sense, has at last been successful; and probably the atmosphere of the metropolis was never at any previous period purer than it is at the present moment; but not until the sewerage is kept out of the Thames can the end hoped for be accomplished.

Notwithstanding the cry of the poor and the indignation of the traders of the middle class, fresh water, which is everywhere abundant, is doled out to consumers in the most niggardly manner, while the suppliers of the article are realising fabulously enormous profit. The condition of the Water Companies of London is such as to be no longer tolerated; and there are good grounds for believing that even in a pecuniary sense the suppliers of water would suffer little, if anything, were they to grant all the public have a right to demand.

A good supply of artificial light is to the moral and social condition of the people what air and water are to their physical health; and it is singular, that the end the most desirable has been the soonest attained. Macaulay, in his History declares, that, with the introduction of gas, highwaymen disappeared from the approaches to the metropolis, being unable to live where such a light existed. It was long the luxury of the wealthy trader; it has now become the necessity and comfort of the poor. While it is not permitted to enter the gorgeous saloons of Belgravia, and only admitted to do service with lacqueys in their halls: it has been introduced into sleeping-rooms in Scotland and becomes general for the purpose of cooking even the most delicate viands. In gas, a spirit of healthy com-

VISIT OF THE LORD MAYOR AND SHERIFFS TO THE WORKS OF THE GREAT CENTRAL GAS CONSUMERS COMPANY.

petition has been permitted. With the appearance of every new rival Company, the united voice of the old monopolies cried out about vested rights being in danger, and ruin to the widow and the fatherless who held shares in the Company; yet constantly has the price been reduced, and still the Companies continue to exist and divide respectable profits. This has been accomplished by increased consumption without proportionably increased expenses. If such has been the case with gas, why not with water? The last great gas contest began in 1848. The price then charged varied from 6s. to 7s. per 1000 cubic feet. The consumers called for a reduction, which was denied: the establishec Companies, having leagued together, openly avowed, that no Company could charge less than 6s. without being ruined. A new company—the Great Central—started into existence with the declaration that 4s. should be their maximum price. The public was startled; and so strong was the disbelief of even members of Parliament, that the promoters withdrew their first measure rather than hazard the preamble of their bill. Still they proceeded, and, after a terrible struggle, obtained their Act. In the meantime they had not been idle; they had procured the sanction of local boards, and absolutely were supplying their customers before their bill received the Royal assent.

The results are astounding. The capital employed in Gas Companies in London is about £5,500,000. Since 1850 the general price of gas has been reduced to 4s. and 3s. per thousand cubic feet—effecting a saving to the consumers of the metropolitan districts of at least £100,000 per annum. The lesson for monopolists to learn is this—not only have the old Companies been able still to make respectable dividends, but, against their will, have become benefactors to the people; the whole of their profits having arisen from the increased quantity consumed a fact which ought to lead them to forsake their contracted, antiquated notions, and, by adopting a liberal policy, ensure a continuous prosperity.

We have been led into these remarks by a visit on Saturday last to the works of the Great Central Gas Consumers Company, situated on Bow Common, of which our Artist has engraved a view. They have lately been completed, having a power of production of equal to eight hundred millions of cubic feet of gas per annum, and costing not more than £210 000—one-seventh of which was spent in law. Works of such magnitude, with such power of production, have never before, we believe, been constructed for less than three times the amount. Their street mains are nearly seventy miles in length. Their four gas holders can store nearly two million feet of gas, produced by retorts placed in two rows of arches—the one over the other—each upper arch containing six clay retorts, and the under arch seven of iron, and each retort producing on the average 8000 cubic feet per day. The fires heating the retorts are but seven inches wide by twenty-eight inches long; which, we understand, is only about one-fourth of the size generally in use. What struck us as being an ingenious and wise expedient for getting rid of one of the abominations generally connected with gas-works was the use made of the offensive coal-tar. Instead of being permitted to accumulate and pollute the air, it was carefully stored in tanks, and introduced into the fire as fuel to heat the retorts. Each section of these retorts occupies a space of 8 feet by 19 feet, and carbonizes from ten to eleven tons of coals, producing about 100,000 feet of gas, per day. We were greatly struck with the massiveness and simplicity of the works. The various processes of manufacture, condensing, purifying, storing, &c., were explained by Mr. Sheriff Croll, the engineer, on Saturday, to the Lord Mayor and Sheriffs of London and Middlesex, several members of Parliament, and a considerable number of merchants and others connected with the City. They were accompanied by Mr. Dakin, the Chairman; Mr. Gabriel, the Deputy-Chairman; and the other Directors and officers of the Company; and also by Mr. Pearson, the City Solicitor. After viewing the works, the company visited Mr. Sheriff Croll's alum manufactory, and, in the evening dined at the Brunswick Tavern, Blackwall.

ALLSOPP'S ALE STORES, HAYDON-SQUARE, MINORIES.—(SEE PRECEDING PAGE.)

ARTHUR NAPOLEON, THE YOUNG PORTUGUESE PIANIST.

THIS interesting boy prodigy, whose performances have been one of the wonders of the present musical season, is a native of Oporto, in which city he was born on the 6th September, 1844; he has not, therefore, yet completed his ninth year. He is the second of a family of six children, and has recently lost a younger sister, who was almost his equal in musical talent. At the age of three years, he evinced a strong passion for music. His father taught him his notes, the treble and bass clefs; and he rapidly imbibed the rudiments of the art. Before he had reached the age of five years, he had appeared in public at the Philharmonic Society of Oporto. At the age of six years his father took him to Lisbon, where he played before the Court; soon after which he was made an honorary member of the Philharmonic Societies of Lisbon and Oporto. In 1852 he was taken to Paris, where he played before the

ARTHUR NAPOLEON, THE YOUNG PORTUGUESE PIANIST,—FROM A DAGUERREOTYPE BY MAYALL.

Court, and was honoured with the notice of their Imperial Majesties; and the little Arthur's success is recorded in the most eulogistic terms by Hector Berlioz, in the *Journal des Débats*.

Arthur Napoleon is of a slight, slender frame; but he has a fine intelligent countenance. His taste and facility in musical composition are highly promising of future excellence. At his piano he is a maestro; away from it, a playful, happy child. He possesses great animal spirits, but can easily be brought to concentrate his ideas on any given subject. He will amuse himself for hours, when left alone, in composing imaginary operas with chairs and sofa pillows, for his company, and himself the conductor and orchestre. He does not study, he only plays at music. It has been said by a French critic, that "he must have brought from heaven the secrets of musical science, for he has not lived long enough to learn them." In truth, no teaching could give the taste, feeling, and expression which he imparts to Thalberg, Prudent, Hartz, Ascher, and a crowd of other composers, who may come under the magic touch of his little fingers. His execution is natural and artistic. The instrument obeys him. He passes over the most difficult passages gracefully; and he interprets the great masters not only with unerring precision, but with wonderful richness of tone, charm of expression, and warmth of sentiment.

THE ST. JAMES'S COMMUNION PLATE.

THE ST. JAMES'S COMMUNION PLATE.

THE Communion Plate of St. James's, Westminster, which presents some remarkably fine specimens of working in metal, consists of nine sacred vessels, silver-gilt: one large flagon, 16 inches in height, and two smaller flagons; four chalices, each 11 inches high; four patens and one large paten; and a large alms-basin, 23 inches in diameter, representing the Last Supper; and on the rim with medallions of the Annunciation, the Nativity, the Crucifixion, and Resurrection. It is supposed to have been the work of an Italian artist. A knife, a richly-chased spoon of foreign workmanship; an alms-box; and two candlesticks, each bearing three branches, complete this superb service.

The beauty of the chasing and elegance of style of the enrichment adopted—flowers, cherubim, sacred symbols, as vine-grapes and wheat-ears—were greatly impaired, owing to encrustations of rust from neglect. The present Churchwardens, Mr. Frederick Crane and Mr. Frederick Sasse, with the zeal that has marked their tenure of office, entrusted it to the care of Mr. George M. Young, silversmith, of 51, Princes-street, Leicester-square, who has restored all the original brilliancy, distinctness, and finish, with such success, that we much doubt whether the plate, when it issued from the maker's in a less advanced stage of art, could have worn such a beautiful appearance as it now presents.

John Evelyn, under the date of December 7, 1654, says, in his Memoirs, that he went to see "the most noble Plate given to the new Church at St. James's, by Sir R. Geere, to the value, as was said, of £200." (Vol. I., p. 377. Ed. Bray, 1899.)

No note is added by Evelyn's editor; some particulars of the donor may, therefore, prove acceptable:—He was the second son of Hugh Gayre, of Cornish descent, and Joan, daughter of Thomas Forres, of Plymouth. On the death of his brother John, he came into possession of the manor of Stoke Pogis, Bucks, in 1657; and, at the coronation of King Charles II., was created Knight of the Bath. He died June 14 1702 (Add. MS., 5732). His first wife was Christian, daughter of the Earl of Aylesbury. He was a zealous partisan of the Stuarts; and, on one occasion, refused permission to William III., who waited at the gates, to visit his mansion at Stoke Pogis (Lipscombe's "Bucks," IV. p. 554). The arms which he bore were (Harl. MS., 1476, f. 82) "Ermine, a fleur-de-lis sable, on a chief of the second a mullet or *Crest:* A lion rampant sable, holding a tilting-spear or, pointed azure."

THE "SOVEREIGN OF THE SEAS."

THIS celebrated American clipper ship arrived in the Mersey on the 2nd inst., from New York, having made the run in a shorter time than was ever previously accomplished by a sailing ship. She came with an

"THE SOVEREIGN OF THE SEAS" AMERICAN CLIPPER.

extraordinary reputation; having been reported in the New York journals as "one of a glorious fleet of a thousand sail" voluntarily engaged in making observations for the wind and current charts; and, taking them for her guide, she made the run in 103 days from New York to San Francisco, both crossing the equator in the Pacific and arriving in port on the day predicted.

She made her last voyage from Honolulu to New York, having a full cargo of oil on board, in eighty-two days; and, during it, displayed the highest rate of speed ever attained by any vessel on the ocean. Within ten consecutive days—commencing March 3, she ran as follows:—219, 312, 284, 307, 245, 306, 311, 430, 360, and 267 miles: whole distance in ten days, 3144 miles; making an average of 314 miles a day; and this being short-handed, and with foretop-mast and jury-topgallant-mast disabled.

We have not space further to detail her performances. Among the results—in twenty-two days, with the winds alone as a propelling power, and but half manned, the *Sovereign of the Seas* accomplished the enormous run of 6,245 miles (one-fourth the distance round the earth), and making the daily average of 283 statute miles and 5-10ths (245.3).

During her recent run from New York, from her position on the Grand Banks on the 25th ult., in lat. 46 20, lon. 50 10, she was 135 hours sailing thence to Cape Clear—a distance of 1668 miles; being an average of 266 miles per day, or 12 78 knots per hour.

The *Sovereign of the Seas* was built by Mr. M'Kay, of Boston, the builder of the celebrated clipper *Flying Cloud*, and was named after the unrivalled ship built at Woolwich Dockyard in 1637, of which there is a fine model at Somerset-house. Her tonnage corresponded with the year; she was the first vessel built with "flushe decks," and the largest up to that period belonging to the English navy. Her keel measured 187 ft. 9 in.; her main breadth of beam was 48 ft. 4 in.; and she had three decks, a poop, and topgallant forecastle. She was pierced for 126 guns.

The dimensions of the *Sovereign of the Seas* are:—Length of keel, 246 feet; between perpendiculars on deck, 258 feet; over all from the knight heads to the taffrail, 265 feet; extreme breadth of beam, 44 feet; breadth at the gunwales, 42 feet; depth, including 8 feet between decks, 22 feet [illegible] 11 inches. Her rise of floor is 11 feet [illegible] 11 inches; she has considerable [illegible] above water lines, but her outline on the rail is convex. She has longer and sharper ends than those of any ship or ocean steamer in the world. Her stern is semicircular in outline, and very snug, and her sheer is carried boldly forward, imparting grace and lightness to the bows. Such is the harmony of her proportions, that, viewed at two or three hundred yards distance, she does not appear to be larger than many full modelled vessels of a thousand tons. Her frame, all her hooks and pointers, and nearly all her knees, are of selected seasoned white oak; and her deep frames, ceiling, and flanking, are of hard southern pine. She is strongly bolted with copper, and is, as a whole, the most substantially built vessel that has yet been produced in America.

All her accommodations are on the upper deck, leaving the hold entirely clear for the stowage of cargo. She has two spacious cabins built into a half-poop deck; a large house abaft the foremast for part of her crew; the galley, and other purposes; and a full top-gallant forecastle; the space under which is also fitted for the accommodation of her crew.

Her masts and yards are very stout, and strongly secured. The lower masts, commencing with the fore, are 89, 95, and 82 feet long; and her lower yards, 80, 90, and 70 feet square; the topsail yards, 63, 76, and 56 feet, and the others in proportion; and she spreads about 12,000 yards of canvas in a single suit. Her bow terminates with the figure of a sea god, half man and half fish, with a conch-shell raised to his mouth, as if blowing it.

Mr. M'Kay, the builder of the *Sovereign of the Seas*, is the son of Scottish parents from Perthshire, and was born in Nova Scotia

THE THEATRES.

ROYAL ITALIAN OPERA.

The revival of Mozart's "Don Giovanni," on Thursday night, filled the house, but by no means satisfied the amateurs in point of execution. Of Mdme. Castellan, Signori Ronconi, Tamberlik, Fra. Mei, Tagliafico, and Herr Formès, who resumed their parts of *Zerlina, Don Ottavio, Masetto, Il Commendatore, and Leporello*, it is unnecessary to state that they were quite up to the mark; but the new *Donna Elvira* (Signora Medori) the *Donna Elvira* (Madame Bosio) and the *Don Giovanni* (Signor Belletti) were so indecorous, or in perfect, that the effect of the *ensemble* was seriously deteriorated. An apology was tendered for Madame Bosio, on the ground of indisposition; her voice, nevertheless, seemed to be in good order; but she did not know her text, and the music is not perhaps adapted to her style. Medori strained her organ, which was unusually tremulous and uncertain in intonation; and Belletti's face, figure, and acting are totally unfit for the libertine *Don*—artistical as his singing was at times.

ST. JAMES'S.—GERMAN PLAYS.

Novelty has now become a feature in the productions of the German Company. On Saturday a slight piece by Wolf, entitled "Preciosa," taken from a tale of Cervantes, and identical in story with the opera of the "Bohemian Girl," was performed for the first time in England. Its chief consists in the opportunity which it affords Fraulein Fuhr, who begins to justify fully the favourable opinion we have expressed of her. Elegant in style, and sweet in her accents, the rhymed couplets in which the dialogue is written, and which might have rendered it monotonous, proved very pleasing. The play was accompanied with music by Weber, but the latter was not executed with sufficient effect to add to the interest of the performance.

Dienhardtstein's version of "The Taming of the Shrew" (Die Widerspänstige) has also succeeded in illustrating Devrient's comic forte, and in justifying his theatrical *audacity* as the Charles Kemble of Germany. His *Petruchio* is full of the true, jovial vein, exceedingly animated, and vigorous to a fault. The Shrew herself was played by Frau Stolte with great spirit; and the play, though badly translated, and injudiciously modified, proved, owing to their united exertions, very successful.

On Monday, an important five-act comedy was produced. It is a German translation from a Spanish play, by Don Augusto Moreto, and has, we are informed, been "highly popular throughout Germany." The translator is Carl August West, who has done his work elegantly enough and elegance in this comedy was the chief aim of the original author. It is, indeed, an instance of the sacrifices almost universally made by the modern drama to mere style. The distinctions of character are in consequence nearly without salient points, and it would be difficult, if not impossible, to discriminate them by their diction.

In the comedy of "Donna Diana" (for such is the title of this Spanish-German play) Herr Devrient has nothing of action, nor characterization; it consists entirely of sentiment and vivacious repartee. It is, in fact, a long conversation-play; the dialogue, even up to the fifth act, scarcely calculating to the required climax. The heroine is never carried to a high approaching frenzy, and we momently expect the solution; but the curtain obstinately refuses to fall, and we have to endure still fresh conversational gymnastics ere the end is effectively arrived at. Many scenes less intelligent and finished than Frau Stolte would have sunk under so long and tortuous a development; and there are few English actresses who have had experience of such elaborate and continuous occasions as compose the entire part of *Donna Diana*. The German stage has several—such as the *Princess Eboli* in "Don Carlos," and the discarded mistress in "Emilia Galotti"—apparently intermediate portraitures which try the patience of an audience and the strength of a performer to the utmost. *Donna Diana*, the hereditary Princess of Barcelona, is distinguished by her pride. She has three suitors—two of them princes of the usual fashion of wooing, and are repulsed. *Don Cesar*, Prince of Urgel (Herr Devrient), at the instance of *Perin*, her Secretary (Herr Dessoir), adopts a different plan, and by treating her with alternate blandishments and disdain, tames, before marriage, the haughty woman who else would have been a decided termagant afterwards. Both Devrient and Perin were capital in their respective parts—the first performing the manners of a gentleman, through all the trials which he imposes on the lady; and the latter showing an absurdity in motion significant of the busy body in all the pride of place. There is, however, little to repay the German student in such a performance; and we more gladly turn to that of Schiller's masterpiece, "William Tell," on Wednesday, than the performance of this great drama in England, nothing could be more instructive. It stands in contrast to the English play on the same subject; in the absence of all theatrical unity, and the entire disregard of the dramocratic element. The pure nationality of the theme, and the simplicity of the treatment, are its distinguishing characteristics. Schiller's *Wilhelm Tell* is no vulgar stage hero, no hero at all in the stage sense, but merely one of a natural group of Swiss peasantry suffering wrong from foreign oppression. He is marked out from the group simply by standing apart, and having an independently sphere of action. At the famous assembly of patriots on the Rütli, he is not present, his place is at home, his affections are centred in his wife and child. All the cantons are in commotion, but *Tell* is tranquil, bent on domestic duties. His wife is uneasy, and even accuses him of belonging to the league; but he replies—

Ich war nicht mit dabei; doch werd' ich mit'
Dem Loose jedes andern, wenn es ruft.

Nor do we doubt it, for proof is given of the courage of the man in every act of his daily life, in every word of his daily conversation. He makes no ostentatious apostrophes to his native mounts as, no enthusiastic appeals for liberty; but we recognise an habitual energy and hardihood which, in the hour of trial, will be equal to its work. That hour comes—its claims are met, and our expectations fully justified. Devrient threw himself into the character with a simple force that was quite charming, and perfectly in harmony with the purpose of the author. The spirit of the work, indeed, appeared to be thoroughly understood by all the actors in it. In this way, the scene on the Rütli, with its various oral cries, was sedately and yet effectively realised—or rather was effective because only realised, and not exaggerated by any attempt at stage portraiture. The part of *Gessler* was sternly outlined by Dessoir; and the two principal female characters—*Hedwig, Tell's* wife, and *Bertha*, the affianced of *Rudens*—were both finely impersonated by Frau Stolte and Fraulein Fuhr. The acting of all, indeed, commanded the applause of a judicious audience. Her Majesty was present, and diligently compared the performance with the book.

STRAND.

"Sambo Dampalus, King of Timbuctoo by Act of Parliament," was produced here on Monday, as an extravaganza burlesque on Byron's "Sardanapalus," the Monarch being performed by Miss Rebecca Isaacs, who, both in its gaiety and gravity, was equal to the numerous requisitions of the part. The piece has been carefully mounted, scenery and costumes being as brilliant as could be expected; the musical arrangements are excellent; and the production has already proved very attractive.

MUSIC.

NEW PHILHARMONIC SOCIETY.

Under the direction of Spohr, the sixth and final concert was given at Exeter-hall, on the 8th inst. The scheme was opened with a dramatic overture "Genevera," by Charles Horsley, the clever composer of the oratorios "David" and "Joseph." This was followed by Spohr's stringed Quartet, Op. 121, played to perfection by Cooper, Hennen, Goffrie, and Piatti: the attraction of this quatuor, in addition to the execution, was the novelty of the orchestral accompaniments—an innovation which may pave the way for much fine Chamber Music to reach the largest concert arena. The next instrumental item of note was Spohr's metaphysically-conceived and mathematically proportioned Symphony, the intent of which was to depict—according to the programme—the antagonism in the mind of man of the "earth earthy," and in his more elevated state—an orchestral conflict between two separate sets of players, to afford a notion of "earthliness and godliness." This work was first given by the Old Philharmonic Society, in 1842, under Moscheles' baton; but it may be doubted whether the gifted Spohr has been enabled to hear more clear in the development of his intentions, than he was when he essayed to describe "sound" before its creation by sound. The great practical and musical point in the Symphony is, that the expounds of the evil passions had decidedly the most captivating music, and the victory claimed by the progenitors for the moral executants was, consequently, an anti-climax. The effect of the symphony was, however, full and dreary; and when Beethoven's Symphony in D was heard, the hearers were indeed in elysium, although the books of the evening did not assure them of the fact—intellect and instinct are at once grasping the really sublime and beautiful, as contradistinguished from dry dreaminess and uninspired science Beethoven's "Fidelio" and Spohr's "Berggeral" overtures, are both gems in their way, and were admirably executed by Mr. Lavigne indulged the auditory with an oboe solo; and Mdlle. Clauss and Miss Arabella Goddard had a pianoforte "Duel" in the well known "Preciosa" duet, jointly composed by Mendelssohn and Moscheles. In the pianoforte performance of these two young pianistes could be recognised—in the Bohemian the highest order of intellect and poetry; in the other, wonderful mechanism, but little sentiment and fancy. Mdlle. Bury and Herr Reichart were the vocalists. It is intimated that the third season of the New Society will be on a more numerous basis. It was a great mistake on the part of the direction this year to go to Germany for chief conductor, and Lindpainter to wield the baton, whilst Molique and Benedict—who are infinitely better qualified to direct large orchestral masses—are in London.

FAREWELL CONCERT OF M. JULLIEN.

The Napoleon of promenade concerts, the hero of a hundred "bal masques," took a grateful farewell of the "shilling million."—first on Monday, in a monster programme; and finally, on Tuesday, in a bal masque; the theatre on both nights being crammed to suffocation. Next week the great Jullien will be on the bosom of the "Jenny," and the Atlantic will bear him in the *Baltic* steamer to New York, with Mdlle. Anna Zer, and a band of picked instrumentalists. This expedition will be no doubt eminently successful in America; and will, with the aid of local military bands, make as much noise as M. Jullien's programmes have made in this country. To state that the instrumentalists at these "testimonial" concerts were picked from the most eminent soloists, and that Madame Castellan, Madame Doria, Miss Dolby, Tamberlik, Sims Reeves, and Formès afforded their aid, will suffice to prove that M. Jullien, in addition to his remarkable popularity, has won the esteem of his professional brethren. Our objections to the mixed system of the programmes and the ridiculous," in M. Jullien's promenade entertainments, have been frequently expressed; but that that his lively concerts have made the general masses better acquainted with instrumental combination, there can be no doubt. It is, however, with great pleasure we learn that the formation of the Jullien dynasty at Drury lane will bring about the establishment of a really English Opera-house, the absence of which is a national disgrace.

THE MUSICAL UNION

The eighth and concluding concert of the ninth season took place at Willis's Rooms last night, under Mr. Ella's direction. The programme included Spohr's Sestet in C for two violins (Signor Bazzini and Herr Goffrie); two violas (Mr. Henry Blagrove and Mr. Webb); and two violoncelles (Signor Piatti and Mr. Lucas), and Beethoven's pianoforte Sonata in D, Op. 10, played by Charles Hallé, as well as Chopin's Polonaise in A flat, Op. 53; a violin solo by Bazzini, and Beethoven's Quartet in D, Op. 70. The concert will be repeated on Monday next, as a benefit and honourable termination. The existence of the "Musical Union" is one of the "great facts" of which the musical metropolis and amateurs have ample reason to be proud.

NOTES OF THE WEEK.

Amongst the most delightful matinées of the season, must be recorded that of Madame Oury the distinguished pianiste, who, in the elegant drawing-rooms of Mrs. Robert Holland, 63, Portland-place, gathered her numerous patrons and friends last Friday week. In addition to her own magnificent performances of works of all schools, Mdme Oury was assisted by Mr. Oury, Piatti, and Bottesini; Mdlle. Agnes Bury, Mdme. and Signor F. Lablache, M. Lefort, and Signor Gardoni; Benedict, Vera, Biletta, and Pereira being the accompanyists.

Mr. Aptholmas, the clever harpist, gave a morning concert at the Hanover-square Rooms, on the 8th instant; with the co operation of Mdlle. Jenny Baur, Miss Kathleen Fitzwilliam, Mrs. A. Stone, Mdme. Ferrari, Mrs. Wokie, Messrs. Salaman, Blagrove, Hausmann, Ferrari, F. Bodda, Richardson, M. Lefort, and Signor Gugliemi.

Mdlle. Emma Steinbach, the accomplished pianiste, and Signor Buzzini, the eminent violinist, gave a morning concert on Thursday last, assisted by Piatti, Puzzi, Bottesini, Biletta, Sprenger, Gardoni, Lefort, Mdme Clara Novello, and Mdme. Viardot. On the same day Signor Mortier, de Fontaine gave a concert at the Pantheon, Bolsover-street, assisted by Mdme. de Lozano, the Spanish vocalist, met her admirers at Willis's Rooms, last Monday, at her annual morning concerts; the abilities of Mdme. Viardot, Mdlle. Parepa, Signor Belletti, Alfredo Piatti, Bottesini, Regondi, Guglielmi, Signor F. Lablache, and Master Blasheck (a juvenile pianist) being also put in requisition.

Mr. C. Salaman's amateur Choral Society having terminated, the members have presented him with a pair of vases as an acknowledgment of his exertion.

Mr. Balfe's [illegible] concert at the Hanover-square Rooms, last Tuesday week, [illegible] high [illegible] [illegible] [illegible]

THE COURT.

The indisposition of the Prince Consort—from which the latest bulletin happily describes his Royal Highness to have quite recovered—has had a perceptible influence on the movements of the Court during the past week. Her Majesty has appeared in public in the park; and on more than one occasion the Queen has been honoured with the presence of the Sovereign; but the hospitalities of the Court have been confined exclusively to the Duchess of Kent, who has visited her Majesty daily.

On Tuesday the Queen, attended by the Viscountess Jocelyn, Col. Bouverie, and Lieut.-Col. the Hon. A. Gordon, left town at a quarter past nine o'clock, for Windsor Castle: Her Majesty travelled by the London and South Western Railway and returned by the same route to Buckingham Palace, at half-past one o'clock. His Royal Highness Prince Alfred left Buckingham Palace on the same day, and travelled by the London and South-Western Railway to Windsor Castle.

On Wednesday the Queen took a drive in an open landau and four, accompanied by the Prince of Wales, who had returned to town the same morning from Windsor Castle.

On Thursday the Queen gave an audience to the Earl of Aberdeen.

Her Royal Highness the Duchess of Kent, attended by Lady Anna Maria Dawson, went to Claremont on Tuesday, and visited the Countess de Noailly. Her Royal Highness returned to Clarence House, St. James's, in the afternoon.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JULY 14th.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
July 8	Inches. 29.886	° 79·6	° 61·6	° 69·5	+ ° 6·5	91	N.W.	Inches. 0.67
„ 9	29.886	79·1	61·5	64·8	+ 2·9	94	CALM	0.27
„ 10	29.835	67·7	57·7	60·6	− 1·2	85	W	0.00
„ 11	29.868	71·3	59·2	60·6	− 1·2	86	S.W.	0.00
„ 12	29.959	74·4	52·6	62·1	+ 0·2	72	W.	0.00
„ 13	29.801	74·9	51·1	61·6	− 0·4	78	S.W. & S.	0.00
„ 14	29.753	68·8	54·5	56·3	− 5·8	94	S.W.	2·00

Note.—The sign + denotes above the average, and the sign − below the average.

The rending of the barometer increased from 29.60 inches at the beginning of the week to 29.886 inches on the 9th, decreased to 29.801 inches by noon on the 13th; increased to 29.88 inches by 9h. p.m. on the same day; decreased to 29.86 inches by 9h. a.m. on the 14th; increased to 30.09 inches by 9h. a.m. on the 15th; and decreased to 29.753 by the end of the week. The mean reading for the week was 29.857 inches. During the five days the mean daily temperature were above their averages, viz. from the 8th to the 9th the average daily increase was 1·1 degree; and the mean temperature of the week was 1·3 degrees above the average of thirty-one years. The range of temperature during the week was 27·1°, the highest reading (79·6°) occurring on the 8th, and the lowest (52·6°) on the 12th. The greatest daily range of temperature during the week was 22·3° (on the 14th); the least, 4·5° (on the 14th); and the mean for the week, 15°. A violent thunder storm occurred between midnight on the 9th and 4 h. a.m. on the 8th. During this storm a house in the neighbourhood was injured by the falling of a meteoric, fragments of which of considerable size were picked up in the garden adjoining. Several injuries were sustained from this storm, which was accompanied by heavy rain. Rain fell during the week to the depth of 3.7 inches. This unusually large amount is due in great part to a heavy fall of rain between 9h. p.m. on the 13th and 9h. a.m. on the 14th, the morning fallen continuously for a period of twenty-one hours. The amount registered by 9h a.m. on the 14th was 1.2 inch, and between that time and 9h. p.m. of the same day 2.5 inches fell.

Lewisham, July 15, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending July 9, the births of 1444 children were registered in the metropolitan districts of these 709 were boys, and 735 were girls. In the eight corresponding weeks of the eight preceding years the average number was 1326. The number of deaths was 855, which is a considerable decrease on the average for each week in June, which was about 1000. In the corresponding weeks of the last preceding years the average number corrected for increase of population, was 1011—the actual mortality is therefore less than the estimates during the past week by 156. Of these deaths 211 occurred in the west districts (their average is 255): of these, 6 are referred to small-pox (its average is 20), 46 to hooping cough (its average is 28), and 43 to typhus (its average is 57). Of the remainder, 251 occurred in the central districts (their average is 286): of these, 6 are referred to small-pox (its average is 19), 46 to hooping cough (its average is 28), and 43 to typhus (its average is 57). Of the remainder, 251 occurred in the central districts (their average is 286): of these, 6 are referred to small-pox (its average is 19), 46 to hooping cough (its average is 28), and 43 to typhus (its average is 57). To cholera, 211 deaths were registered (its average is 255): of these, 6 are referred to small-pox (its average is 20), 46 to hooping cough (its average is 28), and 43 to typhus (its average is 57). To bronchitis, 91 (their average is 84): of these, 13 are due to consumption, exceeding its average by 7. To diseases of the brain, nerves, &c., 98 (their average is 107): of these, 23 are referred to apoplexy, 20 to paralysis and convulsions, 24 (which is 16 less than its average) to disease of the heart and blood vessels, 36 (their average is 37) to diseases of the respiratory organs of respiration, 34 (their average is 37). of these 34 are due to bronchitis (which exceeds its average by 6), and 41 to pneumonia. To diseases of the stomach, &c., 72 (their average is 66). To old age, 30 (being 7 less than its average). To violence, privation, cold, and intemperance, 37 (being in excess of their average by 15).

CONVERSAZIONE AT THE MANSION-HOUSE.—The Lord Mayor and Lady Mayoress entertained a brilliant assemblage at the Mansion-house, on Thursday evening; including the Duchess of Sutherland, with the Duke of Argyll, the Countess Dowager of Glasgow, Lord De Grey, the Bishop of Salisbury, the Bishop of St. David's, Lord Justice Knight Bruce, Lord Justice Turner, Vice Chancellor Stuart, Vice Chancellor Page Wood, the Prussian Ambassador, the Turkish Ambassador, the Belgian and Spanish Ambassadors, several leading members of both Houses of Parliament, many distinguished names in the literature and art, and the City authorities. The Egyptian hall brilliantly lighted, and decorated with pictures; the splendid suite of rooms leading into it, were thronged with visitors, who appeared highly to appreciate the hospitable courtesy of the Lord Mayor and Lady Mayoress. An excellent band of music was in attendance; and in some up-stairs, fitted up with school-books and the best modern educational apparatus; and refreshments provided upon principly scale of profusion, were among the means devised for the entertainment of the guests: under the auspices of the younger port on of whom, after midnight, the Egyptian hall was converted into a *salle de danse* with dazzling and delightful effect.

ELECTION OF SHERIFF.—On Monday, at two o'clock, the Lord Mayor, attended by a large body of the aldermen, Sir James Duke, the Recorder, the Sheriffs, &c., entered Guildhall, and took their respective positions in the hustings. The livery were duly addressed by the Recorder, the object for which they had been convened, that of electing a Sheriff in the room of Thomas Shepperton, Esq., he having been excused on the ground of ill-health. The Town Clerk then read the names of Mr. Wire, Alderman and Innholder; and James Thomas Norris, Esq., Spectacle-maker, to the Hall. On a show of hands the Sheriffs declared the election to have fallen on Mr. Alderman Wire, and declared him duly elected. The proceedings then terminated.

CHARING-CROSS HOSPITAL.—The annual general meeting of this useful charity was held on Tuesday afternoon, in the board room, West Strand, for the usual purpose of receiving the report, and other business; the Rev. Mr. Hall presided. Mr J. Robertson, the honorary secretary, read the report; from which it appeared that, in the course of the set year, 3,626 indigent sick persons were admitted into the hospital for relief, at a cost of £2553 4s 0½d.: these, with previous cases, make a total of 321,144 relieved since 1818. Legacies received during the past year Mr. Thomas Miell, £100; Mrs. M. Hatch, £200; Miss E. Harrison, £200; Mrs. M. Dodd, £200; Miss C. S. Gandell, £20. The committee acknowledge, with sincere thanks, the receipt of old linen from her Majesty and several of the large clubs in the metropolis and neighbourhood. The balance-sheet showed the total receipts for the past year to amount to £2553 4s. 0½d., and after all the necessary expenses had been defrayed, and the purchase of £1308 Stock effected, there was left a balance of £1177 15s. 8½d. There was also a balance of £1116 2s. 6d. on the building-fund account, and of £211 17s. 10d. on the completion-fund. The usual thanks were voted, and the meeting separated.

RELIGIOUS DIFFERENCES.—A faction fight took place on Monday night in Gray's-inn-lane, between a number of Italians, who have a mans-house in Baldwin-gardens, and a number of Irishmen with whom they have a religious feud. The former were taunted and jeered by the Irish on their way to attend worship. The result was a terrific riot—the Irish armed with pokers and bludgeons, attacking the Italians, who, with large clasp stiletto-knives, stabbed indiscriminately all who came near them. Several persons were carried away bleeding and dangerously wounded, and with broken limbs. Father Gilligan and other priests who essayed to quell the tumult, were severely handled, and came out of the fray with their faces covered with blood; Father Gilligan being stabbed. It was not till midnight that tranquil ity was restored, extra constables remaining on duty to prevent a renewal of the fight.

NATIONAL SPORTS.

LIVERPOOL RACES.—WEDNESDAY.

Croxteth Stakes.—Longbow, 1. Eustace de Grey, 2.
Produce Sweepstakes.—Sortie, 1. Alembic, 2.
Mersey Stakes.—Barrel, 1. Silletto, 2.
Handicap Plate.—Obsolescion, 1. Calot, 2.
Lancashire Oaks.—The Queen, 1. Strawberry Hill, 3.
Selling Stakes.—Dear-me, 1. Margaret of Anjou, 2.

THURSDAY

Produce Sweepstakes.—Sortie, 1.
Derby Handicap.—Deformed, 1. Filly by Gameboy, 2.
Foal Stakes.—Hobbyhorse, 1. Doubletlong, 2.
Liverpool Cup.—Scottish Chief, 1. Miss Agnes, 2.
Her Majesty's Plate. Red Lion, 1. Ann Eliza, 2.

FRIDAY

Great Lancashire Produce.—Brother to Mountain Deer, 1. Silletto, 2.
Liverpool St. Leger. Vanderdecken, 1. Georgy, 2.
Stanley Stakes.—Barrel, 1. Twinkle, 2
Handicap Sweepstakes.—Lancelot, 1. Calot, 2
Backers of the Stakes Umbriel, 1. Physalis, 2
Bentinck Testimonial.—Filly by Gameboy, 1. Antigone, 2
Produce Match.—Umbriel, 1. Miss Sarah filly, 2.
Grand Stand Plate Auld Acquaintance, 1. Ann Eliza, 2

MAIDSTONE RACES—WEDNESDAY.

West Kent Handicap.—Auchinleck, 1. Lady Blanche, 2.
Members' Plate.—Won at three heats, by Lady Vernon
Maidstone Stakes.—Won at three heats, by Auchinleck
Hurdle Race of 3 sovs each —Won at two heats, by Perjury

CRICKET.—One of the great matches of the season was decided on Monday and Tuesday, in Lord's; i.e. the Marylebone Club and Ground against All England. Marylebone Club: first innings, 119; second, 68: total, 177. All England: first innings, 43; second, 64: total, 107. Thus the two innings of the latter did not equal that of the former.

VAUXHALL.—Prince Lucien Napoleon, cousin to Louis Napoleon, Emperor of the French, was among the distinguished visitors at these delightful gardens last week, and seemed highly gratified with the entertainments.

CREMORNE GARDENS.—The opening of the Circus here, with a clever *troupe* of equestrians, has proved very attractive. On Monday and Tuesday next the fêtes of the Licensed Victuallers' Schools will be given here.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The unsettled state of Eastern politics, and the rather extensive sale of stock effected by a portion of the *bear* party, have produced much inactivity in the Consol Market, this week. Prices have given way; but the fall in them has not exceeded one half per cent. The large amounts required for railway purposes, this month, have, no doubt, operated to some extent against any advance, and the continuous shipments of the precious metals to France has given rise to some apprehension as respects the future; but, as the tendency of capital is to flow to the point where it bears the highest value, there is no doubt of our receiving very speedily the largest portion of what we have sent away, if the terms here are much enhanced.

The advices from Australia and California, respecting the produce of gold, are very favourable. English manufactured goods were selling at enormous prices; hence, shipments from this country are progressing at a rapid rate, with every prospect of large returns. Upwards of 1,000,000 dollars have arrived from New York, and about £170,000 in gold from Australia.

On Monday Bank Stock was done at 1⅝; the Three per Cents Reduced were 98¾ ⅝ 99; the Three per Cent Consols, 98¾ to 99; the New Three-and-a-Quarter per Cents, 101 to 101⅛; Long Annuities, ending Jan., 1860, 9⅛; India Stock was 256; India Bonds, £1000, sold at 2½ to 3½; Exchequer Bills, par to 2s. prem.; Consols for Account were 98¾ ⅞ 99. Very little change took place in the quotations on Tuesday and Wednesday. The top figure for the Three per Cents on the latter day was 99⅛; the Exchequer Bills were 1s. dis. to 2s. pm. India Bonds sold at 2s. to 3s. premium; and India Bonds, 2½s. to 3½s. premium.

The demand for money has continued very active; nevertheless, the rates of discounts have generally ruled easy. At the Stock Exchange advances have been made upon Government Securities at only ¼ per cent. In Lombard-street, first-class paper has been taken as low as ½ to ¾ per cent per annum.

In the Foreign House a fair average business has been transacted, and the quotations have kept up. Brazilian Four-and-a-Half per Cents have marked 89 ½ per exchange, 91 Mexican, 30 per Cents, 27 to 28; Peruvian, 83¾ to 84; Portuguese Five Cents, 44¼; Ditto, ex Overdue Coupons, 42; ditto, Four per Cents, 41 to 41½; Russian Five per Cents, 116 to 117½; ditto, Four-and-Half per Cents, 103¾. Exchequer Bills were 28. dis. to 2s. premium; and India Bonds, 2½s. to 3½s. premium.

Belgian Four-and-a-Half per Cents, 97 to 97⅛; Dutch Two-and-a-Half per Cents, 62¾ to 64¼; Dutch Four per Cents, 96¾. It is stated that the debt due by Peru to Chili has been discharged

There has been a fair inquiry for Miscellaneous Securities, the prices of which have ruled as follows:—Australasian Bank, 30¼; British North American, 60¼; London Joint-stock, 23¾; Oriental Bank, 40¼; South Australian, 47¾; Union of Australia, 78; Ditto, New, 53; Union of London, 31¼; Crystal Palace, 7¼; Hungarian, 3¼; Ambergris, 1¼; Australian Agricultural Company, 8; Hibernian Bank, 7¼; Peel River Land and Mineral, 1¼; Port Phillip and Colonial, 3¼; Scottish Australian Investment, 2¼; South Australian Land, 2¼; Van Diemen's Land, 2¼; Western Bank, 12; Wrey Gold, 1¼; Australian, 25; Albion Insurance, 9½; Alliance Marine, 5½; Atlas, 23; County, 121; Globe, 152; Imperial Fire, 335; Ditto, Life, 13½; Law Fire, 14; Law Life, 56; Pelican, 40; Royal Exchange, 220; Sun Life, 68; Berlin Waterworks, 2¾; East London, 128; Grand Junction, 73¾; Kent, 84¼; Southwark and Vauxhall, 88; West Middlesex, 115½ to 116; London Docks, 102¾; St. Katherine, 101¾; Canada, Six per Cent Bonds, 116; Lido, 1½, ex div.; City Navigation Bonds, 95¾; General Screw Steampship Company, 8; General Steam Navigation, 23; Hudson's Bay, 22¾; Peninsular and Oriental Steam, 76¾ 77, ex Div.; Ditto, New, 29½ to 30; Reversionary Interest Society, 10.

From a return just issued, we perceive that the shipments of bullion by the outward steamers of the Peninsular and Oriental Company during the six months ending on the 30th of June current year, were not less than £1,886,000, of which £1,450,140 was in silver, and the rest in gold.

For Railway Shares the market has been inactive, owing to the settlement of the account. The traffic receipts have continued large. During the last half year those of the principal lines amounted to £5,387,443, against £4,768,532 in 1852, showing an increase of £620,911, or 10.38 per cent. The following are the official closing money prices on Thursday:—

Caledonian, 75¼; Chester and Holyhead, 12¾; Chester and Holyhead, 21¾; East Anglian, 5¾; Eastern Counties, 12¾; Great Northern, 85; Lancaster and Carlisle, 101¾; London and Blackwall, 8¾; London and North-Western, 114¾; London and South-Western, 91¾; Midland, 79¾; North British, 23¾; North Staffordshire, 12¾; South-Eastern, 69¾; York, Newcastle, and Berwick, 68; Ditto, Extension, 12; Ditto, Great North-Eastern, Purchase, 9; York and North Midland, 26½.

PREFERENCE SHARES.—Eastern Counties Extension, 2 prem.; Great Northern, Five per Cents, redeemable at ten per cent prem., 112¾; Great Southern and Western (Ireland), Eighths, 8¾; Ditto, Irredeemable, Four per Cent, 104; Midland, Preference, Four-and-a-Half per Cent, 5¾.

FOREIGN.—Paris and Strasbourg, 85¾; Royal Danish, 7¾; Sambre and Meuse, 8.

Spanish Shares have met a very inactive inquiry, and prices have been rather unfavourably supported On Thursday, Arandas were done at 2¼; Arangas, 1¼; Aranjuez, 2¼; Asturian, 4¼; Catalonian Bonds, 1¼; Central Spanish, 4¼; Scrip, 2¾; Santiago de Cuba, 4 to 5; Tudela, 4; Mexican, 31; and Western Spanish, 2¾.

Friday Evening.

In the early part of the day Consols were rather active, and prices had a fair upward tendency, the Three per Cents having marked 98 to 98⅜ for transfer; but, several rather large sales of Stock having been effected, the quotation has receded to 97¾ ⅞ 98. The Three per Cents Reduced are 98¾; and the New Three-and a Quarter per Cents, 100⅝; India Bonds, 98s. prem.; Exchequer Bills, 2s. dis. to 3s. prem. Foreign Bonds and Railway Shares have been steady.

THE MARKETS.

CORN EXCHANGE, Monday.—Being the present week the arrivals of English wheat constable as well as and carriage have been on the increase, several fresh parcels were received up to the morning's market; hence, the show of samples of both red and white was a fair average. Selected qual ities were in moderate request, at Monday's quotations but low and middling kinds met a dull sale, at barely stationary prices. For forward delivery next to a thing was doing The imports of foreign wheat having exceeded 7,000 quarters, the sale for that description of produce was very inactive; and, in some instances, the quotations were a shade lower. Floating cargoes were in per quarter cheaper than last week. No English barley on sale: but the supply of foreign was rather extensive. The demand was less active, nevertheless the quotations were supported. Malt, the supply of which was good, moved off steadily, on former terms. The oat trade was firm, but we have no further advance to notice in prices. Beans, peas, and flour sold on Monday's terms.

ARRIVALS.—English: wheat, 2430; malt, 3590 oars, 1,995 flour, 7,46 Irish: oats, 3430 Foreign: wheat, 27,330 barley, 15,760; oats, 12,660; flour, 1620 casks, 7,62 barrels.

English.—Wheat, Essex and Kent, red, 47s. to 55s.; ditto, white, 46s. to 52s.; Norfolk and Suffolk, red, 44s. to 54s.; ditto, white, 45s. to 57s.; rye, 36s. to 38s.; grinding barley, 26s. to 31s.; distilling ditto, 32s. to 34s.; malting ditto, 34s. to 37s.; Lincoln and Norfolk malt, 56s. to 58s.; town ditto, 60s. to 65s.; Kingston and Ware, 57s. to 60s.; Chevalier, 61s. to 64s.; Yorkshire and Lincolnshire feed oats, 23s. to 24s.; potato ditto, 25s. to 27s.; Youghal and Cork, black, 19s. to 22s.; ditto, white, 20s. to 24s.; tick beans, new, 36s. to 38s.; ditto, old, 38s. to 40s.; grey peas, 36s. to 38s.; maple, 36s. to 38s.; white, 36s. to 41s.; boilers, 40s. to 42s. per quarter. Town-made flour, 42s. to 47s.; Suffolk, 35s. to 37s.; Stockton and Yorkshire, 35s. to 38s. per 280 lbs. *Foreign:* Dantzic oats, 18s. to 20s. per sack; Archangel, 15s. to 17s. per barrel

Seeds.—We have to report a steady demand for linseed and cakes, at very full prices. In other seeds next to nothing doing, and the quotations are almost nominal

Linseed, English, sowing, 54s. to 56s.; mixed ditto, 48s. to 50s.; Mediterranean and Odessa, 44s. to 46s.; baltpacked, 38s. to 42s. per quarter; Coromandel, 46s. to 48s. per cwt. Brown mustard—Sss. to 10s.; white ditto, 7s. to 9s.; and tares, 4s. 6d. to 5s. 6d. per bushel. Rapeseed new, 43l to £44 per last of ten quarters. Linseed cakes, English, £8 0s. to £8 5s.; Baltic foreign, £7 10s. to £7 15s. per ton. Rape cakes, 6l. to £6 5s. per ton. Canary, 40s. to 45s. per quarter. English clover seed, red, 44s. to 64s.; white ditto, 66s. to 80s. per cwt.

Spirits.—The prices of wheaten bread in the metropolis are from 7½d. to 8d.; of household ditto 6d. to 7d.

Imperial Weekly Average.—Wheat, 47s 8d.; barley 28s 2d.; oats, 20s. 6d.; rye, 34s. 11d.; beans, 36s. 8d.; peas, 0s. 0d.

Wheat.—Irish barter moves off freely, at an advance in the quotations of from 4s. to 5s. per qr. The imports from the Continent continue heavy

Barley.—Fully 2s. dearer, and the value of English is improving Fine malting Devon, Suffolk, and Norfolk, is 2s. per qr. dearer, and the value is from 34s. to 35s.; low to good, 30s. to 33s. 6d.; brown 30s. Malts, 3s. to 3s.; fine yellow Demerara, 37s. 6d. to 38s. 6d.; low to fine grey Mauritius, 34s. 6d. to 35s.; common to fine yellow, 32s. to 33s. per cwt. Refined goods have sold in a fair extent. Brown lumps, at 42s. 6d.; and low to fine grocery, 43s. to 44s. per cwt. The total clearances to the 5th instant were 3,253,1 6 cwts, against 3,303,347 ditto to the same date last year

Coffee.—Fine Plantation kinds have moved off steadily, and prices have been well supported. In all other descriptions very few transactions have taken place.

Rice.—The article is less active, and prices are drooping.

Sugar.—Irish barter moves off freely, at an advance in the quotations of from 4s. to 5s. per qr. The imports from the Continent continue heavy

Spirits.—A kinds of rum are in request, and prices are still on the advance. Proof Leewards, 1s. 2d.; East India, 1s. 2½d.; Cape, 1s. 1½d.; old Havannah, 1s. 3d. to 1s. 10½d. per gallon. There is a large business doing in brandy on higher terms. Sales of Cognac, in all brands of 1850 7s. 7d. to 8s.; 1851 ditto, 7s. 8d. to 7s. 10d.; 1849 ditto, 7s. 8d. to 7s. 10d.; 1848, 7s. 10d. to 8s.; and as to old ditto, 8s. to 7s. 9d. per gallon. Geneva and cordials are firm.

Hay and Straw.—Meadow hay, £3 to £4 10s.; clover ditto, £4 to £5 10s.; and straw, £1 7s. to £1 14s. per load. Trade steady.

Wool.—The public sales have commenced Up to the present time the siddings have been rather inactive, and prices have been barely supported.

Potatoes.—New potatoes are in fair average supply, and steady request, at from 8s. to 9s. per cwt. The imports from the Continent continue heavy

Provisions.—Mr. Wylam, 13s. 8d.; Eden Main, 13s. 6d.; Belmont, 13s. 3d.; Braddyll, 13s.; Hetton, 12s.; Lambton, 12s.; West Kellop, 11s. 6d.; Tees, 17s. per ton

Hops (Friday.)—Although the plantation accounts are very conflicting, and the show of samples is limited, the demand for all kinds of hops is very inactive, at barely late rates

Wool.—The sales have continued very heavy, to-day, from Antwerp, and fifty-five ditto from London. Mid and East Kent pockets, late to hand; Weald of Kent, 105s. to 130s.; Sussex, 95s. to 120s. per cwt

Smithfield (Monday).—The supply of beasts on sale in this market was somewhat short. For all breeds we had a moderate inquiry, at Monday's prices. The primest Scots realised fully 4s. per stone. Otherwise the markets this week were a dull one. The number of beasts in Lambs of 1850 7s. 7d. to 8s.; 1851 ditto, 7s. 8d. to 7s. 10d.; 1849 ditto, 7s. 8d. to 7s. 10d.; 1848, 7s. 10d. to 8s.; and as to old ditto, 8s. to 7s. 9d. per gallon. Geneva and cordials are firm.

Hay and Straw.—Meadow hay, £3 to £4 10s.; clover ditto, £4 to £5 10s.; and straw, £1 7s. to £1 14s. per load. Trade steady.

Wool.—The public sales have commenced Up to the present time the siddings have been rather inactive, and prices have been barely supported.

Potatoes.—New potatoes are in fair average supply, and steady request, at from 8s. to 9s. per cwt. The imports from the Continent continue heavy

Provisions.—Mr. Wylam, 13s. 8d.; Eden Main, 13s. 6d.; Belmont, 13s. 3d.; Braddyll, 13s.; Hetton, 12s.; Lambton, 12s.; West Kellop, 11s. 6d.; Tees, 17s. per ton

Hops (Friday.)—Although the plantation accounts are very conflicting, and the show of samples is limited, the demand for all kinds of hops is very inactive, at barely late rates

Wool.—The sales have continued very heavy, to-day, from Antwerp, and fifty-five ditto from London. Mid and East Kent pockets, late to hand; Weald of Kent, 105s. to 130s.; Sussex, 95s. to 120s. per cwt

Smithfield (Monday).—The supply of beasts on sale in this market was somewhat short. For all breeds we had a moderate inquiry, at Monday's prices. The primest Scots realised fully 4s. per stone. Otherwise the markets this week were a dull one. The number of beasts in trade ruled steady, at the late decline. Prime small calves commanded a fair inquiry, at fully 4s. per stone. Sheep and lambs sold on steady terms, at Monday's prices. The pork trade was active, at previous quotations. Milch cows were quoted at from £15 to £19 each, including their small calf. Barely 150 head of cattle on offer—Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 4d. to 3s. 6d.; prime large oxen, 3s. 8d. to 4s. 0d.; prime Scots, 4s. 2d. to 4s. 4d.; and prime small ditto, 4s. 4d. to 4s. 6d. Prime Southdown sheep, 4s. 8d. to 4s. 10d.; prime coarse ditto, 4s. 4d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s.; large hogs, 3s. 8d. to 3s. 10d.; neat small porkers, 3s. 6d. to 3s. 8d.; suckling calves, 4s. to 5s.; and quarter of lambs, 12s. to 15s. each. Supply of foreign stock, 1000 oxen, 120 sheep and lambs, 14,000; calves, 600; pigs, 400. Foreign Beasts, 7s. sheep and lambs, 3000; calves, 92.

Newgate and Leadenhall (Friday).—A moderate business was transacted, as follows:—Per 8 lbs. by the carcase:—Inferior beef, 2s. 6d. to 3s. 0d.; middling ditto, 3s. 2d. to 3s. 4d.; prime large ditto, 3s. 6d. to 3s. 8d.; large veal, 3s. 8d. to 4s. 0d.; large pork, 3s. 0d. to 3s. 2d.; inferior mutton, 3s. 0d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime ditto, 3s. 10d. to 4s. 0d.; real, 3s. 6d. to 4s. 8d.; small pork, 3s. 8d. to 4s. 0d.; lamb, 5s. 8d. to 5s. 8d.

WAR-OFFICE, JULY 15

6th Dragoons: Lieut Hon. H. L. B. Rowley to be Captain, vice Powell; Cornet R. H. Carrie to be Lieutenant, v ce Rowley

7th Light Dragoons: Lieut. and Adjt. T. Ashtal-le-Vanille has been permitted to retire from the service by the sale of his commission. 18th Assistant-Surgeon A. M. Macbeth to be Assistant-Surgeon, vice J. Marshall, 93d: Lieut. A. Gemmell to be Lieutenant, vice Butcher.

1st or Grenadier Foot Guards: Lieut. and Adjt. Hon. and Rev. G. G. Bowes to be Captain and Lieutenant-Colonel vice Wood, Ensign and Lieut. W. G. Cameron to be Lieutenant and Captain, vice Wood

2d or Coldstream Foot Guards: Ensign and Lieut. C. Mayne to have the rank of Lieut.; Ensign P. C. D. E. Barclay to be Lieut., vice Garner, J. H. Clutterbuck to be Ensign, vice Barclay. 24th: R. S. Pocock to be Ensign, vice Parker. 28th: A. Reed to be Ensign, vice Gardiner. 30th: Ensign W. Macpherson to be Lieut., vice G. O. Dennis; Ensign T. Tyndale to be Ensign, vice Macpherson. 32d: Lieut. A. Applewhite to be First Lieut., vice Dickins. 58th: Lieut. W. Gandy to be Lieut., vice Willcox. 59th: Capt. R. H. Walters to be Capt., vice Burrowes, Lieutenant H. Bell to be Adjutant, vice Walters. 60th: Lieutenant A. M. Reynolds, 14th: Lieutenant G. B. Wilson to be Lieutenant, vice Gandy. 47th: Ensign H. J. Buchanan to be Lieutenant, vice Knight. A. H. White to be Ensign, vice Buchanan. 53rd: Captain W. F. A. Colman to be Captain, vice G. Hillier. 69th: Lieutenant R. R. Hannan to be Paymaster, vice Hingston. 84th: Lieutenant W. H. Rochfort to be Adjutant, vice Hannan. 85th: Lieutenant E. Dickins to be Lieutenant, vice Applewhite. 93rd: Lieutenant and Adjutant Wade to be Captain, vice G. Hepple Keogh. 95th: Ensign R. Burton to be Lieutenant, vice Wade. Ensign the Hon. A. T. FitzMaurice to be Ensign, vice Fetherston. 73rd: Lieutenant H. Barry to be Captain, vice Walters. 77th: Lieut. C. F. Fraser to be Lieut., vice Gammell. 79th: Lieut. F. Sitwell to be Captain, vice Keyte; Ensign H. Burton to be Lieut., vice Sitwell. R. K. Taylor to be Ensign, vice Burton. 89th: Lieut. R. F. Holmes to be Lieut., vice Hawes. 90th: Lieut. E. A. Dawes to be Lieut., vice Holmes.

HOSPITAL STAFF: J. Ogilvy, M.B., to be Assistant-Surgeon to the Forces, vice Lees.

BANKRUPTS.

J. DICKSON, late of Horsetonger-lane, Newington, licensed victualler, and of Bayswhaw-chambers, Basinghall-street, auctioneer. W. QUINTON, Leather lane, builder. J. HAMPSON, Birmingham, builder. R. LAYBOURN, Bramley-common, Hurst, Berkshire, grocer and ale dealer

BIRTHS

On the 8th inst., at Walcot-house, Lambeth, the wife of Charles Cobb, Esq., of a son.

On the 13th inst., at Bagshot-park, the residence of the Earl of Lucan, the Lady of Captain Orde, Rifle brig, at Chesney Vale, the wife of Major-General Rumsham, R.H., of a son

At Wickham-Bishops, Essex, the wife of the Rev. W. R. Bevan, of a son.

On the 8th inst., at Bath, the wife of the Rev. A. Gaunslett Atherley, of a son.

At Carlton Downs, the wife of Colonel Cheape, C.B., of a son.

At her residence, No. 8, Canterbury-place, Lambeth, on the 8th inst., the lady of S. A. Pinchett, Esq., of a son.

MARRIAGES.

On the 30th ult., at the parish church, by the Rev. L. Boyd, Captain A. Lolus Steele, 6th Regiment Madras Infantry, to Martha, eldest daughter of Captain L. Lekfield (late R.A.), and of Lambeth-terrace, Cheltenham

On the 6th July, at Winscombe, Somerset, Frederick Smith, Esq., 81 Saviour's, Southwark, to Anne Mary Lee, youngest daughter of the late Rev. Joseph Lee, of Winscombe

On Wednesday, the 13th inst., at the parish church, Blackburn, by the Rev. [illegible] Hawes, [illegible] Esq., of Wilpshire, [illegible] Esq., of Mayfield House, Balfaz, to Margaret [illegible] James Pickop, Esq., Blackburn

On the 7th inst., at St. James's Church, Piccadilly, by the Lord Bishop of London, Lord Sandys, Captain Grenville Temple, R.N., to Lady Alice Lambton, third daughter of the late Earl of Durham

On the 13th inst., at St. Mary's, Cheltenham, the Rev. W. W. Stoddart, Vicar of Charlbury, to Augusta, youngest daughter of the late Major Ludsdley, 7th Hussars

On the 13th inst., at Stoodleigh, M. A. Richards, eldest daughter of the Rev. J. Richards, to the Rev. R. K. Elliott, Rector of Broadwinsor, Dorset.

At Claremont Church, J. B. Beresford, Esq., Learmont, to Caroline, daughter of William and Lady E. Hamilton, Claremont, Esher.

On the 12th inst., at St. Catherine Cree Church, by the Rev. Thomas W. Wrench, M.A., Rector of St. Michael's, Cornhill, Charles, eldest son of Mr. C. Sheppard, of Lee terrace, Lee, and Shackelwell, to Mary, second daughter of Mr. Robert Osmond, of Leadenhall-street.

On the 12th inst., by the Rev. E. Wickham, Vicar of Preston Candover, Hants, to Louisa, widow of the Rev. C. H. White.

DEATHS

June 9th, at Copenhagen, Mary Frances Constantia, wife of George F. L. Marshall, Esq., of Moreleaton Lattin, county Kildare, aged 32 years

On the 7th, at Chelsea, after a period of protracted suffering, Matilda, wife of Ralph Phillips, Esq., and grand-daughter of the late John Bacon, Esq., R.A.

On the 5th inst., suddenly, of disease of the heart, Peter Jackson, Esq., of No. 7, Oak Square Bedford New-town, in his 83rd year

On the 7th of July, at Great Malvern, Lucy Hooper Cockburn, the beloved and mourned child of Sir W. R. R. and Lady Cockburn in the fourteen h year of her age.

At Aldare Manor, Caroline Adelaide, daughter of the Earl and Countess of Dunraven, in her 10th year.

In Grosvenor-square, the Hon Louisa Elphinstone in 3d year.

At Belmont House, Isewsport, Major-General F. W. Wilson, C.B., of the Madras Army, after a service in India of 53 years

On the 8th inst., in Wilton-place, Ellen Chantrey, daughter of the late William Chantrey, Esq., R.A.

On the 6th inst., at Chatsworth, Miriam, widow of the late Granville Nicolls, in her 91st year of her age

At Slough, near Windsor, General Boyle Travers, aged 82.

EUROPEAN TURKEY.

AKERMANN AND THE PRUTH.

We this week present our readers with three Illustrations, rendered interesting by recent events in the East—a Map of European Turkey, with the adjoining provinces of Servia, Moldavia, Wallachia, and Bessarabia; a View of the Fortress of Akermann; and a Sketch of the Banks of the river Pruth, which has just been crossed by the Russian army.

For the Map we are indebted to M. Demidoff's "Travels in Southern Russia and the Crimea," just published by Mr. Mitchell. It contains portions of the frontiers of Russia, Turkey, and Austria, and exhibits the relative geographical position and features of the Danubian Principalities, the sovereignty of which has for so many years been disputed among the great powers of Eastern Europe. The Map will also enable the reader to satisfy himself of the incorrectness of the last Russian circular, which represents the English and French fleets as within the Turkish waters, and in sight of the Turkish capital. Besika Bay is not indicated in the map, but it is just at the entrance of the Dardanelles, on the Mediterranean side, and is separated from Constantinople by the sea of Marmora.

Akermann is a fortified town in the Russian province of Bessarabia. It is situated on the right bank of the Dniester, near its mouth, in the Black Sea. It is about twenty miles south-west of Odessa. Akermann, which contains a population of about 26,000, is placed at the foot of a rock, which is crowned by a citadel. The part of the town which borders upon the gulf of the Dniester is defended by a thick wall; the land side is defended by deep ditches. Akermann has a good port, and an extensive trade in salt from the adjacent lakes; and in fish, which is caught in abundance in the gulf of the Dniester. The town contains a handsome Armenian church, with some mosques, and Greek churches. The inhabitants chiefly consist of Greeks, Armenians, and Jews. Akermann is principally known by the famous treaty concluded there, in September 1826, between Russia and Turkey, which may be briefly described as exempting the Danubian provinces from all but nominal dependence on Turkey. By this treaty—the terms of which were dictated by Russia—Turkey agreed to confirm in all its parts the treaty of Bucharest (concluded in 1812); to permit the two Principalities of Wallachia and Moldavia to be governed by native Boyars, elected by the divan of each; to restore the former privileges of the Servians; and, finally, to allow Russia the liberty of navigation and commerce in all the states of the Sublime Porte; and especially free passage by the canal of Constantinople. By these conditions, the important provinces, not only of Moldavia and Wallachia, but also of Servia, may be regarded as having been released from all but a nominal dependence upon the Porte, and made over to the protection, if not to the sovereignty of Russia.

THE FORTRESS OF AKERMANN, BESSARABIA.

The Pruth, a large navigable river, which takes its rise in the Carpathian mountains, forms, during the latter portion of its course, the boundary between the Russian territory and Moldavia. After a course of about 500 miles, it falls into the Danube below Galatz. The spot chosen for illustration by our artist, who has within the last three months returned from a tour in Southern Russia, is situated upon the main road between Odessa and Jassy, near the village of Skoulani, where the Russian troops crossed the Pruth a few days ago. This village is half Moldavian and half Russian, being divided into two portions by the stream which has hitherto separated the principality from the territories of the Empire. At Skoulani is a sanitary establishment, which M. Demidoff calls the most melancholy of lazarettos. It occupies a large space on a low and damp tract, the level of which barely rises above that of the waters of the Pruth, flowing at no great distance from its walls. At the least rise in the waters, the quarantine is inundated. Each nation has established a quarantine, to supervise and purify all arrivals from the right bank of the Danube. The Moldavian lazaretto is established at Galatz, not far from the mouth of the Pruth; the Russians have placed their post of observation on the left bank of the same stream, on a route, the communications by which, between Moldavia and Bessarabia, might with propriety be left untrammelled.

We gave some particulars relative to Moldavia last week, in an article accompanying the view of Jassy.

The Russian province of Bessarabia is said to be making rapid strides in the path of industrial production. Already rich in grain, not only beyond its own wants, but beyond any amount of exportation which, up to the passing of corn-law repeal in England, could have been anticipated, the province has sought in manufactures a new channel for its resources. Beet-root sugar is made here.

BANKS OF THE PRUTH, THE BOUNDARY BETWEEN THE RUSSIAN TERRITORY AND MOLDAVIA.

THE ILLUSTRATED LONDON NEWS

No. 634.—VOL. XXIII.] SATURDAY, JULY 23, 1853. [SIXPENCE { WITH SUPPLEMENT GRATIS.

THE RUSSIAN AGGRESSION AGAINST TURKEY.

HE Turkish question still absorbs the attention of Europe. It the all-engrossing topic of conversation, and, by the uncerinty and inquietude which it creates, disturbs commerce and dustry, and causes a daily loss of otherwise available wealth, hich is sensibly perceived in every civilised country, though its mount is not to be easily estimated.

Since our last publication it has become more than ever apparent at the Russian Emperor stands alone in the false position into hich he has thrust himself; that he has not, and cannot have, y allies or abettors; and that if war be his desire, he must bear e brunt of it, with all the great powers of Europe against him. very document that is made public in reference to his aggression contestably proves that, in sending Prince Menschikoff to Conantinople, to urge his unreasonable demands against the Sultan, Var was his foregone conclusion. He evidently calculated that e long-wished for hour of seizure and spoliation had arrived—at Great Britain and France were cold and disunited—and that y serious opposition to his project was improbable, if not imossible. The progress of events must have shown him his error. ware of their common danger in presence of an ambition so ngovernable, and impelled by that sense of Right and Justice hich exists in the conscience of nations no less than in that of dividuals, the various powers of Europe have united in resistance. reat Britain and France, after a short period of incertitude and decision on the part of France, have taken a firm stand, and have rried with them the great, though minor, powers of Austria and russia. The offending Emperor, awakened at last to the conction that he has made a mistake, driven from plea to plea, d from justification to justification, has at length found himself duced to the miserable expedient of throwing the blame of his ggression upon the two powers who did their utmost to prevent

M. Drouyn de Lhuys, in his temperate, lucid, and unanerable reply to the circular of Count Nesselrode, has conicted the Czar of an error, that looks exceedingly like a wilful e—framed with the intention to deceive. He has demonstrated to the satisfaction of the whole world that the charge brought against the British and French Governments, of having forced Russia to occupy the Danubian Provinces by a maritime occupation of the ports and harbours of Turkey, is as preposterous as it is insulting. Without indulging in hard words, the able minister of Napoleon III. proves by the irrefutable testimony of dates, that the order to cross the Pruth was given on the 31st of May, and that the Czar did not know, and could not have known, until the 17th of June, that the British and French fleets had arrived in Besika Bay. "When, by a circular dated the 11th of June," says M. Drouyn de Lhuys, "the Emperor Nicholas announced to Europe the invasion of Moldavia and Wallachia, ordered by him eleven days previously; the British fleet had not left Malta, and the French fleet was still at Salamina." Not even the mighty Emperor Nicholas can withstand a fact like this. It shows alike his daring and his duplicity. It paralyzes the arms of such hesitating or half-friendly powers as Austria, who might wish to assist him if they dared, or to stand neutral if they could, whilst it lends strength to the determination of such powers as Great Britain and France, already strong in their conviction that Justice is on their side.

The Emperor of Russia has been placed so clearly in the wrong, and the opinion of Europe has been so unmistakeably and unanimously pronounced against him, that the idea gains ground that he will yet find means to withdraw from his untenable and offensive position. In his hand are the issues. If he be not insane, as some allege—afflicted with the worst form of madness, religious fanaticism—a note addressed by Turkey to the Great Powers of Europe collectively, and the simultaneous withdrawal of the Russian forces from the Moldo-Wallachian provinces and of the British and French fleets from the Turkish waters, will put an end to the dilemma, and restore the nations to their wonted tranquillity. But not the less certainly—even in this case—will the Emperor of Russia have accomplished the great object of his dynasty, if not of his people. He will have bullied, coerced, and weakened the Turkish Empire. Every day's occupation of the Danubian Provinces is not only an insult but a loss to the Sultan. The Emperor knows this, and calculated upon it. If without war he can but prolong that occupation for a month or six weeks to come, he will achieve a triumph at the expense of the power whom he wishes to humiliate. Nor is this the only evil that will ensue. The perplexities and troubles of the Turkish Empire are internal as well as external. Already disaffection and revolt have been the consequences of the Emperor's aggression. A powerful and ultra-Turkish party, which has long been scandalised by the innovations of the late Sultan Mahmoud and those of his able successor, Abdul-Medjid, has attempted to raise the standard of Mahomet, to depose the present Sultan, and to wage a religious war of the Crescent against the Cross. The Russian Emperor foresaw all these results, and built upon them the superstructure of his ambition. Turkey is notoriously weak and tottering; and even to menace her is to do her an injury.

It seems probable, from these and a thousand other circumstances, that the days of the Mussulman power in Europe are numbered; that the Sultans, withdrawn into Asia, will have to defend their throne against their own Satraps; and that many other Pachas and Viziers, as able and ambitious as the late Mehemet Ali, will yet arise to carve kingdoms out of the *disjecta membra* of the fallen empire. But let not the Czar Nicholas be too sanguine that such events will work to his advantage. Though the Turks may vacate Europe, it does not follow that he will be permitted to step into their places. The great powers have no interest in upholding a dominion that seems predestined to fall; but they have an interest in raising up a rival to dispute the possession of it with Russia. That rival already exists. The Christian subjects of the Sultan already know that their absorption into the great Muscovite Empire would add nothing to the prosperity or the consideration which they now enjoy, and that it would destroy for ever their fond hope of independence. Thus, though it is probable that the Czar may destroy Turkey, it is quite as probable that he will not be permitted to share the spoil; and that a new Byzantine Empire may arise from the ruins of the Mahometan power in Europe, and be a more formidable barrier against the aggressive inroads of that insatiable Colossus, who now overshadows and alarms Europe, than Turkey has ever been. This would be a fitting and ru-

COMMODORE VANDERBILT'S STEAM-YACHT, "THE NORTH STAR."—(SEE NEXT PAGE.)

tributive sequel of the plots and conspiracies, which, since the days of Peter the Great, the Emperors of Russia have not ceased to form against their neighbour. At the present moment it seems to be the most probable solution of a mighty difficulty. It is one that England and France have not sought to expedite. The blame and the consequences will alike fall upon Russia.

THE "NORTH STAR" STEAM-YACHT.

THIS splendid specimen of American naval architecture arrived at Southampton, from New York, on the 1st June, having made one of the quickest passages across the Atlantic ever known—namely, ten days and eight hours: her log showing that during one twenty-four hours the *North Star* ran 344 miles, and she has accomplished eighteen knots per hour She had on board her owner, Commodore Vanderbilt, a merchant and shipbuilder, of New York, with his family, and friends, and a large suite of servants, on a tour of pleasure to Russia.

The *North Star* is a paddle-box steamer with two funnels. She is registered 1876 tons; but, including her third deck, which is built up solid and flush from stem to stern, she is capable of carrying 2500 tons. She is 250 feet on the keel, 270 feet on the spar deck, 38 feet breadth of beam. 13 feet from floor timber to lower-deck beams; 7 feet 8 inches between decks, 7 feet 6 inches between spar-decks making her whole depth 28 feet 6 inches. She is steered forward. Her wheel is situated in a comfortable apartment, and communicates with the rudder by ropes and rods. The steersmen are thus close to the look-out man; and there is attached to the wheel a bell which communicates with the engine-room. She is propelled by two lever beam-engines, made by T. F. Secon, of the Adaire works; cylinders, 60 inches; length of stroke, 10 feet, diameter of paddle-wheel, 34 feet. Her floaters, of which she has four, are 24 feet long, 10 feet diameter, 11 feet front, 11 feet high, with single return flues. The engines are upon the same principle as those used in the ordinary North American river steam-boats; a portion of the machinery being exposed above deck, but which is preserved from heavy weather by being covered in white lead during a voyage. Immediately upon getting into harbour, this substance is wiped off, which leaves the engines free from rust, and unstained. Handsome flights of stairs lead to the saloon, which is larger and more magnificent than the saloon of any ocean steamer afloat, and surpasses in splendour, as she does in size and power, the *Victoria and Albert* yacht. Ranged round the saloon are beautifully-furnished cabins, the doors and panels of solid bird's-eye maple and rosewood. Mirrors extending from the ceiling to the floor are fixed in the cabins. The walls are lined with marble and malachite, formed of a conglomerate of stone, marble, and glass—a recent American invention. It is fixed on wood precut airly seasoned, and bears an exquisite polish. On iron, it forms handsome table and chimney-slabs, and tops of chiffoniers. The floor of the saloons is another fine deck, extending the whole length of the ship.

The *North Star* cost 500 000 dollars, and her weekly expenses are about £300, exclusive of fuel. Everything on board the *North Star* is American, and it is very evident that in many of the useful and ornamental arts the Americans are our equals in point of taste and skill. Surprise has been expressed at the small quantity of fuel consumed on board the *North Star* when her great speed is considered. In her passage across the Atlantic she consumed 1200 tons of coal per day, while the consumption ordinarily in such steamers is from 70 to 100 tons daily. She has been enabled to traverse the ocean with such speed at so little expense, by her being driven by what is called a beam engine—an American invention, which has never before been used in a steamer to cross the Atlantic. The crew of the *North Star* consists of a captain, two mates, four quartermasters, and fourteen seamen, twenty four engineers and firemen, and eighteen stewards and assistants.

We learn from Havre that Mr. Vanderbilt's splendid yacht excites as much curiosity and interest there, as it did at Southampton. The noble proportions of this fine vessel, her peculiar construction, and splendid accommodations, command universal admiration; and Commodore Vanderbilt, a private gentleman, travelling in a vessel larger than many men-of-war, has raised the naval enterprise of the American people immense y in the eyes of the Havrais. The *North Star* is now on her way to the Mediterranean.

OBITUARY OF EMINENT PERSONS.

JOHN CHARLES, EARL OF PORTSMOUTH.

THIS nobleman—who was declared by an inquisition, many years ago, to be of sound mind—died, at his seat, Hurstbourne Park, Hants, on the 14th inst, in his eighty-sixth year. His Lordship was eldest son of John, second Earl, by Urania, his wife, daughter of Coulson Fellowes, Esq., and secret grandson of John Wallop, Esq., of Farley Wallop, Hants, who was created Viscount Lymington in 1720, and advanced to the Earldom of Portsmouth in 1743 The family from which the noble House of Portsmouth descends was settled at Wallop, in Hampshire, at a period antecedent to the Conquest; and it is thus noticed by Camden:—"Hard by Test lay an ishes into it a little river from Wallop, a noble seat of the Lords Lymington, by interpretation out of forefathers time a long time dwelling there well in the side of a hill; whereof that right worshipful family of the Wallops, of knight's degree, dwelling hard by, took their name."

Caroline, wife of Julius, Viscount Lymington, was great-grandmother of the noble man whose decease we record, was niece and co heir of the illustrious Sir Isaac Newton.

Lord Portsmouth married first, 19th November, 1799, Grace, daughter of Fletcher, first Lord Norton (which lady died 15th November, 1st and, secondly, 7th March, 1814, Anne, eldest daughter of John Hanson, Esq., of Bloomsbury-place, London; but had no issue. This second marriage was annulled by a decree of the Lord Chancellor in 1823.

The successor to the family honours and estates is the Earl's brother—the Hon. Newton Fellowes, late M.P. for North Devon, who now becomes fourth Earl of Portsmouth. He has been twice married; by his first wife he has one surviving child—Henrietta-Caroline, married to J. Chute ester Bagot, Esq.; and by his second, Catherine, daughter of Hugh, third Earl of Lucan, one son Isaac Newton, Viscount Lymington—and three daughters, all married

THE GRAND DUKE OF SAXE-WEIMAR.

CHARLES FREDERICK, GRAND DUKE of SAXE-WEIMAR EISENACH, was born on the 2nd February, 1783; succeeded his father, the Grand Duke Charles Augustus, the 14th June, 1828. The Grand Duke, Charles Frederick, married, the 3rd August, 1804, the Grand Duchess, Maria Paulowna, daughter of Paul I., Emperor of Russia, and sister of the present Emperor Nicholas; by her he has had issue—besides two daughters, Maria and Augusta, both married to Princes of Prussia—the eldest son, Charles Alexander, his successor, a Lieutenant-General in the Russian service, now reigning Grand Duke of Saxe-Weimar, who is married to the Princess Sophia, daughter of William III., King of the Netherlands, and has issue; and a younger son, Charles Frederick, the Grand Duke, of whose death intelligence has lately been received, was Rector of the Ducal Academy of Jena.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. H. Kynaston, D.D., to a prebendal stall in St. Paul's Cathedral *Rectories*: the Rev. P. De Furton, to Burston, Norfolk; the Rev. H. F. Strangways, to Kimbridge, near Bruton, Somerset; the Rev. J. Taylor, to Redmile, Leicestershire; the Rev. S. J. Temple, D.D., to Garton, Northamptonshire; the Rev. S. Walton, to Pensthorpe, Huntingdonshire, the Rev. H. N. Ward, to Hasbeach, near Bath; the Rev. R. Rankey, to Winterbourne-Stoke, Wiltshire; the Rev. W. Godfery, M.A., to Martin Hussingtree; the Rev. T. G. Carter, M.A., to St. Nicholas, Warwick; the Rev. A. Jenner, to Newport, near Cardiff. *Vicarages*: The Rev. W. D. S. Bentley, to Thornfield, Derbyshire; the Rev. P. B. Brodie, to Rowington, Warwickshire; the Rev. J. A. Park, to Metlwold, Norfolk; the Rev. C. C. Snowden, to Mitford, Northumberland; the Rev. W. W. Stedman, to Chardstock, Dorsetshire; the Rev. D. L. Jones, to Stainton-le-Vale, Lincolnshire; the Rev. J. Langdon, to Mudford; the Rev. R. W. Glendowe, to Neston.

NEW CHURCH ON THE ISLE OF DOGS.—A new and elegant church, which has been for some time in course of erection on the Isle of Dogs nearly opposite Greenwich Hospital, is rapidly approaching completion, and will be consecrated in the course of a few weeks by the Bishop of London. It has been erected at the cost of Mr. Alderman Cubitt, M.P., whose extensive workshops it adjoins.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem from their parishioners:—Hindley, of South Dalton, by the parishioners; the Rev. H. Twells, by the teachers and children of the Stratford National Schools; the Rev. J. M. Roberton, M.A., from the incumbent and congregation of St. Jude's, Southwark.

AMERICAN NEWS.—The seventy-seventh anniversary of American independence was celebrated with great rejoicings on the 4th inst. throughout the United States. A terrible fire occurred on the 5th inst. at Quebec, when 200 houses were burned to the ground, and 300,000 bushels of grain consumed by the destructive element. A terrific storm of rain and thunder occurred in New York on the 2nd inst., which did much damage. The Crystal Palace suffered considerably. A portion of the framework came down with a tremendous crash, which killed three men and bruised several others.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

In all our experience of Paris, we have never known a week which gave less to chronicle than the passing one. The eternal *question d'Orient* swallows up every other subject. Not that it affords a supply of new and interesting details, which hold the place, and fill the dearth of other intelligence—by no means. Nobody ever knows anything fresh on the subject, from one week's end to another. Every body asks his neighbour the same question, "What is the news?" and the neighbour replies to everybody, "None." True, there are a few individuals who, weary of this state of things, and possessed of more imagination and less patience than the rest—or, having certain interests in the rise or fall of the Bourse—vary the eternal answer by some happy improvisation, technically termed a *canard*, which the listeners generally swallow with avidity, and retail with activity; but, with these exceptions, and now and then some small detail from more authentic sources, it is always the same ground gone over and over again, the same points debated, and disputed, and discussed, taken up and let down, examined in every position, and the question not one whit advanced or cleared up thereby.

A caricature of a somewhat offensive character of the Emperor Nicholas having appeared in the *Charivari*, it is said that M. Kisseleff, aware that in France everything appearing in the public press is subject to the supervision of authority, has expressed decided dissatisfaction on the occasion; but the report does not go on to enlighten us as to the reply made to his complaint

We are informed, on what is stated to be good authority, that on the day following the attempt at the Opéra Comique, a man was arrested in the Place de la Concorde, in the act of drawing forth a pistol as the Emperor passed. He was in the first instance seized by a hackney coachman, who detected the movement, and being carried off instantly by the police, nothing further has transpired on the subject.

A story has just reached us of a discovery of a fresh plot to assassinate Louis Napoleon, which, if true, as it is positively asserted to be, is, if possible, of a more alarming character than the preceding ones, as having for the end in view that has hitherto existed in the fidelity of the army. The report in question states that, as the Emperor was passing, a few evenings ago, through the Bois de Boulogne, shots were fired at the carriage; the escort instantly returned the fire, and, on reaching the spot whence the shots had proceeded, found the bodies of three soldiers. The number of the regiment was tried to be kept a secret, but the name of the colonel having transpired, it is of course known.

The organisation of the secret societies becomes every day more formidable; and as the different sections are personally unknown to each other, and the individuals who form them distinguished by numbers instead of names, the arrest of any one individual, even, as in the event of its willingness to betray the others, but little able to compromise them.

It is reported that one of the causes of the visit of the Queen Marie Christine of Spain, is a project of the marriage of her eldest daughter by the *main gauche* with the Prince Napoleon, whose return from the camp at Helfaut was almost simultaneous with her arrival Whether any such idea were really entertained we cannot pretend to state; but we believe there is little likelihood of such a plan being carried out.

The preparations for the departure of the Empress for the Eaux-Bonnes continue to advance; which fact seems to give a denial to the report respecting her position; as it was stated last week that it was only in the event of the hopes entertained proving unfounded that the excursion was to take place.

An immense sensation was caused here, a few days since, by a revelation given on the authority of some of the most respected and influential members of the clergy, headed by the Archbishop of Paris, on the subject of the Holy Coat of Treves. Here is the tale as we received it through the channel above stated. The Archbishop, being questioned as to his opinion of the legitimacy, in a religious point of view, of attempting to communicate with spirits through the medium of the tables, replied that he sufficiently studied the question to reply thereon; that he imagined the effects produced were wholly of the nature of a physical science, and in that case harmless; but that, in order to form a judgment, he would attend a meeting, composed of a certain number of the clergy, at a place appointed, to try the usual experiments. The table being put in motion, one of the party demanded it to reply, by a certain number of raps, if there were a spirit present. The response was given in the affirmative, and, more or to a second question, the spirit was stated, by the table marking by raps certain letters of the alphabet, to be that of *sœur Françoise*, deceased a week previously at the Convent of ——, in Paris. The Abbé L——, present, then confessed the *sœur Françoise*, and, in fact, died at the time and place named. General consternation, as may be supposed, ensued; when the Abbé L——, rising, command ed the spirit, "in the name of the Saviour," to appear. The report declares that the spirit became visible, and replied to a variety of questions put to it, but of what import we are not informed. On the above details we do not pretend to give either explanation or opinion. Such is the story as related by the different members of the séance; two of whom were afterwards interrogated as to its truth, and gave details seriously undisposed—one of them even confined to bed. Various histories declare that through the medium of the tables, communications are held with spirits of all natures; who happily, being excellent linguists, find no difficulty in expressing themselves in any language chosen by the questioner, and reveal the "secrets of the prison house" with a frankness not to say indiscretion, that would shock the more reserved ghost in "Hamlet," and that in no way confirm his statement of the horrors of his temporary abode, many of them describing in most glowing terms the beauties and delights of the planets which they inhabit

At the theatres there is little new of any importance. The Variétés gives "Les Deux Marguerites," written on a slight and hackneyed plot, but sufficiently effective on the stage; the Délassements-Comique, an amusing revue, entitled "Les Moutons de Panurge," and the Ambigu-Comique, the "Reprise of Elvire," a drama of M. Karl Holbien, which had, some time since, a run at the Gaîté.

The marriage of Alboni with the Comte Pepoli is publicly announced.

Thursday's *Moniteur* contains the following important decree:—

The prohibition imposed by the predecessors of the French Republic in 1848, will cease provisionally as to corn and flour imported from the possessions of the United Kingdoms of Great Britain in Europe.

There appear to be some misgivings that the approaching harvest in France will be a bad one

The *Journal des Débats* concludes a significant article against the sliding scale principle as follows:

The sliding scale is dangerous, and to the other an illusion. It would be a great benefit to free the country from it under present circumstances, when, thanks to God, we no longer entertain the formidable apprehensions of the past month; but when, however, it is right to take all measures in the anticipation of the dearness of corn for the next winter.

It was reported on Wednesday on the Bourse that an electric despatch from Berlin announced the acceptance by Russia of the propositions of England and France. A general rise ensued. The Three per Cents opened at 78f. 40c., rose to 79f., and closed at 78f. 95c. for the end of the month. The Four-and-a-Half per Cents closed at 105f.

THE THREATENED HOSTILITIES IN THE EAST.

The latest aspect of the Eastern question is that the basis of a compromise, laid down concurrently by France and England, has been approved by Austria and Prussia. The Sultan has accepted the terms which his allies propose for him, and they have been forwarded to St. Petersburg. The prevailing expectation is that the Czar will not absolutely refuse to entertain the moderate proposals of the Allies. Both the Governments of France and England take their stand on the integrity of the Turkish Empire, and regard the occupation of the Principalities by a Russian army as a violation of treaties.

Meanwhile, the Turkish question has been somewhat complicated by intelligence of a disagreement between the Sultan and his Ministers. It appears that on the 9th inst the Grand Vizier, and Redschid Pacha, the Minister for Foreign Affairs, were dismissed from their respective offices. The diplomatic body were taken by surprise when this announcement was conveyed to them, for the change does not seem to have originated in any political cabal of foreign powers; or, indeed, in any definite modification of internal policy. It was explained by the will of the Sultan, who resolved to supersede the Grand Vizier and to replace Redschid Pacha by Ali Pacha, the same who was Minister for Foreign Affairs in the autumn, and has just been recalled from the government of Smyrna. A few hours' consideration, however, served to convince the Sultan of the danger and inconvenience of such a modification in the executive government at this crisis, especially as it was Ali Pacha who was involved in the late disturbance at Smyrna, and he is consequently on indifferent terms with the Austrian Government. His Highness resolved, therefore, to revoke his decision, and before the close of the day the Ministers were reinstated in their places. The protest of the Porte against the occupation of the Principalities, and its public reply to the Russian manifesto, are about to be published At the same time, it was understood that a memorandum would be issued to explain to the Turks the existing relations of their Government with the Christian powers. The Sultan's concessions to the Christian population of Turkey have sufficed to kindle the fiercest resentment among the extreme bigoted Turkish party; who conceive—not, perhaps, without reason—that their existence as a nation is inseparably connected with the ferocity and intolerance of their race. A dangerous conspiracy has been discovered among the Mussulman students in Constantinople, who are represented to be their partisans, with the object of deposing the reigning Sultan, and proclaiming Abdul Aziz, his brother, who is regarded as the head of the old Turkish party That party, goaded to fury by the insults of Russia, and resenting the protective restraint of the other Christian powers almost as fiercely as the aggression of their northern antagonist, would rush into immediate war, and probably bury themselves under the ruins of the empire. In the unhappy position of the Turkish Government, to conciliate one class of its subjects is to exasperate the others; and if it escape from an external attack, it only runs the greater risk of internal revolution.

The commander of the forts on the Dardanelles has been instructed to permit the passage at any time, no matter whether by day or by night, of the British and French steamers. The English and French squadrons remain at Beika Bay.

Negotiations are still carried on respecting the Hungarian, Kossta, and the Polish refugees at Smyrna. There is no cessation in the Turkish armaments. The Turks continue to make determined preparations Thousands of recruits arrive daily from the provinces, and are immediately arrayed in the Ottoman uniform

The Turks celebrated the *Bairam* on the 6th inst with all the customary pomp and ceremony. A great number of Europeans and foreigners of all classes were present at the passage of the Seraglio. Everything passed off with perfect order, and in such a way as to dissipate the fears which some persons entertained as to the disposition of the Mussulman population towards the Christians

The *Morning Post*, the presumed organ of the French Embassy, makes the following statement as to the negotiation now pending:—

Firstly, there is a project specially emanating from our own Cabinet, secondly, there is a proposal which originated with M de Bruck, and to which the assent of the Ambassadors of the Great Powers at Constantinople as well as that of the Porte itself, has been obtained; thirdly, there is a plan to which France gives her assent only on condition of considerable modifications; and, fourthly, it is affirmed that the Cabinet of Prussia has also originated a project of arrangement. Now, we have every reason to believe, are the various negotiations submitted to the Czar We are now upon the verge of the true crisis. If the Emperor accepts one of the plans laid before him, the matter will be settled. If, however, he rejects them all, the proposals made can have but one of two possible results—either the Emperor will acquiesce in the reign of Protectorate of the Greek Christian subjects of the Porte, or he will not obtain that privilege. It is indisputable that, if the right of Protectorate be yielded, the independence of Turkey is lost for ever: Russia will have gained the object of her wishes, while England and France will reserve a severe check both to their interests and influence. On the other hand, if the right of Protectorate be not accorded to Russia, even though certain concessions may be made to her desire of limiting the influence of the Divan, will be preserved, the two great Western Powers will have interfered to good purpose, and the Emperor of Russia will have abandoned pretensions which are totally inadmissible.

AUSTRIA.

The conduct of the American commander of the *St. Louis*, in threatening to repel by force the attempt of the Austrian Consul at Smyrna to secure the Hungarian refugee, Kossta, has excited a great sensation among the Austrian officials at Vienna.

The movement of Austrian troops is going on in the direction of Croatia, Bosnia, and Servia; and several batteries left Vienna on the 16th inst. for the frontier garrisons. Peterwardeine continues to be the headquarters of the General-in-Chief, but troops have advanced in considerable numbers, and in more than one direction between that fortress and the limit of Slavonia, the Banat, and Austrian Croatia. According to the Reserve move in advance from the Pruth towards Transylvania, or towards the Danube, the Austrians seem to make a corresponding movement in the direction just mentioned.

The differences between Austria and Piedmont, on the subject of the progress of Lombardy, are still very far from having reached a solution

A pontifical bull rendering mixed marriages more difficult than they are now will shortly be published at Vienna.

UNITED STATES

(From our own Correspondent.)

NEW YORK, July 9, 1853

All doubt relative to the success of the Crystal Palace is now at an end. The President of the United States has accepted the invitation of the shareholders, and will assist at the inauguration, which takes place on Thursday next, July 14. The Board of Aldermen have voted 5000 dollars to be expended for the reception of the President in New York. Philadelphia and Baltimore are also making arrangements for the same object. Some of the officers of state will accompany the President. This will have the effect of rendering the Crystal Palace a great success, which would otherwise have been a great failure The public considered it as a monopolising institution, thought very little about it, and cared less; the committee have, however, changed the tide of public opinion by their great exertions during the last month, and by the fact that they have obtained 5000 contributors. The inauguration will commence with a thanksgiving prayer by Bishop Wainwright; after which an anthem will be sung by the New York Sacred Harmonic Society, accompanied by the National Guard bands and other societies An address will then follow, by Mr. Sedgwick, the President of the Association. Other speeches will follow, and the proceedings will close by singing the Hallelujah Chorus.

The *New York Herald* acknowledges the triumph of the British steamship *Arabia*, she having accomplished the voyage between New York and Liverpool in less time than it has hitherto been done. The interest in the Russo-Turkish question increases, and it is hoped here that John Bull will hit hard if he does strike Various are the opinions of the newspapers as to the effect of a blow struck by England and France at the East. Some lean to the opinion that a general Continental blaze would break forth, revolutionise Hungary and Italy.

The Colonial fishery question has assumed a rather important aspect, several war steamers having been despatched to the fishing-grounds to protect American fishermen in their rights. The Honourable Pierre Soulé, the newly appointed Minister to Spain, is on his way to Madrid It remains to be seen whether the Spaniards will receive him or not; the solution of this question will have great influence on Cuban affairs and on Spanish politics generally. The weather is still exceedingly hot and very trying to the constitution of Englishmen, having a very debilitating effect

In my next communication I shall send a sketch and description of the ceremonial of inauguration.

By the *Baltic*, we have advices from New York to the 9th inst.

Mr. Crampton, the British Minister, had left Washington for Halifax, for the purpose of having a personal interview with Admiral Seymour relative to the fishery question. The subject of the Reciprocity Bill continued to occupy the public attention; and the steamers *Fulton* and *Princeton*, and a sloop, were about to be despatched to the fishing grounds, for the purpose of protecting the American interest. The visit of Mr. Crampton, the British Ambassador, to Halifax, was said to be for the purpose of discussing Admiral Seymour from pressing too hard on American fishing vessels

WEST INDIES.

Jamaica affairs, up to the departure of the packet on the 27th of June, remained in the same unsettled state No steps towards reconciliation had been taken by the Council or the Assembly; all public business had been brought to a stand still, and the treasury continued to be drained by civil claimants. In consequence of th want of immediate

o meet the expenses of the Penitentiary a considerable number of the convicts have been discharged.' The yellow fever had not abated its ravages among the shipping at Kingston, and some fatal cases had occurred on shore. The subject of copper mining continued to a great extent on, and confidence is felt that the mineral wealth of the land will ultimately justify very high expectations.

INDIA AND CHINA.

We published in our last the telegraphic despatch from Trieste, containing the principal items of information brought by the Calcutta mail of the 3rd June. Accompanying the Illustration in page 36 of our present Number, will be found some additional details relative to the refusal of the Burmese to agree to the annexation treaty proposed by the Governor-General. Immediately after the departure of the Burmese Envoys, the *Meteor* and two gun-boats were sent up from Prome to Meaday, to strengthen our advanced post there, and to blockade the river, with a view of preventing the transit of rice from the lowest provinces to the capital. It is not yet certainly known what steps will be taken in consequence of the breaking off of these negotiations. It is thought that the regular troops might, now that the river is open to our larger steamers, be almost wholly withdrawn from the lower provinces, thereby becoming available for an attack on Ava. The troops at Rangoon enjoyed excellent health, the hospitals being nearly empty. The Burmese have collected a considerable force immediately north of Tongho, as if to bar the further advance of Gen. Steel's column; a second force covers Ava; and a third being collected and established by the brave and successful Burmese chief, Menloon, in a fortified position half-way between Meaday and Ava. Menloon has received many honours and titles from the Court of Ava, and appears to be at present its most trusted general.

The news from China is very interesting, though consisting rather of detailed descriptions of the insurgents than of important events. Advices from Canton come down to the 14th of May from Shanghai to the 7th, and to the 8th, Sir G. Bonham returned to the latter port in her Majesty's ship *Hermes*, having been in communication with many of the insurgent chiefs, both in the vicinity of Nankin and China Kiang foo. Mr. Meadows was within the walls of the former city, and reports it in a state of ruin, while the whole district is filled with anarchy and confusion. Nankin is held by the rebel forces, who are strongly defending it; they are also in possession of Chin Kiang. The whole line of river between the two cities is in a very complete state of defence, and they are said to be awaiting the arrival of reinforcements from the south, when they will proceed on their way to Pekin. The information gained regarding the character of the insurgents and their objects seems to be of a most curious and interesting nature.

A translation of the Bible is freely circulated among them, and a zeal amounting to fanaticism is leading them on to attempt the destruction of the whole Tartar race, while strictly moral duties are not only prescribed, but enforced and practised. The visit of the *Hermes*, which was successful in clearly explaining to the insurgents the neutral position which all foreign Governments are disposed to hold during the struggle. On her way back, the *Hermes* was fired upon by two forts, which had been sent up the river

The *North China Herald*, of the 7th of May, gives the following particulars, and thanks Her Majesty's Plenipotentiary for bringing back intelligence of so deeply interesting and astounding a character as regarding the insurgents:—

The insurgents are Christians of the Protestant form of worship, and not idolaters of the established church order. They acknowledge but one God, the heavenly Father, the All-wise, All-powerful, the Omnipresent Creator of the world; with him, Jesus Christ, as the Saviour of mankind, and the Holy Spirit, as the last of the three persons of the Trinity. Their chief on earth is a person known as "Tae-ping wang, the Prince of Peace," to whom a kind of divine origin and mission is ascribed, however, from claiming adoration, he forbids men to call him "Holy," to himself of the terms "Supreme," "Holy," and other attributes constantly assumed by the Emperors of China, but which he declines on the ground that they are due to God alone. Their morals, as the insurgents call the "Heavenly Rules," which, on examination, proved to be the Ten Commandments. The observance of these is strictly enforced by the leaders of the movement, chiefly Kwang tung and Kwang-se men, who are not merely formal professors of a religious system, but actual and spiritual Christians, deeply influenced by the belief that he is always with them. The hard-ships they have suffered, and the dangers they have incurred, are punishments and trials of their heavenly Father; the success they have achieved are instances of His grace. Each overcoming proof of the sincerity of the ruling minds is, that while fighting to free their country from a foreign yoke, and anxious to obtain adherents, they nevertheless throw great difficulties in the way of persons desirous of associating, by insisting on the great kingdom of China and Tartary being reclaimed from "barbarians."

We are informed by an officer on board the *Hermes*—who had published, in the "Friend of China," a narrative of Sir G. Bonham's expedition up the river Yang tse-kiang, that the ILLUSTRATED LONDON NEWS has penetrated as far as Nankin, and has found many admirers among the Chinese. The officer's diary, written while the *Hermes* was off Nankin, has the following passage:—

"Saturday, April 30.—This day was occupied in negotiations, but whilst we were sending to and went on shore. The object of these negotiations [illegible] [illegible] [illegible]

INTERVIEW BETWEEN THE BURMESE ENVOY AND BRITISH COMMISSIONERS, AT PROME.

THE BURMESE WAR.

INTELLIGENCE has been received during the past week of the Burmese Envoys having refused to sign the treaty proffered by the Governor-General of India. The final interview took place at Prome, on the 7th of May. The Burmese tried to put off giving a definite answer, and asked for a second period of thirty days for deliberation. This was refused. To induce them to give a favourable reply, the British Commissioner offered to remove the proposed frontier line still further to the southward. This concession was, however, of no avail, and the Burmese Envoys refused to sign away a single rood of the Burmese dominions on any consideration. They were then given twenty-four hours to reconsider their answer, or to quit the territory occupied by our troops; and they did so depart within ten hours. It is stated that the Burmese Envoys did not evince any anxiety to bring matters to an accommodation; and thus the negotiation was broken off.

The previous interview between the Burmese Envoy and the British Commissioners was held at Prome on the 4th of April; and an obliging Correspondent has enabled us to illustrate the scene of negotiation. The moment chosen by our Correspondent in his Sketch is the departure of the Burmese from the place of conference. The tall Burmese figure is the present prime minister of the King of Ava; the short one is the King's nephew. The band is that of the 18th Royals; and the cavalry the Madras Artillery. The officer on the left of the Envoy is the Assistant British Commissioner.

LOWESTOFT REGATTA.

THIS annual Regatta took place on Tuesday, the 12th instant, under the distinguished patronage of the Earl of Yarborough, Lord Londesborough, Lord Alfred Paget, M.P., Sir Edward S. Gooch, Bart., M.P., Sir E. H. K. Lacon, Bart., M.P., Sir Thomas Maryon Wilson, Bart., Sir F. Kelly, M.P., S. M. Peto, Esq., M.P., R. Stephenson, Esq., M.P., D. Waddington, Esq., M.P., J. C. Cobbold, Esq., M.P., F. Mills, Esq., Andrew Arcedeckne, Esq., J. Goodwin, Esq., and E. L. Betts, Esq. The promoters of the Regatta this year were not only successful in obtaining this high patronage, but also in raising a large subscription, so that prizes amounting to £215 were offered for matches between yachts, yawls, river latteeners, sailing punts, and beach gigs. The Eastern Counties Company ran cheap excursion trains from all the stations along their lines of railway, and these trains conveyed thousands of people to the scene of amusement on Tuesday morning.

The piers of the harbour and the esplanade afforded every accommodation for viewing the matches, and a regatta on such a scale of magnitude was never before attempted on the eastern coast, nor with more satisfactory results on the whole. Mr. Arcedeckne placed his schooner at the service of the Committee, and for their accommodation it was moored opposite the harbour. From that vessel all the signals were given of the starting and arrivals of the boats in each match; and soon after twelve o'clock the following yachts contended for the first prize of 100 guineas:—

Mayfly, schooner ..	96 tons	S. M. Peto, Esq. ..	Lowestoft
Mosquito, cutter ..	80 tons	Lord Londesborough	London
Gossamer, cutter ..	45 tons	R. Hoare, Esq.	Lowestoft

The *Sverige* schooner, of 280 tons, was entered for this match; but, in consequence of the very light wind that was blowing, Mr. Bartlett did not consider himself justified in starting. The match, over a distance of thirty five miles, was won by the *Mosquito*, who beat her competitors by nearly an hour

While the above match was going on, the yawls were started for the second prize of £20, for yawls from all parts; four to start or no race; half a minute per foot allowed for difference of length. First yawl, £15; second, £10; third, £5. Eight boats started for this match, which we have engraved, being the prettiest and most interesting match of the day. The following were the winners—*Beeswing*, *Queen Victoria*, *Royal Victorine*.

While the two foregoing matches were proceeding, the smaller yachts were started at 1h. 42m. 10s., for the third prize of 30 sovereigns, for yachts over 15 and not exceeding 30 tons. Three to start or no race. This match was won by Mr. Lane's *Phantom*, of 25 tons. The fourth prize of £20, for yachts not exceeding 15 tons; three to start or no race; entrance fee 10s.; was won by Mr. Wheeler's *Vampire*, of 15 tons. The fifth prize of £10, for River Latteen Boats, with latteen foresail and lug mizzensail (weather permitting); three to start or no race; was won by Mr. Brightwen's *Shannon*.

The sixth prize, of £10, to be rowed for by six-oared beach gigs; open to all; four to start, or no race: first, £6; second, £3; third, £1:—*Jenny Lind*, 1; *Teaser*, 2; *Beeswing*, 3.

A Punt Match and Duck-hunt concluded the Regatta.

Captain Andrews and the Committee deserve the greatest praise for the arrangements of the day.

In the evening, all the yachtsmen and their friends, to the number of 170, sat down to dinner at the Royal Hotel; provided in excellent style by Mr. Howett, the proprietor.

LOWESTOFT REGATTA.—THE YAWL MATCH.

SCENE FROM THE GERMAN COMEDY OF "DONNA DIANA," AT THE ST. JAME'S THEATRE.

STAMFORD RACES, 1853.

THE Stamford "Gold Cup," contested for on Wednesday, is a vase of classic design, silver gilt, the ornamentation being in the pure *Renaissance* style. On two sides are panels, each bearing a representation of

THE STAMFORD RACE GOLD CUP.

race horses in bold relief. The lower part of the Vase is divided into smaller panels, each having a richly-embossed mask; under the lip also is a finely-chased mask. This superb Cup is from the establishment of Mr. C. F. Hancock, of Bruton-street, and is an elegant specimen of design and working in metal.

THE COMEDY OF "DONNA DIANA," ST. JAMES'S THEATRE.

WE now present a scene from the German-Spanish drama performed last Monday week at the St. James's Theatre. It is one which peculiarly testifies to the elegance of the work—the quality on which, as we have already stated, it mainly relies for success. It occurs in the 4th Act, *Donna Diana*, the haughty Princess (Frau Stolte), indignant that all her fascinations have failed to conquer the seeming coldness of *Don Cæsar* (Herr E. Devrient)—who, though deeply in love with the proud lady, has been advised by *Secretary Perin* (Herr Dessoir) to tame his disdainful mistress by simulated indifference—has summoned her ladies to her garden, intending to astonish and dazzle the recreant Cavalier into submission by a display of her talent on the lute. *Don Cæsar*, wandering in the garden, and drawn towards *Diana* by the witchery of her music, is about to surrender at discretion, but finds himself forcibly held back by *Perin*, who admonishes him that the only way to gain his prize is by keeping aloof, with an aspect of perfect indifference. In the back ground appears *Florette*, the waiting-woman, a character conceived in the good old school This is one of the few good situations that occur throughout the comedy. The scene is picturesque, and, as the embellishment of a comedy, somewhat poetical in its conception. It pleases the eye, and the mind is gently stirred by the neatness of the incident, as well as by the spectacular beauty of the situation. In all respects it stands in contrast with those with which we are familiar in our "Taming of the Shrew," and therefore possesses the charm of variety.

MENAGERIE OF THE ZOOLOGICAL SOCIETY, REGENT'S PARK.

THE *Aquavivarium*, as it is proposed to call the collection of marine and fresh-water animals in the Regent's-park, maintains all its interest with the public, as well as with the Fellows. The assemblages of the latter on Sundays have not only included all the most distinguished persons in London, but have been far more numerous since the Aquavivarium has been opened than has occurred for many years past.

While the Aquavivarium has engrossed so large a share of public attention, the other novelties in the Gardens have scarcely met with the notice which they deserve, and which under less absorbing rivality they would have certainly attracted. Among these are three young *American* ostriches (*Rhea Americana*) which have been hatched at the gardens with the aid of Cantelo's machine. They are growing very rapidly, and appear to thrive as well under the artificial treatment to which they have been subjected, as if they had been produced on the Pampas. They are attended during the day by a little boy, for whom they evince the most lively attachment. The Rheæ, like all the ostrich family, have characteristic peculiarities in the method of incubation, which, in their case, devolves entirely on the male. The female makes no nest, but deposits her eggs without preparation of any kind; but, probably, at no very great distance from each other. The male collects them together, rolling them up to one spot with his beak. After arranging them in a circle, either on the ground or on a very slight thickness of grass, he begins to pile round himself, as he sits, a wall of such material as he has collected for the

AMERICAN OSTRICHES HATCHED AT THE ZOOLOGICAL GARDENS, REGENT'S PARK.

purpose within reach of his long neck, and he keeps adding to this mass for some time. When he leaves the eggs, which occur only at long intervals, he covers them slightly with some of the upper layer of the walls of the nest. The period of incubation is about thirty-five days, and the full number of young appears to be about fifteen.

Among a collection of living animals, which the Society has just received from Egypt, is a flock of Flamingoes, which we shall engrave next week.

We cannot conclude this short notice of the Society's acquisitions, without adverting to the extremely beautiful state of the flowers with which some part of the Gardens are ornamented, and which in themselves must be a most attractive source of enjoyment to thousands of the visitors.

CALENDAR FOR THE WEEK.

SUNDAY, July 24.—Ninth Sunday after Trinity.
MONDAY, 25.—St. James
TUESDAY, 26. St. Anne. Earl of Rochester died, 1680
WEDNESDAY, 27.—Duty on Almanacks repealed, 1834.
THURSDAY, 28.—Robespierre guillotined, 1793.
FRIDAY, 29. French Revolution commenced, 1830.
SATURDAY, 30.—Charles X. dethroned, 1830 William Penn died, 1718

RUSSIA AND TURKEY.

On Saturday, the 6th of AUGUST, will be published

A GRAND DOUBLE NUMBER

OF THE

ILLUSTRATED LONDON NEWS,

CONTAINING

LETTERS AND SKETCHES FROM CONSTANTINOPLE AND THE DANUBIAN PROVINCES,

FROM OUR OWN CORRESPONDENTS AND ARTISTS.

Among other Illustrations will appear Portraits of the Emperor and the Sultan; the Passage of the Pruth by the Russian Army under Prince Gortschakoff; numerous Views on the Pruth, the Danube, and the Bosphorus; the Castles and Forts of the Dardanelles and the Black Sea. Sketches of Russian and Turkish Cavalry and Infantry; Views in St. Petersburg and Constantinople; Turkish Artillery; the Peasantry and People of Moldavia and Wallachia, &c. &c.

With this Splendid Number of the ILLUSTRATED LONDON NEWS will be presented,

GRATIS TO SUBSCRIBERS,

A MAGNIFICENT FOUR-PAGE ENGRAVING OF

THE BRITISH FLEET AT SPITHEAD,

DRAWN BY E. DUNCAN.

Now ready, price 8s., Volume XXII of

THE ILLUSTRATED LONDON NEWS, elegantly bound in cloth, gilt edges, rich in the tradition of the Events of the last Six Months, forming a most complete and valuable ILLUSTRATED CHRONOLOGY; together with a new and full and highly interesting Index to Art, Literature, and Society.—The Covers for Volume XXII, with the New Design, price 3s. 6d. each, may be obtained, by order, of all booksellers, &c., in the kingdom, as also all the previous volumes.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 23, 1853.

A FEAR has been expressed in some quarters that thirty-eight years of peace have enervated the British people; that our soldiers are no longer such soldiers as those who gained the battles of Wellington; and that our sailors are no longer the hardy and unconquerable tars who immortalised the British name under Howe and Nelson. It will no doubt be a great misfortune for this country, and for the world, if war should arise at the present time, to put these timid assertions to the proof; but, should the necessity occur, the doubters will speedily discover that they have more reason to blush for themselves than for their countrymen. The proverbial "pluck" and mettle of the people of these islands have been shown in too many ways, even in the "piping times of peace," to permit any reasonable and observant Englishman to believe that the men of the present generation are not as valiant and determined as their forefathers. The universal execration which the mingled ambition and fanaticism of the Emperor of Russia has excited among all classes; the firm determination which has been evinced to suffer no infraction of solemn treaties, or disturbance of the balance of power in Europe;—to uphold Turkey in the right;—and to resist at any cost the fleets or armies of the aggressor; all betoken that the old spirit yet survives amongst us in its pristine vigour; and that, if needs be, we can fight as cheerfully and as successfully as we can work and colonise. In a needless or an unjust war, it may, perhaps, be doubted whether our soldiers or our sailors would be up to the old mark; but in such a war as that with which we have been threatened for the last three months by the Emperor of Russia, British statesmen may well rely upon the unchangeable valour and patriotism of the nation. The British people are prospering in peace: they detest war as cordially as the Peace Society ever did; and would make any sacrifice, consistent with their honour and their independence, to avoid it; but, the more they abhor it while at peace, the more zealously they will fight, if driven into it, on a question affecting the national dignity or safety. No one who has watched the current of public opinion upon the Turkish question, and remarked the gratifying unanimity of all parties in the state, and of all classes and conditions of men, can have any fear that the star of our glory will pale before that of any nation with which we may be brought into conflict, or that we have been in any degree emasculated by the long peace which we have enjoyed since 1815. In that brilliant interval we have almost doubled our numbers, and quadrupled our wealth. We have changed the face of the world by our enterprise and ingenuity; and conquered difficulties quite as formidable in their way as any which affronted us in war. The powers of the world know our mettle in all these respects. Those amongst them who may speculate upon our weakness, will do so in ignorance. If there be any timorous people amongst ourselves who are not quite convinced that we are as good and as brave in 1853 as we were in 1815, let them "take heart of grace" and look about them.

THE signs of the approaching termination of the Session begin to accumulate. Members, allured by the attractions of country sports or country business, are gradually pairing off; and those who remain are working more and talking less than they did before Whitsuntide and Easter. Set speeches are considered as great nuisances by the House, as they have long been felt to be by the readers of newspapers; and measures that in the hot youth and enthusiasm of the Session were held to be of primary importance, are one after another postponed or abandoned. The same thing happens every year. The constant palaver of the first four months of the session impedes business to such an extent that the month of July usually finds both Houses in arrear with many useful if not indispensable measures. Independent members, therefore, see that within a few days they have no longer any chance of attention for their pet projects; and, by the same period, the Government itself finds it useless to attempt to proceed with any bills but those of absolute necessity. Already we can calculate the results of the Session of 1853. The new Budget, and the India Bill, are almost the only items of national importance that figure in the list. Had the Session produced nothing but the Budget, it might well claim the epithet of fruitfulness. We cannot say as much for the India Bill, which is nothing but a compromise with difficulties. It settles nothing with regard to the future Government of India, and merely stops a gap until the Legislature and the country shall have better information, or evince a stronger determination to deal decisively with the subject. If we add to these the New Hackney Carriage Act of Mr. Fitzroy; the emancipation of newspaper supplements from fiscal burdens—a boon for which we are to be indebted to the Chancellor of the Exchequer; and the total abolition of the Advertisement-duty—which we are to expect from the independent members of the House, aided by the acquiescence of the Government; we shall have pretty nearly exhausted the list of the measures of the Session.

There reforms are all good in their way. We might have wished that the Hackney-carriage Act had regulated the fares of omnibuses as well as of cabs, and that the alterations in the law relative to newspapers had been broad and general enough to include all literature; but the public will be contented to take what it can get; and to hope, in the meantime, that the Session of 1854 will complete a work that has been well begun and remedy other short comings or omissions of its predecessor. Among the measures which might have been carried, if the too numerous members for "Verbosity" had been less wordy and tedious, we must not forget to mention the very excellent bill introduced by the Government for facilitating the profitable investment of the small savings of the people by means of Savings-banks Annuities. It is with much regret we see that this measure has been postponed for another year. It is also to be lamented that the Education Bill of Lord John Russell will incur the same doom; and that the greatest of the many great tasks which this country must perform, under the penalty of being left behind in the great march of civilisation, is bequeathed as a legacy to the uncertain future.

One word, in conclusion, upon the long-winded orations of the many members who consider the House of Commons as something no better than a monster debating club. The evil is one that annually increases; and, if not remedied by Parliament itself, will have to be remedied by the reporters. If these gentlemen will make it a rule, and inflexibly adhere to it—to report no long speeches whatever, unless delivered by a Cabinet Minister or the leaders of Opposition, the public will speedily have better newspapers, and more business-like sessions of Parliament. Let the members for "Verbosity" report their own speeches in their own local newspapers if they please; but let the London press decline to administer to their vanity.

THE COURT.

We are sure that we only anticipate the universal feeling when we express our deep regret that the official announcement of the Royal physicians—which will be found below—unhappily confirms an impression which obtained in the highest circles, even so far back as Saturday last, to the effect that her most gracious Majesty has at length fallen under the malady which, with only two present exceptions, has attacked all the members of the Queen's family within the last few days.

Her Majesty, with the Prince Consort and the Prince of Wales, arrived at Osborne House on Saturday last. Her Majesty was out for a short time on Monday, but on Tuesday afternoon indisputable symptoms of measles exhibited themselves. The subsequent condition of the Sovereign is thus described by the official bulletins issued on Wednesday, Thursday, and Friday:—

OSBORNE, Wednesday Morning, July 20, 9 a.m.

The Queen has an attack of measles. The eruption appeared slightly yesterday afternoon, and is now well out. Her Majesty had much cough during the night, but is relieved this morning.

JAMES CLARK, M.D.
HENRY HOLLAND, M.D.

OSBORNE, Thursday Morning, July 21, 1853, 9 a.m.

The Queen has had a good night.

A fine specimen of the disease are abating; and her Majesty's state is altogether very satisfactory.

JAMES CLARK, M.D.
HENRY HOLLAND, M.D.

OSBORNE, Friday, July 22, 1853.

The Queen has passed a good night, and the marked abatement of every symptom this morning is such as to indicate her Majesty's approaching convalescence.

JAMES CLARK, M.D.
HENRY HOLLAND, M.D.

THE ROYAL FAMILY AT WINDSOR.

Their Royal Highnesses the Princesses Helena and Louise have been attacked with measles, and are passing through the malady most favourably. His Royal Highness Prince Alfred, whose attack was more than usually violent, is completely recovered, and visited the Camp on Monday, attended by Mr. Gibbs. On Tuesday morning the Prince left the Castle, attended by Mr. Gibbs, for Osborne. The Princess Royal and the Princess Alice, who are ill with measles at Buckingham Palace, are expected at the Castle as soon as their Royal Highnesses are in a condition to travel. The two youngest of the Royal children, Prince Arthur and the infant Prince Leopold, are the only members of the Royal family who have not been visited with the complaint at present.

THE GRAND-DUCHESS OF LEUCHTENBERG.

Her Imperial Highness the Grand-Duchess Marie of Russia, who arrived at Torquay a few days since, came to town on Tuesday last, and remains at the residence of the Russian Legation in Belgravia. The Grand-Duchess returns to Torquay on Saturday (this day). Her Imperial Highness honoured the establishment of Mr. C. F. Hancock, in Bruton street, with a visit on Wednesday.

Her Royal Highness the Duchess of Kent left town on Thursday, on a visit to her Majesty at Osborne, in the Isle of Wight.

Their Royal Highnesses the Prince and Princess Royal of Wurtemburg are shortly expected to arrive on a visit to this country. Their Royal Highnesses will land at Woolwich on their arrival from the Continent.

Their Royal Highnesses the Duchess of Gloucester and the Duchess of Cambridge, and the Princess Mary, and the Hereditary Grand-Duke and Duchess of Mecklenburg-Strelitz, visited her Royal Highness the Duchess of Kent, on Tuesday, at her residence, Clarence-house, St. James's.

His Serene Highness Prince Ernest of Leiningen arrived at Clarence-house, St. James's, on Tuesday, from the Continent, on a visit to her Royal Highness the Duchess of Kent.

The Duke and Duchess of Northumberland have left Sion House on a Continental tour.

The Marquis and Marchioness of Londonderry have left town for Wynyard Park, Stockton-on-Tees.

The Earl and Countess of Jersey gave a splendid entertainment on Monday evening to his Royal Highness the Duke of Cambridge, at the family residence in Berkeley-square.

Lady Holland's afternoon reception, at Holland House, on Wednesday, was attended by a brilliant circle of rank and fashion.

The Countess Walewska had a soirée musicale on Tuesday night, at the residence of the French Embassy, in Grosvenor-square. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary, attended by Baron Knesebeck and Lady Suffield, honoured the réunion with their presence, arriving shortly before eleven o'clock.

MARRIAGE IN HIGH LIFE.—A very gay and brilliant assemblage of the aristocracy attended at St. George's Church on Wednesday, to witness the celebration of the marriage of the Lady Emily de Burgh, second daughter of the Marquis of Clanricarde, with Viscount Dungarvan, grandson and heir-apparent to the Earl of Cork and Orrery. Lady Clanricarde celebrated the event by a breakfast at the family mansion on Carlton-house-terrace, at which a select circle of relatives were present. Early in the afternoon the bride and bridegroom left town for Baltersbe Court. The bride is grand-daughter of the celebrated George Canning.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Lord Chancellor took his seat on the woolsack at five o'clock.

The Summary Jurisdiction (Ireland) Act Amendment Bill, the Petty Sessions (Ireland) Bill, and the Entails (Scotland) Bill, severally passed through committee.

The Bankruptcy (Scotland) Bill and the Insolvency (Scotland) Bill were read a second time.

The Land Revenues Bill and the Coinage Offences (Colonies) Bill were read a third time and passed.

SUCCESSION DUTY BILL.

The Earl of ABERDEEN, in moving the second reading of this bill, said the measure had received considerable attention in the other House of Parliament, and had come up to their Lords ips backed by a large majority of the members of the House of Commons. The Government was induced to propose this measure for the sake of relieving the country from some unjust imposts, as well as paving the way for the entire abolition of the Income-tax; but perhaps the proposition for the introduction of the measure was for the removal of the gross inequalities which at present existed between real and personal property. It was a manifest injustice that a poor man who received a legacy of £100 was required to pay £10, whilst a rich man succeeding to an estate worth £.00,000, was allowed to go free. The injustice of this inequality was daily becoming more intolerable; and the Government, when they took office, came to the conclusion that any well-devised scheme for readjusting the taxation of the country must embrace a measure of this nature, and they, therefore, proposed this tax upon successions. Much had been said in the other House of its injustice and inequalities, but he (the noble Earl) had examined the petitions on the tables of both Houses, and he could not discover any considerable amount of public disapprobation. Having stated the provisions of the bill, the noble Earl concluded by hoping that the discussion that evening would be on the principle of the bill, as the proper time for making any alteration would be in committee.

The Earl of DERBY, in a speech of considerable length, contended that the tax would be the source of great oppression and injustice, and for that reason he did not envy the Government by whom it had been brought forward. Mr. Pitt failed in carrying such a measure; and, as no subsequent Government had ventured to take a similar step, he thought it very rash on the part of the present Ministers. He looked upon this tax as a Property-tax, and one of the most obnoxious and oppressive character, for it not only operated prospectively, but also retrospectively; and would be the means of upsetting every family arrangement, with respect to personal property, throughout the length and breadth of the land. The charge upon copyholds was always looked upon as an intolerable grievance, but by this bill all the land in the country would become copyholds. The Income-tax was far less objectionable than this impost, and if it remained in force seven years, a general demand would be made for its repeal, even by the constituents of the Income-tax. The tax was most inquisitorial, and would fall most heavily upon the poor proprietors, who could scarcely keep their heads above water. The only persons who would benefit by the measure would be the legal profession, in consequence of the immense amount of litigation it would create. He would not oppose the second reading; but in committee he would propose an amendment, which would make the operation of the tax prospective only.

The Duke of ARGYLL defended the bill, and denied that it was characterised by the injustice and enormities asserted by the noble Earl (Derby). As a means of revenue it was less objectionable than any other means of taxation, and had been proposed in order that the Income-tax might be abolished.

The Earl of MALMESBURY contended that the bill was identical in principle with the oppressive laws of the Norman conquest. He would rather have an Income-tax for life than say content to this measure, which was unjust, inquisitorial, and uncalled for.

Earl GRANVILLE supported the bill, and contended, from the fact of there being no petitions against it, that the country was not opposed to the tax.

The bill was then read a second time; and the other bills on the table having been advanced a stage, their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY.

At the morning sitting, the Tenant Compensation (Ireland) Bill and the Pilotage Bill were considered in committee, and several clauses agreed to.

At the evening sitting,

In answer to Mr. A. Pellatt, the CHANCELLOR of the EXCHEQUER said he did not intend to propose the resolutions which he had originally submitted to the House with reference to a system of license duties.

STATE OF PUBLIC BUSINESS.

In answer to Mr. Disraeli, Lord J. RUSSELL said the Education Bill would not be proceeded with at that late period of the session, as it would materially interfere with the passing of the Charitable Trusts Bill, which it was most desirable to have passed this session. The Income-tax Bill, the Succession-duties Bill, and the Government of India Bill, would be proceeded with. On the 1st of August he proposed to go into Committee of Supply, that the remaining estimates might be voted. He hoped, after the 1st of August, orders of the day might be allowed to take precedence of notices of motion on Tuesdays as well as on other days, and that gentlemen having bills fixed for Wednesdays would withdraw those of an unimportant character.

RUSSIA AND TURKEY.

Mr. LAYARD put a question to Lord J. Russell as to the state of the negotiations between Russia and this country, and the production of papers connected therewith. He had been given to understand that a noble Earl in the other House had promised to produce the papers in a few days; and he therefore felt justified in repeating the question now. Within the last fortnight extraordinary events had taken place in connection with the transactions to which he referred; and no acts so outrageous and dangerous as those accomplished within the last three months had ever before occurred in Europe. A body of troops had been marched into Moldavia and Wallachia, and had not only taken possession of those provinces, but had seized, in great part, upon the civil administration of government, held the fortified places, and even stations on the Danube. Moreover, statements had been put forward in a manner unprecedented in the history of diplomacy, and in a manner disrespectful to England and France. These outrageous acts were not disavowed, although they had been told they were. Little was known as to what our own Government had done in the matter, but he hoped there had been a firm and dignified protest: but, whether it was so or not, the House ought to know what really had been done.

Lord J. RUSSELL, after apologising for not having previously stated with respect to the demands of the Government of Turkey by Prince Menschikoff, and her Majesty's fleet being ordered to proceed to Besika Bay, stated that the latter step could not be called a negotiation, but was intended as a proof of how much her Majesty's Government had at heart the independence and integrity of the Turkish Empire. The negotiations, so far from being concluded, had hardly commenced, in consequence of the distance which intervened between the different Governments. With regard to the production of the papers asked for, he thought the negotiations should be carried on from Government to Government, and must, therefore, ask for that indulgence which the House had always shown Ministers in such a question. The manifesto recently published by Russia had been well answered by the despatch of M. De Plhy's, and if it were the practice to furnish paper separately, he should have no objection to lay Lord Clarendon's despatch in answer to the same immediately on the table, but, as such was not the practice, he must decline to produce it until the whole correspondence could be laid on the table together. He had only to add that it was unfortunately found that the present negotiations could not be brought to a satisfactory issue. Her Majesty's Government would call confidentially on the patriotism of that House in support of the honour of the country, and that the conduct of his Majesty, the Emperor of France, had been entirely in accord with that of her Majesty's Government. It was their aim, if possible, to preserve the peace of Europe, if the honour of this country could be preserved at the same time.

THE ROW-STREET CAB CASE.

Lord PALMERSTON said he had made inquiries into the case of the man committed by Mr. Henry from Bow-street; he found that the fine had been paid, and that the man was now at liberty.

GOVERNMENT OF INDIA BILL.

The House then went into committee on this bill, all the clauses of which were agreed to after considerable discussion.

The orders having been gone through, the House adjourned.

FOREIGN.

FRANCE.—PARIS, Thursday Evening.—Nothing but peace was talked of to-day at the opening of the Bourse. The Three per Cents were at 72f. 15c., and for the month 72f. 15c. Suddenly, however, great gloom came over the market, and at the close the Three per Cents had fallen to 72f. 50c., and for the month to 72f. 30c., being a fall of nearly one per cent. The prevailing rumour was that the French Government had just received accounts from St. Petersburg which are not considered satisfactory. It was said that the Emperor of Russia has expressed his willingness to negotiate; but that he refuses to evacuate the Principalities until the negotiations shall have terminated to his satisfaction, and will fix no time for a solution.

The trial of the men charged with being connected with secret societies in Paris, is still going on before the Tribunal of Correctional Police.

ITALY.—Letters from Milan (of July 14) state that the Austrian police are on the track of a projected insurrection in Central Italy.

AUSTRIA.—Three steam-tugs arrived at Pesth on July 15 with nine large vessels in tow. These vessels were filled with Austrian infantry. This morning the steam-tugs and vessels continued their voyage down the river. All the steam-tugs in the Danube have been put into requisition for the Emperor of Austria's service.

RUSSIA.—Accounts from Vienna (July 17) state that the Russian troops have occupied all the fortified places on the Wallachian side of the Danube.

TURKEY, BOSNIA, AND SERVIA.—Accounts from Constantinople (of the 11th) state that everything was tranquil; but there had been no relaxation in the preparations for defence. It appears that there is no truth in the statement of the *Lloyd* of Vienna, that the Sultan has sent an Ambassador to St. Petersburg. The letters received from the Ottoman Embassy are of the 8th, but they do not give any details about the conspiracy discovered at Constantinople against the person of the Sultan.

Under date of Vienna, Thursday, July 21, is the following telegraphic despatch:—

"BELGRADE, July 15.—Our Senate, being devoted to Russia, has urged the reigning Prince to abdicate in favour of his nephew, aged twenty-five, educated in Russia. The Prince has already quitted Belgrade, and has handed three days' delay to consider."

A considerable displacement of troops is taking place throughout that portion of the military frontier which adjoins Bosnia and Servia. The Austrians are edging on towards Turkey.

From Servia it is said that the Russian Government, after procuring the dismissal of the Premier Garaschnin against the Prince's will, now demands the removal of all state *employés* who are known to entertain anti-Russian sentiments.

STAR CLUB.—The last meeting of this club for the present season will take place at the Star and Garter, Richmond, on Wednesday, 3rd August; when a large muster of the diplomatic members is expected, as well as many members of the House of Commons.

ELECTION OF SHERIFF.—A Common Hall of the Livery was held at the Guild all on Friday, for the purpose of electing a person to fill the office of Sheriff of London, in the room of J. Turnley, Esq., who had refused to serve; but the Lord Mayor said, circumstances had transpired which rendered it advisable to adjourn the election, which was done.

THE STEAM-SHIP GREAT BRITAIN.—The "screw steam-ship *Great Britain*, Matthews commander, will be despatched for Australia on the 15th of August next, and is expected she will make a very rapid run. The agents have advertised that, if she does not make the run to Melbourne within sixty-five days, they will return forty shillings per ton of the freight-money paid on goods.

IRISH LIBEL CASE.—The case of Birch, of the late *World* newspaper, against the Dublin *Freeman's Journal* for libel, has terminated in a verdict for the defendant.

REGATTA AT BRIGHTON.—The three days' grand aquatic meeting at Brighton, commenced on Thursday; and, although circumstances rendered it necessary to defer a portion of the sport to the second and third days, the great schooner race for 120 guineas amply compensated the visitors for the postponement. The course was to start from a flag-boat off the Chain-pier towards the west, to a boat moored off Shoreham Harbour, out about five miles, to another boat facing the pier; thence to a boat off Rottingdean, and back to the Chain pier, three times round, making a distance of at least 32 miles. They came in as follows:—

	H. M. S.
Alarm	3 45 0
Sverige	3 47 0

The *Sverige* thus lost by two minutes in a distance of 32 miles, performed by the winner in 4h. 20m. Some minor rowing matches followed. Amongst the sport for Friday was a grand race for £100, in which the *Mosquito*, *Arrow*, *Wildfire*, and *Crest* were to compete.

LAUNCH OF THE CRESSY.—On Thursday the new screw steam-ship *Cressy*, 80 guns, was launched at Chatham Dockyard. She was designed and laid down in 1844; but recently it was determined to change her from a sailing to a screw steam-ship. There was a large concourse of spectators in the yard and the *Cressy* was christened by Miss Percy, daughter of Vice-Admiral the Hon. Josceline Percy. The dimensions of the ship, according to the lloyd navy list, are length, 231 feet 3 inches; breadth, 58 feet; depth in hold, 24 feet 9 inches; burthen in tons, 2,752 tons. She is to have engines of 800-horse power, on Maudslay and Co.'s double piston-rod direct-acting principle. The *Mosquito*, an 11-gun screw steam-sloop, will be ready in about two months for launching, from the same dockyard.

MARSEILLES.—The *Fury*, 6, paddle-sloop, Commander Tatham, arrived at Marseilles on the 17th inst., with important despatches from Lord Stratford de Redcliffe, relative to the Eastern difficulties, to which she awaits the reply from the British Cabinet. Lord Arthur Lennox was a passenger for England on board.

HEREFORD CHURCH STRUCK BY LIGHTNING.—On Wednesday morning, during a fearful storm, the fine old church at Hereford was struck by lightning, during the performance of the marriage ceremony. The edifice was only injured trifingly; but two women and two children present were struck by the electric fluid, and one of the children was much injured.

THE METROPOLITAN POLICE.—On Thursday afternoon a meeting of about 150 constables of the B division of the metropolitan police was held at the Belgrave Hotel, Pimlico, for the purpose of taking into consideration what steps should be adopted in order to obtain an increase of pay. Mr Superintendent Gibbs endeavoured to persuade the men not to assemble, but they expressed a determination to take that course, in order to make known their complaints. It was eventually resolved that a memorial be presented to the Commissioners of Police, representing the propriety of an increase in their pay, and which it was agreed should be signed by every constable.

PROVINCIAL INTELLIGENCE.

THE WEATHER AND THE CROPS.—The hay-crops, although abundant, are unpromising for the interests of the growers. Along the whole distance from London to the western extremity of Herefordshire, and through the south-western part of Buckinghamshire, the floods in the lower lands have placed the crops under water, and be the weather ever so fine, the quality of the hay must be seriously damaged Wheat, through the same district, looks uncommonly well: we have seen heavier crops, but rarely more healthy-looking ones. Notwithstanding the heavy rains, there is very little beaten down; in fact, not only are the ears good, but the straw is strong. In the county of Hereford, the bearded, or Polish wheat, shows best. The barley (not grown in these districts largely) shows every appearance of an average harvest; they are all in full ear, and, like the wheat, keep well up their preponderance. Oats are unquestionably an extraordinary crop. There are a few fields—one particularly near Hickmansworth—that are worth going to see. Their uniformity of growth, and the quantity of ears on each stem, are promise of an abundant crop. Turnips are healthy, and in many instances an inch and a half high, and come up so abundantly that they will require great thinning. Mangel-wurzel and beet-root (not much cultivated in this district) are exceedingly healthy and abundant; in fact, there is every prospect, under God's will as to weather, of a good and abundant harvest.

THE FLOODS NEAR LONDON.—The most disastrous news has been received from nearly every town in the neighbourhood of London of the effects of the heavy rain that has recently fallen. Along the South-Western Railway very little is to be seen in the low lands beyond immense sheets of water, and thousands of hay-cocks floating on the surface. At Guildford, Chertsey, Woking, and Battersea, the water is several feet deep, and much damage has been done to the crops as well as the hay. On the Eastern Counties line immense injury has been caused to the sheep and lambs, and some of the crops have been destroyed. In Kent there has been a destruction of many thousand pounds worth of property.

NORTH DERBYSHIRE ELECTION.—Late on Tuesday night Mr. Evans, satisfied with the result of the first day's polling, retired from the contest. Mr. Thornhill, therefore, is duly elected.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

A conversation upon the Eastern question was commenced by the Earl of MALMESBURY, who expressed his impatience for the publication of the Government of their answers to the Russian circular notes. The Earl of CLARENDON said the papers connected with this subject would be laid upon the table of the House in a few days, whatever might be the result of the negotiations now going on.

The Transportation Bill passed through committee.

The Earl of ALBEMARLE, in presenting petitions from India, complaining of the salt monopoly, enlarged upon Indian grievances.

The EARL OF DONOUGHMORE called attention to the present condition of the system of national education in Ireland, moving, at the same time, for a copy of the resolution lately adopted by the Board of National Education, excluding the use of certain books of Archbishop Whately's from the schools under their management; and asked whether, in consequence of that resolution, any and what members had resigned their seats at the board? The Earl of ABERDEEN denied that any member had hitherto resigned his position and defended the national system, which he maintained to have worked well. He considered that an erroneous construction had been placed upon the resolution, which excluded only one book—the "Evidences of Christianity," and had not caused any change at the board. Lords MONTEAGLE, DERBY, and HARROWBY took part in a debate upon the subject, which resulted in the papers being ordered to be laid on the table.

The Public-houses (Scotland) Bill passed through committee.

HOUSE OF COMMONS.—MONDAY.

Mr. BRIGHT moved for a select committee to inquire into the allegations contained in the petitions of certain electors and inhabitants of the city of Peterborough, presented on the 1st of July, complaining of the interference of Earl Fitzwilliam, as peer of the realm, at the election in December last, and at previous elections. Mr. Bright read extracts from the petition, in order to show the extent to which the Fitzwilliam influence, by means of the Fitzwilliam property, had been maintained in the city. So paramount and crushing was that influence, that the electors would be content to allow that Fitzwilliam to return one representative, if they were permitted to return the other. Mr. Fitzwilliam seconded the motion, believing inquiry to be necessary for the vindication of Lord Fitzwilliam's character. The motion was agreed to, after some further discussion.

THE SUCCESSION-DUTY.

On the motion that the bill be read a third time, Mr. LIDDELL, the new member for Liverpool, opposed the bill. He complained of the inequality of the tax. Some property might pay four or five times in the course of twenty years, while other property might escape for fifty or sixty years. He mentioned a barony in which four successors to the property and title had died in a short time, recited statistical illustrations in proof of the hardships and inequality of which he complained, and spoke of the burdens already imposed upon land as an additional argument against the tax. On the motion "that the bill do pass," a proviso to the second clause was moved by Mr. SPOONER, which was negatived, after a discussion, by 138 to 100. An animated, but not interesting discussion next took place upon a motion by Mr. MALINS, to omit the clause relating to the Timber duty. The result was the rejection of the amendment by 112 to 77. Sir J. PAKINGTON moved another amendment, to insert certain words, neutralising the *ex post facto* application of the tax. The amendment was rejected on a division, by 134 to 93. Mr. MALINS moved another amendment, to protect title-deeds from being called for; which was rejected, on a division, by 146 to 110. A final division then took place upon the main question; and, at a quarter to eleven, it was decided, by 176 to 134, "that the bill do pass." The result was received with loud cheering from the Ministerial side.

GOVERNMENT OF INDIA BILL.

The House went into committee on this bill. Mr. HUME moved an amendment on the 22nd clause, to allow two native gentlemen to be included in the Legislative Council. Sir C. WOOD was of opinion that instead of making the introduction of natives compulsory, the system which had been commenced of giving them increased power, should be left gradually to develop, as the natives themselves advanced in capacity. Lord STANLEY wished to express his views, but did not consider that the amendment prescribed the best mode of accomplishing the object. Lord JOCELYN agreed with Lord Stanley. Mr. BLACKETT gave his support to the amendment; which was opposed by Sir H. WILLOUGHBY, as perilous to the stability of our Indian empire, and by Mr. MANGLES, because he conceived the natives to be unfit for legislative duties. Mr. D. SEYMOUR condemned the course pursued by the Government as calculated to alienate the natives from the Government. After some further discussion, the House divided, and the amendment was lost by 168 to 39. The clause was then agreed to, and the Chairman reported progress.

Mr. ALCOCK moved that the third reading of the Assistant-Judge (Middlesex Sessions) Bill be postponed for six months; and Sir D. L. EVANS supported the amendment, and related various anecdotes of the "eccentricities" of the present Assistant-Judge. On a division, the bill was thrown out by 93 to 42.

Lord PALMERSTON obtained leave to bring in a bill to authorise the closing of burial-grounds in towns. The House adjourned at twenty minutes to two o'clock.

HOUSE OF LORDS.—TUESDAY.

The Bankruptcy (Scotland) Bill, and the Land Reserves Bill, passed through committee.

The General Board of Health (No. 3) Bill and the Coinage Offences Bill were read a second time, and the Metropolitan Buildings Act Further Amendment Bill a third time.

The Marquis of CLANRICARDE, after a prefatory statement of some length, introduced a bill in relation to the law between landlord and tenant in Ireland.

The Succession-duty Bill was read a first time.

HOUSE OF COMMONS.—TUESDAY.

The House held a morning sitting, in which the LORD ADVOCATE moved the second reading of the Edinburgh and Canongate Annuity Tax Abolition Bill. He explained that it was intended to do away with an impost of six per cent, levied upon the Edinburgh householders for the support of ministers of the Church of Scotland in that city. These, to the number of eighteen, received salaries of £300, and it was proposed to reduce their number to fifteen, and their salaries to £500, and to raise the same in part by a municipal tax of three per cent; and the balance was to be taken out of the Consolidated Fund, which, however, was to be ultimately reimbursed by the falling in of the annuities. The measure, he stated, was calculated to do away with what had long been a rankling cause of irritation. Mr. J. B. SMITH contended that the church which these annuities endowed was no longer the church of the people, and he moved the second reading that day three months. Mr. HADFIELD seconded the amendment. Mr. MACAULAY supported the measure, chiefly upon considerations of the unpopularity of the impost as it at present existed, and of the outrages to which it had given rise; and he implored the House not to reject a bill calculated to promote peace in Scotland, and the welfare of the establishment in that country. Colonel Blair, Mr. Bouverie, Mr. Macgregor, Mr. E. Ellice, Mr. Miall, Sir A. Campbell, Mr. Cowan, and Mr. F. Scott contributed to a further discussion. The latter gentleman was still on his legs when the Speaker left the chair at four o'clock.—At six o'clock the House re-assembled, and was immediately counted out.

HOUSE OF COMMONS.—WEDNESDAY.

Sir J. PAKINGTON, in moving the second reading of the Vaccination Extension Bill (which had been sent from the House of Lords), stated its object, which was to render vaccination compulsory, under pecuniary penalties, and showed the unsatisfactory results of the voluntary system. The mortality from small-pox was greater in England than in almost any other country in Europe. Lord PALMERSTON expressed his approval of the bill, which was read a second time.

THE ATTORNEYS' CERTIFICATE-DUTY AND THE ADVERTISEMENT DUTY.

On the order for the second reading of the Attorneys and Solicitors' Certificate-duty (No. 2) Bill, Lord R. GROSVENOR said that if the Chancellor of the Exchequer would say that the present duty was retained merely for revenue purposes this year, and would promise to take the tax into consideration next year, he was willing to forego a division.

The CHANCELLOR OF THE EXCHEQUER could not give a pledge that in any future year he would propose the repeal of this duty, since there were many claims for relief from taxation, some of which were far more imperative. With respect to the state of the revenue on the 18th of April, he had calculated the surplus of the year at £495,000. Looking at the existing circumstances of the country and to the prospects of the harvest, if he were to frame a new estimate for the year 1853-4, he could not make a more favourable one. After allowing for the ascertained gains and losses, and the probable charges upon this surplus, the amount would be reduced to less than £150,000. Two demands were then made—one for the repeal of the Advertisement duty, amounting to £80,000; and another for the abolition of the Certificate-duty, producing an equal amount; and if both duties were repealed, the financial operations of the year would have to be carried on, not with a surplus, but with a deficiency. The Government thought the most prudent course was to repeal neither duty; but if compelled to choose between the two, and if the House should press the repeal of the Advertisement-duty, he had no hesitation in saying that he should prefer that alternative. He therefore declined to give any pledge on the subject of the Certificate duty.

Colonel SIBTHORP, Mr EWART, and Mr. MAGUIRE addressed the House; and, upon a division, the second reading of the bill was negatived by 136 against 102; so the bill is lost.

INSPECTION OF CONVENTS.

On the next order, for resuming the debate on the second reading of the Recovery of Personal Liberty Bill, adjourned on the 22nd of June, the SPEAKER explained the state of the question before the House, namely, that the second reading of the bill having been negatived, the question was, whether the House would adopt the amendment proposed by Mr. PHINN, in favour of referring the subject to a Select Committee. A debate ensued, in which Mr. Whiteside, Mr. Drummond, and Sir J. Tyrell argued that inmates of convents required protection; and Mr. J. Ball, Mr. E. Ball, Mr. O'Brien, Mr. Keogh, and Mr. J. D. Fitzgerald contended that no cause had been shown for inquiry.

On the motion of Lord PALMERSTON, the debate was adjourned (at the instance of Mr. Newdegate) until the 10th of August.

HOUSE OF LORDS.—THURSDAY.

The Parish Vestries (No. 2) Bill, the Spitalfields to Shoreditch Improvement Bill, and the Entails (Scotland) Bill, were severally read a second time.

The Land Revenues Bill was reported, with amendments.

The Coinage Offences (Colonies) Bill passed through committee.

The Transportation Bill, the Copyholds Bill, the Battersea-park Bill, and the Westminster-bridge Bill were severally read a third time and passed.

The Colonial Church Regulation Bill went into committee, after a brief statement from the Archbishop of Canterbury, that the bill was rather permissive than legislative. Its main object was to empower the ecclesiastical authorities in the colonies to summon a convention (in which the laymen shall appear by representation), to form such rules and regulations for the conduct of the church as might be deemed necessary. A discussion then took place, in the course of which Lord MONTEAGLE, the Earl of HARROWBY, and the Earl of DERBY raised some objections as to the danger of those assemblies raising questions involving matters of faith and the supremacy of the Crown.

The bill ultimately passed through committee.

HOUSE OF COMMONS.—THURSDAY.

The House sat at twelve o'clock.

The CHANCELLOR of the EXCHEQUER withdrew the Saving Banks Bill for the present session, with a view to its re-introduction in the session of 1854. In giving security for deposits, he said that the Government would require ample control over those establishments.

The reserved clauses of the Landlord and Tenant Bill (Ireland) were agreed to in committee.

The Tenants Compensation (Ireland) Bill made some progress.

RUSSIA AND TURKEY.

In the evening sitting, Mr. LAYARD gave notice of his intention, on the following day (Friday) to put a question to her Majesty's Government as to the state of the pending negotiations between this country and Russia, and also for the production of papers connected with the same.

In reply to Lord Dudley Stuart, Lord J. RUSSELL said, that although the defective state of the Danube was partially owing to the neglect of proper precautions by the Russian Government; yet its present obstructed state had, in a great degree, arisen from natural causes, and principally from an immediate, owing to excessive rain, which was now subsiding. The correspondence which had taken place on the subject would be looked into, and if there was any portion of it of a nature fit for general inspection it would be furnished to the House.

Mr. BRIGHT called attention to the case of a cab-driver, as reported in the daily papers, who had been fined 40s. at the Bow-street Police-office, and committed to prison in default, because he had not 6s. to deposit before the measurement of the disputed distance. Although such things might happen in Turkey or Russia, he did not think that they ought to happen in this country. He wished to know whether the Home Secretary could afford any information on the subject. Lord PALMERSTON said he would certainly make inquiry into the matter. In the meantime he entreated the House to suspend its opinion.

Mr. BRIGHT moved that the General Committee of Elections should be instructed to select a chairman, and six other members to be the Select Committee on the petition from the city of Peterborough, upon the subject of the alleged interference of Earl Fitzwilliam, at the last election for that place. Lord H. VANE opposed the motion, upon the ground that the pending petition against the sitting member for Peterborough ought first to be decided.

Lord J. RUSSELL supported the motion, which, after some discussion, was agreed to.

THE INDIA BILL.

The House then went into committee upon the India Bill, resuming the consideration of the clauses from the 23rd. Clauses up to 31 having been agreed to, the House resumed. The Chairman reported progress, and obtained leave to sit again to-morrow.

ADVERTISEMENT-DUTY.

On consideration of the Stamp-duties Bill as amended,

The CHANCELLOR of the EXCHEQUER stated that, in regard to the Advertisement duty, it was the intention of the Government to defer to what they considered to be the wish of a real majority of the House.

Mr. BRIGHT then asked whether the duty was to cease upon the passing of the resolution.

The CHANCELLOR of the EXCHEQUER said no; but a bill might be brought in and become law in the course of next week.

ADVERTISEMENT AND STAMP DUTIES.

The following is an abstract of the resolutions reported, amended, and agreed to, on Thursday night:—

1. That from and after a time to be specified, conveyance of any kind or description whatsoever, in consideration of any annual sum— £ s. d.

Where the annual sum thereby reserved, secured, or made payable, shall not exceed 20s. 0 2 6

And where the same shall exceed 20s., and shall not exceed £12, then for every 20s., or any fractional part of 20s., of such annual sum 0 2 6

And where the same shall exceed £12, and shall not exceed £24, then for every 40s., and for any fractional part of 40s. of such annual sum 0 5 0

And where the same shall exceed £24, then for every £5, and for any fractional part of £4 of such annual sum 0 10 0

2. That from and after a day to be named, the following stamp duty shall be charged and paid in lieu thereof:—

On any scrip certificate, the right or title of the holder thereof, to any share or shares in any joint-stock or other company, or any certificate declaring or entitling the holder thereof, to be or become the proprietor of any share or shares of or in any company, or otherwise than by deed or instrument in writing 0 0 1

That from and after the 5th day of July, 1853, in lieu of the duties now payable on advertisements, there shall be paid—

For and in respect of any advertisement contained in or published with any gazette or other newspaper, or other periodical paper, or periodical literary work 0 0 0

THE CHOLERA.—We learn from St. Petersburg, of the 9th inst., that cholera had increased in intensity. There were on that day 104 new cases. Letters from Copenhagen, of the 12th, state that the cholera was at that time increasing in intensity. A letter from Kalmar, in the island of Gothland (Sweden), states that this terrible disease had broken out there with great virulence. Many of the persons attacked died in less than two hours.

BUCHAREST, WALLACHIA, THE HEAD-QUARTERS OF THE RUSSIAN ARMY

BUCHAREST, WALLACHIA.

THE Russian army of occupation in the Danubian Principalities having fixed its head-quarters at Bucharest, the capital of Wallachia, we present our readers with a Sketch of that city. Bucharest contains nearly 70,000 inhabitants: it covers an immense area, owing to the number of gardens with which it is interspersed. Seen from the summit of the Metropolitan Church of Bucharest, the city, with its many coloured roofs, its lofty towers rising from more than sixty churches and its verdant trees and glades mingling with the mass of buildings, presents a most picturesque appearance. The Metropolitan Church stands upon a hill commanding the city. Like all the other churches of Bucharest, it is surrounded by spacious cloisters the entrance to which is by two solid gateways, surmounted by towers, which formerly enabled them to carry on a protracted defence. In a building forming part of the cloisters of the Metropolitan Church stands the Hall of Assembly, in which the deliberations of the Boyards were held up to the arrival of the Russian army of occupation. The Metropolitan is the constitutional President of the Assembly, which consists of forty-three members. A few of the older Boyards take their seats in the ample and majestic costume, worn by them under the Turkish rule, they still retain their beards and voluminous kalpaks. The military chiefs of Wallachia take part in the deliberations, dressed in their uniforms, and wearing their swords. Bucharest no longer possesses a palace for the Wallachian Princes. A vast palace, formerly occupied by the Hospodars, was burnt down in 1812. The city contains luxurious baths, upon the Turkish model, a theatre, in which opera and comedy are performed, a museum devoted to natural history, and a public library. The streets, tortuous and of unequal width, are irregularly built and ill paved. The houses are, many of them, little better than barns of rotten timber. Edifices of a more pretending character are to be found; but the finest houses in Bucharest are wofully dilapidated in their exterior, notwithstanding their luxurious display of flowery ornament. An immense number of Jews inhabit Bucharest, who will, no doubt, make a rich harvest out of the Russian army of occupation.

The Hospodars of Wallachia used to be elected for life: they were chosen among the Boyards of the first class. By the convention concluded between the Porte and Russia, May 1, 1849, the Hospodars were only elected for seven years. The present Hospodar of Wallachia, Barbo Demitri Stirbey, was nominated on the 16th of June, 1849. The Prince Constantine Ghika is President of the Supreme Tribunal of Justice. A British Consul General, who also fulfils the office of political agent, Mr R. G. Colquhoun, resides at Bucharest. The population of Wallachia is about two millions and a quarter. The religion of the Greek Church is professed by the inhabitants of both Principalities.

KERTCH, SOUTHERN RUSSIA.

KERTCH.

KERTCH, a thriving port in the Crimea, on the straits of Yenikale, contains from 5000 to 6000 inhabitants. It exports large quantities of salt, wheat, salt-fish, and caviare. In its neighbourhood are the extensive ruins of the ancient town of Panticapæum, once the residence of Mithridates. The favourable position of the strait, uniting the Sea of Azoff with the Black Sea, attracts a numerous concourse of vessels to the roads of Kertch. The prosperity of Kertch has also been increased by the construction of a custom-house and a lazaretto on a large scale. In 1839 Kertch was declared the quarantine fort for Taganrog, and all ships visiting its shores were obliged to anchor under the walls of its lazaretto. From this time the Sea of Azoff was closed to all ships except mere coasters, and Kertch became the dépôt and port of this sea, as well as of the northern part of the Black Sea. If the reader will turn to the map which we published last week (p. 32) he will perceive at a glance the admirable commercial situation of Kertch.

PART OF DRESDEN, FROM THE RIGHT BANK OF THE ELBE.

RUSSIA AND TURKEY.

RANDOM NOTES AND SKETCHES MADE ON THE WAY TO CONSTANTINOPLE, JULY, 1853.

(SECOND LETTER.)

(From our Special Correspondent.)

VIENNA, July 10.

THE railroad from Dresden to Prague lies, with slight exceptions here and there, along the course of the river Elbe; and a more beautiful country it is impossible to conceive. Having crossed the new bridge—half of which is devoted to the railroad, and the other half to ordinary traffic—a sharp turn brings us in a course parallel with the left bank of the river, along which the line has been laid. The stream, which soon

TOWER ON THE BRIDGE, AT PRAGUE.

becomes narrower and more rapid than lower down, is bounded on either side by abrupt walls of rock, in the material of which the space for the railway has been cut. It is very devious in its course, and opens up at every turn some new vista of grandeur or beauty. The mountain precipices on either side are generally covered with fir-trees; through the green masses of which sharp pinnacles of stone rear their heads, or stretch forth their gigantic arms. In many parts the base of the rock is skirted with small patches of alluvial soil, which have been put into cultivation, chiefly for vines and hops; and close to such plantations a cottage or two, and now and then a small village appears, its white-washed walls and slate roofs sparkling in the sun-rays. At intervals, a verdant dale slopes away upwards, between two mountain ridges; but these occasions are rare—the rocky mass maintaining its footing down to the very water's edge. The channel of the river is consequently narrower, and the stream bold and rapid. The barges employed in the conveyance of stone from the quarries situate some miles distant from Dresden, skim cheerily downward, but make slow progress on the return voyage, even when towed by three or four horses each. All along the towing-path, which lies between the railway and the river, we meet with crosses, and little figures of the Virgin and of saints, their faces looking towards the water. The accompanying sketch by S——, will give an idea of the character of the scenery that I have endeavoured briefly to describe.

We had to exhibit our passports at the station at Dresden before taking our tickets; being aware that another inspection of them would take place at Bodenbach, the frontier station in the Austrian dominions. Accordingly, the train having passed through a short tunnel by which this station is approached, we found ourselves under the eye and protection of the Austrian authorities. There is no mistake about the business-like manner in which they carry out their functions. A passport is no mere piece of paper or empty formulary in their hands: it is, in their eyes, a curious and precious document, which they treat with all the veneration a cognoscente would bestow upon an article of *vertù*. The train had scarcely come to a stand-still, when, before we could alight, a police agent, attended by a sort of side-de camp, both in uniform, opened the door, and demanded our passports. Being handed to him, he turned them over, examining the various *visées* with greedy eagerness; and we thought the business was over. Not at all. The little side-de-camp produced a bundle of printed forms, one of which he handed to each of us in exchange for our passports; after first sticking upon the latter a coupon, or docket, which he had torn from the said form, and duly numbered, for the purpose of identification; and we were told to apply, before starting again, at the *Polizei-Direction*. Half an hour's stay here, and a most tempting *restauration*, but no time for refreshment. First, there were the Custom-house officers to pay our respects to, who, after a brief interview, politely authorised the admission of such small matters as writing-case, &c., which we carried with us in our hands, the remainder of our luggage being *emballée* for Prague; and when this business was over, that of the passports had to be attended to. After all the accounts we had heard of the vexatious inquisitiveness lately indulged in by the Austrian authorities in passport transactions, we were a little anxious as to the nature and extent of the scrutiny we might be subjected to; but in the end we got off much easier than we had expected. Having stood amongst the crowd till it came to our turn, we presented our tickets. The official, having looked at the numbers and then at the passports, inquired, "What is your character? (by which we understood him to mean our position in life) and what is your age?" Having briefly satisfied him upon which points the important facts were duly endorsed on our passports, which were then returned to us.

Meantime, whilst the rest of the passengers were getting their passports put *en règle*, we had an opportunity of admiring the prettily-situated village of Tetschen, and the castle of the same name, which stand on the opposite side of the river, and of which S—— took a sketch from his seat in the carriage. This castle, which, with the village, belongs to the Count Thun, stands at the top of a bold rock. It has been a fortified place for ages, having been a point of some importance during the time of the Thirty Years' War, and again during the Seven Years' War. The castle, as it now stands, was finished in 1775, and was placed in a state of defence by Napoleon in 1813.

After passing this point the banks of the river become more open the hills less steep and further apart, forming a delicious valley, through which the river flows with a broader and calmer surface than previously.

The carriage into which we were transferred at Bodenbach was lighter and different in arrangement to those we had previously occupied. Instead of roomy and luxuriously padded seats, elbows, sides, &c., two in each carriage, we had a light carriage, something like the second-class carriages in Belgium, with a double set of seats, and a passage running down the centre, the door opening from the end; seats smaller, elbows mere painted wood, with cushioned tops, scarcely any other padding—altogether a very homely affair in one sense of the word, but not in the sense of the comfort of home. Probably, however, the light structure of the carriages has been wisely adopted, in consideration of the extraordinary difficulties of working the line from this point, owing to the sinuosities of the river, which the railway implicitly follows, and upon which curves of fearful abruptness are of continual occurrence; one particularly I remarked, skirting a point of high ground, round which our train wound its way for at least three parts of a circle, with a radius apparently of not more than half a mile. Of course the lighter the material of the train the better under such circumstances; and even with materials ever so light, any high degree of speed might be attended with disastrous consequences. But if it were not for these considerations the slowness of our progress for the remainder of the journey would have tried our patience beyond human endurance. The same may be said of a great part of our subsequent journey (on the following day) from Prague to Brünn and Vienna, which was a prolonged effort of pulling up, with whistle accompaniment, just as we have it upon an English railway

VIEW ON THE ELBE, BETWEEN DRESDEN AND PRAGUE.

when approaching a metropolitan terminus. Road guards are through out this one placed at closer intervals than upon any we had hitherto passed—not more, I should say, than half or three-quarters of a mile apart—who, standing by the doors of their little wooden sheds, dressed in uniform, or an undress frock of blue and white stripe, salute the train in military fashion as it passes.

The coals used are abominable in quality—a sort of brown anthracite; they are not coked, and the smoke, sparks, and dust which come from them, including very sizeable unconsumed particles, constitute a most fearful infliction upon all in the wake of the engine. The chimney or funnel is made differently to ours, like an inverted cone or bottle, partially closed at top, with the intention probably of checking the escape of the solid particles; but the contrivance only mitigates the evil, which—especially in hot weather, and under a broiling sun—is indescribably offensive.

At almost every stopping place—and there are thirty or forty between Prague and Vienna alone—there is a building inscribed *Wasser station*, and a syphon pipe for supplying the engine with water. At most of these places, however, the pipes seem to have run dry, for the water was poured into the engine in buckets, from a supply provided in a large cask. In short, it is quite evident that at present the railway system has not made great progress in Austria, and that it is pursued, in the cases where it is in operation, under considerable natural disadvantages.

As we approach Prague we leave the Elbe, and come upon the River Moldau, the aspect of which is somewhat different from that of the former river. And what can have happened all this time? The dear authorities have not seen our passports for at least four hours! Let the door at the end of the travelling caravan opens, and enters a very small, but pleasant-looking, portly gentleman, who, introduced by a gruff, who, lifting his hat from his head (a motion which his side-de-camp admirably, and we very indifferently imitate), begs the favour of an inspection of the precious document. He receives it with parental affection—docket it in his pocket-book—and another printed broadside in exchange—and, grinning from ear to ear, tells us—in German, French, and English—that we shall receive it back again at Prague, and to apply for it, "*Schnell—brod-de suite*—directly," on our arrival at the station. Accordingly, having first passed our baggage under inspection for the third time—(I was quite grieved to see so much valuable time wasted upon my humble wardrobe at the public expense), we proceeded to the *Police-Direction*, where we had an opportunity of observing the method in which this business is conducted. The first person we saw under examination was a farmer-looking man, who answered all the questions put to him very promptly, a gentleman in mousetachios posting up his answers in a large book, in his own particular page and column, and where, doubtless, every previous event of his life (for he was evidently belonging to this part of the country) was already duly recorded. Others followed; the interrogatories being put by a stern, consequential-looking police-officer, who kept his eyes all the while steadfastly fixed upon the person under examination. Amongst others examined was a middle-aged country woman, who, after replying to at least a dozen questions, paused for an instant at one which was put to her; probably she did not understand it, for she was a simple-looking body. In an instant the official's eye flashed suspicion; he repeated the question in a more authoritative tone, and blew his nose with a sonorous twang, to give her time to collect her thoughts; and so succeeded in eliciting a reply. When it came to our turn, our greeting was simply "When are you going away?" To which, having answered "To-morrow," our passports were carefully transcribed into the big ledger, by way of "opening an account" for us; and we were ushered to depart. And so for [illegible] hours. In every moment we entered our rooms at the Hotel de Saxe, we were followed by another suit only, who produced a piece of paper which we were required again to fill up with "the story of our life" including place of birth, of residence, religion, time of [illegible]. As for the poor passports, they were again demanded three several times between Prague and Vienna, although we travelled by the same train throughout. At one place, Bilsen, we fancied it was the railway-tickets we were asked for, and accordingly handed those papers. I shall never forget the look of astonishment and disgust with which the functionary spurned them, and exclaimed, in a tone of unmistakeable earnestness, somewhat approaching to insolence, "Passports!" At Gaussersdorf, the last station before reaching Vienna, the police-officer who visited us was disposed to be rather inquisitive. Not content with taking our passports, he began making inquiries as to our station in life, the object of our journey, &c.—were we *proprietaires* or *negociants*? and so forth. To all this we simply replied by pointing to the endorsement upon our passports already made by the authorities at Prague; and he went off with a sort of smirk, still poring over the documents as he carried them away with him.

THE THEATRES.

ROYAL ITALIAN OPERA.

One of the most finished performances at Covent-garden Theatre has been Donizetti's "Favorita." This fine work would appear to be an especial favourite with the composer, for in no other work has he bestowed greater pains in careful drilling of the choral and orchestral [illegible]. Originally produced at the Grand Opera in Paris in 1840, "La Favorita" was transplanted to her Majesty's Theatre in 1847, and to the Royal Italian Opera in 1848; but, notwithstanding the attraction of Grisi, Mario, and Marini in the cast, a most gorgeous *mise en scène*, and a perfectly admirable reading in 1848 the opera drew upon every to the treasury. It is difficult to account for the non popularity of "La Favorita." When it has been seen that Beethoven's "Fidelio," Rossini's "Moïse" (Zora), and "Guglielmo Tell," and Halévy's "Juive" have been financial failures—albeit artistic triumphs: and that Gounod's "Sapho" and Verdi's "Trovatore Corsaro" have been condemned, one is tempted to conclude no doubt will be [illegible] in advance in art in this country. "La Favorita" is Donizetti's masterpiece in the concerted pieces display a breadth and power far beyond all his former lyric productions; and some of the most delicious melodies that have ever emanated from Italian inspiration are to to be heard in the [illegible] opera; in which [illegible] [illegible] [illegible]

CHESS.

TO CORRESPONDENTS.

C. F de J.—All duly received, and since acknowledged by letter.

COLONSAY.—They shall have prompt attention.

DR. R., Jersey.—In the last game in our printed list of the game played by specials between the *Anglo Parisian* and *Wellesley*. It shall be re-examined.

W. B.—Of Kensington.—The game is drawn under such circumstances.

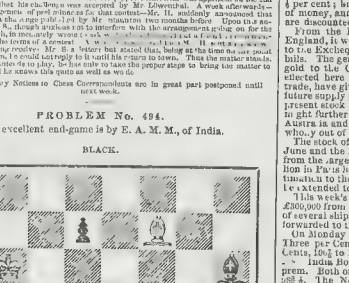
ARMADO.—We have not seen the statement to which you refer; but most hardly say that it has met a shadow of foundation. The facts are simply, Mr. Horwitz was applied, on the part of this event, that his challenge was accepted by Mr. Löwenthal. A week after wards, during the arrangements of preliminaries for that contest—Mr. H. suddenly announced that he had accepted a challenge published by Mr. Staunton two months before. Upon the re-monstrance of Mr. S., though unable not to interfere with the arrangement going on for the first-named match, he instantly wrote to ask Mr. Staunton to communicate to his opponent, both men of having received Mr. S.'s letter but stated that, being at the time on our point of leaving London, he could not reply to it until his return to town. Thus the matter stands. If Mr. H. can by any means so play, he has only to make the proper steps to bring the matter to bear at once; and he knows his quite as well as we do.

* * Our customary Notices to Chess Correspondents are in great part postponed until next week.

PROBLEM No. 494.

The excellent end-game is by E. A. M. M., of India.

BLACK.



WHITE.

White, playing first, to mate in six moves.

CHESS IN THE PROVINCES.

MR. STAUNTON gives his Q Kt to one of the best players in the Richmond Chess club.

(Remove White's Q Knight from the board).

		And Black surrendered.	

(a) This may be done with safety when the adversary has no Queen's Kt

(b) Better, we think, to play at once taking the B. If then, White could securely retire his Queen to Q R 2nd.

(c) Notwithstanding White's next move, of P to Q R 3th.

(d) The obvious move for Black at this crisis was R to K B 2nd. If he had played so, White's reply would probably have been P to K 6th.

(e) Much better than taking the Queen off-hand.

(f) The best move to sustain the attack.

CHESS IN RUSSIA.

By a communication just received from Major Jaenisch, we are informed that on the last of June the members of the recently-established Chess-club at St. Petersburg, celebrated the opening of their new and magnificent *locale*, which is in the centre of the city, by a grand dinner, under the auspices of the chief officials of the capital and several members of the *corps diplomatique*. Among the distinguished visitors present on this occasion we notice the names of Prince Gorousoff the elder and Mr. Petroff—the former of whom took up his abode from Moscow, and the latter from Warsaw, solely for the purpose of taking part in a ceremonial so interesting to every lover of Chess in Russia. During the sojourn of these famous players at St. Petersburg they contested many memorable games together, and against other amateurs of acknowledged eminence The best of these *parties* have been kindly placed at our disposal, and we shall give them, with comments, at opportunity serves, for the entertainment of our readers.

The following is one played between Mr. PETROFF and the PRINCE :—

		And Black surrendered.	

(a) This variation—presented hitherto only in Major Jaenisch's "Analyse Nouvelle"—is here excited fled, and with the best line of defence

(b) It is shown enough in the game of White and takes the Pawn with his Knight, Black must have won a piece by playing Q to K 2nd.

(c) The game now becomes extremely critical and interesting, and on both sides the play is exce lent

(d) The moves of Mr. Petroff throughout the excellent play of the pretty. It appears to us that, by pushing forward the Pawn to K B 4th, White must have obtained an irresistible superiority in a very few more moves.

(e) Black might have resigned at this stage. In such an end game Mr. Petroff is invincible.

MATCH BETWEEN MESSRS. LÖWENTHAL AND HARRWITZ.—The conditions of this encounter we may now consider settled, since the only point in dispute between the belligerents is as to when the battle shall begin; and, as the question is to be referred to the decision of Mr. Lewis, here can be no longer any doubt of the match taking place.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The occupation of Wallachia and Moldavia by the Russian forces has been the all-absorbing topic of conversation during the whole of the week. Notwithstanding the out and outs, the last as the vital some what warlike in the r tone, here has been a very steady market for the National Securities, in which, however, the amount of business actually transacted has been by no means extensive. Prices have advanced about ¼ per cent; but the rise must be chiefly attributed to the great abundance of money, and the low rate of interest at which good commercial bills are discounted in Lombard-street and elsewhere.

From the last accounts of the assets and liabilities of the Bank of England, it would appear that rather large sums of money have been lent to the Exchequer to meet the dividends, and a portion of the deficiency bills. The general appearance of the crops, and the continuous export of gold to the Continent (in spite of the large purchases of grain lately effected here on French account), together with the activity in the corn trade, have given rise to apprehensions in some quarters respecting the future supply of gold. Of one thing we may rest assured, viz., that our present stock is more than equal to our commercial wants; whilst we in sight further observe that, such is the rapid extens on of our trade with Australia and the United States, my actual scarcity appears to us to be who.y out of the quest on.

The stock of bullion in the Bank of France declined, between the 9th of June and the 16th of July, not less than £2,229,000; scarcely, it is said, from the large purchases of grain abroad; but the new mode of valuation lately has compelled the authorities at the Mint to give out an increase to the effect tha., in nature, the re-delivery of coin for bullion will be extended to forty-two days.

This week's imports of the precious metals have amounted to nearly £300,000 from Brazil, and £46,000 from New York. Exclusive of several shipments to the Continent, £100,000 in gold and silver has been forwarded to the East and to Alexandria.

On Monday the Three per Cent Reduced were done at 98¾ ⅞, the Three per Cent Consols, 97¾ 98 to 98½; the New Three-and-a-Quarter Cents, 104¾ to 104½. Consols, for account, 97¾ 98 to 98½. India Stock was 270 India Bonds marked 1s. to 2s. 6d. per £100. Exchequer Bills, 1s. to 2s. prem. Both on Tuesday and Wednesday Consols were tolerably firm, at 98⅞ ⅞. The New Three-and-a-Quarter per Cents were 104¾ ¼ and the Three per Cents Reduced, 98¾ ⅞. India Stock, 270. On Thursday the market was by no means active, yet prices were higher. The Three per Cents, for transfer, were done at 98¾ ⅞; the Three per Cents Reduced, 99 ¼; and the New Three-and-a-Quarter per Cents, 104¾ ⅞. Bank Stock was 223. Exchequer Bills improved to par and 1s. premium.

Russian Bonds have met a very inactive market, and the quotations have tended downwards. In other foreign securities a full average business has been done, at extreme prices. Brazilian Five per Cents have been officially marked 103 to 104; the Small Ditto, 102½; Buenos-Ayr Five per Cents, New, 89; Grenada Deferred, 9¾ to ¾; Mexican Three per Cents, 20¾ ¼; Portuguese Five per Cents, ex overdue coupons, 44; the Four per Cents, 31¾ to 32; Spanish Five per Cents, for the Account, 18¾ to 18¾; Sardinian Five per Cents, 94¾ to 95¾; Spanish Three per Cents, 46¾ ⅞, the Three per Cents, New Deferred, 22¾ to ⅞. Gold is now 0 18 per cent dearer in Paris than in London, 1 16 per cent dearer in Hamburg than in London; but 0.42 per cent lower at New York than here.

Miscellaneous Shares have ruled tolerably firm. In prices, no material change has taken place.—Australasia Bank have been 80½; Chartered Bank of Asia, 4¾ to ⅝; English, Scottish, and Australian Chartered, 10¾ ⅝; London Chartered of Australia, 14¾; London Joint-Stock, 38; Oriental Bank Corporation, 43; Union of Australia, 77¾ to 78¾. Australia Agricultural, 20¾ to 20½; British American Land, 6¾; Crystal Palace, 7¾ ⅝; New Ditto of Finance, 4 prem.; Australian Land, 2¾; North British Australian Loan, 1¾; Port Phillip and Colonial, 2¾ to 3; Scottish Australian Investment, 3¾; South Australian Land, 4¾ ex div. and ex bon.; Van Diemen's Land, 1¾; Western of Canada, 17¾; Hungerford Market Company, 12¾ ⅝; Waterloo, 4¾ to 5; and Vauxhall, 2¾. London Assurance, 34; Alliance Marine, 4¾; Atlas, 22½; County, 121; Globe, 12½; Imperial Fire, 17; Imperial Life, 19¾; Law Fire, 8¾; Law Life, 7½; London, 11; Pelican, 45; Rock Life, 88; Royal Exchange, 240 to 245; Sun Life, 1 discount, 1¾; Sun Fire, 2¾; Waterloo, 2¾; Westminster, 5½; East London, 1½; Grand Junction, 73¾; Kent, 84¾; Lambeth, 50; Phœnix, 3¾; Southwark and Vauxhall, 95; West Middlesex, 114 ex div.; Crystal Palace Deferred, 1¾; London, 11¾ ex div.; Ditto Navigation, 10¾; Regent's Canal, 78¾; Surrey Commercial Docks, 20¾; Canada Steam Navigation, 12; General Steam Navigation, 22¾; Peninsular and Oriental Steam, 57; Ditto, New, 41.

The Market for Railway Shares has been very inactive. Paris and Lyons have been bought in at 38 prem., and Northern, 37¾. The Stock is scarce, and many of the Shares have been heavy loans. A large Bundle of the Shares in the Company held by the leading bankers. The following are the official closing prices on Thursday :—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 9¾; Bristol and Exeter, 101½; Caledonian, 44¾; Chester and Holyhead, 22¾; East Anglian, 8¾; Eastern Counties, 13¾; Eastern Union, 8 Stock, 8¾; Edinburgh and Glasgow, 73; Great Northern, 84; Ditto, A Stock, 26; Great Western, 60¾; Lancaster and Carlisle, 78; Leeds Northern, 15¾; London and Blackwall, 9; London and North-Western, 116; Ditto, Fifths, 18¾; London and South-Western, 80¾; Midland, 72; Newport, Abergavenny, and Hereford, 10¾; North British, 3¾; North Staffordshire, 13; North and South-Western Junction, 12¾; Oxford, Worcester, and Wolverhampton, 30; South-Eastern, 72¾; South Yorkshire and River Dun, 13¾; West Cornwall, 8¾; West Midland, 12¾; Paris, 12¾; York, Newcastle, and Berwick, 70; Ditto, Extensions, 12¼; Manchester, Sheffield, and Lincolnshire, 29; York and North Midland, 60¾.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 151; London and Greenwich, 14¾ ex div.; Manchester, Buxton, and Matlock, 3¾.

PREFERENCE SHARES.—Eastern Counties Five per Cent, 10¾ ⅝; Eastern Union, Scrip, Six per Cent, 20¾; Great Northern, Five per Cent, 128; Ditto, Five per Cent, redeemable at Ten per Cent prem., 13¾; Londonderry and Enniskillen, Half Shares, 3¾; Midland Preference, Four-and-a-Half per Cent, 8¾; North British, 11⅝; Oxford, Worcester, and Wolverhampton, New Shares, 8¾; York, Newcastle, and Berwick, 103¾; York and North Midland, B, and 5 Purchase, 11¾ ex div.

FOREIGN.—Great Western of Canada Bonds (second issue), 1 ; Luxembourg, 7¾ ex div.; Madras, 9¾; Northern of France, ; Orleans and Paris and Lyons, 27¾ ex div.; Paris and Strasbourg, ; Sambre and Meuse, ; and Rouen and Havre, 10; Royal Swedish, 4¾; Sambre and Meuse, New Shares, 3¾; Sambre and Meuse, Scrip, 1¾; Namur and Liege, 3¾; Sambre and Meuse, Warrants, 1¾. It is understood that an amalgamation of the Paris and Rouen Railway Company with the Paris and Orleans Company will shortly take place.

MINING SHARES.—Cobre Copper, 1¾; Linares, 1¾; Mexican, 1¾; Real del Monte, 1¾; Royal Mexican, 1¾; Taylor's Australian, 1¾; Australian, 1¾; Colonial Gold, 1¾; English, and Australian Coal, per Smelting Company, 1¾; Great Nugget, 1¾; Scrip, 1¾; Ural, 1¾; Wheal Buller, 1¾; Mariquita, Mexican and South American, 7¾ ex div.; New Grenada, 1 ¼.

Friday Evening.

Consols have been fast to-day, and prices have had a downward tendency. The Three per Cents have marked 98¾ ⅞; the Three per Cents Reduced, 99¼; and the New Three-and-a-Quarter per Cents, 104¾. Exchequer Bills, par to 3s. premium. Foreign Bonds and Railway Shares are tolerably firm.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up to our market to-day the arrivals of bar... st wheat were on a very limited scale, and the show of samples of both red and white was extremely small. For all kinds of wheat of home produce the demand ruled steady, and, as some instances, Monday's prices were exceeded. The imports of foreign wheat have exceeded 4,000 quarters. The trade was free at 67s. of the late advance in the quotations. Floating cargoes were offered of Odessa at 44s., and 45s. has been large sold at extreme currencies. No English barley was brought forwards, and for that of foreign the demand was large, the whole of the trade ruled very firm, at last week's currency. In the value of malt no changes took place. Oats and flour sold readily, at late rates. In beans and peas no alteration has occurred.

ARRIVALS.—English, wheat, 3,961 mats, 1,316 qrs.; oats, 1,442 flour, 690. Irish: oats, 8440. Foreign: wheat, 1,600 qrs.; barley, 1,200; oats, 2,000; flour, 1,000 sacks.

English.—Wheat, Essex and Kent, red, 40s to 50s; ditto, white, 49s to 52s; Northumberland Suffolk, red, 44s. to 48s; ditto, white, 48s. to 52s.; rye, 30s to 32s.; grinding barley, 26s to 28s.; distilling ditto, 28s. to 30s.; malting ditto 32s. to 36s.; Lincoln and Norfolk malt, 52s. to 56s.; Kingston and Ware, 54s. to 58s.; Chevalier, 60s. to 62s.; Scotch, 52s. to 56s.; Essex and Lincolnshire feed oats, 22s. to 24s.; potato ditto, 26s. to 27s.; Youghal and Cork, 19s. to 23s.; ditto, white, 24s. to 25s.; tick beans, new, 30s. to 32s.; old, 34s.; grey peas, 32s. to 33s.; maple, 36s. to 38s.; white, 38s. to 40s.; boilers, 40s. to 42s. per quarter. Town-made flour, 40s. to 45s.; Suffolk, 38s. to 40s.; Essex and Kent, 40s. to 42s. per 280 lb. *Foreign:* French, 37s. to 39s. per 280 lb. American flour, 24s. to 25s. per barrel.

Seeds.—The demand for linseed is brisk, and prices have advanced full ... Black ditto is quoted at 48s.; and Calcutta, at 50s. per quarter. Rape has risen 2s. per last; but Calcutta being worth 58s. per quarter. Canary and hemp are dull.

Linseed, English, sowing, 50s. to 52s.; Baltic, crushing, 47s. to 50s.; Mediterranean and Odessa, 45s. to 48s.; mustard, white, 9s. to 12s. per quarter; ditto, brown, 6s. to 8s. per bushel. Foreign mustard-seed, 8s. to 9s.; white ditto, 7s. to 8s.; and tares, 4s. 6d. to 5s. 6d. per quarter. English tapeseed, new, 37l to 37l per last of ten quarters. Foreign ditto, 34l to 35l. Carraway seed, 24s. to 25s.; ditto, for exportation, 23s. to 24s.; dark beans, new, 30s. to 32s.; old, 34s. to 36s. per quarter. Canary, 40s. to 44s. per quarter. English clover seed, red, 42s. to 62s.; white ditto, 45s. to 64s. per cwt.

Bread.—The prices of wholesome bread in the metropolis are from 8d. to 9d. per 4lb. loaf.

Imperial Average.—Wheat, 49s. 8d.; barley, 28s. 11d.; oats, 20s. 11d.; rye, 34s. 10d.; beans, 34s. 1d.; peas, 34s. 8d.

Duties.—Wheat, ... barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Flour.—Per sack: the demand is somewhat inactive. In prices, however, no change has taken place. Common second sorts, 34s. per 280 lb.; fine ditto, 36s. to 38s.; and seconds, 40s. to 42s.

Average.—The supplies brought forward this week have been very moderate; nevertheless, they have proved fully equal to the wants of the buyers. In some instances, the quotations have had a downward tendency. Fine yellow Barindoes has sold at 38s. to 39s. 6d.; low to good, 34s. 6d. to 37s. 6d.; good to fine brown Jamaica, 33s. to 34s.; good to fine yellow Honduras, 35s. 6d. to 36s.; fine grainy ditto, 37s. 6d. to 38s.; fine grainy white Bengal, 34s. to 35s. 6d.; low to mid. white Bengal, 30s. to 32s. per cwt. Refined goods have ruled readily; brown lumps at 45s., and low to fine grocery, 46s. 6d. to 48s. per cwt. The references to the sugar trade will be found in our Liverpool and Glasgow letters.

Coffee.—Fine Plantation descriptions have been in good request, at an advance of 2s. per cwt. All other kinds of coffee have supported previous rates. Good ordinary native has sold at 44s. 6d.

Rice.—This article is in request, and somewhat dearer. Fine white Bengal has sold at 12s.; good, 11s. 6d. per cwt.

Provisions.—Most kinds of Irish butter move off slowly, at barely last week's advance in the quotations. In the value of foreign very little change has taken place. English is firm, and quite as dear. Fine weekly Bored, 86s. to 90s. per cwt.; fresh, 94s. to 96s. per dozen lbs. The bacon market is firm, and prices are a shade higher. Waterford sides, 54s. to 57s.; Limerick, 53s. to 55s.; Hanover, 60s. to 64s. per cwt. Lard, choice hams, and cheese are in steady request. Otherwise the demand is very limited.

Potatoes.—Only a fair sale to-day for purchase. P.K.C., on spot, 90s. 6d. ... 95s. 6d.; and, for the last three months, 96s. 6d. per cwt. Town tallow, 38s. net cash.

Oils.—Generally speaking, the demand is steady, and prices are well supported. Linseed, 30s. 6d. to 30s. 9d. per cwt.; cocoa nut, 37s. to 37s. 6s. per cwt. British turpentine, 43s.; American, 42s. 6d.; sperm, 110s. per cwt.

Hay and Straw.—Meadow hay, £3 15s. to £5 0s.; clover ditto, £4 15s. to £6 0s.; and straw, £1 7s. to £1 8s. per load. Trade brisk.

Spirits.—A fair business is doing in rum, on higher terms. Proof Leewards, 1s. to 2s. 6d.; East India, 1s. 6d. to 2s.; and Jamaica, 1s. 6d. to 1s. 11d. per gal. Brandy is still unsettled. Sales of cognac, best brands of 1831, 7s. 6d. to 7s. 10d.; ditto, 7s. 2d. to 7s. 4d.; ditto, 7s. 0d. to 7s. 1d.; ditto, 7s. 10d. to 8s. 0d.; and fine 8s. 6d. to 8s. 8d. per gal. Geneva, 2s. 2d. to 2s. 3d. per gal. Gunpowder and corn-spirits steady.

Wool.—The public sales are progressing steadily, yet prices have given way from ½d. to 1d. per lb. The quality advertised is upwards of 60,000 bales.

Country.—New potatoes are in good supply and steady demand, at from 3s. to 5s. per cwt. The imports from the Continent continue on a liberal scale.

Cattle (Friday).—Beasts, 1,600; Sheep, 13,000; Calves, 300; Pigs, 300. Trade inactive, 3s. to 4s. per stone lower. The plague has caused a total stoppage in the Foreign trade, and the Metropolitan Market is glutted with cattle. Only a few Foreigners were on sale, and these were sold at 3s. per stone. Scotch cattle were dull, and prices 2s. per stone lower. Inferior Downs were 2s. per stone lower. Calves were dull, and 2s. per head lower. Pigs were slow of sale, and 2s. per score lower.

Sheep (Monday).—Only a moderate supply of foreign stock has been on sale this week. Prices have ruled steady. Of English sheep, the supply has been large, and the demand heavy, at a fall of 2s. per 8lbs. The sale for calves was dull, and prices 2s. per 8lbs. lower. Pigs were in good request, at late rates.

Beasts (Monday).—Our market contained very few foreigners. Prices, however, were barely as high as last week. The plague has caused a total stoppage in the Foreign trade, and the Metropolitan Market is glutted with cattle. Only a few Foreigners were on sale, and these were sold at 3s. per stone. Scotch cattle were dull, and prices 2s. per stone lower. Inferior Downs were 2s. per stone lower. Calves were dull, and 2s. per head lower. Pigs were slow of sale, and 2s. per score lower.

Newgate and Leadenhall (Monday).—[illegible] 3s. 4d. to 4s. 2d.; second quality, 3s. 8d. to 4s. 6d.; prime large oxen, 4s. 8d. to 5s. 0d.; prime small ditto, 4s. 8d. to 5s. 0d.; coarse inferior ditto, 3s. 8d. to 4s. 4d. Calves, 3s. 8d. to 4s. 8d.; second quality ditto, 4s. 10d. to 5s. 0d.; large coarse calves, 4s. 8d. to 5s. 0d.; prime Scotch ditto, 4s. 10d. to 5s. 0d.; large coarse calves, 5s. 8d. to 6s. 0d.; prime small ditto, 5s. 4d. to 5s. 8d.; large hogs, 3s. 8d. to 3s. 10d.; second quality ditto, 3s. 8d. to 4s. 0d.; small pigs, 4s. 2d. to 4s. 4d. each. Total supply: Beasts, 2,800; sheep and lambs, 16,000; calves, 300; pigs, 270.

Newgate and Leadenhall (Tuesday).—[illegible] 3s. 4d. to 4s. 2d.; second quality, 3s. 8d. to 4s. 6d.; prime large oxen, 4s. 8d. to 5s. 0d.; prime small ditto, 4s. 8d. to 5s. 0d.; coarse inferior ditto, 3s. 8d. to 4s. 4d. Calves, 3s. 8d. to 4s. 8d.; second quality ditto, 4s. 10d. to 5s. 0d.; large coarse calves, 4s. 8d. to 5s. 0d.; prime Scotch ditto, 4s. 10d. to 5s. 0d.; large coarse calves, 5s. 8d. to 6s. 0d.; prime small ditto, 5s. 4d. to 5s. 8d.; large hogs, 3s. 8d. to 3s. 10d.; second quality ditto, 3s. 8d. to 4s. 0d.; small pigs, 4s. 2d. to 4s. 4d. each. Total supply: Beasts, 2,800; sheep and lambs, 16,000; calves, 300; pigs, 270.

Sir Henry Paul Seymour, Bart., of Hanford, Dorset

F I N E A R T S

"THE LOST PATH."—PAINTED BY R. REDGRAVE, R.A.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.

dition fall, in proportion, down to drivelling idiotcy. Now, what is so remarkable in these children, is the total absence of what may be termed offensive or painful idiotcy—their lamb-like or bird-like gentleness and playfulness; and this is the result of the identity of the condition of their brains with those of the Simiad genus. In point of size and shape, their heads are identical with the cast of the head of an oran-outan in the writer's collection. Theirs are not malformed human heads, but Simiad heads on human bodies. Hence, these children are not educable, in the ordinary sense of the word. They may be taught to perform some slight feats, or to utter a few words in a parrot-like manner, but beyond this advancement is denied to them. Their heads are in circumference equal to the head of an infant one month old, but in coronal height much inferior. The relative sizes of the head of the boy, Maximo, to the head of an ordinary child two years and a half old is as follows —

	Aztec boy, 14 years.	Head of English child, 2½ years.
Circumference	16½ inches	19 inches.
Width of head from above ear to ear	4 "	5¼ "
Height of head from opening of ear to vertex	4¼ "	5¾ "
Length of head	4½ "	6½ "

Here, then, we see what I believe ordinary idiotcy rarely if ever presents—namely, perfectly-formed and very diminutive human bodies, with heads, in most respects, identical in form and size with the heads of the more gentle and intelligent of the monkey genus. Whether or not this descent was produced by influences operating immediately on these children before their birth, or is the result of a gradual deterioration of brain in their ancestors, I refrain from conjecturing. That these children have reached the zero of moral and intellectual inferiority, seems very probable. All the world ought to see them. Happily, their only deformity is covered with a thick crop of beautiful black hair.

"THE LOST PATH." PAINTED BY REDGRAVE.

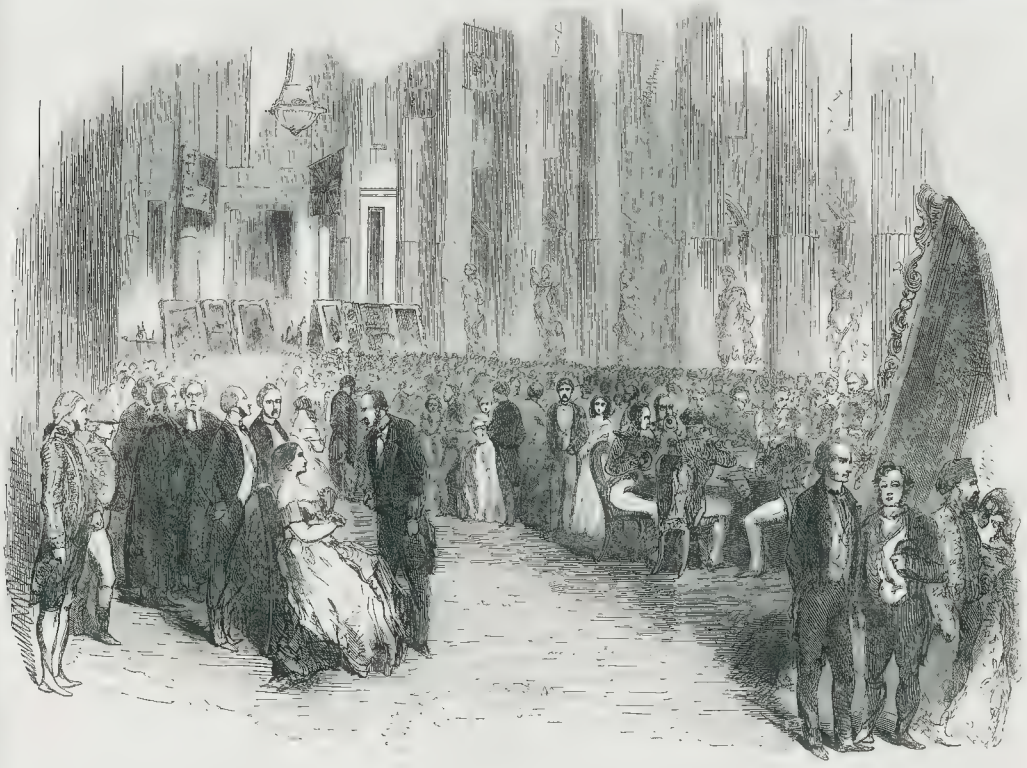
THIS is another version of the well-known nursery story of the "Children in the Wood;" or at least of part of their adventures: only that the "children" here are those of modern society, and of the upper class. They are brother and sister, and have lost their way in a wood, and severely wounded their feet by the way. The girl has taken her sock off, which is stained with blood. The countenances of both are lugubrious in the extreme; the boy still tries not to give way; but the young lady is weeping with pain and affright. The painting of this picture is most elaborate and careful; the leaves, flowers, and various minutiæ being picked out with the greatest nicety of detail. In this Mr. Redgrave somewhat follows the painstaking of the so-called pre-Raffaelite brotherhood; but he does not imitate their mannerism in other respects.

"LOGGIO, ON THE LAKE OF LUGANO."

PAINTED BY G. STANFIELD.

THIS is a charming spot, of which Mr. G. Stanfield has made a very agreeable picture. There is great breadth in the treatment; and the varied outline of the hills, and all the details of landscape-life, are very carefully and conscientiously produced. This picture is exhibited at the Royal Academy (No. 389).

"LOGGIO, ON THE LAKE OF LUGANO."—PAINTED BY G. STANFIELD.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.



THE LORD MAYOR AND LADY MAYORESS' CONVERSAZIONE (LITERATURE AND ART), AT THE MANSION-HOUSE.

LITERATURE AND ART.—CONVERSAZIONE AT THE MANSION-HOUSE.

The Mayoralty of Alderman Challis has been distinguished by a series of entertainments in which the desire to do honour to the representatives of literature, science, and the fine arts, has been gracefully displayed. The Lord Mayor has, on recent occasions, entertained the working educationists of the metropolis, the representatives of local Mechanics' Institutes, and the corporate authorities of the provinces. On Thursday se'nnight (the 14th instant), the whole of the magnificent state apartments of the Mansion-house were thrown open to the most distinguished literary men, artists, and scientific men now in the metropolis. The company also included many distinguished representatives of the world of fashion and of politics. The company were received by the Right Hon. the Lord Mayor and the Lady Mayoress, in the Reception Drawing-room, and proceeded from thence to the Egyptian-hall, which was lighted with unusual brilliancy. Several valuable paintings were displayed in the Egyptian-hall—the works of Maclise, D. Roberts, Stanfield, Linnell, Sydney Cooper, and other artists. Among the pictures we may mention the "Spirit of Justice," by Maclise, which forms the subject of one of the frescoes in the House of Lords; Mr. Roberts's "Destruction of Jerusalem;" a small cabinet picture, by George Cruikshank, illustrating an incident in Dickens's "Life of Grimaldi;" and some choice and highly-finished specimens by Isabey, the French miniature painter. Statues, busts, and specimens of sculpture, by M'Dowell, Marshall, Foley, Baily, Adams, were also placed in suitable positions round the Egyptian-hall. Included in the objects of art should be mentioned some fine paintings upon porcelain, and some beautiful statuettes in biscuit, from the establishment of Mr. Alderman Copeland, in Bond-street, who also exhibited some reproductions of the old Wedgwood ware, which were greatly admired for their beauty of form and sombre depth of colour. The company was so numerous that there was some difficulty in keeping the circulation open; but the various objects of interest were so distributed as to prevent too great a throng in one place. Thus, the fine arts exhibited their attractions in the noble Egyptian-hall, and in the other apartments upon the same floor. Up-stairs, the educational models and apparatus filled a suite of rooms; and here the works of the pupils who have received, or are receiving, their education at the School for Teaching the Blind to Read, excited much interest. Many of the pupils were present, and the company had the opportunity of witnessing their successful efforts in reading, arithmetic, music, and other branches of instruction. These rooms also contained many new and excellent school-books and scientific models and apparatus, and were constantly filled by crowds of curious and admiring spectators. The band of the Coldstream Guards was in attendance, and played a selection of popular airs during the evening. In the orchestra of the Egyptian-hall were a party of vocalists, who, under

THE COMMERCIAL TRAVELLERS' SOCIETY'S NEW SCHOOLS, FOUNDED AT PINNER, ON WEDNESDAY LAST.—(SEE NEXT PAGE.)

the direction of Mr. R. G. Wesley, diversified the entertainment by singing some of the chefs d'œuvre of operatic music.

Among the more distinguished visitors were the Duchess of Sutherland; the Duke of Argyll; the Bishops of Salisbury, St. David's, St. Asaph, and Llandaff; the Prussian Ambassador, the Turkish Ambassador, the Greek Ambassador, the Belgian Ambassador, several high judicial dignitaries, a crowd of members of Parliament, and the celebrated musical composer, Spohr, who remained until the close of the *conversazione*. Consequence, also, among the company, from his blue ribbon and garbed knee, was Earl de Grey. Dr. Bowring was recognised with pleasure on his first public appearance since his return from China. Probably each of the London newspapers had its one or more representatives. Refreshments were abundantly provided, and the Lord Mayor and Lady Bicester were most courteous and assiduous in their attentions to their numerous and distinguished guests. It was computed that not less than 2000 persons were present, a large portion of whom were of the gentler sex. Shortly after midnight the band of the Coldstream Guards received from an ante-room to the Egyptian hall, which soon resounded with the inspiring strains of a quadrille or waltz. The dance was kept up with great spirit, and brought to a close an entertainment which will be felt to be a pleasant innovation upon the ordinary character of civic festivals, and a graceful tribute to the influence of those who, by means of Railways and the fine arts, mould the character and refine the taste of the age in which they live.

COMMERCIAL TRAVELLERS' SOCIETY'S NEW SCHOOLS.

On Wednesday the foundation-stone of the above Society's schools for the orphans and necessitous children of Commercial Travellers, was laid with the accustomed form by John Masterman, Esq., M.P., president of the institution. The estate purchased for the site is beautifully situated about thirteen miles from the metropolis, near the Pinner Station of the London and North-Western Railway. The preparations for the ceremony were made beneath a spacious tent, where the stone was placed; and at about three o'clock the official proceedings entered, the band of the Coldstream Guards playing an inspiriting air. Mr. George Moore, the secretary, came forward, and, having stated that Prince Albert was prevented by indisposition from performing the ceremony, as it had been the wish and intention of his Royal Highness, he requested Mr. Masterman, the representative of the banking and commercial interests of London, would under-take the task. The stone was then adjusted, the current coins of the realm were placed in it, Mr. Masterman spread the mortar with a silver trowel which had been presented to him, and the stone was lowered amid the cheers of the company. Mr. Masterman made a brief address. He said he knew that Prince Albert would have been present if it had been in his power, for he heard his Royal Highness express his consent to come. Every one knew that whenever there was an opportunity to do good for the country Prince Albert was always ready (Cheers). The weather that day was so suspicious that he thought a favourable augury might be drawn for the success of the institution, and he trusted that a long period would elapse before the coins which had that day been deposited should be disturbed (Cheers). Dr. Vaughan, the head master of Harrow School, then offered up a prayer; a hymn, written for the occasion, was sung by the children; which was followed by "God save the Queen." Hearty cheers were given for her Majesty and Prince Albert, and for the prosperity of the institution.

The company then partook of an excellent cold collation, supplied by Mr. Rich (Radley's Hotel), Bleeding Arms. After the toast of "The Queen," "Prince Albert," and "the Royal Family" had been proposed and acknowledged with cheers and cordiality, Dr. Vaughan, in a very tasteful and feeling speech, proposed "the Health of the Chairman." The Chairman acknowledged the compliment in appropriate terms; and in proposing "Prosperity to the Commercial Travellers' Schools," appealed in forcible terms for assistance to the institution, touched on the advantages to be derived from the spread of education, and spoke of the commercial travellers as a most intelligent and respectable class. The body consisted, he said, of 20,000, and he could not say how many children (A laugh). The toast was acknowledged by Mr. Cuffey, who said there were friends to the institution. The Chairman next proposed "the Health of Mr. G. Moore, the treasurer." Mr Moore acknowledged the compliment, and expressed a hope that the new Schools would be opened in twelve months. After the toast of the Ex-officio Trustees, Mr Masterman read a list of the subscriptions of the educational premises of the children, particularly of their advance in Scriptural knowledge. He then gave a satisfactory account of the subscriptions of the day. After some other toasts in connection with the institution, the company left the tent, every one present being much gratified with the proceedings.

The Schools will be, as the Illustration upon the preceding page shows, an important building. Accommodation has been obtained for the children now in the institution, to the number of about 130, in an old mansion situated at Wanstead. This building has been from time to time enlarged, and the Board of Management are now able, through the activity and liberality of the subscribers to the schools, to commence this larger edifice, according 300 feet in length and averaging 40 feet in width, with ample and healthy playgrounds attached, educational accommodation for 300 scholars, with dormitories for 200; residences for schoolmasters and schoolmistresses, infirmaries, and every kind of official and ecclesiastical accommodation required by a first-class establishment. This extension of the benefits of the institution is a great work, and the Board of Management anxiously hope for the continued aid and kindness of the subscribers to enable them to accomplish the undertaking.

The architects of the new schools are Messrs. G. Ousely Lane, and Frederick W. Ordish. The style of architecture is Old English; and the materials red brick, with stone dressings. The plan consists mainly of a large central hall, divided into two school rooms, beneath which are the dining-halls. At each end of the hall are the dormitories; and in the wings are the Masters' and Mistresses' residences; above which are the infirmaries. Beneath the cloister-like arches is a space serving as a covered play-ground.

NATIONAL SPORTS.

STAMFORD RACES.—THURSDAY.

Sweepstakes.—Fifty sovs each.—Marguerite, 1. Red Rose, 2.
Stamford St. Leger.—Dove, 1. Cock Pheasant, 2.
Burghley Stakes.—Chief Justice, 1. Pantaloon, 2.
Handicap Plate.—Knight of the Whistle, 1. Cavan, 2.

WEDNESDAY

Assembly Room Stakes.—Black Swan, 1. Dove, 2.
Sweepstakes of 15 sovs. each.—Weathercock, 1. Marguerite, 2.
Gold Cup of 100 sovs.—Nutbrown Maid, 1. Pancake, 2.
Stewards' Plate.—Rackapelt, 1. Weathercock, 2.
Handicap of 5 sovs. each.—Black Swan, 1. Cock Pheasant, 2.

NOTTINGHAM RACES.—THURSDAY.

" 21	29.713	70·6	55·7	59·8	— 2·0	88	S.W.	0·00

Note.—The sign — denotes below the average. The numbers in the second column are calculated to the 10,000th part, on the assumption that the standard of the air is represented by 1·0.

The reading of the barometer increased from 29.44 inches at the beginning of the week to 29.85 inches by 9h. a.m. on the 16th; decreased to 29.56 inches by 9h. a.m. on the 17th; increased to 29.96 inches by 9h. a.m. on the 18th; decreased to 29.39 inches by 9h. p.m. on the same day; increased to 30·04 inches by 9h. a.m. on the 20th; and decreased to 29.71 inches by 9h. a.m. on the 21st. The mean reading for the week, at the height of 82 feet, was 29.741 inches. The mean daily temperature of the 14th was 56·3°, and is the lowest mean daily temperature recorded on that day since the year 1841, when it was 54·9°. The mean temperature of the 15th was 58·0°, and is the lowest since the year 1838, when it was 57·2°; and the mean temperature of the 16th was 56·0°, and is the lowest since the year 1837, when it was 54·6°. During the period from the 14th to the 21st, the mean daily temperature was 1·6° below the average of the corresponding seven days during thirty-eight years. The highest reading of the thermometer was 74·4° (on the 17th); the lowest 51·1° (on the 18th); their difference, 23·3°, shows the range of temperature in the week. The range of temperature during the week was 19·6°. Rain fell during the week to the depth of rather more than seven-tenths of an inch.

Lansdown, July 22nd, 1853. JAMES GLAISHER

HEALTH OF LONDON.—During the week ending July 16 the births of 1267 children were registered in the metropolitan districts; of these 716 were boys, and 651 were girls. In the eight corresponding weeks of the years 1845-52 the average number was 1239. During the week, 904 deaths were recorded; in the preceding week the numbers were 922; with in the last six weeks the weekly number has been raised by 105. In the corresponding years 1840-52—the average in each was 1004, which, corrected for increase of population, becomes 1164. The actual return is thus shown to be less than the estimate by 260. To zymotic diseases 226 deaths are referred (their average is 222). To diseases due to an atmospheric influence (average is 16); 37 to hooping-cough (its average is 26); 64 to diarrhœa (its average is 44); 47 to typhus (its average is 43); and 3 to cholera (its average being 741); but this average is swelled by the number of deaths from this disease in the corresponding week of the year 1849. To dropsy, cancer, &c., 42 (their average is 44). To tubercular diseases, 209 (their average is 186); of these, 1[illegible] to "consumption." To diseases of the brain, nerves, and senses, 91 (the average is 109); of these, 12 are due to apoplexy, 8 to paralysis, and 46 to convulsions. To diseases of the heart and blood vessels, 31 (their average is 32). To diseases of the lungs and of the other organs of respiration, 87 (their average is [illegible]). To diseases of the stomach, liver, and the other organs of digestion, 25 (their average is 27). To diseases of the kidneys, and other organs of secretion, 22 deaths are referred (their average being 22).

BROMPTON HOSPITAL.—The Committee of the Hospital for Consumption, at Brompton, are proceeding with the new wing of the institution with the less possible delay. The first half of the building, which has hitherto been opened for the reception of patients, affords room for ninety beds; another wing will be opened to 250—by the completion of the original design. The fund for commencing the second moiety of the Hospital, it may be remembered, was started by Mr. Henry Lucas, by the payment of £1000 for the purpose of securing which connected her name with the various charitable institutions of the country. A further sum of £1000, to the same cause, has been given by the Governor, place, given recently on Friday, 15th inst., by Garnett, Fabbinghi, Hurst and Co.'s, Clun Nove lo, Arthur Napoleon, and a host of others assisted; and the Queen's Institution of Mrs. Warner, were fully represented.

INDUSTRIAL SCHOOLS.—THE LATE DUKE OF WELLINGTON'S ILLNESS.—A meeting of ladies and gentlemen interested in the success of this institution was held on Wednesday in Upper Harley street—the Bishop of London in the chair—the objects of the society to afford[illegible] an asylum for the homeless and destitute children of the metropolis, where they might receive all the benefits of the [illegible] boarding art, admirably skilful and charitable men. Resolutions were passed to carry out the measure, and also three spiritual consolations which were not less important than medicine itself.

THE WELLINGTON CAR.—The Lord Chamberlain has given [illegible] that the funeral car of the late Duke of Wellington now in a temporary building in Marlborough House, will be publicly exhibited to the public, under the following regulations:—On Mondays, Wednesdays, and Thursdays, free. On Tuesdays and Saturdays, by tickets, from the office of Messrs. Gunter, 7, Berkeley street. Fridays, the doors to be closed. The first day [illegible] on Monday, [illegible] inst., and until the 1st of October next, the hours of admission will be from seven to ten o'clock.

NEW GENERAL RAILWAY TERMINUS.—Mr. Henderson (of the firm of Fox, Henderson, and Co.) has had printed for private circulation, the description of a novel project for a "central terminus railway station," [illegible] Charing Cross, by means of a viaduct or structure over a portion of the Thames, on the principles of a suspension bridge, following as near as possible the course of the river, and occupying [illegible] commercial importance, complete scheme, the distance from Westminster Bridge to London Bridge.

DIPLOMATIC APPOINTMENTS.—The Hon. Julian Fane has been appointed first paid Attaché to her Majesty's mission at Vienna, in room of Mr. Frederick Lamb, appointed Secretary of Legation at Stuttgart. Mr. Fletcher Norton, unpaid Attaché at Naples, has been appointed second paid Attaché at Vienna. The Hon. Edward Vesey Boyle has been appointed second paid Attaché at Berlin. Mr. Will [illegible] has been appointed unpaid Attaché at Stockholm. Mr. Augustus Graham has been appointed Assistant Colonial Surveyor at Sierra Leone.

KENSINGTON GARDENS.—Her Royal Highness the Duchess of Cambridge and the Princess Mary were among the company on Tuesday at the fashionable promenade in Kensington-gardens on [illegible] by the unexpected fineness of the weather. The display [illegible] in consequence of the sudden change from cloudy, pressing weather, to fine and vergant appearance, was thronged with the most respectable company on Sunday.

THE NEW GOVERNOR OF JAMAICA.—On Wednesday evening an entertainment was given, at the Thatched-house Tavern, to Mr. Henry, the newly appointed Governor of Jamaica, by gentlemen connected with the commerce of the island. The chair was occupied by Mr. Thomas Hankey, jun. The Duke of Newcastle, as Chief Secretary of the Colonies, honoured the banquet with his presence. Among those present were Viscount St. Vincent, Mr. T. A. Hankey, Mr. Cave, Mr. Davidson, Mr. Beckford, the Hon. P. [illegible], Mr. Rose, Chief Justice of Jamaica, the Hon. Mr. Perreau, Mr. Keate, Governor of Grenada; [illegible] number of other influential gentlemen. Mr. Barkly, prior to his departure for Jamaica, received the honour of knighthood, with the decoration of a Civil Knight Commander of the Most Honourable Order of the Bath. We understand that the mercantile of the city of London connected with the colony of British Guiana are preparing an address to Sir Henry, to have unanimously signed, to Mr. Barkly, expressive of their appreciation of his administration; and their regret at his retirement from an office which he has filled with so much ascendency and usefulness.

CROWN SUITS IN THE COURT OF EXCHEQUER.—The Attorney-General has given notice of a motion for leave to bring in a bill for the amendment of the procedure and practice in Crown suits in the Court of Exchequer, and for the payment of costs in proceedings instituted on behalf of the Crown.

AUSTRALIAN MAILS.—The *Vimiera* has been engaged by the Government to take out the Australian mails, and will leave Deptford on the 5th August. The Sydney mail to proceed on Wednesday morning, at five o'clock, a second conflagration took place at 44, 45, 47, Princes street, Soho, the premises belonging to Cartell and Brown, oil-and-colour-men. The fresh damage was in the [illegible] also sustained by the neighbourhood of Rupert-street, &c.

MANSION HOUSE.—The Lord Mayor has issued invitations for a dinner on Saturday (this day) to her Majesty's Ministers and a distinguished party of the nobility, members of the House of Commons, and other gentlemen and their ladies; and his Lordship will give a grand entertainment on the 2nd of August next.

THE CHOBHAM ENCAMPMENT.

PONTOON MANŒUVRES

VIRGINIA WATER will be recollected as having borne upon its unruffled bosom a model war-frigate, to amuse the noon-tide leisure of George IV., which was, however, merely child's play in comparison with the scene; which our Artist has pictured upon page 48, and words must be considered as one of the most effective manœuvres yet executed by the troops encamped at Chobham. It took place on Tuesday week, and the scene was fully described in the ILLUSTRATED LONDON NEWS for July 9, page 6; so that we shall only repeat such details as relate the action of the Illustration.

While the contest at the bridge was in progress, and shortly after eleven o'clock, her Majesty and his Royal Highness Prince Albert, with their illustrious guests, embarked in a gaily-decorated barge upon the lake, and drew near to witness the mimic strife. The Guards were suddenly seen standing like a long line of statues under the shade of the trees close at hand. A strong force of Sappers, in fatigue dress, proceeded to launch pontoons, and it was evident that while our Sir Lacy Evans was occupying the attention of the enemy on the left, and concentrating the defence upon Blacknest-bridge, Lord Seaton was preparing to carry over the men in another and easier direction, which had been left unguarded. The occupants of the Royal barge were in secret, and soon glided down the lake to witness the pontooning.

While the Sappers, like so many ants, were launching the pontoon, four companies of the Rifles, passing through the ranks of the Guards, were rapidly pushed across the lake on india rubber rafts of a new construction, and took shelter in the woods close to the edge of the water. The cannonade on the left, at Blacknest bridge, now became fiercer and feebler, until about noon it died away altogether; and the enemy, having discovered Lord Seaton's real intention, advanced to dispute his passage. Not a moment was now to be lost. The pontoons were completed, the remaining companies of the Rifle corps were thrown across, and formed up, though the ranks of the Guards, under cover from the south side of the water, and under cover of this fierce cannonade, which shrouded in smoke for some minutes the woodland, the stately brigade of Guards marched across [illegible] they had scarcely disappeared, when the Sappers, leaving the pontoons for a moment, returned with bundles of fern which they strewed along the planking, and then, their passage being thus rendered tolerably secure, came the three batteries. To these, safely ferried over, succeeded the Artillerists and the rest of Fane's brigade and of the cavalry made for the high ground on the north side of the lake by the Iron gate, while Sir De Lacy Evans's brigade proceeded in the same direction, the enemy being now withdrawn from the stoutly-contested Blacknest-bridge. The whole division then met, about two o'clock, on a fine piece of table land admirably adapted for reviewing troops, and called Smith's Lawn (represented in the ILLUSTRATED LONDON NEWS of last week).

Some amusement was caused by the salute fired from the model frigate on Virginia Water when the Royal barge passed and repassed.

The troops were all changed in the course of Thursday last; and the new-comers had to put up with wretched weather on Friday and Saturday; indeed, the storms of rain and wind were so exceedingly heavy, that, had they continued, it was very doubtful whether the Camp would not have been abandoned—at all events, for the time.

The final arrangements for the infantry brigades are as follow:—The First Brigade, commanded by Sir Richard England, will consist of the 1st Royals, 38th and 88th Regiments. The Second, under the command of Colonel Lockyer (97th Regiment), comprises the 19th, 79th Highlanders, and 97th Regiment.

SATURDAY.

The drenching rain reduced the whole field to such a condition that it was with the utmost difficulty any communication could be kept up between the different regiments. The General Commanding-in-Chief, with Lord Raglan and a large party of the aristocracy, left town early this morning, for the purpose of being present at a proposed review of the new division. They were met on the ground by Lord Seaton, the Duke of Cambridge, and the Brigade Generals, and for a couple of hours they braved the weather on one of the elevated positions in the field. The arrangement was, however, found to be altogether impracticable; and, after being exposed to a heavy rain for some time, a hope of a review was given up, and the party returned to the whole party to Highlands, where they passed a couple of hours under shelter, and, after partaking of luncheon, returned to London.

SUNDAY AND MONDAY.

Sunday the warm sun and gentle breeze had an extraordinary effect on the appearance of the ground and the Line of Encampment. The clayey soil became hardened in an almost inconceivably short time; and what had been an unequivocal lake in the morning progressed to the condition of a mitigated swamp in the afternoon. The men of the different regiments were thus restored their usual appearance of smartness, and no one who observed the troops on their way to and from Divine service yesterday would have said that they had passed through three days of stirring hardships as a veritable campaign could have forced on them in the same space of time.

No field day took place on Monday, owing to the rain. A considerable number of persons went down to Chobham, [illegible] returned ungratified by the sight of any military display.

TUESDAY.

To day the troops paraded at half past ten o'clock, and at eleven, headed by Lord Seaton, his Royal Highness the Duke of Cambridge, and a brilliant staff, the whole division marched to the elevated ground known as Long Down, at the eastern extremity of the heath, which, though wet, was sufficiently firm to allow a magnificent series of evolutions to take place, and which were watched with intense interest by a large number of spectators. The manner in which the Royal Horse Artillery, under Captain Taylor, was worked, exceeded any thing we have before seen on the field; and the manœuvres of the Blues and the Scots Greys reflected the highest possible credit on the activity and discipline of both regiment.

WEDNESDAY.

This was one of the most effective field days witnessed since the commencement of the Encampment. The manœuvres lasted over five hours. The enemy were to be driven from a strong position; partially repulsed, and, forming under cover of a thickly wooded plantation, they were to treat upon the whole of their line. The evolutions are described as reflecting the greatest credit upon all concerned. Only upon one occasion, and that too their very last field day, did the troops of the late Camp go through so many and such varied manœuvres. From this fact we are inclined to form very high expectations of the field days which will be gone through with the forces now at the Camp. The Lieutenant-General seems determined to make up for the time lost by the bad weather. The Sappers and Miners are, we believe, to be relieved. They have been in Camp for upwards of [illegible] weeks; and the hard and [illegible] work which they have performed, in all weather, fairly entitles them to the same relief as has been accorded to the other portions of the Camp. The fresh companies of engineers will be employed in throwing pontoon bridges over the Thames at Chertsey.

THURSDAY

Was again a busy day in the Camp. Lord Seaton appearing resolved to take advantage of every fine day for exercising the troops. The whole division was under arms at eleven o'clock, and was subsequently inspected by Lord Hardinge in front of its encampment. The inspection over, the whole of the troops marched over the Queen's ridge, on the extreme right of the Camp; the enemy consisting of the same forces as before, with the exception of a fresh company of sappers, who had relieved the first company—being posted behind a hill, close to Col. Challoner's plantation. Here another series of beautiful manœuvres were carried out; and in the end the "Camp" troops retreated before the enemy. In marching past the head-quarters, one or two of the Scots Grey got into a quagmire, and their uniforms suffered in the extrication, but no other damage was done.

We are happy to learn that Brigadier Bentinck is progressing satisfactorily, and has been pronounced out of danger.

VOYAGE ROUND THE WORLD.—The Swedish frigate *Eugenia* returned to Stockholm last week, after performing a most successful voyage round the world. She has been nearly two years absent, and brings home an immense collection of curiosities, preparations, and botanical and zoological specimens. She came under Captain Virgin, has gained universal respect, both for seamanship and talent, and intends publishing a detailed and illustrated account of his interesting [illegible].

DELEGATES FROM NEWFOUNDLAND [illegible] members of the Assembly [illegible].

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, OXFORD STREET.—Under the Management of Mr. CHARLES KEAN. SATURDAYS ALES will be performed EVERY EVENING (except Saturday) with other Ballets nightly, and a Grand Divertissement every Evening. On SATURDAY next, JULY 30th, will be performed, for the FIFTY-SECOND TIME, the Ballet of LA SYLPHIDE. EVERY DAY WEEK, 3rd AUGUST.

MR. ALBERT SMITH'S MONT BLANC [illegible] (each (except Saturday). Stalls, 3s. [illegible] at half-after every day from 11 till 5. [illegible] Tuesday and [illegible]

ZOOLOGICAL GARDENS, REGENT'S PARK.—The Collection of LIVING ZOOPHYTES [illegible] 2nd, and other Nights. Admission 1s. [illegible] Part of the Performances will [illegible] Band, every Tuesday, at Half-past 3 o'Clock. Admission, One Shilling; Saturday, Sixpence.

CONSTANTINOPLE.—Additional Picture [illegible] DIORAMA closed on [illegible] Admission [illegible] Acts of Australia. [illegible] Open from [illegible]

POULTRY SHOW.—The FIRST ANNUAL [illegible] Show of [illegible] Poultry, Pigeons, [illegible] Rabbits, will be held at the [illegible] Gardens, Regent's Park, on [illegible] Tuesday, 2nd August, at 12 o'clock precisely. Lord Portman in the chair. Tickets, 5s. each; on [illegible] Prizes, certain of the Silver Cups to be awarded by a [illegible] EDWIN ARNOLD, Secretary. Gloucester-place, New-road.

ROYAL ASYLUM of ST. ANN'S SOCIETY.—The Institution, setting out for the Club of [illegible] to Margate to become an Orphan, by Election. Voluntary Contributions [illegible] from a Home, Clothing, Maintenance, and Education [illegible] Offices, 32, Poultry. [illegible] Wednesday, and Thursday, [illegible] Ironmongers' Hall, [illegible] Chairman. [illegible] Secretary.

COLLEGE of AGRICULTURE and CHEMISTRY, and of PRACTICAL and GENERAL SCIENCE, 37 and 38, Lower Kennington-lane, Kennington, near London.
PRINCIPAL—J. C. NESBIT, F.C.S., F.S.S.
The next [illegible] will commence on [illegible] Terms, and every information may be obtained on application to the Secretary, at the College, suitable to prepare youths for the pursuits of Agriculture, Engineering, Manufactures, and the Arts; for the Navy, the Military Academy, and for the Universities.
All [illegible] Messages of every description are promptly and accurately executed at the College.
[illegible] Lessons and other parts of [illegible] may be had on application to the Secretary.

DUBLIN AND IRELAND.
DUBLIN GREAT INDUSTRIAL EXHIBITION.
IRISH TOURIST TICKETS (available for a month) are now issued to the following stations:—

	1st Class.	2nd Class.
Dublin (Custom House)	£6 0 0	£4 5 0
Holyhead, Liverpool, Bath, Bristol, Carlisle	5 15 0	4 0 0
Chester, Shrewsbury, Oxford, Tunbridge, Leamington	5 15 0	4 0 0
Birmingham, Rugby, Leamington, Coventry, London	5 5 0	4 5 0
Peterborough, Huddersfield, Leeds, Sheffield, Derby	5 0 0	4 5 0
Manchester, Warrington, Stoke, Macclesfield, Crewe	4 10 0	3 10 0
Liverpool, Chester	4 5 0	3 5 0

They enable the holders to proceed to Chester, Hanmer, Llangollen, Corwen, Bettws-y-Coed, the Lakes of Killarney, and back again to the station at which they [illegible]

A Book of 1851 Irish Tourist Tickets is entitled to have issued on [illegible] to Dublin, at very reduced fares, and to break the journey at any intermediate station in the county Wicklow, in Kildare, and the Liffey district, on the line between Dublin and Belfast, for the purpose of proceeding to Carlow and from Dublin to Galway for the Lower Lakes of Killarney.
Every purchaser of a ticket is presented, gratis, with a map of the Dublin Great Irish Tourist's Road, compiled from the latest authentic sources.
Full [illegible] and accurate information afforded at the Chester and Holyhead Company's Offices, 82, Westland-row, Dublin. See also Bradshaw's Guide, page 125.

STEAM to AUSTRALIA.—The Iron [illegible] are [illegible] SYDNEY, 1,000 tons [illegible] YORK ASKEY, Commander, [illegible] Lade Locks and Solar Tie Wrought-iron [illegible] Cabin for passengers on Gravesend [illegible] Deck, with [illegible] Bulkheads, and [illegible] square. 18, Crosby, Liverpool; or 2 Vols., 6s. 6d. bound. [illegible] Gravesend. Parcels as follows:— [illegible] Second Class, 60 cubic feet ... ... 1s. 6d. ... ... 2s. 6d. ... ... 7s. 6d. For further particulars, and scales of [illegible] apply at the Office of the Australian Royal Mail Steam Navigation Company, [illegible] and to Messrs. CHARLES WATTS, Bristol; H. & H. church-street, London, of whom orders to view the ship may be obtained.

ROGNOR, SUSSEX.—A favourable resort of the late lamented Princess Charlotte and her [illegible] [illegible] Hotel, [illegible] Family, [illegible] quiet, and extremely [illegible] The Table of Fare has much honor of and is served [illegible] long the shore. All is so arranged as to [illegible] Bathing-place.

ONE SHILLING.—ROSEWOOD PIANOFORTE, by GEORGE WALTON, 3 Octaves, Grand Musical [illegible] on the plan of the Royal Art Union, with Iron Plate, Metallic Bars, Trichord Throughout, Check Action, Trichord Throughout, Check Action, Trichord Throughout, Check Action

THE CHOBHAM ENCAMPMENT.—PONTOONS AT VIRGINIA WATER. (SEE PAGE 47.)

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JULY 23, 1853.

EXHIBITION OF THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

Last week, our report of the proceedings of this important meeting was continued to the close of the dinner on Wednesday. On Thursday morning the yards were opened at six o'clock. The entries in cattle, sheep, and pigs exceeded in number those of the Show at Lewes; and there was a general excellence of quality exhibited, though there were fewer extraordinary animals.

Short-Horns.—The first class contained eighteen animals, being a larger number than was shown at Lewes. Some very creditable animals were to be seen, but none of extraordinary merit. The first prize was justly awarded to No. 11, shown by Lord Berners. He is of a rich roan colour: he is closely allied to the far-famed blood of Mr. Bates. His head, loins, and hind-quarters are good, his flank heavy and well set.

In the class of young short-horn bulls eleven animals were shown, among which there were but five good ones; though the first and second prizes were carried off by two very good animals. The first prize was to Mr. Booth's white bull. The second prize was given to a fair, useful beast (Mr. Fletcher, of Mansfield), not equal to the first.

The class of short-horn cows contained some magnificent animals. The first prize was carried off by a perfect model of a cow belonging to Mr. Smith, of the Grove, near Bingham, Notts: she possesses in perfection almost every point and property that can be desired in a cow, and was shown in the condition in which all breeding animals ought to be shown. She is rather light in her fore-quarters. The second prize was awarded to Mr. Booth, for a roan cow of first-rate quality—remarkably good in many points, but disproportioned by fat. She is not very evenly grown, but her good points are prominent.

The class of short-horn heifers consisted of eight animals, varying much in quality and symmetry; but the most perfect animal in the yard was in this class. It was shown by Mr. Booth, and of course received the first prize. Nothing can be more level and equally proportioned. She is in very high condition. The second prize was also carried off by Mr. Booth, for a roan heifer, not so high in condition as the last, nor so symmetrical, but of first-rate quality.

The class of yearling heifers contained some very useful animals The first prize was carried off by a white heifer, belonging to Mr. B. H. Allen, Staffordshire. The hair is somewhat "sharp" and harsh, but in other points she is very good. The second prize was given to Mr. Stratton, for a roan heifer, with fine head and fore-quarters, and broad loin, but not firm; flank deep and good.

Herefords.—The first class of this breed was not well filled, though the good quality and symmetry of those that were shown made up for the deficiency in number. The first prize was awarded to Lord Berwick, for a remarkably fine well-made bull. His head and fore-quarters are very good, with the exception of a slight defect in the upper part of the shoulder. In Class 2, the first prize was awarded to Mr. Price, of Courthouse, Leominster, for a remarkably even, well-made bull, with very good deep hind-quarters, good flank, and very compact general form. No. 99 received the first prize for cows in milk or in calf; rather a large formed animal, of pretty good quality.

Devons.—Among the bulls, No. 130, shown by Mr. Wright, of Taunton, received the first prize, and is a very well-made beast. The second prize was carried off by No. 121, Mr Turner, of Barton. Among yearling bulls, Mr. Turner carried off the first prize.

The class of Devon cows was perhaps better than on some former occasions. The first prize was awarded to a very well-made cow.

Poultry.—The arrangements for the poultry were excellent. The pens were commodious, and the display of birds and their condition worthy of the preparations made for them. In the classes of Dorking fowls (which the judges unanimously allowed never to have been equalled at any exhibition in the kingdom) the two first prizes were taken by Captain Hornby; and the remainder divided between Mr. Leary, Lord Hill, and T. T. Parker, Esq. In Spanish classes, Captain Hornby again (two first prizes), Mr. Mappiebeck, and Mr. Adams. Cochin chickens, of which there were fifty entries, the prizes were awarded to Mr. Terry, of Aylesbury, Mr. Punchard, Mrs. Herbert, and Dr. Gwynne.

Horses.—The show on the whole was respectable. In Class 1, the Suffolks as usual bore away the palm—the first prize being awarded to a very fine, powerful, Suffolk four-year-old horse, No. 210, exhibited by Mr. S. Clayden, of Linton, near Cambridge, possessing fewer faults than any other horse in the show. The second prize was given to No. 227, belonging to Mr. W. Wilson, near Ipswich, a splendid specimen of a cart-horse, certainly and unquestionably the finest horse in the show; possessing immense strength, perfect symmetry, and great activity; but having one defect, which, though it might have robbed him of the first prize, yet, in our opinion, was redeemed by his otherwise golden virtues. His hocks showed the effects of the work he had done during the last three years, in the existence of thorough-pins, which, if they had appeared in a young horse, would probably have put him out of the pale of competition, but which, in a horse of six years old, simply operated as a weight in the adverse scale, outbalanced on the other side by splendid qualifications. There were other worthy specimens of the English cart-horse.

Class 2, for Two-year-old Horses for Agricultural Purposes, though less numerous than class 1, yet surpassed it in excellence. The first prize of £20 was awarded to Mr. John Ward, of East Mersea, near Colchester, for a most promising Suffolk horse; whilst the second prize was given to No. 238, also a Suffolk, the property of Mr. George Sexton, near Ipswich, a very near approach to perfection.

In Class 3, for Roadster Stallions, only ten were entered. The prize was given to a very neat-looking horse, possessing a good deal of symmetry, but with scarcely sufficient substance, but whose action was very superior.

In Class 4, No. 1103, a strong, neat pony, was worthy of the prize awarded to him; and there were some very pretty Shetland ponies.

Class 5, for Cart Mares and Foals, did not equal in merit the same class in many former shows. The first prize was given to a remarkably strong, compact, and useful mare, with a very good foal, No. 276, belonging to Mr. Henry Bailey, near Berkeley, Gloucester; whilst the second was awarded to Mr. T. B. Brown, for his four-year-old Suffolk mare of considerable merit, and with a very good foal by her side.

In Class 6, for Mare Ponies, the prize was awarded to No. 1105.

In Class 7, for Cart Fillies, there was but little competition. The first prize fell to the lot of No. 302, the property of Mr. T. B. Browne; whilst the second was gained by Mr. Owen, near Newbury.

The Sheep and Pig classes were numerous and satisfactory. The pigs were more numerous, but did not quite equal some of former years in quality and usefulness. The sheep have seldom been surpassed, and the class of long-wools has never been equalled at any former show.

Annexed is the entire list of Prizes.

SHORTHORNS.

Judges.—Messrs. John Grey, Charles Stokes, and John Wright.

Class 1.—Bulls, calved previously to the 1st of July, 1851, and not exceeding four years old. First prize of 50*l.* to Right Hon. Lord Berners, of Keythorpe-hall, Tugby, Leicester; second prize of 20*l.* to Richard Stratton, of Broad Hinton, Swindon, Wilts.

Class 2.—Bulls, calved since the 1st of July, 1851, and more than one year old. First prize of 25*l.* to Richard Booth, of Warlaby, Northallerton, York; second prize of 15*l.* to William Fletcher, of Radmanthwaite, Mansfield, Notts.

Class 3.—Cows, in milk or in calf. First prize of 20*l.* to Henry Smith, of the Grove, Cropwell Butler, Bingham, Notts; second prize of 10*l.* to Richard Booth, of Warlaby, Northallerton.

Class 4.—Heifers, in milk or in calf, not exceeding three years old. First prize of 15*l.* to Richard Booth, of Warlaby, Northallerton; second prize of 10*l.* to Richard Booth.

Class 5.—Yearling Heifers. First prize of 10*l.* to B. H. Allen, of Longcroits-hall, Lichfield; second prize of 5*l.* to Richard Stratton, of Broad Hinton, Swindon.

HEREFORDS.

Judges.—Messrs. William Cox, Thomas Hartshorne, and John Williams.

Class 1.—Bulls calved previously to the 1st of July, 1851, and not exceeding four years old. First prize of 40*l.* to the Right Hon. Lord Berwick, of Cronkill, Shrewsbury; second prize of 20*l.* to John Carwardine, of Stockton Bury, Leominster.

Class 2.—Bulls calved since the 1st of July, 1851, and more than one year old. First prize of 25*l.* to Edward Price, of Courthouse, Leominster; second prize of 15*l.* to the Right Hon. Lord Berwick, of Cronkill, Shrewsbury.

Class 3.—Cows in milk or in calf. First prize of 20*l.* to John Monkhouse, of the Stow, Hereford; second prize of £10 to James Ackers, of Prinknash-park, Painswick, Gloucester.

Class 4. Heifers in milk or in calf, not exceeding three years old. First prize of 15*l.* to the Right Hon. Lord Berwick, of Cronkill, Shrewsbury; second prize of 10*l.* to Philip Turner, of the Leen, Pembridge, Leominster.

Class 5.—Yearling Heifers. First prize of 10*l.* to Edward Price, of Courthouse, Pembridge.

DEVONS.

Judges.—Messrs. Philip Halse, E. L. Franklin, and Henry Trethewy.

Class 1. Bulls, calved previously to the 1st of July, 1851, and not exceeding four years old. First prize of 40*l.* to George Turner, of Barton, near Exeter; second prize of 20*l.* to Robert Wright, of Moor Farm, Taunton.

Class 2.—Bulls calved since the 1st of July, 1851, and more than one year old. First prize of 25*l.* to George Turner, of Barton, near Exeter second prize of 15*l.* to Samuel Farthing, of Stowey-court, Bridgewater

Class 3.—Cows in milk or in calf. First prize of 20*l.* to George Turner, of Barton, near Exeter; second prize of 10*l.* to George Turner, of Barton, near Exeter.

Class 4.—Heifers in milk or in calf, not exceeding three years old. First prize of 15*l.* to George Turner, of Barton, near Exeter; second prize of 10*l.* to James Hole, of Knowle-house, Dunster, Somerset.

Class 5.—Yearling Heifers. First prize of 10*l.* to James Quartley, of Holland-house, South Molton; second prize of 5*l.* to James Quartley, of Holland-house, South Molton.

WELCH BREEDS.

Judges.—Messrs. J. E. Jones and Thomas Hunt.

Class 1.—Bulls, calved before the 1st of July, 1851, and not exceeding four years old. No entry.

Class 2.—Bulls, calved since the 1st of July, 1851, and more than one year old. The prize of 10*l.* to William Powell, of Eglwysnewydd Margam, Talbach, Glamorgan.

Class 3.—Cows, in milk or in calf. First prize of 10*l.* to Wm. Powell, of Eglwysnewydd Margam, Talbach, Glamorgan; second prize of 5*l.* to George Goode, of Croft Cottage, Carmarthen.

Class 4.—Heifers, in milk or in calf, not exceeding three years old. The prize of 10*l.* to William Powel., of Eglwysnewydd, Glamorgan.

Class 5.—Yearling heifers. The prize of 5*l.* to George Goode, of Croft Cottage, Carmarthen.

OTHER BREEDS,

Not including the Short-horn, Hereford, Devon, or Welsh Breed.

Judges.—Messrs. T. Hunt, J. E. Jones, and E. L. Franklin.

Class 1.—Bulls, calved previously to the 1st of July, 1851, and not exceeding four years old. The prize of 10*l.* to Nathaniel G. Barthropp, of Cretingham Rookery, Woodbridge, Suffolk.

Class 2.—Bulls, calved since the 1st of July, 1851, and more than one year old. The prize of 10*l.* to Samuel Burbery, of Wroxhall, Warwick.

Class 3.—Cows in milk or in calf. The prize of 10*l.* to Captain Inge, of Thorpe, Tamworth, Staffordshire.

Class 4.—Heifers, in milk or in calf, not exceeding three years old. The prize of 5*l.* to Edward Cane, of Berwick Court, Alfraston, Lewes, Sussex.

Class 5.—Yearling Heifers. The prize of 5*l.* to W. C. Cartwright, of Aynhoe-park, Brackley, Northampton.

HORSES.

Judges.—Messrs. T. R. Colton, W. C. Spooner, and William Linton.

Class 1.—Stallions for Agricultural Purposes, foaled previously to the 1st of January, 1851. First prize of 20*l.* to Samuel Clayden, of Little Linton, Cambridge. Second prize of 15*l.* to William Wilson, of Ashbocking, Ipswich.

Class 2.—Stallions for Agricultural Purposes, foaled since the 1st of January, 1851. First prize of 20*l.* to John Ward, of East Mersea, near Colchester. Second prize of 15*l.* to George Sexton, of Thorrington-hall, Wherstead, Ipswich.

Class 3.—Roadster Stallions. The prize of 15*l.* to John Lister, of Addingham, near Otley, Yorkshire.

Class 4.—Stallion Ponies. The prize of 10*l.* to W. B. Reed, of Victoria-square, Clifton, near Bristol.

Class 5.—Mares and Foals for Agricultural Purposes. First prize of 20*l.* to Henry Bailey, of Walgaston Farm, near Berkeley, Gloucester; second prize of 10*l.* to T. B. Brown, of Hampen, Andoversford.

Class 6.—Mare Ponies. The prize of 5*l.* to W. B. Reed, of Clifton, near Bristol.

Class 7.—Two Years Old Fillies, for Agricultural Purposes. First prize of 15*l.* to T. B. Brown, of Hampen, Andoversford; second prize of 5*l.* to James E. Owen, of Hodcott, West Isley, Newbury.

SHEEP.—LEICESTER.

Judges.—Messrs. Hugh Aylmer, Samuel Bennett, and Henry Chamberlain.

Class 1.—Shearling Rams. First prize of 30*l.* to William Sandby, of Holme Pierrepoint, Nottinghamshire; second prize of 15*l.* to T. E. Pawlett, of Beeston Sandy, Bedfordshire.

Class 2.—Rams of any other age. First prize of 30*l.* to T. E. Pawlett, of Beeston Sandy, Bedfordshire; second prize of 15*l.* to William Sanday, of Holme Pierrepont, Nottinghamshire.

Class 3.—Pens of Five Shearling Ewes of the same Flock. First prize of 30*l.* to William Sandey, of Holme Pierrepoint, Nottinghamshire; second prize of 10*l.* to William Sandsey, of Holme Pierrepoint, Nottinghamshire.

SOUTHDOWN, OR OTHER SHORT-WOOLLED SHEEP.

Judges.—Messrs. Edward Trumper, John Waters, and Edward Pope.

Class 1.—Shearling Rams. First prize of 30*l.* to Jonas Webb, of Babraham, Cambridge; second prize of 15*l.* to Jonas Webb, of Babraham, Cambridge

Class 2.—Rams of any other age. First prize of 30*l.* to Henry Lugar, of Hengrave, Bury St. Edmunds; second prize of 15*l.* to William Rigden, of Hove, near Brighton.

Short-Horns.—Class 3, prize £20. Mr. H Smith.

Short-Horns.—Class 1, prize £40. Lord Berners.

SHORT-HORNS.—CLASS 4, PRIZE £15. MR. RICHARD BOOTH.

SHORT-HORNS.—CLASS 2, PRIZE £25. MR RICHARD BOOTH.

CLASS 3.—Pens of Five Shearling Ewes, of the same flock. First prize of 20*l.* to Henry Lugar, of Hengrave, Bury St. Edmunds; second prize of 10*l.* to Henry Lugar, of Hengrave, Bury St. Edmunds.

LONG-WOOLLED SHEEP.

Not qualified to compete as Leicesters.

JUDGES.—Messrs John Abbot, Charles Clarke, and N. C. Stone.

CLASS 1.—Shearling Rams. First prize of 30*l.* to William Lane, of Broadfield-farm, Northleach; second prize of 15*l.* to William Garne, of Aldsworth, Northleach.

CLASS 2.—Rams of any other age. First prize of 30*l.* to William Slatter, of Stratton, Cirencester; second prize of 15*l.* to Edward Handy, of Sevenhampton, Andoversford.

CLASS 3.—Pens of Five Shearling Ewes of the same flock. First prize of 20*l.* to William Lane, of Broadfield Farm, Northleach; second prize of 10*l.* to William Lane, of Broadfield Farm, Northleach.

PIGS.

JUDGES.—Messrs. John Clayden, William Hesseltine, and Henry Eddison.

CLASS 1.—Boars of a large breed. First prize of 15*l.* to Robert Crossley, of Holland-street, Miles, Platting Newton, Manchester; second prize of 5*l.* to Thomas Horsfall, of Burley Hall, Otley, Yorkshire

CLASS 2.—Boars of a small breed. First prize of 15*l.* to William Northey, of Lake Lifton, Devon; second prize of 5*l.* to John Moon, of Lapford, Crediton.

CLASS 3.—Breeding Sows of a large breed. The prize of 10*l.* to Thomas Craven, of Whetley-street, Manningham, Bradford.

CLASS 4. Breeding Sows of a small breed. The prize of 10*l.* to John Moon, of Lapford, Crediton, Devon.

CLASS 5.—Pens of three Breeding Sow-Pigs of a large breed, of the same litter, above four and under eight months old. The prize of 10*l.* to William James Sadler, of Bentham Furlon, Swindon.

CLASS 6. Pens of three Breeding Sow-Pigs of a small breed, of the same litter, above four and under eight months old. The prize of 10*l.* to the Right Hon. Lord Wenlock, of Escrick-park, Yorkshire.

SPECIAL PRIZES.

SHROPSHIRE, OR OTHER GREY AND BLACK-FACED SHORT-WOOLLD SHEEP.

JUDGES.—Messrs W T Hartshorne, W. Cox, and John Williams.

CLASS 1. Rams of any age. First prize of 20*l.* to John Gillett, of Brize Norton, Witney, Oxon; second prize of 10*l.* to Thomas Horton, of Haunage Grange, Cressage, near Shrewsbury.

CLASS 2.—Pen of five Ewes of any age, with their Lambs. The prize of 10*l.* to William Foster, of Kinver-hill Farm, Stourbridge.

CLASS 3.—Pen of five Shearling Ewes.—The prize of 10*l.* to William Foster, of Kinver-hill Farm, Stourbridge.

WELSH BREEDS.—CLASS 2, YEARLING BULL. PRIZE £10. MR. W. POWELL.

WELSH BREEDS.—CLASS 3, COW. PRIZE £10. MR. W. POWELL.

PONIES.—CLASS 4, PRIZE £10. MR. W. B. REED.

PONIES.—CLASS 6, PRIZE £5. MR. W. B. REED.

THE IMPLEMENTS.

Several implements were highly commended; but many of the prizes were deferred for want of a sufficient trial of the implements or those exhibited not coming up to the standard of excellence expected by the judges—Mr. Joseph Druce, Mr. J. V. Gooch, Mr. T. W. Grainger, Mr. Henry Hanman, Mr. Wm. Lister, Mr. J. H. Nalder, Mr. Wm. Owen, Mr. J. J. Rowley, Mr. Thos. Scott, Mr. Wm. Shaw, Mr. O. Wallis, and Mr. Wm. Woodward, who were assisted by the Consulting Engineers Messrs. Easton and Amos.

Although not selected as one of those implements with which the further trial is to be made, its action not being considered as yet sufficiently perfect, Atkins' automaton, or self raking reaping-machine, attracted great attention. By this machine the presence of a man on the platform to rake off the grain as cut is dispensed with, that operation being performed by a moveable iron arm, which rakes up the cut grain and presses it against a toothed plate, between which it is firmly held, until, swinging round a quarter of a circle behind, the rake separates from the toothed plate, and the sheaf is deposited at the side of the platform ready for binding. This machine is the invention of Mr. Jearm Atkins, of Chicago, United States, and is thus described by one of the exhibitors, Mr. Ransome:—

"This important and valuable machine, though at first sight it may appear somewhat complicated, is in operation exceedingly simple and easy of management. As its name implies, it is self-raking, thus dispensing with the man required to take off in most reaping machines. It cuts in the same manner as others. It is fitted with a reel, for the purpose both of inclining the grain towards the platform preparatory to being cut, and bringing it, when cut, on to the platform. The knife-bar is on the upper side, instead of being placed, as usual, flush with the back edges, in the middle of the blade, and as far forward as the angle of the cutting will allow. The back side, instead of being left straight, is cut zig-zag, and each alternate edge is levelled the other way and serrated. By this arrangement it is scarcely possible to choke, as the knife blade resting on the fingers, and the edges front and rear being in close contact with them, any matter accumulating upon the fingers will be picked off by the sharp points of either the front or rear edge of the knife. Sufficient corn for a sheaf having fallen on the board, round comes the long arm carrying the rake, and, pulling across the entire bed of the machine, collects the grain into a compact bundle against a sheet-iron plate, and then, with the sheaf in the grasp, the rake and iron plate immediately make a quarter turn round the back of the machine: the rake arm is caused to stretch out behind, relaxing its grasp, and the sheaf falls in the line of the horse-walk (out of the way of the horses) the next round, and the rake-arm takes a sweep round back to its work. With reference to the motion of the rake, it is the quickest at those points where a quick motion is most needed, viz., in sweeping the platform and while opening the rear of the machine for delivering the bundle. The main driving-wheel is large, being four feet in diameter, with a four-inch felloe, giving a steadiness of movement in passing over rough ground, and good support in soft. The grain-wheel, too, is two feet in diameter, and may be increased if desired. The frame-work is well braced, and stiffly supported and strengthened with iron wherever necessary. The gearing is compact and symmetrical, well boxed in and protected from dirt. The team is relieved of weight, and of the side draught by resting the hounds upon a pair of front wheels, making it also very convenient to turn a square corner, as will be learned by a little practice. The driver's seat is elevated and easy, giving him good command of his team, while at the same time he can watch the operations of the knife, reel, and raker, and, if necessary, instantly throw the machine out of gear, by the lever at his right side. The careful handling of the grain by the rake saves a small percentage over raking by hand. The height of cutting is regulated by a very simple arrangement, and the knife may be set close to the ground. The draught is comparatively easy for a pair of horses, and is not perceptibly increased by the raker, the team, however, ought to be changed every two or three hours."

Of course the great value of this machine consists of getting rid of the raker required by the other machines, a desideratum which there appears little doubt will, in the course of time, be effected.

Clayton and Co.'s Patent Portable Steam engine took the first prize of £5. The duty done by this engine has not, we believe, been equalled by any non condensing steam-engine hitherto brought before the public. The official statement made by the Society's engineers shows this engine to have burnt, during the trial, the very small quantity of 4·32 lb. of coals per horse, per hour. The patented improvements of this engine consist in a new method of heating the exterior surfaces of the cylinder and slide-box, thereby effecting a saving of fuel. The cylinder is placed in a jacket, the space between the two being filled with steam, while the outer surface of the jacket, by being placed in the smoke-box, is surrounded by heat of 400 degrees and upwards, thereby preventing any loss by radiation.

Annexed is the entire list of the Prize Implements.

Plough best adapted for general purposes. To W. Busby, a prize of 7*l.*
Plough best adapted for deep ploughing. W. Ball, 7*l.* prize
One-way or Turn-wrest Plough. Ransome and Sims, 7*l.* prize.
Paring Plough. J. Glover, 5*l.* prize.
Dynamometer. J. H. Nentall, 5*l.* prize.
Subsoil Pulveriser. J. and F. Howard, 5*l.* prize.
Machine for making Draining-tiles or Pipes for agricultural purposes. J. Whitehead, 10*l.* prize.
Instruments for Hand-use in Drainage. H. Winton and Sons, 3*l.* prize.
Heavy Harrow. W. Williams, 5*l.* prize.
Light Harrow. J. and F. Howard, 5*l.* prize
Cultivator, Grubber, and Scarifier. Ransome and Sims, 10*l.* prize.
Pair-horse Scarifier. R. Coleman, 5*l.* prize.
Drill for general purposes. R. Garrett and Son, 10*l.* prize.
Steerage Corn and Turnip Drill. R. Hornsby and Son, 10*l.* prize.
Drill for small occupations. J. Smyth and Son, 5*l.* prize.

THE NEW NOVELS.
Now Ready, at all the Libraries, in three vols.,
LADY MARION. By Mrs. W. FOSTER.
"This fascinating novel needs not the attraction of the name of the Duke of Wellington's niece on the title-page to commend it to the novel readers of the fashionable world; nor will its popularity be confined to the circles in which its authorship will be suspected to lend additional interest. The work gives evidence of talent of no common order."—John Bull.
Also, now ready, in three vols.,
THE YOUNG HEIRESS. By Mrs. TROLLOPE
"The best of Mrs Trollope's novels."—Sunday Times.
"A tale full of romance and interest."—John Bull.
"A striking story, carrying the reader through it with unflagging interest."—Sunday Times.

MURRAY'S MODERN COOKERY BOOK
New and cheaper edition. Now ready, an entirely new, revised, and Cheaper Edition, with 56 Woodcuts. Post 8vo, 6s. bound,
MODERN DOMESTIC COOKERY. Founded upon Principles of Economy and Practical Knowledge, and adapted for the Use of Private Families.
"A collection of plain receipts, adapted to the service of families, in which the table is supplied, with a regard to economy, as well as comfort and elegance."—Morning Post
"Unquestionably the most complete guide to the culinary department of domestic economy that has yet been given to the world."—John Bull
"A new edition, with a great many new receipts, that have stood the test of family experience, and numerous additional and important general improvements throughout."—Spectator.
"Murray's 'Cookery Book' claims to rank as a new work."—Literary Gazette.
"The best work extant on the subject for an ordinary household."—Atlas.
"As a complete collection of useful directions, clothed in perspicuous language, this deserves a place in every household."—Examiner.
"Full of sage instructions and advice, not only on the economical and scientific principles of cookery, but on the management of servants in general."—Builder.
"We may safely and safely commend to English housewifery this cookery book. It tells plainly what plain folks wish to know, and points out how an excellent dinner may be best secured."—Leader
JOHN MURRAY, Albemarle-street.

ALEX. GREEN, Secretary.

NEW MUSIC, &c.

HER MAJESTY'S STATE BALL.—PARLIAMENT'S NEW DANCE-MUSIC, performed by LAURENT'S Band in the Throne-room—The Rosalinda Waltz, the Nymph of the Wave Waltz, and Le Chasse d'Amour Valse, the Inspired Quadrille, the Lago Maggiore Quadrille, and the Belle Vue Quadrille; the Rosalinda and Chasse d'Amour Waltzes, and the English Quadrille, were repeated by command. Beautifully Illustrated editions are now ready.—CHAPPELL, 50, New Bond-street.

PIANOFORTES.—CRAMER, BEALE, and CO., have the best of every description, new and second-hand for SALE or HIRE.—201, Regent-street, and 67, Conduit-street.

MR. J. T. COOPER (Associate of the Philharmonic Society, &c.) begs to announce that he continues to give LESSONS on the PIANOFORTE, in Singing, Harmony, and Composition, &c.—Schools attended. 16, St. Mary's-road, Canonbury, London

ENGRAVING on WOOD.—Mr. EDMUND EVANS has a VACANCY for a PUPIL. His necessary the application should have a taste for drawing. A Premium required. App.y, 4, August court, Fleet-street

ENVELOPE PAPER.—This paper superseds the separate use of an envelope; admits of three clear pages for correspondence, each measuring 9½ by 8 in., and identifies the contents with the address and post-mark. Superfine cream laid, blue laid, or blue wove, at 3s. 6d. per ream; self sealing, and perfectly secure.—F. W. RADDE, Manufacturer, 36, Throgmorton-street, Bank.

BRIET'S PORTABLE GAZOGENE, or SODA-WATER APPARATUS.—Sole patented in England, for the immediate production of Soda-Water, Ginger-Beer, sparkling Wine, Lemonade, &c., at the moment required. Ingredients for draught, and powder for generating the gas, of all Chemists, Opticians, Ironmongers, Soda-Water Manufacturers throughout the Kingdom Wholesale Depôt, 21, Hartlett's-buildings, Holborn.

ALLSOPP'S PALE ALE.—It is seldom that the enjoyment of a luxury is authenticated by the approbation of the Physician. In the opinion of numerous Members of the FACULTY, however, recent circumstances have given occasion to a renewal by the Public of those recommendations which first ensured their vast popularity. I have, therefore, made arrangements for supplying them genuine as from the Brewery, and in fine condition, from my Cellars, at 8s. per dozen, CARRIAGE PAID, for each Pint, 3s., Imperial measure only (by which the public gain one-third); and also in Kilderkins (Eighteen Gallons), for draught, 36s.
HARRINGTON PARKER, 23, Pall-mall.

CHOBHAM ENCAMPMENT.—The ROYAL CAMP HOTEL, behind the Cavalry Camp, on the Staines Road is the only hotel open to the Common; and affords the required accommodation to the better class of visitors to the Camp. In addition to the large marquee, which measures 50 feet by 60 there are several smaller ones, fitted up as sleeping apartments for gentlemen paying a prolonged visit to the Camp. The wines, &c., are of the finest quality, and the charges for all refreshments are fixed and moderate. Omnibuses to and from the Staines Station by Virginia Water.

EASTGATE HOUSE, LINCOLN.—A Private Establishment for the Restoration of a limited number of Ladies of the Upper and Middle Classes, afflicted with NERVOUS and MENTAL Complaints. Conducted by Mr. R. GARDINER HILL, M.R.C.S. Eng. (REGULATOR OF THE NON RESTRAINT SYSTEM), and Mrs Hill.

TO ATTENDANTS upon the INSANE.—WANTED, at the Derby County Asylum, Mickleover, TWO experienced MALE ATTENDANTS. Salary, £25 per annum (increasing £5 annually to £35), with Board, Lodging, and Washing. No one need apply whose character for kindness, honesty, and sobriety will not bear the strictest investigation.—Apply to Dr. HITCHMAN, Mickleover, Derbyshire.

MENTAL AFFECTIONS are RELIEVED in many cases only by early removal from home, before their influence becomes deeply rooted, and when the sufferers are placed under the care of those who have paid attention to mental disorders. Acomb House, situated at the extremity of the pleasant and healthy village of Acomb, about two miles from York, which is easily accessible at all hours, presents many advantages for the relief and comfort of those afflicted in mind, its position affords the privacy of the country with the benefits of the town. Mr. Metcalfe, many years resident medical superintendent of the York Asylum (accommodating 160 patients) resides at Acomb, where he receives a very limited number of ladies and gentlemen, who are treated by him and his wife as members of their family, having their own sitting-rooms, bedrooms, attendants, acting under the personal direction of Mr Metcalfe. Acomb House is fitted up with every regard

THE ILLUSTRATED LONDON NEWS.

No. 635.—VOL. XXIII.] FOR THE WEEK ENDING SATURDAY, JULY 30, 1853. [SIXPENCE.

THE PAST AND FUTURE GOVERNMENT OF INDIA.

PRIOR to the discussions which have recently taken place in Parliament the British public knew but little of the affairs of India. The ideas of most people upon the subject were vast, but vague. They took but little interest in what they so imperfectly understood; and devoted far more attention to French politics, which scarcely concerned them at all, than they bestowed upon the affairs of an empire, the most splendid in the world, and whose well-being was intimately associated with that of Great Britain. The recent and still pending debates upon Sir Charles Wood's bill have somewhat enlightened the public mind. The fearful importance of the subject begins to be understood. The designs of Russia on Constantinople have still further excited the attention of reflecting men. Russia is no friend of our dominion in the East. Wherever disaffection against our rule has been excited in the councils or armies of the native Princes, the intrigues of the agents and emissaries of Russia have been palpably discernible. The loss of India—by our own neglect or misgovernment, or in consequence of the secret machinations or open hostilities of Russia or any other power—would be one of the direst blows that could be inflicted upon England. All these things are more keenly felt than they were a few months ago; and India has at length assumed her proper place in the estimation of that great people, who are responsible to God and man for the good government of one hundred and fifty millions of their fellow-creatures.

In our Journal of the 14th of May last we briefly sketched the leading facts of the history of British rule in India. We now return to the subject, to show in greater detail the actual relations between England and her dependency, that our readers may more fully comprehend, not only what Sir Charles Wood's Bill attempts to do, but what it leaves undone. It will, we think, be seen that the reforms proposed by the Government are safe and useful, as far as they go. They do not exhaust the subject, but at all events they oppose no obstacle to their own extension, nor attempt to settle the mightier questions that are certain to arise ere British statesmen can be entitled to say that they have done their best and their utmost for the people of India.

The East India Company was originally established solely to prosecute trade. It soon had to defend its factories by force of arms; and, taking advantage of internal dissensions, formed alliances with native Princes against their personal enemies, and thus, in detail, conquered the whole territory. The oppressive and intolerant reign of Aurengzebe shook the territory of the Moghul Empire to its foundations; and his death, in 1706, precipitated the catastrophe. His provincial governors established independent kingdoms, and arrayed themselves with the Royal insignia of the Musnud. In 1739 Nadir Shah quitted Delhi, and in 1756 Clive won the battle of Plassy, which virtually made us masters of the richest and most populous division of the empire, which had been broken up into the following six principal states:—1. The Nizam. 2. The Mahratta Confederacy. 3. Mysore. 4. Oude. 5. Bengal. 6. The Rajpoot States. The victory of Lord Clive was followed by the grant of the Dewany of Bengal, by Shah Aulum. And in this manner the East India Company took its rank among the sovereigns of India. Since the days of the hero of Plassy, this corporation has advanced from conquest to conquest, and now claims to be Lord Paramount, securing its power by a standing army, which costs about twelve millions annually.

The political Government of India is of a very mixed and complicated nature, and is frequently termed a double Government, divided betwen the Court of Directors and the Board of Control To these are attached a Secret Committee in London, and a host of administrative functionaries throughout Hindostan. The East India Company received its first charter of incorporation from the Crown; and in no period of its history has it ever exercised a perfectly independent sway; the authority committed to it having always been limited in duration, and renewable from epoch to epoch. Till 1708 it was a corporation of mere traders; but in that year the Courts of Directors and Proprietors were regularly constituted In 1726 the Company was permitted to construct Mayôralty Courts at Calcutta, Madras, and Bombay, and a Court of Quarter Sessions; while an appeal was directed to the three Presidencies, to be heard before the President and Council. In 1753 European courts of justice were established. The Regulating Act was passed in 1773, and took effect in India during the following year. Its chief provisions appointed a Governor-General in Council, and a Supreme Court of Judicature. In 1784 the Board of Control was established, for the purpose of supervising the proceedings of the East India Company, restraining its acts, and directing the main principles of Indian policy; but it was not till 1788 that the relative position and power of both were adjusted. During four years they were jealous rivals, disputing the authority of each other; but from that date to the present day the Board of Control has been really absolute. The Directors are elected by the holders of proprietary stock; and, out of thirty, who constitute the entire body, six annually go out of office by rotation. The salary of a Director is only £300 per annum; but the patronage of each averages from £13,000 to £14,000, and £4000 has often been spent in canvassing the constituency, which numbers about 2000. The election is determined by proxy and ballot. The Secret Committee of the India House is always composed of the Chairman, Deputy-Chairman, and Senior Director. It is their business to receive despatches from India, which they are not allowed to read, but are compelled to send unopened to the Board of Control; and they forward desparches to India prepared by that Board, as instructions sanctioned by themselves, however much they may disapprove of their substance. In fact, the Secret Committee, as Mr. Sullivan has truly remarked, is "a screen," behind which the Board of Control retires when it dreads publicity and exposure.

The Board of Control consists of a President and two Secretaries. The salary of the President is £3500 a year—to be raised to £5000 by an amendment agreed to by the Government in the debate of Tuesday evening last. The President shares the official patronage of the India House, and is allowed to expend secret-service money at his discretion, for which he is wholly irresponsible; and in a single year the amount has exceeded £100,000. In this respect he is far more privileged than the

RUSSIAN EMBASSY.

MOSQUE OF THE LATE SULTAN MAHMOUD CONSTANTINOPLE.—BOUYOUK-DERE

Secretary for Foreign Affairs, who is limited to £10,000 a year; and is, moreover, obliged to swear, at the end of every twelve months, that whatever was expended was absolutely necessary for the public service. The President alone can make war or peace; and the real truth is that he wields, with scarcely any check, the power of an irresponsible autocrat, to whom the Directors are subservient. Lord Ellenborough has avowed frankly that the President is an absolute Dictator. He gave the following statement in evidence:—"The President of the Board of Control can now overrule the Directors; they can now do no more than express an opinion; they have, in fact, no authority. I know that when I was at the Board of Control I conducted the government; there is no doubt about that." The President enters office and retires from it with his party. He is not required to know anything of India; but by an amendment introduced into Sir Charles Wood's bill, he is to be assisted by a political and permanent secretary. Since 1820, the average tenure of office for each President has been less than two years; in the last twelve months there have been three changes; so that an ignorant man has no time to learn his business. It is to such incompetency that the welfare of 150,000,000 of people has been hitherto committed. The fact is, that all the real business at Cannon-row is entrusted to the clerks, whose situations are permanent, whatever Ministry may rule in Downing-street.

The Indian branch of the Administration is conducted by a Governor-General and Council, with Governors and Councils at Madras and Bombay; a Governor without a Council for Bengal; and another for the north-west provinces. The Punjaub is managed by a Board of Administration; Scinde and British Burmah, by individual Commissioners. The civil government of Bengal costs £439,970; of Bombay, £130,000; and of Madras, about the same sum. The north-west provinces, where there are no Councils, are civilly governed for rather less than £10,000. The Board of Administration for the Punjab figures for £54,000; and Scinde is managed for £10,000. The salary of the Governor-General is £24,000, and he is allowed £53,252 for his annual visit to the upper provinces. The military salary of the Commander-in-Chief is £8000, and as a Member of Council he receives £10,000 per annum—though, as he lives a thousand miles from the Council Chamber, he rarely enters it after having gone through the ceremony of being sworn into office. At the minor presidencies, the salaries of the Commanders-in-Chief are one-half of the preceding sums.

The local government in India is administered by covenanted and uncovenanted servants. The former include 6000 European officers and 800 civilians: all these are appointed by the Court of Directors and the Board of Control, and hold the Company's covenants. The uncovenanted servants are natives, whose remuneration is trifling, while their duties are laborious; and, whatever may be their merits, they can never rise above a subordinate condition. This injustice had often been protested against by such high authorities as the late Duke of Wellington, Sir Thomas Munro, and Sir John Malcolm: and when the charter was renewed in 1833, the Imperial Parliament inserted a clause which was designed to put an end to this exclusive system. It ran thus:—"That no native of such territories, nor any natural born subject of his Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office, or employment under the same Company." We are informed by Mr. Sullivan that, "when the merits of this clause were discussed in Parliament, Lords Lansdowne and Ellenborough, Messrs. Wynne, Grant, and Macaulay, all dwelt upon the necessity of opening to natives all offices for which they might prove themselves to be qualified; and Mr. Grant, in answer to a question from Mr. Hume, distinctly declared that, under the clause alluded to, natives would be eligible to a seat in the Council." From 1833 to the present hour that clause has remained a dead letter, not one native having been raised to the covenanted service. The Court of Directors dreaded the clause as fatal to their patronage, and interfering with what they seem to consider the reversionary rights and vested interests of their sons, nephews, and cousins. When Sir John Cam Hobhouse was President of the Board of Control he gave a writership in the Company's service to the adopted son of the late Rajah Ram Mohun Roy, born a Brahmin of the highest class, but who was converted to Christianity. His qualifications were undoubted, or Sir John would not, it is fairly to be presumed, have conferred the appointment. The Directors remonstrated, and thus opposed the clause to which we have referred. The President of the Board of Control had the weakness to yield, and thus impliedly threw a censure on the Act of Parliament. Another case has occurred. A native surgeon, named Chickkerbutty who had received an excellent medical education, came to England to complete his studies, and was declared eminently qualified by competent judges to practise as a surgeon and physician. He was strongly recommended to the Court of Directors for an appointment in the covenanted service, but his claims were rejected.

When it is desired to evade justice, it is easy to invent plausible pretexts, which satisfy those who never look further than the surface of things; and, accordingly, the Directors have contended that men of colour are of a low intellectual organisation, and unfitted for superior offices, either military or civil. It is, however, an undoubted fact, that this unworthy imputation was never uttered during our early struggles for dominion, and that under Lawrence and Clive, when we came into collision with French troops, the British Sepoys were commanded by a native general, Mahomet Issoof. In his Indian despatches, the late Duke of Wellington spoke in the highest terms of the natives employed under him in the public service. "He speaks (says Mr. Sullivan) with the highest admiration of the civil administration of Poorneah, the Regent of Mysore, of the diplomatic talents and integrity of Gorind Rao, of the military qualifications and strict integrity of Bisnapunt; and the names of these individuals will go down to posterity in his pages. And yet Poorneah, who had been the principal minister of Hyder and Tippoo, and who ruled Mysore for eleven years in a manner that called forth the admiration of the Duke of Wellington, would, for want of 'moral qualities,' be debarred from holding a higher office under our Government than that of judge of a county court; and Bisnapunt, who had commanded armies under those princes, and who commanded 3000 horse in such a way as to call forth the highest praise of the Great Captain, would be placed under the youngest European Ensign, and be ineligible to a higher command than that of a company of Sepoys." The civil departments of the covenanted service are filled up by nominees of the Directors educated at Haileybury, and who are sent out to India at an age when they ought still to be *in statu pupillari*. Their utter incompetency is no bar to their appointment, for that would be a serious limitation to lucre of patronage. The late Mr. Empson, when Professor of Law in Haileybury College, was examined before the Select Committee of Parliament in 1832, and stated that "there certainly has been felt to be in the College a moral obligation on the part of the professors to send out young men who are not qualified to go. I have, unfortunately, much to my suffering, acted upon it. Young men, imperfectly qualified, go out, and remonstrances come from India, that the College does not answer its purpose." How does this occur? From the circumstance that all youths who are nominated to the College have a right to be passed after a residence of two, and, at the most, of three years, however obtuse or uninformed. It is to this favoured class that all the lucrative appointments are given, from which the natives are excluded. These grievances are specially felt in the judicial departments, where causes are decided by men utterly ignorant of the language of the witnesses, and where the effect of oral evidence, as tested in a tribunal in this country, is almost nugatory, since it must be communicated to the judge through a translation, and thus loses its saliency and point.

Such is a rapid outline of the machinery of the Government by which our Eastern empire is administered at home and in India, and, if a fair estimate be made of its merits and demerits, it must be conceded that more extensive reforms are needed than those which are now under the discussion of the Legislature.

The true extent of the capabilities of India are unknown to the people of England; and those best acquainted with them declare that we have only yet scratched the surface of its industrial wealth. It is, apparently, an inexhaustible mine of treasure. We gained it by the sword; we can only retain it by justice.

CONSTANTINOPLE.—BOUYOUK-DERE.

THE portion of the environs of Constantinople pictured on the preceding page, is at this moment a locality of unusual interest, for here and at Therapia are the summer residences of most of the Ambassadors. The traveller who enters the Bosphorus from the Black Sea, after passing four white castles or batteries, shining on either side in deep contrast with the green hills, and deeper hued cypresses above and around them, arrives at the Bouyouk Déré, or Bujukdereh (the great valley), as the Turks call this splendid spot. Here stands the palace of the Russian Embassy, to which spot the thoughts of the Turkish population of Constantinople revert sometimes with fear and misgivings, and at other times with deep indignation. In the centre of the View is the celebrated Mosque built by the late Sultan Mahmoud. A battery extends along the water's edge in front of the Mosque. The building on an eminence to the left is the residence of the Russian Ambassador. It occupies the most commanding situation in the city, and can be seen from the waters of the Bosphorus on all sides

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The excursion of the Emperor and Empress to the Eaux-Bonnes and the Pyrenees, is definitively abandoned for the present. Two causes are stated as leading to this decision—the one political, it being suspected that the attitude that Russia is disposed to take is less favourable to a pacific conclusion than the accounts of the last fortnight or three weeks promised; the other personal, relating to the supposed condition of the Empress: but which of these be the real reason, or if both combine, we cannot positively ascertain. It appears that her Majesty purposes, shortly, going to Trianon, which is to be prepared as one of her summer residences, and where she intends passing much of the remainder of the season.

It is said that the Queen Marie Christina purposes going to Claremont to visit the Queen Marie Amélie. All the boxes of the Court at the different theatres have been placed at her disposal, and she has, on several occasions appeared in them. She receives all the members of the *Corps Diplomatique* at the Malmaison, where the Princess Mathilde has been to visit her; but the *ex-roi* Jerome and the Prince Napoleon have hitherto abstained from going to offer their *hommages*, to avoid giving countenance to the report of the marriage between the latter and the daughter of the Queen.

The *roi* Jerome, who purposed passing, as usual, a portion of the season at the *établissement des bains* of Frascati, at Havre, has countermanded the preparations made for the excursion, and goes instead to the Château de Meudon, in the neighbourhood of Paris, which residence has been lent him for the season by Louis Napoleon.

Already are the preparations for the 15th of August commencing in the Place de la Concorde, which, with the grand avenue of the Champs Elysées, the Arc de Triomphe, and the *quais* from the Pont Royal to the Pont de Grenoble, are to be the theatre of the fête. A new mode of illumination, the most magnificent description, invented by M. Alexis Godillot, and approved by M. Achille Fould, Minister of State and M. Visconte, architect of the Imperial Household, is, we are told, to be adopted for the Arc de Triomphe, on this occasion.

A project is said to be entertained for the erection of a new Opera House, on a scale and with improvements and inventions such as no Opera, or any other house, assuredly has yet displayed. The building in question is to be constructed on the ground now occupied by the Ministère des Affaires Etrangères; the entrance on the Boulevard des Capucines. The *salle*, by some arrangement, the secret of which has not been confided to us, is to be *elastic*; that is to say, capable of being enlarged or diminished at will; the boxes are to be furnished each with a *salon* and a balcony, opening on gardens filled with flowers. Such is the plan proposed for this tenth wonder of the world. It is not yet settled, so the report affirms, whether this gigantic project is to be accomplished by the State at its own risk, or by a company, to which the Government accords the concession.

The Variétés is most actively engaged in preparing for representation "Les Trois Sultanes," the long-expected piece in which Mdmes. Ugalde, Arène, and Deinschnux, are to take the parts of the heroines. M. Jules Sandeau is preparing a rival and successor for Mdlle. de la Seiglière; M. Paul Foucher, the piece we spoke of some months since, on the subject of Mdlle. Aissé; and M. Scribe is also occupied on a new work.

Algeria, resolved not to be behind-hand in civilisation, has completed a magnificent theatre, and an excellent operatic *troupe* has just left Paris, under the management of M. Duprat, to open the scene there.

We hear from Paris that a communication has been made by the French Government to the British Cabinet, inviting it to join in taking steps of a decided character in case the Russian Government do not evacuate the Ottoman territory. It is distinctly perceived by the French Government that the Russians have an immense interest in gaining time, so long as they are actually in occupation of the much-coveted Principalities. The period of the year is approaching when the French and English fleets will have to abandon their anchorage in Besika Bay, and when operations in the Black Sea on the part of the combined fleets will be impossible.

It was reported on Wednesday on the Paris Bourse that the English steamer *Cavadac*, which arrived on that morning at Marseilles from Constantinople, brought intelligence that the Sultan had accepted the propositions of the Ambassadors, and that the Eastern question might be regarded as settled. This announcement produced a general rise. The Three per Cents opened at 78f. 40c., and advanced to 78f. 70c., at which they closed for the end of the month. The Four-and-a-Half per Cents closed at 109f. 40c.

The Court of Cassation on Saturday pronounced judgment upon the appeal of Count Alfred de Césiloguen, Dr. Flandin, and MM. Virmaitre and Planhol, four of the "foreign correspondents," against the decision of the Tribunal of the First Instance, confirmed by the Imperial Court, convicting them of sedition upon evidence obtained by breaking open letters confided to the Post-office. The venerable judges of the tribunal of the last resort have quashed the conviction as illegal. It is now, therefore, decided by the highest judicial authority in France, that no authority whatsoever has the right to violate the sanctity of the Post-office upon mere suspicion, and that the Prefect of Police especially has not, under any circumstances, the right to break open letters. The judgment orders the fines paid by the prisoners to be returned to them. The result of this trial has agreeably disappointed public expectation. It is the most cheering symptom of a return to regular and legal government that has been seen since December 2, 1851.

The *Gazette de Languedoc* has received a second warning, for having, in the form of an article addressed to "Monseigneur le Comte de Chambord," published a manifesto professing to declare, in the name of a collective number of individuals, that they look to the Count de Chambord as the saviour of France.

ITALY

There is considerable agitation in the Roman States, in consequence of the fear of a famine. There has been a short wheat harvest in Tuscany; and accounts from Ravenna, in the Roman States, state that the scarcity has engendered a bad spirit in the population. The municipality of Faenza has resigned *en masse*; that of Imola threatens to follow the example. The people will not allow corn to be removed. The pro-Legate of Bologna has forbidden the exportation of corn.

The Austrian police are said to be on the track of a projected insurrection in Central Italy. The mission of Count Rechburg in Lombardy is acknowledged to have completely failed, and the Austrian authorities are again executing the decreed confiscation with rigour.

The Grand Duke of Tuscany has commuted the sentence of M. Guerazzi and the ex-Ministers, his companions, to perpetual exile. M. Guerazzi has accepted the commutation of his sentence, and is about to leave Tuscany, it is said, for the United States.

AUSTRIA.

We hear from Vienna that a conspiracy has been brought to light; 47 persons, some of them students, have been arrested

The Government has published a decree, prohibiting Austrian labourers going into Switzerland. Nevertheless, it is thought that the differences between Austria and Switzerland will soon find a satisfactory settlement; some persons even mention the conditions of the proposed arrangement. They are to the following effect:—Austria insists on the expulsion of the refugees, and demands a pension for the 22 Lombard Capuchins

The education question is warmly discussed in Austria. The Minister, Count Thun, is reaping the fruit of his want of foresight in entirely emancipating the Catholic Church To reward him for his complaisance, the Ultramontane party is now doing all in its power to overthrow his new educational system, and to return to that which prevailed before the year 1848

Advices from Smyrna state that M. Kosta is still in safe custody in the French naval hospital there. The Austrian frigates *Novarra* and *Bellona* having arrived at Smyrna, the American sloop of-war *St. Louis* immediately left the harbour.

The American Chargé d'Affaires at Constantinople has demanded the liberation of M. Kosta, which the Austrian Minister at Constantinople has curtly refused.

THE TURKISH QUESTION.

A telegraphic despatch, dated Constantinople, July 18, states that conferences have taken place between the Ambassadors, of a character which promises a speedy settlement of the dispute between Russia and Turkey. A later despatch, of the 20th, from Constantinople states that the concessions made by the Porte to Russia, under the advice of the Ambassadors of the other great powers, were of such a nature, that the question was considered as all but terminated. A note has been transmitted to St. Petersburg embodying these concessions, which are however accompanied with the condition that the Danubian Principalities shall be immediately evacuated by the Russian army Unless Russia accepts this condition, it is believed that the English and French fleets will enter the Dardanelles. It is considered probable that Russia, to gain time, will temporise and protract the negotiations by demanding that her right shall be admitted to retain possession of the provinces until Turkey shall have reimbursed Russia all the expenses she has been put to in consequence of the occupation, and that the complete settlement of the question will be delayed in consequence of the necessity of referring from one distant capital to the other.

It is stated that the Emperor of Russia has refused to recognise the interference of France and England, and insists upon communicating directly with the Porte. The Emperor has, however, accepted the mediation of Austria, and it is current report that to the Austrian internuncio at the Porte (M. Bruck) belongs the honour of originating the propositions which are supported by France, England, and Prussia, and acquiesced in by the Porte. A day or two must necessarily elapse before we can receive definite information of the Czar's decision upon them. That decision, the *Morning Post* declares, will be regarded as constituting the test of Russian sincerity in professing to desire peace, and in abandoning intentions of permanently occupying the Principalities. An attempt to protract negotiations will be taken as the sign of an intention to out-manœuvre the Allied Powers by holding the Danubian provinces till the setting-in of winter prevents maritime reprisals; and, in such case, will be the signal for a "terrible" interposition. This semi official article, however, concludes, as it commences, with professions of belief that the difficulty is at an end

From the advices from Constantinople allude to the activity of negotiations and the frequent conferences between the Turkish Ministers and the European Ambassadors. Turkish fanaticism is still excited in various parts of the empire, but it has been limited to partial squabbles which excite no importance The Turkish forces are being concentrated at Shumla and they are engaged in fortifying Pravadi, a town between Shumla and Varna. Instructions have been sent to Omar Pacha, ordering him to destroy the bridges over the Danube. That General is said to have written, that if he does not cross the Danube his troops will dose with cholera. In Asia three points of rendezvous have been selected. At Batoum 15,000 men are stationed, at Trebisonde the same number, and at Erzeroum 40,000

Moldavia and Wallachia bear witness to the complete supremacy which the Russians have assumed in the Principalities. The native authorities in the two provinces still carry on the public business by order of the Russians, but they cannot be considered free agents. As to the Hospodars, they appear resigned to their fate, and to fancy that the moment has at length arrived when they are to change their Russian troops still continue to march into the provinces, and about 25,000 men are now distributed in the two Principalities. On the 10th a considerable park of artillery and a pontoon corps left Jassy for the south. On the 13th, Prince Gortschakoff went to Tekush, on the Sereth; but it was expected that his head-quarters would in a few days be removed to Bucharest, which city the vanguard only reached in the afternoon of the 16th. All fear to prevent there is no Russian garrison in Jassy, the troops being encamped outside the city. The Moldavians are of opinion that the present energetic and evidently long prepared concentration of the Russian military power is more than a simple demonstration; and that, consequently, even if satisfaction is formally given, the invading army will not soon repass the Pruth.

Letters from Odessa of the 14th announce that new regiments of the Russian army continue to arrive at Bessarabia and in the Crimea, where there is an intention of forming a camp. The diplomatic agency has been attached to the head-quarters of the expeditionary army.

PROTEST OF THE SUBLIME PORTE

The Sublime Porte has protested against the occupation of the Principalities by Russia. We select some of the most important passages:—

The Sublime Porte has just learnt officially that the Russian army has passed the Pruth, and that it has entered Moldavia, with the intention of likewise occupying Wallachia. This movement, made without its concurrence, upon an integral part of its empire, has necessarily caused it no much pain as surprise. It is painful to it to see the inhabitants of its loyal and tranquil provinces exposed to all the chances of military occupation. It is difficult for it to reconcile such an aggression with the pacific declarations and friendly assurances which the Cabinet of St. Petersburg has so often reiterated. It is still more difficult for it not to be astonished at an operation which strikes at the principles established by the Treaty of 1841. * * * * * * *

It is moved by the official communications [illegible] Sublime Porte has made to the Great Powers, that she does not hesitate to give sufficient assurances, capable to dispel the doubts [illegible] have led to the dissensions relative to the rights, to the spiritual privileges, and to the other immunities which thereunto belong, and in the possession of which the Greek Churches and the Greek priests are placed by his Majesty the Sultan. Far from thinking of withdrawing any part whatever of these privileges, or even of restricting their enjoyment consecrated by use, his Imperial Majesty glories himself in confirm ng them publicly, and, faithful to the maxims of justice and clemency, places them in a position of safety from all prejudice by means of a solemn act confirmed by his hatti-cherif.

* * * * * * *

If the Court of Russia persists in founding the demand to consecrate, by a document obligatory towards the Porte, the privileges of which it is question on the treaty of Kainardjé, it must be observed that the promise contained in the first part of Art. 7 of that treaty, relative to the protection of the Christian religion and its churches, is as general as any and that degree of importance attributed to it by Russia can scarcely be founded in it, still less especially in favour of the Greek religion.

However this may be, if the Sublime Porte cannot, to protect the Christian religion and churches, it is then only that it would be time to remind it of its promise by quoting that treaty, and it is no less clear that this new proposition cannot be founded upon that treaty, inasmuch as the privileges and immunities of the Greek religion have been granted (octroyé) by the Sublime Porte without the demand or intervention of any one whomsoever It is, in fact, a point of honour for it to maintain them at present and in the future, and a duty imposed upon it by its system, full of solicitude for its subjects. The firmans which have recently been promulgated, and which confirm the privileges and immunities of all religions, publicly testify to the firm intentions of the Sublime Porte in this respect, in such manner that without the slightest doubt a foreign intervention is not at all required for the purpose. Only, whereas the Court of Russia, what-

ever may be the motive, has conceived suspicions with regard to those religious privileges, and as the Greek religion is that of the august Emperor, and of a great portion of his subjects, the Sublime Porte, moved by these considerations, and also from deference to the amicable re asons which still exist between the two Powers, does not retire before the resolution of giving sufficient assurances to his subjects. But, if a Government contracts, on the rights and privileges which from its own movement it has accorded to the churches and priests of a nation of so many millions of souls submitted to its authority, exclusive obligations with another Government, it would be to share its authority with that Government; it would be nothing less than the annihilation of its own independence.

The treaties concluded between the Sublime Porte and the Court of Russia, concerning the two principalities, do not authorise in any manner the sending of troops by Russia into these two countries; and the article relating thereto, which is in the Sened of Ittefa Limani, is subordinate to the cases of the breaking out of internal disturbances; which is by no means the case in the present instance

The fact is that the aggressive proceeding on the part of Russia cannot in principle be considered in any other light than a declaration of war, giving to the Sublime Porte the incontestable right of employing military force in return. But the Sublime Porte is far from wishing to push its rights to the extreme. Strong in the justice which regulates its policy towards the Powers, it prefers reserving them in the expression of its spontaneous return of Russia to a line of action more conformable to its declarations.

It is with a view to remove every obstacle to that return that it declares that the powers that signed the treaty of 1841 would not give their consent to such an aggression, it has given them an explanation of the circumstances, and meantime maintains an armed attitude for its defence

"In conclusion, it repeats that his Majesty the Sultan is always desirous of meeting any founded reclamation of the Court of Russia, of which he has already given proof more than once, and is ready to redress any grievance concerning the religious affairs of which his Greek subjects might have cause to complain; that that reparation has been made as regards the Holy Places; that that question has been solved to the satisfaction of Russia, and that the Sublime Porte does not hesitate to offer more explicit assurances to confirm the arrangement which has been made to the satisfaction of all parties.

"Constantinople 2 (14 July), 1853 (8 Cherval, 1269)."

AMERICA.

The steamer *Lady Eglinton* arrived at Liverpool on Thursday morning in eleven days from Quebec, with telegraphic accounts from New York to the 16th instant.

The New York Crystal Palace was opened on Thursday, the 14th instant, in presence of an immense assembly. The President and Gen. Scott were present.

Mr. Buchanan has accepted the appointment of Minister to London.

The Canadian Parliament, before their adjournment, did a good session's work. The following is a summary of the acts passed:—

A decimal currency has been established. The grand trunk railway has been organised. Four hundred miles of the road will probably be finished before the 1st of January. An Ocean Steam Navigation Company has been incorporated, and the two pioneer vessels have already made the voyage. An increase in the representation of the province from which very salutary results are anticipated—has been carried. A law for Binding the settlement of wild lands has been added to the statute-book. Increased security has been given to municipal debentures in Upper Canada by the Consolidated Loan Fund Act. A measure providing for the better treatment of lunatics has been adopted. All religious sects have been placed on a footing of equality as regards the celebration of marriage. The Legislative Council, as at present constituted, has been formally condemned, and the way paved for an elective Senate

A Canadian Protestant deputation lately waited on Lord Elgin, with a petition couched in strong language, claiming the protection of the Government against such outrages as that upon Gavazzi; and received a reply in which his Excellency observed, that "in view of the scenes which lately occurred at Chalmer's Church, it was doubtful whether Jacques Cartier, could be again visit Quebec, would think that the country had benefited by the expulsion of the Iroquois and the introduction of the Irish."

The intercourse between Germany and the United States is rapidly extending. Two additional mail steam packets are about to run between Bremen and New York, in conjunction with the steamers *Washington* and *Hermann*. For years past the German emigration to the United States has been going on, and is even more remarkable than Irish emigration to the same country. Once a month the United States mail steamers convey from 300 to 400 passengers, and thousands of well-to-do Germans have, within the last few years, been carried to the great Western Republic.

INDIA AND CHINA.

The following telegraphic despatch has been received from Trieste, where the steamer *Bombay* arrived on the 26th of July, at two p.m., the receipt of 111 hours from Alexandria:—

The Indian mail has arrived at Alexandria with dates from Rangoon to the 4th of June, Calcutta to the 16th of June, Bombay to the 20th of June, and Hong Kong to the 7th of June.

From Burmah the intelligence is that no advance is to be made on Ava unless our troops or civil servants are molested; and our present position there is to be maintained. Many officers have died.

Trade in India is dull, owing to the season of the year Exchange at Calcutta on London, 2 1/4.

The barque *Lauriston*, on her passage from Shanghai to Hong-Kong, struck on Turnabout Island, and was totally lost. The crew and passengers were all saved.

PROVINCIAL INTELLIGENCE.

THE QUEEN'S VISIT TO HULL.—Her Majesty's promised visit continues to be the general topic of conversation in most circles, and curiosity is naturally desirous of knowing when she will arrive. We cannot at present relieve this popular anxiety, as nothing at all definite is yet known. As a matter of course all sorts of capricious rumours have been afloat, but no reliance can be placed on any report until her Majesty's determination has been official y announced.—*Hull Packet.*

A MIDLAND CRYSTAL PALACE.—A project, originating with Mr. Samuel Beale, deputy chairman of the Midland Railway Company, has been started, with the intent of erecting, in Sutton Coldfield Park, a public edifice, after the plan and for similar purposes as those of the new Crystal Palace at Sydenham, and, moreover, there appears to be every probability of its success. It is proposed that the corporation of Sutton should convey, as a nominal rental, for 999 years, 200 acres of land, the same being a beautiful tract of several thousands, on the condition that the corporation of Birmingham should erect an ample and magnificent building for the reception, accommodation, and amusement of the people of Birmingham and the surrounding districts, and as a repository for the exhibition of specimens of the manufactures and artistic works of the midland counties; the property to be vested in the corporation of Birmingham, the inhabitants of Sutton enjoying the same privileges as those of Birmingham. A deputation was appointed to confer with the inhabitants of Sutton, and to put the matter clearly and definitively before the corporation of that town and the public generally.

QUEEN'S COLLEGE, BIRMINGHAM.—The Court of Directors of the East India Company have most liberally transmitted to the College a collection of the specimens of the raw products of India in aid of the public museum for the promotion of scientific and industrial researches. The following donations have been recently presented to the fund for the purchase of philosophical apparatus for the use of the institution:—The Earl of Craven, £10; Lord Ashburton, £10; Lord Overstone, £10; Charles Geach, Esq., M.P., £10; the Rev. Dr. Warneford, £21; Mr. James Griffin, Athol House, £20; Mr. Samuel Haines, Chad House, £5.

AUSTRALIAN EMIGRATION.—Six vessels have taken their departure from Liverpool for the Australian colonies during the week. On Saturday the *Goldfinder* and the *Tasmania* cleared out—the former with 376, and the latter with 440 passengers. The *Tasmania* will be succeeded by the *Ascot*, a new vessel. She is now on view at the Salthouse Dock. There are now three ships loading at Liverpool for Adelaide, of an aggregate tonnage of 1502; seventeen for Melbourne, 9888 tons; one for Moreton Bay, 1369 tons; one for Port Phillip, 1040 tons; and six for Sydney, of an aggregate tonnage of 3 9.

DEVONSHIRE.—CURIOUS DISCOVERY.—A singular discovery of the ruins of an old house took place last week at Rilla Wood, in the parish of Buckfastleigh. A party of miners driving an adit in the side of the hill, came against the solid masonry of a house. It is several feet under the surface, on which trees are growing. They are excavating around the walls to ascertain the size of the building. It is about a mile from the old Cistercian Abbey at Buckfastleigh.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Municipal Corporations Act Amendment Bill passed through committee

The following bills were read a second time, viz:—The Resident Magistrates (Ireland) Bill; the Turnpike Trusts Arrangement Bill; the Sheep, &c., Contagious Diseases Prevention Bill; and the Public Libraries (Ireland and Scotland) Bill.

The Registration of Meetings Bill, and the Stamp Duties Bill were severally passed through committee.

The Customs Duties Bill, and the Dublin Parliamentary Registration Bill, were severally read a third time and passed.

The Burgh Harbours (Scotland) Bill, the Elections Bill, and the Sheriff Courts (Scotland) Bill, were severally read a second time.

HOUSE OF COMMONS.—FRIDAY.

The House met at twelve o'clock.

SOUTH SEA STOCKS, &c., COMMUTATION ACT.

The CHANCELLOR of the EXCHEQUER replied to the speeches of Mr. Disraeli and Sir F. Kelly, made on the previous day; denying that there was any intention to offer to the holders of South Sea Stock any better terms than those which they had already declined, or that he desired to have granted to him the unlimited power to negotiate with them. The whole scope of the resolutions was nothing more than a new offer to those holders of Stock who were by law disqualified from accepting the option last offered to the other holders of Stock by the act of this session, of the same identical terms which those others had thought proper to decline. He admitted that he was disappointed in the amount of Stock commuted under the act of this session; but he attributed the want of success in a great measure to the delays interposed in carrying his measure through the House. That it was a total failure he denied; for, although it had not been carried to the full extent he had anticipated, yet as far as it had gone, it had commuted a certain amount of those stocks with a positive advantage to the national exchequer.

SIR F. KELLY hoped that the bill to be founded on those resolutions would contain a clause restraining trustees from commuting trust property without the concurrence of the parties beneficially interested.

Mr. J. B SMITH opposed the course proposed by the Chancellor of the Exchequer

After some discussion, Mr. DISRAELI protested against the conclusion that the failure of the right hon gentleman's scheme was to be attributed either to the state of the weather or the state of the Continent, for it was condemned *ab initio* by all all those who were most conversant with the subject. He was decidedly opposed to the resolutions.

The committee then divided, and the second resolution was carried by a majority of 117 to 1:

The third resolution was then agreed to, and the House resumed. The report was ordered to be brought up on Monday.

ASSESSED TAXES BILL.

The House then went into committee upon the Assessed Taxes Bill, for the purpose of introducing some amendments which had been proposed by various hon. members, and which the Chancellor of the Exchequer had agreed to

The bill passed through committee; and the House resumed.

The Stamp Duties Bill was read a third time and passed

At the evening sitting, Lord J. RUSSELL, on moving the adjournment of the House until Monday, said that he would on that day state the proposal of the Government in regard to Jamaica.

Mr J. SHELLEY intimated his intention of abandoning his motion for the prosecution of Mr. Mure, the late member for Plymouth, for bribery.

THE CASE OF PHILLIPS, THE CABMAN

In reply to Lord D. Stuart, Lord PALMERSTON justified the decision of Mr. Henry, the magistrate at Bow-street, in the case of the cabman Phillips, who had been committed to prison, not because he had not the money for the measurement of the ground, but because he objected to the measurement altogether. He (Lord Palmerston) had looked at the map, and he thought that the charge made by the cab-driver was too high.

In reply to Mr Bowyer, Lord J. RUSSELL said that it was not the intention of the Government to introduce any measure for the regulation of hackney cab fares.

Thomas Towler, a witness before the Clitheroe Election Committee, was committed to the custody of the Sergeant-at-Arms for wilful prevarication.

INDIA BILL.

The House then proceeded to the consideration of the amendments of various hon. members, upon the third reading of the Government of India Bill.

EAST INDIA HOUSE.—A Special General Court was held yesterday, in the Court-house, for the purpose of further considering the bill now before Parliament, entitled "a Bill to provide for the Government of India." Richard Bilton Reed, Esq., the chairman, briefly stated the resolutions which the Directors had agreed to, and which would be submitted for the approval of the General Court. They were that the Court thought it inexpedient to offer any further opposed on to the bill before Parliament, although they regretted that the objections to its details, by the Court had not been met with proper consideration. The fact that the powers of the Board, in their control in the management of the affairs of India, were substantially unchanged. If the Upper House came to the same view as that of the Lower House, the Court felt it would be their duty to defer to the pleasure of Parliament, at the same time pledging themselves to use their best endeavours for the interests of the proprietary. The chairman then moved that the resolutions be agreed to. Mr. Stewart Mackenzie thought it would be desirable that the Court should adjourn until Wednesday next; which was seconded by Sir E. Colebrooke. Mr. Alderman Salomons addressed the Court at some length, and made some severe remarks upon the conduct of the Directors. After a protracted discussion, the adjournment was agreed to; and the Court adjourned until Wednesday

CLITHEROE.—The committee have decided that Mr. Aspinall was not duly elected for this borough—bribery and treating having taken place by his agents.

CANADA.—The Chief Justice of Canada, Sir James Stuart, died at Quebec on the 16th inst. Amongst those named as his successors are Mr. Justice Rolland, the Hon. Henry Black, and the Hon. Hyppolite Lafontaine

THE SOUTHAMPTON MAIL PACKETS.—The Peninsular and Oriental Company's steam ship *Iberia* left on Thursday with her mail for Peninsula, Malta. She took with her £4000 in specie for Lisbon, about thirty passengers, amongst whom were Admiral Quesada and Assistant Commissioner General Dalrymple), and a general cargo

ST. PAUL'S SCHOOL.—At a Court of the Mercers' Company, held on Thursday, M. Dellie was appointed French master to St. Paul's School

We have to announce the death of Lieutenant-General Sir William Ware, C.B., Colonel of the 94th Regiment. Sir William entered the army in 1809, and served in the Peninsula from 1808 to 1813. By his death the Colonelcy of the 94th is placed at Lord Hardinge's disposal.

MEETING OF CABMEN AND PROPRIETORS.—On Friday a general meeting was held at the Cranborne Hotel, for the purpose of taking into consideration their present position. Mr. Colter presided, and explained at considerable length the operations of Thursday. He congratulated the meeting upon the concessions made by the House of Commons the preceding night; they were of a very encouraging character, and led to the belief that more would be granted now that so much inconvenience was felt by the public. Several persons subsequently addressed the meeting, but nothing was added to the arguments advanced on form er occasions. A subscription was entered into to render assistance to the men at present out of employment.

FIRST DIVISION IN THE CAB STRIKE.—On Friday the United Committees of the Hackney Cab Proprietors, after a very long discussion, decided upon the important question as to whether they should return or not to-day (Saturday); a majority appearing in favour of *not returning*. The proposition of bring ng out the cabs was supported by the original committee; but they were beaten by the committee appointed at the meeting which took place at the National Hall.

METROPOLITAN AND CITY POLICE.—On Thursday a memorial was presented to Sir Richard Mayne, in Scotland yard, from the constables of the D division, and also from the T division, requesting an increase of pay on account of the dearness of provisions. The committee of the City police had a meeting on the same day, for the purpose of adopting a petition to obtain an increase of pay. After some discussion, it was determined to present the petition to the Chief Commissioner, D. W. Harvey, Esq., and a committee was appointed for that purpose.

FATAL ACCIDENT ON THE BLACKWALL RAILWAY.—The North London train, on passing through the Minories portion of the Blackwall Railway on Thursday afternoon, got partly off the rails, and three platelayers, who had been working at the spot, and who were standing against the parapet wall to let the train pass, were unfortunately thrown under the engine, and two of them killed. The third escaped with some bruises. None of the passengers received any injury.

FOREIGN.

FRANCE.—An official gentleman in Paris has received a letter from Bucharest. It says:—"We have not less than 75,000 Russians close to the town. They are fine-looking fellows, but we should wish to see their backs turned towards us."

The Funds were very heavy on Thursday, but with very little variation on the prices of Wednesday.

SPAIN.—The Cabinet has adopted, and the Queen approved, the resolution that the railroads already sanctioned by her Majesty shall be forthwith constructed. The Northern line has been begun, and the works are being carried on with great activity.

TURKEY.—On the 16th the fleets of Great Britain and France remained in Besika Bay. Admiral Hamelin has arrived on board the *Pluton*, and taken command of the French fleet. The latest accounts from Constantinople state that the armaments continued with the same activity. The contingents of Tunis and Tripoli, calculated at 20,000 men were expected. Abbas Pacha had placed at the disposal of the Sultan fourteen ships of war, 15,000 men, and a sum amounting to 25,000,000 of piastres.

A letter from Smyrna of the 18th says, that "the arrest of a Hungarian refugee at Beyrout, which took place recently, nearly gave rise to events as deplorable as those of Smyrna. The refugee, his wife, and his children, embarked on board the Austrian steamer the *Lloyd's*. The Captain immediately signified that he had arrested him and would convey him to Trieste. The Hungarian protested; and then appearing to submit, he withdrew to a corner, and waiting until he saw that he was not watched, threw himself into the sea. A boatman picked him up and conveyed him to the Consulate of the United States. There proving by his passport that he was entitled to American protection, he was received. Thanks to the energy of the American consul, the wife and children of the Hungarian, whom the captain wished to keep on board, were restored to liberty, and arrived at Smyrna yesterday (by the French steamer."

THE INDIA MAIL.—MARSEILLES, 27th inst.—The *Valetta* arrived here at four o'clock, p.m., in forty-seven hours.

THE CAPE OF GOOD HOPE.—PLYMOUTH, Friday.—The General Screw Shipping Company's packet *Queen of the South* arrived this morning. The Constitution, with one or two exceptions, had been received at the Cape with every expression of gratitude, and General Cathcart and Lieutenant-Governor Darling are restoring order on the borders, and promoting content within the colony.

Wool was being brought in to Port Elizabeth in larger quantities than ever before observed. The *Calcutta*, due at the Cape on the 18th June, was not there on the 21st. There was no intelligence at the Cape of the *Argo*, from Southampton; the *Antelope*, from Liverpool; or the *Adelaide*, from the Australian colonies, with gold dust valued at £ 0,000.

THE GREAT LONDON SUMMER POULTRY SHOW.

THE private view of the London Summer Poultry Show took place at the Bazaar, King-street, Portman-square, on Tuesday evening, previous to its opening to the public on Wednesday. The central portion of the building, which is so well known to the public in connection with the Smithfield Cattle Show, is divided into three avenues, and they are chiefly occupied by the Cochin-China, Spanish, and Dorking classes. The former class consists chiefly of chickens of the present year, and they are pronounced by the judges to be the most magnificent specimens, for their ages, that have ever been exhibited. There is, however, a class of birds which fair to outvie even the Cochin-China breed. They are a pen of Brama Pootra fowls, aged only eighteen months, which, not only with regard to the superior quality of their flesh, but from the quantity of meat they possess on the breast, are considered superior to the Cochin-China. The cock in this pen weighs 10½ lbs., although only eighteen months old; and the average weight, when in their prime, is from 12½lbs to 15 lbs. Captain Hornby, R.N., has carned off most of the prizes in the Spanish and Dorking classes. The most extraordinary prohibitory prices are appended to some of the specimens. In one instance, the owner of a pen of Cochin Chinas has the modesty to ask the enormous sum of £1000 for his specimens. Captain Hornby, R.N., on all his pens, has the sum of £500 appended, while £200 and £100, is a common sum demanded. In the geese and duck classes there are some most extraordinary specimens. The following is the list of the principal prizes:—

SPANISH FOWLS.—Class 1. Captain Hornby, R.N., first and second prize; J. W. Tomkins, jun., Esq., Captain Hornby, R.N., first and second prize; J. W. Tomkins, jun., Esq. Class 2. J. G. Ramsden, first prize; Captain Hornby, second and third prize. Class 3. Captain Hornby, R.N., first prize; Mrs. T. T. Parker, second ditto. Class 7. Joseph Jennens, first prize; Mrs. Mills, second ditto; John Fairlie, third do. Class 8. Daniel Anull, first prize; Miss Wilcox, second do.; John Fairlie, third do.

COCHIN-CHINA. Class 9. T. H. Potts, first prize; Lord Berwick, second do.; Charles Punchard, third do. Class 10. Lord Berwick, first prize. H. M Sparham, second do.; Henry Gittus, third do. Class 11. Charles Punchard, first prize; John Fairlie, second do. Class 12. W. B Mapplebeck, first prize; Charles Punchard, second do. Class 13. John Harrison, jun., first prize; Charles Punchard, second do.; John Fairlie, third do. The prizes in other classes were awarded to Mr. Adkins, Mrs. Herbert, Capt. Hornby, and other amateurs.

Mr G. C. Adkins, of Edgbaston, near Birmingham, was successful in carrying off the champion Prize Cup; and Mr. Castany, of Leadenhall-market, the prize awarded to dealers.

Wednesday was the first day on which the Exhibition was thrown open to the public. The attendance was rather limited a fact which was attributed, in a great measure, to the combined movement, or, rather, non-movements, of all the cab-proprietors and drivers of cabs. Among the company we saw Lord Ranelagh, the Lord Bishop of Sodor and Man, &c.

Taking the collection as a whole, it is much more varied and numerous than its predecessor

We observed many persons previously noting down the numbers of lots preparatory to the sale of prize and commended birds, which took place on Thursday, and we are glad to find that the attempt to establish a Poultry Show annually has been so successful. Much credit is due to the committee and the secretary, for the arrangements which they have made.

BETTING-HOUSES BILL.—The bill for the suppression of betting-houses has been published. It provides that no house, &c., shall be kept for the purpose of the owner or occupier betting with any person visiting there, or declared to be gaming houses within 8 and 9 Vict., c. 109. The penalty for keeping or assisting in keeping such a place is £100, or committal to the common jail for six months, with or without hard labour. The penalty for persons receiving money on condition of paying money on event of any bet shall be £50, or imprisonment with or without hard labour for three months. Money so received shall be recoverable from the party receiving it. The fine is not to extend to stakes due to owner of horse winning a race. Persons exhibiting placards, or advertising betting-houses, are to be subjected to a penalty of £20, or imprisonment with or without hard labour for two months. Penalties and costs to be levied by distress. One half of each penalty to be paid to the informer, and the other to go to the use of the parish. Persons convicted of keeping betting-houses may be suspected betting-houses. Commissioners of police may authorise superintendents of police to enter and search suspected houses. An appeal is given to Quarter Sessions. The provisions of the bill extend to the United Kingdom.

IRISH RAILWAY TRAFFIC.—The number of visitors flocking to Dublin to witness the Exhibition, is telling most favourably on the traffic returns of all the principal lines of railway. The Great Southern and Western receipts for the past week, as compared with the like period of 1852, show an improvement of £1100; on the Midland Great Western, the increase is £650; on the Dublin and Belfast Junction, £500; on the Dublin and Drogheda, £600; and on the Dublin and Kingstown, £500.

FRIENDLY SOCIETIES.—A bill to amend the laws relating to Friendly Societies, brought in by Mr. Wilson and Mr. Fitzroy, has been printed. It provides that Friendly Societies may invest their funds otherwise than as required by 15th and 16th Vic., c. 115. Societies availing themselves of this provision are not to invest any further portion of their funds with the Commissioners for the Reduction of the National Debt. Societies not already having an account with the Commissioners, after passing of the act are not to invest funds with Commissioners; but when their assurances do not exceed £200, may deposit all their funds in savings banks.

BRITISH MUSEUM.—A return to the House of Commons has been printed, which gives some facts with reference to the library of the British Museum. The estimated total number of volumes now in the library is 458,110. At the end of 1848 the number was estimated at 438 000 volumes. According to the printed returns, the additions amounted to 58,110 in the next four years, to which must be added parts of volumes, when bound, at 3,000 per annum, amounting in all to 12,000, and 5000 volumes during the current year.

THE LONDON POULTRY-SHOW: PRIZES.

1. MR. THOMAS POTTS'S COCHIN-CHINA. 2. MR. TERRY'S COCHIN-CHINA. 3. MR. FRANK REDMOND'S SILVER-LACED BANTAMS. 4. MR. FOX'S BLACK BANTAMS. 5. MR. RAWSON'S GOLD-LACED BANTAMS. 6. MR. POTTS'S WHITE POLISH FOWLS. 7. MR. ADKINS'S BLACK-BREASTED GAME.

OPENING OF THE NEW BLUE-COAT SCHOOL, AT NOTTINGHAM.

THIS excellent institution, after an existence of a century and a half, has been removed to a new School-house, which was opened, with an interesting ceremony, on the 19th inst. The new premises are built upon the rising ground opposite the top of York-street, and form a very conspicuous object from the Mansfield-road. The building in style is Elizabethan, and consists of school-rooms for the boys and girls, and of a dwelling house for the master and mistress. The portion intended for the School is situate on the Mansfield-road side, and looks down upon a spacious play-ground, which is extended as a sort of basement story under the Schools, and thus provision is made for the recreation of the scholars in wet weather. The Boys' School, which is situate immediately above the covered portion of the play ground, consists of a room forty-two feet long by about twenty feet in width, well lighted, spacious, and handsome. The desks and other furniture are new and massive, and at the same time extremely elegant. On the walls are suspended lists of those charitable individuals who have contributed to the School funds. On the story above the Boys' School is situate that for the girls, 21 feet by 19; the committee, or class room, occupying the remaining portion of the floor. The house is a very convenient one; is three stories high, and contains two sitting-rooms, a commensurate number of bed-rooms; as well as a kitchen, sculleries, &c.

OPENING OF THE NEW BLUE-COAT SCHOOL, AT NOTTINGHAM.

The architect is Mr. T. C. Hine; and the builders, Messrs. Dennett, who appear to have done their work remarkably well. In the gable end, over the entrance into the School, is preserved space for a clock. Higher up is an elegant little belfry. In the turret on the Mansfield-road side, is placed a slab, bearing the following inscription:

Blue-coat Charity School, founded A.D. 1706 by voluntary contributions, and further endowed with lands and tenements by

Charles Harvey	A.D. 1711
Jon Labray	1718
William Thorpe	1720
Gilbert Beresford	1747
Joseph Pecke	1723

was removed A.D. 1853 from the School-house on the High pavement to this building.

Erected A.D. 1853. T. C. Hine, Architect.

In niches in front of the building are statuettes of a boy and girl clad in the school dress, carved from white Caen stone by a mason named Stonehouse. Underneath each figure appears a scroll bearing the appropriate inscription, in old characters, "Excelsior." On the day of the opening of the School, a procession started from the old school-house on the Pavement, through a dense crowd of spectators. The procession was headed by a large banner; and during the latter part of its progress by an excellent band. Then came the children, some bearing flags and banners, while others attended their respective bowers. Of these, upwards of thirty were borne in the pageant; and inside of not a few were deposited busts of the Queen, representations of blue-coat boys in their full dress, &c.; while in those of the girls appeared gaily-dressed dolls. In the construction of the bowers were employed flowers, evergreens, pictures, eggs, gaily-coloured crowns, coronets, balloons, &c. The prevailing colour everywhere was of course *blue*; while, nestled among the flowers and foliage, appeared such inscriptions as "The Bible our Rule of Faith," "God save the Church of England," "Church and State," "God save the Queen." "Success to the Blue coat School," &c. The play-ground had, of course, been suitably prepared for the occasion; flags were suspended from the windows of the School; while festoons of evergreens and flowers completely encircled the square, and surrounded a lofty pole erected in the centre, around which also garlands were wreathed up to the very top. Among the company who in great numbers had assembled to receive the procession, were the Rev. J. W Brooks (Vicar of the parish), Miss Brooks, Mr. J. Hadden, Mr. F. Braithwaite, Mr J. Braithwaite, Mrs. and Miss Braithwaite, Mr. Gimson, Mr. Hawkridge, Mrs. T. Bishop, Mrs. Hannay, Mr. C. Hannay, Mr. T. C. Hine (the architect of the building), Mr. Turner, Mr. W. Goodacre, Mr. T. Cokayne. By the kindness of the trustees, the workhouse children were admitted within the inclosure; while, surrounding it, occupying every position from which a view of the place could be obtained, from the top of the neighbouring factory downwards, was stationed a dense concourse of spectators. After the procession had passed completely round the yard, the children and their attendants halted in front of the School. Mr Brooks then gave out a metrical version of the 116th Psalm, which having been sung by the children, he said a number of appropriate collects. He then proceeded to address them, and, in the name of the trustees, he bade them a hearty welcome to the New School. Mr. Brooks regretted the absence, through illness, of his friend, Mr. Almond, who had so long presided over the affairs of the institution. The inconvenience of the old school-house had been long felt and acknowledged, and it was a great matter of rejoicing to the trustees, as it was also to himself, that they had been enabled to provide so excellent a house as the one they had now assembled to open. Let them give thanks to God for His mercy in sending them funds for the purpose. He was glad to know that they had with the new School a spacious ground for recreation, an advantage wanted and very often lamented in the old school. Mr. Brooks then proceeded to remind them, that although the school they now looked upon was new and possessed of the utmost strength and firmness, the time would come when it would first require repairs, and then would either decay and fall away, or in order to prevent that would have to be taken away. He drew an analogy between this and the earthly tabernacle each of them inhabited, and called to their remembrance the fact that although at present they were young and strong, the time would shortly arrive when this would be the case no longer. He therefore exhorted them to pay the utmost attention to matters calculated to fit them for those eternal habitations to which if faithful they would be called. In conclusion, Mr. Brooks expressed his entire satisfaction and concurrence with the course of study pursued in the School, especially on account of the fact that the Holy Scriptures proved the basis of the whole. He quoted a Prussian authority to show that the substitution of philosophic for religious teaching in that country had been the cause of great injury, not only to the eternal, but also to the temporal interests of the people. He expressed his hope that, in this country, the plans of the secular educationists might never be carried into effect; and he entreated all to pray that the instruction furnished in the new School might, with the blessing of God, make many virtuous citizens, men useful in their generation, and at the same time train them for a blessed eternity. Than this the trustees either in this or coming generations could not have a better reward (Applause). The psalm "Deus Miseretur" was then chanted by the children; after which Mr. Goodacre proposed, and Mr. Cokayne seconded, a vote of thanks to Mr Brooks. Mr Hawkridge, as one of the old scholars, then proposed three cheers for the School, which having been duly responded to, "God save the Queen" was played and sung, and the proceedings terminated. In the evening an excellent tea was provided for the children in the School.

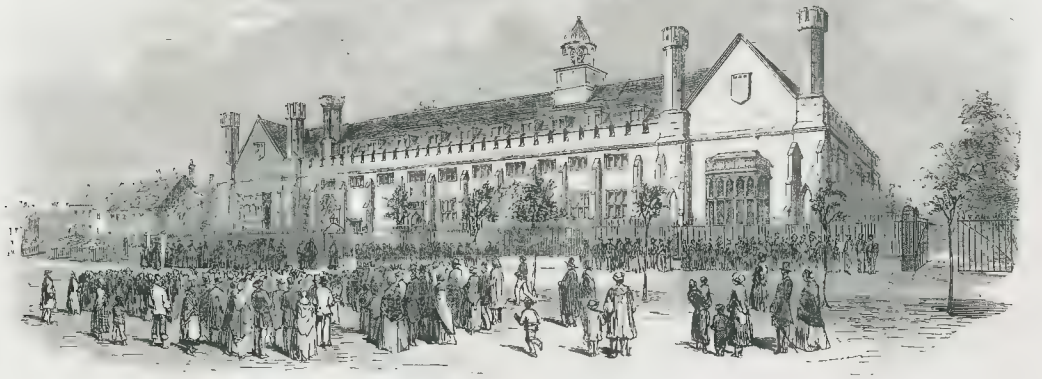
TESTIMONIAL PRESENTED TO THE REV. J. S. WELLDON, D.C.L., HEAD-MASTER OF TONBRIDGE SCHOOL.

TONBRIDGE SCHOOL.—TERCENTENARY COMMEMORATION.

THE Grammar-school, founded by Sir Andrew Judd, at Tonbridge, having extended its sphere of usefulness through three centuries, it was resolved to commemorate the interesting event on Tuesday last with an appropriate ceremony. As a fitting commencement, the pupils of the school presented their highly-respected head master with an elegant piece of plate, bearing the following inscription:—

Presented at the Tercentenary Commemoration, July 26, 1853, to the Rev. J. S. Welldon, D.C.L., Head-master of Tonbridge School, as an acknowledgment of the respect felt for him by those, then under his tuition.

This pleasing tribute is of silver: the base represents a brook, in



THE TONBRIDGE SCHOOL TERCENTENARY COMMEMORATION.

which are water-lilies, very neatly executed; from the centre rises a mound of earthwork, with small creeping plants, and two storks, nicely modeled. From the centre springs a cluster of bulrushes; above which rise a cluster of leaves, whence springs the base for the glass dish, which is formed by wavy bands.

On Tuesday, the Company of Skinners, Governors of Tonbridge School, held their annual visitation at the School-house; and, it being the 300th anniversary from the date of the charter in 1553, it was celebrated with a solemnity worthy of the occasion. A sermon, in commemoration of the foundation, resulting from the benevolence of one of the great merchants of London, citizen and skinner, in the earliest days of the Reformation. The proceedings of the day commenced by the assembling in the School-room of the governors, governor, master, and scholars, as well as a numerous body of old scholars and gentlemen of property and influence in the town and neighbourhood. His Grace the Archbishop of Canterbury participated in the proceedings of the day, accompanying the procession from the School to the parish church, in which the service was performed, and an appropriate sermon was preached by the Primate. At the conclusion of the service, the Clerk of the Skinners' Company rose in the church, and read the will of Sir Andrew Judd, bequeathing an annual sum of money to several parishes in the immediate vicinity, to be expended in providing weekly distributions of bread, and an additional donation of cloth, on the occasion of the annual visitation, to needy householders.

The company, to the number of 200, partook of a déjeûner given by the head-master, the Rev. Dr. Welldon; and then returned to the School-room for the distribution of prizes, when, in addition to the usual recitations, the rev. head-master read a concise history of the masters of the School from its foundation. The scholars availed themselves of the opportunity to present to Dr. Welldon a piece of table-plate—which we have engraved upon the previous page. In the evening the Governors entertained a party of nearly 100 at dinner, in the library of the School; the Master of the Court of Governors, Mr. E. H. Burnell, being in the chair, supported by the Marquis Camden; Mr M. Smith, M.P.; the Rev. Sir C. Hardinge, Bart., Vicar of Tonbridge; and the following distinguished scholars of the School, viz., the Hon. J. Byng, the Rev. I. J Saint, Rural Dean; the Rev. H. Woodgate, Bampton Lecturer; the Rev. C. Girdlestone, and many others. The meeting was rendered interesting by the good sense and taste which characterised the speeches of the Chairman and his guests, and by the spirit of harmony displayed by all present.

TO CORRESPONDENTS.

A BEGINNER, Hurstmonceaux.—The price of "The Practice of Photography," by F. H. Delamotte, is 6s. 6d.

WAVERLEY.—The sketch sent is from a letter of the Old Pretender, which is very common

J. G. N. El Dorado Company, California.—Declined.

M. A. M., Naples.—The Heads of the Month, by Kenny Meadows, are published in the ILLUSTRATED LONDON ALMANACK for 1848.

L. G. R., Bristol.—We have not space.

A NEW SUBSCRIBER.—The price of the commission of First Lieutenant in the Rifle Corps is £700.

R. R.—By the new Income-tax Act, sec. 54, persons who have made insurance, or contracted for a deferred annuity, on the lives of themselves or wives and persons who are liable to have annual sums deducted from their salaries to secure deferred annuities for their wives or children after their death—are to be allowed an abatement of duty in respect of the annual premiums paid or the annual sums deducted. See the statute 16 and 17 Vict., c. 34, s. 54.

CALENDAR FOR THE WEEK.

SUNDAY, July 31.—10th Sunday after Trinity. Ignatius Loyola died, 1556
MONDAY, August 1.—Slavery in the British colonies ceased, 1834.
TUESDAY, 2.—Battle of Blenheim, 1704. Arkwright died, 1792.
WEDNESDAY, 3.—Bank of England incorporated, 1722.
THURSDAY, 4.—East India Docks opened, 1806
FRIDAY, 5.—Fenelon born, 1651. Lord Howe died, 1799.
SATURDAY, 6.—Imprisonment for Debt abolished in England, 1844.

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—Under the Management of Mr CHARLES KEAN.—SARDANAPALUS will be performed EVERY EVENING during the week (Wednesday excepted), when MACBETH will be repeated for the FIFTY-SECOND TIME. With other Entertainments, according to the bills of the day.

MR. ALBERT SMITH'S MONT BLANC every Evening at Eight o'clock except Saturday visits, at which can be secured at the Box-office every day from Eleven till Four; and, by permission, A Morning Performance every Tuesday and Saturday, at Three o'clock. A View of the Localities, MEALS de LACE from Montanvert has been added to the Illustrations. Egyptian Hall, Piccadilly

CONSTANTINOPLE.—Additional Pictures will precede the DIORAMA illustrating the OCEAN MAIL, including the Overland Route to Bombay, Ceylon, the Cape, Sydney, and the Gold Fields of Australia. Daily, at Three and Eight. Admission, 1s.; 2s. 6d.; and 3s.—Royal Gallery of Illustration, 14, Regent-street.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The Collection of LIVING ZOOPHYTES, MOLLUSCA, FISH, and other Marine Animals, is now OPEN to Visitors. The Band of the First Life Guards will perform, by permission of Colonel Mall, every Saturday, at Four o'Clock. Admission, One Shilling; Monday, Sixpence

ZULU KAFIRS.—In consequence of the increasing interest excited by this extraordinary and pleasing EXHIBITION, arrangements have been made by which visitors will be allowed to see this interesting Tribe daily, from 12 till 5 o'clock. Admission, 1s. The performance in the Theatre will take place at Half-past Two and Half-past Four. Reserved Stalls may be secured at Mr MITCHELL'S Royal Library, 33, Old Bond-street.—St George's Gallery, Pall-mall corner, near Grosvenor-place, Hyde Park.

ORATIONS will be DELIVERED by J. B. GOUGH, the great Apostle of Temperance in America, as follows:—
EXETER-HALL, on TUESDAY, 2nd of AUGUST.
WHITTINGTON CLUB, WEDNESDAY, 3rd.
EXETER-HALL, THURSDAY, 4th.
WHITTINGTON CLUB, FRIDAY, 5th.
Admission, 5s., 1s., and 2s. 6d. each. Doors open at Half-past Six o'Clock, p.m. Tickets to be had at 337, Strand

CHELTENHAM GRAMMAR-SCHOOL.—
HEAD MASTER—E. S. Humphreys, LL.D
SECOND MASTER—H. M. Jeffery, M.A.
MODERN MASTERS—Joseph FEIS
HEAD MASTER'S ASSISTANT—C. B. Heigstocke, B.A.
With a numerous Staff of Assistant and Visiting Masters.
A Department of PRACTICAL SCIENCE, under eminent Professors, has lately been added to this School. In connexion with the Government Department of Science and Art, and endowed with Exhibitions in the Government School, Jermyn-street.
The School has also several Scholarships at Oxford.
The next Session commences on the 1st of August, on which day all pupils are required to be present.
E. R. HUMPHREYS, LL.D., Head Master.

GREAT WESTERN RAILWAY.—CHEAP EXCURSION to SOUTH WALES. On MONDAY, the 8th of AUGUST, an EXCURSION TRAIN will leave the PADDINGTON STATION, at 8 a.m., for Carmarthen (calling at Chepstow, Newport, Cardiff, Bridgend, Port Talbot, Neath, Swansea, Llanelly, and Pembrey); and also at the following Stations on the Line of North Railway, Reading, Slough, Hirwain, and Aberdare; returning to Paddington from the above Stations on Wednesday the 17th August. The public will thus have an opportunity of visiting Chepstow Castle, Tintern Abbey, on the River Wye, and the magnificent scenery of the Vale of Neath. Parties visiting Neath can avail themselves of this opportunity, by taking Tickets to Pembrey, from whence steamers ply to that watering place. Fares there and back:—

	First Class.	Closed Carriages.
Chepstow	10s.	11s. 6d.
Newport or Cardiff	12s.	13s. 6d.
Bridgend, or Port Talbot	20s.	16s. 6d.
Neath, or Swansea	22s.	17s. 6d.
Llanelly or Pembrey	25s.	20s. 0d.
Carmarthen	28s.	22s 6d.
Resolven, Glyn Neath, Hirwain and Aberdare, on the Vale of Neath Railway	24s.	20s 0d.

The Excursion Tickets are not transferable and are only available for the Excursion Train. Tickets may be obtained previously, at 27, King-street, Cheapside; 269, Strand; 25, Regent-street (corner of Jermyn-street); and at the Paddington Station; at which places handbills of further particulars may be obtained.
Paddington Station, July 23, 1853.

STEAM to AUSTRALIA.—The Iron Auxiliary Screw Steamship SYDNEY, 1463 tons, 300 horse power, will be dispatched direct for SYDNEY HARBOUR ASKEY, Commander: to load in the East India Docks, and follow the Victoria. This fine vessel will positively be despatched from the Docks on the 6th of AUGUST next, and embark her passengers at Gravesend on the following day. She is fitted up with ample bathhouses, and every convenience for passengers, of which she will only take a limited number. She is found on the most liberal scale as regards the dietary and steward's department, and carries an experienced surgeon. Fares: Chief Saloon, 70 or 80 guineas. Second Saloon, 45 to 50 guineas. Freight of goods as per agreement. Parcels as follows:—

Not exceeding					
1 lb. in weight, or	1	cubic foot	.. .. ..	1s 0d
1 cwt.	2	"	.. .. ..	1s. 6d.
1 ton	4	"	.. .. ..	2s 0d.
..	..	"	.. .. ..	7s. 6d.

For further particulars, and copies of dietary scales, &c., apply at the Office of the Australian Royal Mail Steam Navigation Company, 69, Lombard-street; or to CHARLES WALTER, jun'ior, 17, Grantchurch-street, London, of whom orders to view the ship may be obtained

VOLUME XXII. of the ILLUSTRATED LONDON NEWS, now ready, price 21s., elegantly bound in cloth; or, stitched in an elegant wrapper, price 16s.—The whole of the Volumes from the commencement may be had in complete sets, bound and gilt, price £20 18s. 6d.; or, stitched in paper covers, £16 5s. 0d.; or any Single Volume can be had separate. Single Copies of any of the back Numbers are charged 1s. each, one month after the date of publication. Portfolios for preserving the Numbers (which may thus be read without fear of injury before binding), 4s. Reading Cases, 2s. Covers for Binding the Volumes, 2s. 6d.—Office, 198, Strand.

ROYAL POLYTECHNIC INSTITUTION.—Lectures—By J. H. PEPPER, Esq., on PHOTOGRAPHY. By Dr. BACHHOFFNER, on CALICO PRINTING by VOLTAIC ELECTRICITY. The LANCASHIRE SEWING MACHINE, as used in the Queen's Household, daily. On TUESDAYS and FRIDAYS, at Four o'clock, and every Evening (except Saturday), at Nine, the FIRST PART of an HISTORICAL PICTURE, on the THAMES, by GEORGE BUCKLAND, Esq. Open Mornings and Evenings. Admission, 1s. Schools and Children under Ten years of age, Half-price.

RUSSIA AND TURKEY.

On Saturday next, AUGUST 6th, will be published

A GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
CONTAINING
LETTERS AND SKETCHES FROM CONSTANTINOPLE
AND THE DANUBIAN PROVINCES,
FROM OUR OWN CORRESPONDENTS AND ARTISTS

Among other Illustrations will appear a Panoramic View of Constantinople; Portraits of the Emperor and the Sultan; the Passage of the Pruth; numerous Views on the Danube and the Bosphorus; the Castles and Forts of the Dardanelles and the Black Sea; Sketches of Russian and Turkish Cavalry and Infantry; Views in St. Petersburg and Constantinople; Turkish Infantry, Cavalry, and Artillery; Sketches of the Peasantry and People of Moldavia and Wallachia, &c. &c.

THE GREAT CAB STRIKE.

The Number will also contain, among other Illustrations, Scenes in the Streets and Railway Stations during the Great Cab Strike; Incidents and Scenes in the Burmese War; the Chobham Camp by Moonlight; the Flamingoes and Antelope at the Zoological Gardens; the Artillery Camp at Landguard Fort, Ipswich; the Archæological Association at Rochester; the Paper Mache Village for Australia, &c. &c

With this Splendid Number of the ILLUSTRATED LONDON NEWS will be presented,

GRATIS TO SUBSCRIBERS,
A MAGNIFICENT FOUR-PAGE ENGRAVING OF
THE BRITISH FLEET AT SPITHEAD,
DRAWN BY E. DUNCAN.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 30, 1853.

THREE weeks ago a European war seemed imminent. A week ago the hopes of peace predominated. At present the warlike symptoms are again in the ascendant. Throughout all Christendom one fact is patent—that no one wishes for war except the Russian fanatics, who look upon the Czar as divinely appointed to expel the Mahometans from Europe. It may be doubted whether the Czar himself shares the feeling of his people. He has evoked the war-demon to serve a purpose; but it does not follow that he will go to war now that he finds the sword of combined Europe is ready to support its opinion. Every bully is, of necessity, a coward. The policy of the Czar is procrastination. We attach no faith to the assertion so eagerly received both in Paris and in London, that he is willing to negotiate upon a basis that will leave the independence of Turkey intact. We may depend upon it that his object is not to end the dispute, for the longer it lasts the better he will be satisfied. What he desires is to humiliate and to injure the Turkish Empire. If a war against all Europe is too hazardous or impracticable, he will pursue the same objects by a different method. Nothing will stop him but a firm determination on the part of England and France, that there shall be no further negotiation on the subject until he shall have withdrawn his armies to his own side of the Pruth. It is plain that he has no such intention at present, and that he will not remove except on compulsion. He evidently calculates upon retaining possession. All his arrangements are adapted to that end. He has already usurped a large portion of the civil as well as of the military Government. His principle is that every hour in which he so acts is for him a success and for Turkey a danger. Procrastinations are his victories; and if Great Britain and France allow him to procrastinate, his object will be attained, and theirs will be defeated. We attach little credit and no importance to the various rumours and reports which are conveyed to Paris and London by the electric telegraph, purporting to reveal the Czar's intentions. Nothing more positive in relation to them than are contained in the facts of the occupation of the Principalities can possibly be known for several days; and these facts are grave enough to demand vigorous action on the part of the Allies. Any want of firmness manifested at the present moment by Great Britain or by France, though it might possibly postpone a war for a twelvemonth, or even for a longer period, would not prevent it, and would in all probability render it more sanguinary and protracted. It would be much easier to restrain and punish the ambition of the Czar at the present moment, when he is palpably in the wrong, and when the whole of Europe is against him, than it would be at a future time, when emboldened by success and impunity he might attempt a still more gigantic aggression. Though it is always time to stop the beginnings of evil, no time is so good as the present.

THE cab-owners and cab-drivers of the metropolis, aggrieved by an act of the Legislature, have taken the remedy into their own hands. On Wednesday morning last this vast city was deprived of the greater portion of its means of locomotion. The cab-drivers unanimously struck work, and a population of upwards of two millions suddenly found themselves cabless. The inconvenience and annoyance that ensued may be readily imagined. To men of business, and to in-coming and out-going passengers by railway, the grievance was a severe one. Happily for the persecuted public the day was fine, and the misery of such pelting showers, as those with which we have of late been too familiar, was not added to the other distresses, which the savage conduct of Cabby inflicted upon an unoffending people. Cabby thus lost the spice of his anticipated revenge; but the scenes which occurred at the various railway stations and elsewhere, were sufficiently painful to administer largely to the bad feeling which prompted this unparalleled strike.

London has, in consequence, presented an unusual, and, in many respects, a much improved appearance. Streets and thoroughfares that formerly exhibited a squalid, uncomfortable, and disreputable aspect, were observed to look wider, longer, cleaner, and more respectable. The improvement arose entirely from the absence of the cab-ranks that formerly encumbered the way. No longer having public stables in their midst, the great highways of the metropolis ceased to be offensive to the eyes and to the noses of the public. We hope the knowledge thus acquired will not be forgotten by the Legislature; and that, in the amendments which are to be made in the new Hackney Carriage Act, a clause will be introduced forbidding the open and public cab-stables and litters which have hitherto been a disgrace to this metropolis.

The omnibus proprietors, some of whom are cab-proprietors, also took advantage of the cab-strike, to raise their fares twenty-five per cent. They also have threatened a general strike, if certain demands which they make are not immediately acceded to. We hope, too, that their conduct will not be forgotten; and that the Legislature will, when it next meddles with the subject, take them also under its care. Bad as our cab system has been, our omnibus system has been little, if any, better. Liverpool, Glasgow, and Edinburgh possess omnibuses, constructed upon a wholesome principle—clean, comfortable, and roomy. But in London, omnibuses, though not quite so dingy and dilapidated as the cabs, are so narrow, that few ladies who value decency care to enter them, and to force their way amid the projecting knees of the passengers. The narrowness and incommodiousness of these vehicles is an evil that must be remedied. The arbitrary and sudden increase of fares to which the combined proprietors at present resort whenever any great attraction, such as the Exhibition of 1851—the Duke's funeral, in 1853—or the Epsom races every year—is one of many grievances. The omnibus proprietors will have themselves to thank for the Legislative interference which is certain to be the result of their threat and of the great cab-strike of Wednesday last.

The cab-owners and drivers cannot be allowed to set the law at defiance, and to incommode an enormous and busy population. Their grievance was redressed upon certain conditions, which conditions they failed to fulfil when they deserted the streets for four-and-twenty hours. It remains a question for the consideration of the Law-officers of the Crown, and for the Commissioners of Police, whether every license now held by cab-owners and cab-drivers throughout London has not been forfeited by the strike. Upon that point we at present offer no opinion, but we may safely predict that every offender will have been proved to be possible, that if such be not the state of the law at present it will immediately be made so by a short and summary Act of Parliament. Of course if the owners and drivers of public vehicles cannot profitably carry on their business under the recent act, it is their undoubted right to retire from it. But had they been wise, they would not have resorted to so desperate a remedy as that which one class has adopted, and another has threatened. The inconveniences to the public can be but temporary, whilst the loss to themselves will be permanent. Already means have been adopted to prevent the recurrence of such an annoyance, and it may perhaps be found that some great Cab and Omnibus Company will seek and obtain the authority of Parliament and sweep away all the old proprietors as effectually as the London and North-Western Railway Company extinguished the old stage-coach proprietors. This is the consummation to which things are tending; and if, hereafter we shall have clean and comfortable cabs, in lieu of dirty, crazy, and jolting ones—strong horses in lieu of broken-kneed and broken-winded hacks—and civil drivers in lieu of extortionate bullies, we shall have to thank the promoters of this memorable strike for a boon which they never intended, but which will be none the less agreeable on that account.

By their conduct the present race of cab-owners have deprived themselves of all sympathy. It has been generally admitted within the last fortnight that the new law, in some important particulars pressed rather severely upon them. If they had urged their grievances, in a respectful and legal manner, before the only tribunal which has the power to redress them, the British public—that prides itself upon its love of fair-play—would have supported them in their attempt to obtain a re-hearing. Their demand for back-fares after a certain distance was felt to be just; and if they had required extra fares after ten or eleven o'clock at night, or before six or seven in the morning, the public voice would have been in their favour. These concessions, and perhaps some others, may even yet be obtained; but they may rest assured that sixpence a mile and no more will be the future price of cab conveyance in the metropolis. The wisest thing they can now do is to show penitence, and return to their business, and trust to the Legislature to remedy any injustice that may have been inadvertently committed against them. If they choose to continue in their present courses they will find, when it is too late, that they have deprived themselves of the means of subsistence, and that the public want has been efficiently supplied by more responsible, and more respectable persons.

THE COURT.

We announced last week that her Majesty was progressing as favourably as could be desired through the malady which she had unfortunately contracted from the youthful Princes and Princesses of the Royal family. The following satisfactory bulletin was issued on Saturday, since which no further announcement has been published:—

The Queen has passed through the measles in the most favourable manner, and her Majesty is now convalescent. No further bulletin will be issued. OSBORNE, July 23, 1853. JAMES CLARK, M.D. HENRY HOLLAND, M.D.

Her Royal Highness the Duchess of Kent arrived at Osborne on Thursday week, on a visit to her Majesty and the Prince Consort. Her Royal Highness was received by Her Serene Highness Prince Ernest of Leiningen. The Duchess and Prince Ernest returned to London on Saturday.

On Saturday Count Werthern Beichlingen, Grand Chamberlain, arrived at Osborne, from Weimar, with letters for her Majesty, announcing the death of the late Grand Duke, and the accession of his Royal Highness the reigning Grand Duke of Saxe-Weimar.

On Sunday Prince Albert and the Prince of Wales attended Divine service, which was performed by the Hon. and Rev. G. Wellesley. The Ladies and Gentlemen in Waiting were also present.

On Monday the Princess Royal and Princess Alice, attended by Mr. R Ormsby Gore, arrived at Osborne from Buckingham Palace. Their Royal Highnesses, previously to their departure from London, received a visit from the Duchess of Kent.

On Tuesday the Prince Consort, attended by Lieut.-Colonel Seymour, rode on horseback to West Cowes. The Prince of Wales and Prince Alfred took walking exercise in the grounds.

On Wednesday the Prince Consort, with the Prince of Wales and Prince Alfred, took walking exercise. The Princess Royal and the Princess Alice took a drive in the Royal grounds.

On Thursday the Queen took an airing, and drove out in the afternoon with his Royal Highness Prince Albert, the Princess Royal, and Princess Alice.

The Hon. Mary Seymour has succeeded the Hon. Flora Macdonald as Maid of Honour in Waiting

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary visited the Duchess of Kent, on Saturday, at Clarence House. The Duchess and the Princess Mary, accompanied by the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz, honoured Mr. Albert Smith's "Ascent of Mont Blanc" with their presence on Saturday afternoon.

The Countess de Neuilly visited her Royal Highness the Duchess of Kent, on Monday, at her residence, Clarence-house, St. James's

The Duke of Rutland has sailed in his yacht from the Southampton waters, for a cruise off the French coast.

The Marquis of Winchester has arrived in town within the last few days, from a brief tour of the German Spas.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

SUCCESSION-DUTY BILL.

On the motion for going into committee on this bill, Lord St. LEONARDS opposed the motion in a speech summed up in the declaration that the income tax was a far preferable tax; and that the bill would lead to litigation, carry discomfort into every family, and finally work its own condemnation. The Earl of WINCHILSEA in vehement terms denounced the bill. He contended that whether they considered this bill on the grounds of justice, of oppression, and cruelty, or as a source of litigation, it was one of the most obnoxious, detestable, and odious measures that had ever been placed upon the statute-book. The noble Earl also declared that these were, indeed, strange times, when the bold barons of England submitted to such measures; and that the Government was in the hands of harpies.

The House then went into committee, when clause 1 passed unopposed.

On clause 2 the Earl of DERBY proposed an amendment, the object of which was to exclude from the operation of the bill all property now under settlement, and to deprive the measure of its retrospective effect. If the object of the measure were to cut down the great estates, a better instrument could not have been provided for that purpose. The Earl of ABERDEEN proved that the late Government contemplated the imposition of some such tax; and pointed out that it was intended, on a point of detail, to damage an entire system of financial legislation. The Earl of HADDINGTON and the Duke of CLEVELAND supported the amendment; which was opposed by Earl GRANVILLE, the Duke of ARGYLL, and the Marquis of LANSDOWNE, who said that the fortunes of the great landed proprietors rested upon the prosperity of the whole country, and would be most benefited by measures that increased that prosperity. The committee then divided, and the amendment was rejected by 105 to 68—majority, 34.

The remaining clauses passed without formal opposition.

[The division was a decided muster of the forces on both sides: and the effects of the struggle were as much out of doors as within, for as many were kept away as were induced to attend and vote. Strange faces were seen in the House. Our foreign Ministers, the Lord-Lieutenant of Ireland, and noblemen who have long retired from the public gaze, for one reason or another, were there to assist at the triumph or downfall of Government. The whippers-in themselves were baffled in some instances by the unfamiliar aspect of the Peers they had evoked. A Ministerial majority was expected, but neither side had calculated on the so conclusive. The bill is now safe.]

HOUSE OF COMMONS.—MONDAY.

At the early sitting, on the order for the committal of the Entry of Seamen Bill, Sir J. GRAHAM gave a short summary of its provisions, which he described as greatly adding to the inducements to seafaring men to enter the navy, contributing to their comfort and increasing their pay. After a short discussion, chiefly with reference to flogging in the Royal Navy and the alleged backwardness of men to enter that branch of the service, the bill passed through committee.

GOVERNMENT OF INDIA BILL.

In the evening, the House having again resolved itself into committee upon the Government of India Bill, Sir H. WILLOUGHBY moved a new clause, the object of which was to empower the Secret Committee of the Court of Directors to tender their advice and opinion on the effect of orders issued to the Government of India, and to enter a protest, if they deem it expedient to do so—such protests to be recorded. Sir J. HOGG opposed the proposition, on the ground that the exclusive responsibility, in matters respecting which the President of the Board of Control was authorised to issue orders to India, through the instrumentality of the Secret Committee of the Court of Directors, rested with the Government of the day; and, where the responsibility rested, there should rest the power. Mr. DISRAELI inquired whether the power of recalling the Governor-General of India was to be left to the Court of Directors? Sir C. WOOD replied, that it was not proposed to deprive the Court of Directors of the power of recalling the Governor-General. Upon a division, the clause was rejected by 72 against 30.

Mr. HUME moved a clause, extending the qualifications of electors of the directors to all persons having £500 East India Stock; also to all holders of company's papers to the value of 10,000 rupees; also to every civil and military servant who has served the Company for twenty years in India, and who shall have retired from the service. Mr. LOWE and Sir C. WOOD objected to the clause, which was negatived by 74 to 54. One or two other amendments were proposed and negatived; and the Chairman was then ordered to report progress.

The House then went into Committee upon the Burials (beyond the Metropolis) Bill, and the Stamp Duties (No. 2) Bill.

Several bills were read a third time and passed. In one of them the Turnpike Acts Continuance, &c., Bill, on the motion of Lord NEWPORT, a clause was inserted prohibiting any persons from using dogs for draught along any turnpike road in England or Wales. The House adjourned at half-past three o'clock.

HOUSE OF LORDS.—TUESDAY.

The General Health of Towns (No. 2) Bill passed through committee. The Parish Vestries Bill was read a second time, after a division. The Bankruptcy Court (Scotland), and the Public-houses (Scotland) Bill, were read a third time. The Courts of Common-law (Ireland) Bill was read a second time, after speeches from Lord BROUGHAM and the LORD CHANCELLOR. This is the bill introduced into the Lower House by Mr Napier and Mr. Whiteside, which effects vast improvements in the mode of procedure in the Irish law courts. The Customs-duties Bill was read a second time. The Missionary Bishops Bill passed through committee.

HOUSE OF COMMONS.—TUESDAY.

GOVERNMENT OF INDIA BILL.

The House, at the early sitting, having resolved itself again into a committee upon the Government of India Bill, Mr. J. PHILLIMORE moved to insert a clause, the object of which was to constitute a tribunal to take cognizance of disputes between the Government of British India and native Princes, giving an appeal from such tribunal to the Privy Council. After a short debate, the clause was negatived.

Mr. BRIGHT moved a clause to provide for the transaction of the business of the Board of Control and the Court of Directors in one and the same building. He dwelt upon the enormous expense attending the home establishments, which the adoption of his proposal would diminish, by facilitating the reduction of the staffs, while, by affording the means of carrying on the business of the two departments by word of mouth, it would curtail the amount of "stupid" correspondence between them. Sir C. WOOD said, if the establishment of the Board of Control were altogether retrenched, the saving would not exceed £20,000; but as the principle of the double establishment had been sanctioned by the House, there must be two establishments. The clause was rejected, upon a division, by 74 against 61.

Mr. SMITH moved a clause, enacting that the fixed salary of the President of the Board of Control shall, in no case, be less than the salary paid to one of her Majesty's principal Secretaries of State, and that only one of the Secretaries to the Board shall be capable of being elected to a seat in Parliament. He insisted that a permanent Secretary to the Board of Control would be much better than two political secretaries. Mr. W. WILLIAMS was opposed to the clause, which, however, was carried, on a division, by 118 to 28.

Mr WISE next proposed a clause transferring a portion of the Addiscombe patronage from the Board of Directors to the Governor-General. On a division, the proposition was negatived by 101 to 39. The committee then reported progress, and the House adjourned till six o'clock.

At six o'clock the House met again, and was almost immediately counted out.

HOUSE OF COMMONS.—WEDNESDAY.

THE CABMEN'S STRIKE.

Sir R. INGLIS drew the attention of the Under-Secretary of State for the Home Department (Mr. Fitzroy), to the fact that there had not been a single cab upon the stands of London on that day. He wished to ask whether the hon. gentleman was not now prepared to consent to the appointment of a Select Committee, to consider the cab fares which ought to be paid by the public? Mr. WALPOLE understood that the great hardship of which cab proprietors complained was that they could not charge upon the return fare. Mr. FITZROY said that the principle of arbitrarily fixing the sum to be charged per mile for cab conveyance was not for the first time laid down in this bill. The hon. gentleman added:—

On consideration of the different compensations made to the proprietors of cabs in the shape of lower charges for licenses, and taking into consideration the lower cost of materials generally, and of provender for several years past, it certainly did appear to me, after the closest calculation, and examining the estimate put before me by the representatives of the trade, that a sixpence a mile would be amply remunerative within certain limits of the metropolis. With respect to that estimate, I have seen no reason whatever to change my opinion. I have taken every opportunity to inquire of the drivers and proprietors of cabs what were the probabilities of this change working well for their interests and the interests of the public; and they have, with hardly an exception, told me that within the crowded parts of the metropolis sixpence a mile would be amply remunerative. I have left the cab proprietors I was aware that the license given by the bill to use hackney carriages had been abused—that it had been worked to its greatest possible limit—that persons had taken cabs quite six miles into the country, and then discharged them without the payment of any return fare. I stated that I would do everything in my power to find a remedy; but it must be obvious that I am placed in a worse position for effecting this arrangement by the foolish step taken this morning by the cab proprietors. I told a deputation on Monday that I would propose a clause which would give them an increase of remuneration for distance, if you hire a cab and discharge it at a distance exceeding four miles from the place where it was hired, and within a certain radius, you shall give an extra sum for the whole hiring. I think, besides, it might be possible to make a change as to the distances to which cabs may be desired to go, and that they should not be compellable to go more than five miles from the General Post-office, instead of six miles, as at present provided by the act. These two provisions I am prepared to submit to the House, and with these arrangements I am sure it will be the feeling of the House that the trade should be perfectly satisfied. All I can say is, that before the strike was contemplated, I put these propositions before the deputation, and I am exceedingly sorry and annoyed at what has taken place, because it greatly increases the difficulty of providing a remedy.

On the motion that the Hackney Carriage Duties Bill be read a second time, Colonel SIBTHORP said, that great inconvenience had been occasioned to the public, especially to persons coming up to town, in consequence of the cabs having been withdrawn from the streets. He hoped the noble Lord, the Secretary of State for the Home Department, would strictly watch the movements of those connected with the public vehicles in this great town. He admitted that there were many highly-respectable persons connected with the cabs and other public carriages used for the convenience of the people in the streets of London; but he must say that he was daily witnessing conduct on the part of the drivers of the most offensive description. He had more particularly noticed it in the neighbourhood of Temple-bar and Regent-street. He had seen those drivers standing three and four abreast across the pavement, to the great obstruction of foot-passengers along what should be a thoroughfare, and using language of the most gross character, to the utter disgust of the unprotected people passing near them. It was the imperative duty of the Government to suppress this public nuisance; and he implored them by no means to give way in this contest with such a race of people. The blame had been hitherto attached to the driver; but he denied the justice of that imputation. He had heard that the great bulk of the cabs belonged to a comparatively few persons, who derived the utmost farthing they could from the poor creatures who drove their cattle, and who often got nothing at all for their labour. He trusted that the Government would, in some manner, see that the labourer should be properly paid, and that they would visit upon the proprietor those penalties which had hitherto been too often visited upon the drivers.

The CHANCELLOR of the EXCHEQUER observed that the bill before the House had reference to the reduction of the duties on hackney carriages, and had nothing whatever to do with the regulation of cabs. The bill was then read a second time.

The Duties on Horses Let for Hire Bill was read a second time.

The Lunacy Regulation Bill having passed through committee. On the order for going into committee upon the Lunatic Asylums Bill, Lord D. STUART called attention to a case which had occurred in a lunatic asylum at Colney-hatch, in which a sudden conflict between two dangerous lunatics had resulted in the death of one of them. Lord PALMERSTON and Mr. FITZROY gave explanations respecting the occurrence, there should then was then gone into committee on the bill, the clauses of which were agreed to, after considerable discussion.

The order for the second reading of the Factories Bill was discharged, Mr CORBETT pledging himself to introduce the bill next session.

The Government of India Bill finally passed through committee.

HOUSE OF LORDS.—THURSDAY.

The County Courts Further Extension Bill was, on the motion of Lord BROUGHAM, read a second time, after a statement from the noble and learned Lord that he did not intend to proceed further with the measure in the present session.

SUCCESSION-DUTY BILL.

This bill was read a third time, after a speech from the Earl of CLANCARTY in opposition to it. On the motion that the bill do pass, Lord ST. LEONARDS laid upon the table a protest against the measure, with a view to its being entered upon the journals of the House. The bill then passed.

The Missionary Bishops Bill was read a third time and passed. Several other bills upon the paper were forwarded a stage

The Earl of CLANCARTY complained of certain returns relating to the working of the national system of education in Ireland not having been laid on the table, although they had been ordered by their Lordships some months back.

The Earl of ABERDEEN could not account for the non-production of the papers; but the Government had no objection whatever to their production. He believed that the national education was the greatest blessing which had ever been conferred upon Ireland.

After some remarks from the Earl of Wicklow, the Earl of Donoughmore, and Lord Redesdale, the matter dropped.

The Bishop of SALISBURY moved for some returns regarding the revenues of his Bishopric, and entered into explanations respecting some allegations made against himself upon the subject. The returns were ordered.

In reply to the Earl of Waldegrave, the Earl of CLARENDON said that there was no intention on the part of the Government to reduce the squadron on the coast of Africa.

Their Lordships soon afterwards adjourned.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

The third reading of the Eastern Union Railway Bill was carried by a majority of 88 against 64; Sir G. PECHELL having moved that it be read a third time that day three months, considering the measure as nothing more nor less than one of confiscation.

SOUTH SEA ANNUITIES DISSENTIENTS.

The House then went into committee upon this bill.

The CHANCELLOR of the EXCHEQUER proposed the following resolutions:—

1. That provision be made, out of the Consolidated Fund of the United Kingdom of Great Britain and Ireland, for paying off the proprietors of the capital stocks of Old South Sea Annuities, New South Sea Annuities, Bank Annuities (1726), and 3 per Centum Annuities (1751), mentioned in an act of the present session, chapter 23, in respect of which assents to commute shall not have been signified according to the said act, and also for paying to the South Sea Company a principal sum equal to the amount of the trading or capital stock of the said company, or the part thereof the interest or annuity on which shall not have been commuted or exchanged, according to the said act, or any act to be passed in the present session of Parliament.

2. That the South Sea Company shall be permitted to commute, within a time to be limited, all or any part of the annuity or interest on their trading or capital stock, payable in respect of shares in such stock standing in the names of the Accountant-General of the Courts of Chancery of England and Ireland, respectively, and of the Accountant in Bankruptcy in England, and in the names of trustees and others disabled from voting in the General Court of Proprietors of the said company, into or for any one or more of the stocks and securities authorised to be created and issued by the act of the present session, chapter 23, and the £3 per Centum Annuities, and New £3 per Centum Annuities, created under the acts of the seventh year of her Majesty, chapters 4 and 5, commonly called and known as £3 5s. per Centum Annuities (1844), such commutation into or for the said stocks and securities authorised to be created and issued by the said act of the present Session, to be upon the terms and subject to the conditions upon and subject to which the like commutation was authorised under the said act, and such commutation into or for the said £3 5s. per Centum Annuities (1844), to be upon such terms and subject to such conditions as the Commissioners of her Majesty's Treasury may see fit and shall provide that the assent of the said company to any such commutation shall be signified to the said Commissioners of the Treasury within such time as may be limited by such Commissioners for that purpose.

3. That the South Sea Company shall also be permitted, upon signifying their assent within such time as may be limited by the Commissioners of the Treasury for this purpose, to commute, upon the same terms, and subject to the same conditions, all or any part of the annuity or interest payable in respect of such further amount of their said capital or trading stock as may be authorised or required by Parliament to be invested as a guarantee fund for their administration of private trusts, in case they should be authorised to undertake such administration by any act to be passed in the present session of Parliament.

Mr. DISRAELI said it was most unwise, at the end of the session, to attempt to push up a scheme in order to enable the Government to enter into new speculations, which were founded on calculations as imperfect as those on which their first proposals rested. They were now asked to grant to the Government an unlimited discretionary power for settling the terms in which future commutation should take place, which would leave our finances in a state of uncertainty and doubt. The Government were fairly warned what would be the effect of the proposals, and he thought it would be impolitic to accede to the present resolutions unless the committee were informed more clearly what their intentions were in regard to the intended commutation.

In reply to Sir H. Willoughby, the CHANCELLOR of the EXCHEQUER said he would venture to state, that, instead of there being any loss, there would be a considerable gain to the Consolidated Fund by the proposed arrangement

After a short discussion, the first resolution was agreed to.

On the 2nd resolution being put by the Chairman, Mr. J. B. SMITH objected to it; on the ground that parties who had received one offer and refused to accept it, should not have another made to them. If the resolution passed, it would place future Chancellors of the Exchequer in considerable difficulty; for holders of stock would not be disposed to avail themselves of the first proposals of the Government, because they would look forward to some other opportunity being afforded them to make a better bargain. The only right course to adopt was to pay off the parties in money, which the Chancellor of the Exchequer must raise in the best way he could. Mr. J. M'GREGOR supported the resolution. Sir F. KELLY opposed it.

The CHANCELLOR of the EXCHEQUER rose to reply, but had not proceeded beyond a few sentences when four o'clock arrived, and the House then stood adjourned until six this evening.

At the evening sitting, in reply to Mr. Spooner, Lord J. RUSSELL said that no commission had as yet been issued for inquiry into the state of Maynooth, but that it would issue in a short time

In reply to Sir De Lacy Evans, Lord PALMERSTON entered into an explanation of the case of a culprit who, at the Middlesex Sessions, had pleaded guilty at the head of the Assistant-Judge, and, in consequence, had his sentence of ten years' transportation increased to fifteen years' transportation. The propriety of such increase of punishment the noble Lord warmly justified, and said that as Home Secretary he could not remit a single day of such sentence.

INDIA BILL.

On the order of the day for the consideration of this bill as amended, Sir J. PAKINGTON moved a clause, the effect of which was to abolish the salt monopoly in India.

Sir C. WOOD opposed the clause.

After a long discussion the House divided, when the numbers were—For Sir J. Pakington's clause, 117; against it, 107: majority against the Government, 10. The clause was then added to the bill.

The Chairman then reported progress.

In committee on the Hackney Carriage Duties Bill, a clause was moved by Mr. LOWE, altering the recent act, by enacting that, where more than two persons are carried in a cab licensed for two, 6d. shall be paid for each person in excess for the whole hiring; which, on a division, was agreed to. Another clause, authorising the driver of a cab to charge 1s. per mile for every mile or part of a mile, if required to drive beyond the circumference of a circle the radius of which shall be four miles from Charing cross, provided he be discharged beyond such circumference, was likewise agreed to. The bill, as amended, was ordered to be reported.

Other bills were advanced a stage, and the remaining business of the House was disposed of.

THE FLOODS AT BRECON.

AMONG the "Tremendous Thunderstorms and Floods" which recently devastated South Wales were the destructive visitations of the upper part of the valleys of the Wye and the Usk, with the entire course of their various tributaries, the Irvon, the Ithon, and the Honddu. "Throughout the whole of that extensive tract of country (says the *Hereford Times*) a storm of thunder, lightning, hail, and rain, rendered more destructive by the bursting of a waterspout in North Breconshire, has done immense mischief. Twenty-two bridges have been more or less completely destroyed; and, not only has the maternal damage done by the loss of cattle, the injury to crops, &c., been very extensive throughout part of West Herefordshire, South Radnorshire, most parts of Breconshire, and the adjoining parts of Cardiganshire and Glamorganshire, but we regret to have to add that not less than eight persons have perished by the floods—a loss of human life, we believe, perfectly unparalleled in this district, and calculated to make the 9th of July, 1853, sadly memorable for many years to come." At Brecon, the destruction of property has been of fearful extent; and, by the aid of an artist resident in that town, we are enabled to present our accompanying series of illustrations of the catastrophe by which the picturesque old place has been devastated. The event was briefly recorded in our journal of the 16th inst.; but we append an outline of the ravages of the flood in the localities of the annexed Engravings.

The storm commenced on the night of Friday the 8th; about one o'clock on the morning of the 9th, heavy rain fell and and continued for about two hours. At four o'clock the rivers Tarall and Usk were much swollen. The Honddu, the rise of which is never preceded unless it be a very high flood indeed, was not much changed at that time. By five o'clock, however, the water had gained the street at Watergate and rose rapidly over the Watergate-bridge; the upper parapet of which fell, and a very heavy body of water flowed over it towards Kensington and Watergate. This was met in the bottom of Ship street by a rush of water down Market-street, and in less than ten minutes the whole of the street was under a depth varying from three to nine feet.

Our limit will only allow us to select such portions of the account of the devastation as relate to the places illustrated. Between Upper Chapel and Cwmanwd, near Brecon, there were two bridges over the river, at the only out of that number withstood the wreck—viz., the upper and lower bridges at Cwm-cy-dy * * * * * * The rush of the mighty waters continued with unabating fury to Cwmanwd. The bridge here was blocked up with the timber which came with the water, and the torrent in consequence spread over the road, threatening to overwhelm the neighbouring cottages. The inhabitants narrowly escaped with their lives. The bridge, unable to support the heavy weight of water, yielded, and was carried away; trees at every height being added to the mass. The parapets of the Forge bridge gave way; the weir at Mr. Handley's mill was swept along with the current; the weir at the Rock and Castle shared the same fate; a stretch of walling between the road and the river fell; and the vast sheet of water found an uninterrupted channel along the road for some distance.

A Correspondent of the *Hereford Times* states:—"The greatest devastation was committed on the banks of Honddu, and (speaking of those places within a short distance of the town) the first fury of the flood was spent on Cwmanwd-bridge, a neat wooden structure recently erected by the county, the old bridge having been a few months back destroyed by a very heavy flood; this little bridge was instantly destroyed, and the cottages adjoining inundated, the inmates having barely had time to secure their own safety. The next spot on which the force of the stream was directed was the Forge-bridge; the immense body of water here failed not long to level the building, but the parapet walls, the principal part of the abutment, and all the masonry except the mere shell of the arch, were ruthlessly swept away. Gathering force as they went, the waters successively demolished the weirs at Priory-mill, Rock and Castle, and Street Factory. Beyond Street-bridge, a whole series of slight buildings attached to the backs of those houses abutting on the stream were carried off, as were also some extensive workshops, occupied by Mr. Watkins, plumber, and Mr. Jones, skinner. (This scene of devastation is shown in the lower Engraving upon page 60). The Castle-bridge had one of the piers thrown down, and the last bridge of all—the pretty little Honddu-bridge, fell before the watery avalanche, as shown in the fifth Sketch."

The terrible devastation is thus described in the *Hereford Journal*:—"The river Honddu, which rises in the Eppynt mountains, and runs on the north-west side of the town, rapidly flooded: the water of a deep muddy colour, and carrying on its surface indications of the violence with which it had visited the district through which it passed, and swollen beyond the capacity of its banks to contain the infuriated waters, rushed forward with irresistible force, tearing up the very foundations of the bridge crossing the stream at the bottom of Ship-street. The superstructure, of course, was blown up, and fell in with a loud crash; and, the *débris*

THE FLOOD IN SHIP-STREET.

VIEW UP THE USK.

partially blocking up the course of the water, the neighbourhood, in a few minutes, became flooded to the depth of some feet, spreading terror throughout the town. The inhabitants of many houses only escaped by flight, or by ascending to the upper stories of their dwellings; thence, in many instances, to see their little all either swept away by the raging waters, which foamed and madly broke over the ruins they had made, or utterly destroyed by being saturated and buried in mud."

The Six accompanying illustrations, from sketches by Mr. Teale, of Brecon, show the devastation of the floods. We have, 1, a View down Ship-street; 2, a View up the Usk, with the remains of the house of Mr. Evans, grocer, after the flood had subsided: 3, the Inundation of the Honddu Mill, and the bursting of the bridge, which caused so much damage as the foot of Ship street; 4, Wreck of Cwmanwd-bridge — a melancholy picture of desolation, after the rush of water had subsided; 5, the devastation in progress, and the flood carrying away the houses; 6, the torrent carrying away the rear of the premises of Mr Watkins, plumber and glazier, and Mr. Jones, skinner and destroying his shop and stock.

RUSSIA AND TURKEY.

RANDOM NOTES AND SKETCHES MADE ON THE WAY TO CONSTANTINOPLE, JULY, 1853.

(THIRD LETTER.)

(From our Special Correspondent.)

VIENNA, July 10.

YOUR readers will, probably, think that they have had enough of the history of passports in my last letter, and I only re-enter upon it in order to give them some exact information upon the working of police regulations which have recently been much discussed, and which, from not being thoroughly understood, has often led to serious *desagrémens*. Since my arrival here, I have heard several complaints of the vexatious manner in which these regulations are conducted, and which, though not in all cases strictly enforced to the letter, certainly give to every man dressed in a little brief authority the power to annoy, if not absolutely to interrupt the progress of, the traveller, if he takes the whim to do so. I believe, also, that in the case of an Englishman there is still a good deal of spleen lurking in the bosoms of the Austrian people, and particularly those connected with the police and army; and that they would be very ready to take advantage of the slightest informality or omission in his papers to interdict his passage -if merely for the pleasure of showing their power and seeing his vexation.

You will perceive from this that the bland feeling with which I contemplated the probable operation of the Austrian passport system from a distance has been a little disturbed. I will confess it; and add that although we have met with no positive check or interruption in our progress, the effect of the constant *surveillance* and repeated inspection to which we have been subject has been really depressing to the moral feelings. It has been such as to make us fancy that in passing through the Austrian territories we were positive intruders—only tolerated by special grace and favour; and liable at any moment, at the mere *sic volo sic jubeo* of any functionary, to summary ejectment. Yet such is not at all the case, as one's own common sense, and the slightest consideration of the laws which regulate communities ought to tell us. It is, on the contrary, the fact that I have as perfect a right to travel unmolested and unimpeded along the highways of Austria, as along those of my own or any other country. The principle of the common right to the use of public roads has been acknowledged from the earliest times, and frequently asserted and confirmed by judicial decrees; and it was upon parity of reasoning that in the treaty of Vienna it was expressly conditioned that all navigable rivers should be considered as public highways, and open in common to all nations. Not to load your columns unnecessarily with authorities upon the subject, I will merely refer to a case cited by Vatel in his "Droit des Gens," wherein the Emperor Sigismund solemnly confirmed a decree made by the Bourgrave of Nuremberg, in which it was asserted as a principle of natural right that public highways throughout the world were for the common use of all nations; and then cite a few observations by the great jurist himself ("Droit des Gens," liv. ii., chap 10), which I would humbly recommend to the attention of the Austrian Government. Vatel says:—

> Property in the territory cannot take away from other nations the right of travelling over the earth for the purpose of intercommunication for the affairs of commerce, and for other just reasons. The ruler of a country can only refuse a passage through it upon particular occasions when it would be prejudicial or dangerous to permit it. He ought, in short, to permit it for legitimate occasions, at all times that it leads to no ill-consequence to himself, *and he cannot legitimately attach onerous conditions to a concession which it is obligatory upon him to grant*, and which he cannot refuse if he would fulfil his duty, and not abuse his right of property.
>
> The right of sojourn within, as well as passage through, the territory is asserted upon the same grounds.
>
> The ruler of a territory cannot, without particular and important reasons refuse either the passage through, or residence within, his dominion to strangers, who demand it for just occasions; and although other nations and other men in general may be obliged to defer to his will in these matters, he will not the less be guilty of a breach of his duty if he refuses without proper grounds; he will, in so doing, merely abuse his territorial power.

Without entering further upon the nice question of international law, I will merely point to the above extract from a writer of unquestioned authority, and leave it to others to consider how far a system of repeated interruptions, and accompanied by formalities, at the expense of time, attention, and some personal trouble; how far a too strict enforcement of arbitrary regulations, the intricacies of which must necessarily be unknown to the majority of strangers, may come "onerous conditions," within the meaning of which Vatel says rulers of states would not be justified in imposing upon foreigners

TETSCHEN ON THE ELBE, OPPOSITE THE BODENBACH RAILWAY STATION.

VIEW ON THE MOLDAU.

as the price of the enjoyment of an undoubted natural right. The Emperor of Austria may "do as he likes with his own," but the law of nations imposes limits to his "tricks upon travellers." But, independently of all consideration of personal inconvenience and annoyance, the strictness of *surveillance* carried on in Austria has a depressing influence upon the spirits which, though more keenly felt by the new comer, without doubt permanently influences the *morale* of the resident population. The effect of this depressing influence is not palpable to the eye of a stranger frequenting any of the *cafés*, or other places of public resort. An habitual reserve prevails everywhere. Conversation, even amongst intimates, and when upon the most indifferent subjects, is carried on in a suppressed tone, the eye instinctively looking warily around when any word upon which the slightest reference to political or local matters might be hinged is used. One illustration of the extent to which this feeling is carried will suffice. Yesterday we were walking through the town with a gentleman, who, amongst other remarkable places, said he would point out the spot in the square opposite the War-office where the lamp-post had stood upon which the unfortunate Count Latour was hung, at the first outbreak of the insurrection of 1848. "But do not stop or appear to remark the place," said he, "as the guard are close by, and soldiers are constantly lurking about, and any symptom of our taking an interest in the locality might lead to unpleasant inferences, and perhaps to our being watched." Accordingly, he merely indicated the fatal spot by striking it with his umbrella as he passed; and we passed on too, merely taking a furtive glance at it. The lamp-post no longer exists: on the entrance of the Imperial army, under Windischgrætz, it was assailed by the pioneers, and hacked down in the course of a few minutes.

Perhaps it is partly attributable to the police regulations above treated of, which have tended to exclude the Austrian population from the civilising influences of association with the wide world; but, to whatever cause attributable, most certainly they have much yet to learn on the score of politeness to foreigners. If there be one thing which more than another is indicative of ill-breeding, it is the habit of rudely staring at strangers. Yet, and as we have unfortunately since our arrival in Austria; we could not have been more so if we had been on a visit in the Sandwich Islands or at Kamschatka. And they do not confine themselves to staring; they carry the r rudeness to the length of whispering together about you, every now and then remarking upon your dress, appearance, and what you have to eat; and then taking a particularly long look as you or they leave the room. This is the case more particularly with the military. I am happy to say that we have borne all this with philosophical composure hitherto; not even condescending to appear to be cognisant of the circumstance, nor even of the presence of the offenders, except by occasionally taking a very cool survey of them, as one would of a picture on a wall, or a cast in the street. Upon the whole, however, I attribute the conduct complained of more to ignorance than to any bad feeling or intention.

Prague is certainly a fine city, situated most picturesquely on the two banks of the river Moldau. The view from the famous old bridge is particularly grand—the buildings rising up on both sides, in grades, one above the other, along the sides of the hills, which have a precipitous fall. Interspersed are the domes and spires of several fine churches; and, crowning the whole, is the Hradschin—the palace of the Bohemian Kings, and which is now occupied by the ex-Emperor Ferdinand. It is an extensive building, but of an unpretending style of architecture: the stone of the exterior is whitewashed. We paid a visit to the place, in order, chiefly, to see the window in the council-chamber, out of which Slawata and Martinitz—two unpopular members of the Imperial Court—together with their secretary, or minion, Fabricius, were ejected (1618) by the armed nobles assembled in council, after the issuing of their offensive edicts against the Bohemian Protestants, which may be said to have been the first act of violence in the Thirty Years War. The height of the window is upwards of eighty feet from the ground; but there happened, fortunately, at the time to be a dunghill underneath, upon which the two obnoxious nobles, and their still more obnoxious secretary, alighted, and so they escaped unhurt. Two stones mark the spot of this remarkable adventure. The view of the town and country from the window aforesaid is magnificent in the extreme. The Cathedral, or Dom Kirche, which is dedicated to St. Vitus, stands within the enclosure of the Hradschin. It was commenced in the middle of the fourteenth century, but was never completed; it moreover suffered severely from the attack of the Swedes, in the course of the wars of Frederick the Great during the Seven Years War; upwards of 215 balls having struck the roof, and 1600 the end of the church The traces of these ravages are plainly visible to this day. Nevertheless, it is externally a fine specimen of Gothic architecture. The interior is massive, heavy, and over laden with ornamentation. In it, amongst other monuments and relics, are to be remarked a fine mausoleum in white marble, erected by Rudolph II., as a monument to himself and several other Kings and Princes of Bohemia; and the chapel and shrine of St. John Nepomuk, or Nepomucene—the latter of solid silver, and weighing, it is said, 37 cwt. Accompanying is a View of this Cathedral, and of part of the Hradschin. The round tower in the centre is an old prison, the scene of many fearful atrocities in the old feudal days. Fifteen fathoms beneath the floor of this tower is a dungeon, into which wretches, sentenced to perpetual seclusion, were let down by a rope.

We paid a passing visit to the Church of St. Nicholas, a stately building, with a dome tower at one end; rather over-decorated in the interior with painting and gilding, and colossal statues of saints, in wood, painted white and unsmelled. After this, we found ourselves, with a crowd of about a dozen other strangers, and as many more of the towns folk, soliciting admission to the Monastery of Strahow, belonging to the Premonstratensian monks; the library in which is reputed to be one of the handsomest apartments of the kind in Germany, and which is, moreover, enriched by two autographs of Tycho Brahe. After some five minutes' pause, beneath a burning sun, a portly old *frère*, who could hardly stand on his legs, appeared at the door: but was evidently alarmed at the numerical force of the crowd assembled in search of admission. "Za vell! au vell!" he exclaimed; and was for shutting the door in our faces; but, eventually, his experienced eye made a selection of the travelling lot, who generally pay for civilities of this kind, and admitted them, calling upon them, at the same time, to aid him in shutting the door against the others. As a sight, the affair was hardly worth the trouble of getting to it. The old *frère*, after hobbling along through the ante-room, into the library, went to the window nearest to the latter, and produced the two most precious documents enriched with the sign-manual of the great astronomer; which being duly inspected, we took our departure.

The Palace of Wallenstein is a building of historical interest—though, through neglect, in a splendid state of decay. Some of the most curious portions of it are the grotto, built in imitation of stalactites, where the great General used to take his shower-bath; and a small room, at the opposite side of a covered terrace, where he used to smoke and play cards. The latter is now occupied by the stuffed skin of the horse which carried Wallenstein at the battle of Lutzen; and on the wall hangs a portrait of Wallenstein, with an inscription on the back, ending—"Ergo obut sugre, 25 Feb., 1634," a punning reference to the name of the little village where he was assassinated. The palace is still in the family of the hero of the Thirty Years War, and the grand reception saloon on the first floor is now being repaired and re-decorated.

All the places described are in the smaller quarter of the town (called *Kleinseite*), which is situate on the left bank of the Moldau; for the larger portion, comprising the Altstadt and Neustadt, and where most of the hotels are, being situate on the right bank. The two banks are connected by two bridges—one of them, a very old one, begun in 1328, and finished in 1607; the other, a suspension-bridge of iron, a work undertaken by private enterprise, and completed about ten years ago. The old stone bridge is said to be the largest in Germany, being 1700 German feet in length. It has either eighteen or twenty-eight statues of saints, of large dimensions, rather clumsily executed, and some of which have fallen to decay, being minus hand, or head, or foot. Amongst them is one of "St. John Nepomuk," whose silver shrine I have already mentioned, and who was thrown over this very bridge into the river, by order of King Wenceslaus IV. (1383), because he refused to reveal the secrets of the Queen, confided to him as her confessor. The legend states that sparks of fire were seen to flicker over the water where his body lay, until it was found; and now the spot on the bridge where he was thrown over is marked by a sort of double cross, set with stars. There is an old tower at each end of the bridge: one of which, that on the Altstadt side, was, in 1648, the means of defending the city from a sudden invasion of the Swedes, through the bold and determined conduct of a Jesuit scholar, aided by three soldiers, who, just at the critical moment, lowered the draw-bridge, and defended the port till the citizens and students of the University came to their aid. The tower on the Kleinseite, however, is the more picturesque of the two—both intrinsically, and in regard to prospect which lies beyond it—including the bold frontage of the Hradschin, the Dom Kirche, and the dome of St. Nicholas's Church.

The nearer we approach the capital, the slower goes the train, and the longer the stoppages at the stations. Half an hour was a very common interval; and at Lundenburg, where the branches from Olmutz, Breslau, and places beyond fall in, we were detained upwards of three-quarters of an hour. It was dark when we arrived, and broad daylight before we started again. Meantime, several heavy trains, of thirty and forty carriages each, came up; many of them open, and filled with a living freight of all tongues and nations. The endless variety of their dress, and the confused Babel of their jabber, produced in the grey dawn a most remarkable effect. After the departure of each train, silence again prevailed, which was only broken by the early notes of birds from the trees adjoining, the cackling of geese, and the croking of frogs, with the addition of an occasional warning scream from the railway whistle.

All the way from the point last mentioned, or about sixteen or twenty miles from Vienna, the country is a dead flat, and evidently at a very low level; a great portion of it being cultivated, the remainder marshland, covered with fir-trees. As we passed through it, however, owing to the recent floodings of the Danube, there were vast tracts of country which presented the appearance of an immense lake, in which were small islands and tufts of trees. The district cannot be a healthy one, and it appeared to be but thinly inhabited. One village we saw close to the line, and which seemed to be built in a swamp, for it was but the thatched roofs only appeared above the surface of the ground; and the cottages in which were perched together so closely that opposite neighbours must have been within arm's-length of one another.

The distant outline of the Carpathian range, and then the tall pointed spire of the Cathedral are seen for nearly an hour before we enter the Vienna railway station. Here the luggage is again examined but this time by the town authorities, for *octroi* dues.

Vienna is, as it were, a town within a town, with a belt of country between. The city itself is very small, and can never be larger; being, in extent and number of houses, not one-eight of the whole town, including the suburbs. Between the latter, and surrounding the city on all sides, is a fine glacis, covered with grass and planted with trees, which is now used as a promenade. The Imperial Palace is within the city; the Imperial stables just without the city, on the other side of the glacis, and opposite the Palace. The best hotels are within the city; and these are the most convenient for a visitor who wants to be near everything worth seeing

The public buildings are of a very stately character; and even the hotels and residences houses are built upon a scale of magnitude, and with a lavish use of material, which cannot but astonish every stranger. In the Hôtel Munsch, where we put up, and now the best in the place, are I know not how many hundred rooms—it is quite a little town of itself. It is built of stone; the walls at the basement being at least seven feet thick, and those of the third and fourth floors five feet: the walls between rooms about three feet. The stairs are wide—entirely of stone; the ceilings to all the rooms vaulted; the flooring and doors alone being of wood. As a rule, all the other houses in the town are built upon the same principle, a little modified as to dimensions, perhaps; so that such a thing as a house being burned down is here almost unknown. The windows and doors are double everywhere; the former with the intention of keeping out heat as well as noise. An Englishman, on going into the coffee-room of the hotel on a broiling summer day, will be astonished to see all the windows closed, and will probably rush to open them for the sake of air. He will soon find, however, that the external air is many degrees hotter than that within; and be told that it is for this reason the inhabitants keep their windows closed. For my own part, I confess there is something to be said on both sides of the question. The residents always keep their windows shut up, except quite early in the morning and late in the evening. The room is undoubtedly cooler in consequence; but the air is tainted in a way which, to any one not accustomed to it, is most oppressive—producing headache and drowsiness. Upon a balance of evils, I recommend braving the heat for the sake of the air.

There are no *tables d'hôte* here, as in other parts of Germany, and in Belgium and France—an evidence of the unsociable character of the population, who, made up of all sorts of stocks, seem to have very little nationality in common. The dinners *à la carte* are rather a venture for a stranger; but, if you order a good dinner, at a fair price per head, you will not be disappointed. *Bière* and beer houses abound in all parts of the town, and are all day crowded. The beer, both local and that of Bavaria, is excellent—sound, genuine, refreshing; without the sharpness of our pale ale, nor is it so heady as that of London or Edinburgh By the way, "Munich Ale," as it is called here—is in error when he states that smoking is not permitted in the streets. It was prohibited temporarily some time ago: but now is permitted again, and indulged in freely, not only in the streets, but in the parks, the public walks, and even in the gardens of Schönbrunn. Talking of Schönbrunn, which is to the Volksgarten, a place of fashionable resort near the palace, where there is, on certain days of the week, a concert *al fresco*, conducted by young Strauss, who succeeded to the post upon the death of the celebrated father, and who is said to be a worthy son of a worthy sire. On these occasions, Coleman, and Captain—some sipping coffee, others promenading—all smoking. Admission, 12 kreutzers (about fivepence English).

The Cathedral, which stands in the midst of a fine open place, is indeed a noble ecclesiastical pile, and a most stately object, and conspicuous for many miles round. The interior, though not dispiring that light, rich tracery which abounds in some of our cathedrals—is spacious, and wears an aspect of grand solemnity. Roberts has recently exhibited at the Royal Academy a picture of the interior, which has been greatly talked of late years, and since Murray's "Red Book" was compiled; it no longer bears the representation of the Austrian eagle, the tiles being arranged in lozenge patterns, red and green alternately, with a white band between. This Cathedral was built between the middle of the fourteenth and the latter end of the fifteenth century; but it stands on the site of a church built in 1147, some remains of which still exist; and the outer walls are covered with ancient monumental tablets, some of which belonged to the former edifice. In early times this spot was in the centre of a vast forest, called the Wienerwald—one of the trees of which still remains, in a recess in the walls of an old house, some say 800 years old, supposed to have belonged to the layer of the said forest. Nothing but the trunk remains, if even any particle of that; for it has been so completely studded with nails, driven in by the wandering apprentices of Vienna, when setting out on their travels, that it appears but one mass of curiously wrought iron; and is appropriately called the *Stock-Eisen*, giving the name to the street or *platz* in which it stands. It is fastened to the wall by a hoop of iron, with a padlock, which an ingenious locksmith made for the purpose, by running it in a circle, so that it has hitherto been found impossible to pick it. This is a chance for Mr. Hobbs, if he would like to try his hand!

One of the most picturesque views of Vienna is to be obtained from a hill about two miles out of town, on the road to Mödling and Brühl. There stands a curious Gothic cross, known as the "Spinnerin am Kreutz," erected in 1547, and to which a curious legend attaches. The story is that the cross is erected to commemorate a fair damsel, who vowed, when her lover went to the wars, that she would sit upon the spot where it stands, every day till he returned—a vow which she religiously kept, till one day her lover, returned from the wars, actually found her there. . . . sends you a Sketch of this curious Monument, with Vienna in the distance

Every one here—at least all those who express any opinion at all upon political affairs—are very anxious as to the policy the Austrian Government may eventually adopt in the Russo-Turkish question. Although what that policy may turn out to be is as yet a matter of uncertainty, there can be no question as to what it ought to be, if Austria respects herself and the feelings of her subjects. She has nothing to gain by assisting the overgrown power and overweening ambition of Russia—but much to risk. True, out of pique against the Porte for the asylum afforded by her to the Hungarian refugees, she may be induced to join with the Czar in some act of hostility; but let her beware of the success of the Hungarian integrity of Turkey shall fall, where will be the Austrian frontier provinces, where Hungary itself? Besides, the Austrians hate the Russians most cordially, and *vice versa*: there is no sympathy between them in sentiment, or religion, or in purpose. It may be supposed that Austria might feel under some obligations to befriend an ally who lately did her such service in time of need; but there is no pretence for such an assumption. What Russia did in Hungary, she did as much for her own interests as for those of Austria; for the success of the Hungarian cause would have been the signal for a rising in Poland. Moreover, the Emperor of Austria has already paid to the Russian Czar the full amount of the contribution agreed upon for the aid afforded.

All that has passed in politics has, I am assured, had a great effect in changing the state of society here; implanting jealousies and suspicions, and breaking up old friendships; severing communities into factions and parties; so that Vienna is no longer the gay and dissipated capital it used to be. As a consequence, all the shopkeepers complain that trade is very bad.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A case of specimens of Swedish porphyry from the Royal quarries at Elfdal has arrived in England. They include fifteen distinct varieties, some of great beauty. They have been presented to the Crystal Palace Company by Mr. Charles Henry Edwards

A letter from Munich states that the Bavarian Government has decided that no executions shall for the future take place in public; but in the interior of prisons, in the presence of magistrates and witnesses appointed for the purposes.

A piece of land, containing about twenty acres, situated at Hornsey, has been purchased for the purpose of forming the site of a new cemetery for the inhabitants of the parish of St. Mary, Islington.

Advices from Warsaw represent Prince Paskewitsch to be in so bad a state of health that, in the event of war, he would be unable to take a command.

George Smith, one of the Frimley gang, the person who turned Queen's evidence, died in East Grinstead workhouse last week.

A railway to Cintra from Lisbon is in contemplation. It is proposed to carry it to Belem along the Tagus, which is to be embanked. This will be of great utility, as the northern side of that river is getting rapidly choked up.

A new gold-field has been discovered at Kilmore, about sixty miles from Melbourne; and it is alleged that tin ore exists in great quantities, and in its most valuable form, in the Ovens gold-district.

The following gentlemen were elected at Harrow on the 23rd inst. to the scholarships vacant on the Lyon and Neeld foundations:—Lyon scholars: 1. Br. W. H. Stone; 2. Mr. R. D. Wilson. Neeld scholar: Mr. E. W. Sergeant

The foreign papers arriving at Warsaw and St. Petersburg are almost entirely out to pieces; and the public can only receive the news through the Russian papers.

Last week a donkey, grazing in a meadow upon a farm at Moulsham lodge, attacked a child about ten years old, and lacerated its arm, tearing off a considerable portion of the flesh.

On Sunday week, while two boys, of ten and twelve years, were at play at the North Cliff, in Camborne, Cornwall, they fell over, and were both killed.

The young men of Edinburgh have petitioned Parliament in favour of an extension of Mr. Ewart's Public Libraries Act to Scotland.

The Hon. E. B. Bligh has issued an address to the electors of Canterbury, stating that as he has been appointed to fill an important diplomatic office at Berlin, he shall not solicit their suffrages at the next election

The Prince of Prussia and suite arrived at the Hotel d'Angleterre, at Ostend, on Saturday week, from Weimar, viâ Erfurt and Prague. The Prince intends to remain some weeks for the advantage of sea bathing.

Copies of despatches from Commander Phillips of the *Polyphemus*, reporting the destruction of the Barracoons of Don Crespo, on the African coast, last Christmas day; and the burning of the town of Sherbar, on or about the 18th of January last, have been printed.

The Duke of Saxe-Coburg-Gotha has been attacked with measles. The Duchess is convalescent.

The Baltic fleet of Russia, consisting of 37 sail, left Cronstadt in the morning of the 16th, to manœuvre in the Gulf of Finland. The Breeding Grand Duke inspected it previous to its departure.

By a letter from Rome, dated July 12, we learn that the health of his Holiness is daily becoming more precarious. He is suffering from a severe attack of asthma and general debility.

The *Dublin Evening Mail* of Wednesday states that the Archbishop of Dublin, Mr. Blackburne, and Baron Greene have resigned their seats at the Board of National Education

The Board of Guardians of St. Luke's have given public notice that they have formed themselves into a sanitary committee, with a view to put in force the powers given them by the Nuisance Removal Act.

The establishment of the mail-packet communication between England and the west coast of Africa, is likely to develop an immense trade with that part of Africa, particularly in palm oil.

Throughout the recent important negotiations about Russia and Turkey, M. Drouyn de Lhuys has been labouring under a very painful affection of the eye.

On the site of Smithfield Market—about to be removed—a square, or small park, is to be laid out for the health and pleasure of the citizens.

Five thousand miners and colliers at the Dowlais Iron Works (South Wales) struck work on Friday week, for an advance of 10 per cent on their wages.

The Austrian camp, about to be formed at Turas, in Moravia, in the month of September, is to consist of 40,000 infantry and 11,000 cavalry.

The Archæological Association has been holding its meetings during the past week at Rochester.

On Wednesday the new Vaccination Bill was issued. From the 1st of August next children are to be vaccinated within three months of the birth, or parties to be liable to penalties.

A violent thunder storm, accompanied by heavy rain, took place in London between two and three o'clock on Thursday morning. It then subsided a little, but broke out again with extreme violence about half past five.

On Tuesday evening the Surrey Gas Consumers' Association entertained Mr. Sheriff Croll, at the Bridge House Hotel, and presented him with a piece of plate for the valuable services he had rendered to the company.

At a recent meeting Mr. Chapman, formerly judge of the Supreme Court in New Zealand, stated that New Zealand possesses more native literary and scientific, than any other British colony.

The express train between Oxford and London very nearly met with a serious accident on Monday. The crank-axle of the engine broke, but fortunately no damage was done to the passengers.

On Monday last a handsome chased silver tea and coffee-service was presented to the Rev. John Edwards, M.A., principal of Bonchurch College, and late second master of King's College School, by 123 of his late pupils, as a testimonial of their esteem.

A new cemetery is in course of construction at Bradford, Yorkshire, on a large scale, and will be situated on the top of one of the highest elevations near the town, commanding a magnificent prospect.

The Governor and the *Gonfaloniere* of Faenza has been fired at and stabbed, it is feared mortally; and an agent of the police, named Cuccaccio, has been murdered at Imola.

Mr. Leicester Viney Watson, whose name was mixed up in the affair of the Keswith grenades at Rotherhithe, was arrested on Friday week at Coblentz, on his way to Switzerland.

Mr. Leicester Viney Watson, recently elected, has stated that he does not intend to defend his return for the borough of Chatham.

The machine manufactory at Bukau, near Magdeburg, in Prussia, was destroyed by fire a few days ago. The loss is estimated at 150,000 thalers.

A deputation, on the subject of the City new cattle market, had an interview with Viscount Palmerston on Tuesday, at the Home-office. The deputation consisted of Mr. Taylor (chairman), Mr. Hall, Mr. Jersey, Mr. Thwaites, the City Commercial Traveller, and the City architect.

It is said that the Emperor of the French is about to raise Dr. Conneau to the dignity of senator. Dr. Conneau shared the imprisonment of Louis Napoleon at Ham.

The balance of the defence fund of the Rev. Dr. Newman has been handed over to the new Roman Catholic University in Ireland, with the exception of a few hundred pounds given to one of the religious houses in this country. The balance amounted to £5000.

Numbers of foreigners are now attracted to Brussels by the fêtes in preparation for the marriage of the Duke de Brabant. Among other amusements, bull-fights are to be organised, similar to those in Spain.

The Museum of Ornamental Art at Marlborough House was closed on Friday last, until Monday, the 3rd of October, when it will be reopened for the public.

A company has been formed in Saxony for constructing a railway from Dresden to Tharandt, and for subsequently continuing it to Freyberg.

Some members of the medical profession have combined for the purpose of starting an "Anti Advice Gratis Society," the precise object of which is stated to be the organisation of the profession against all unpaid or ill-paid hospital, poor-law, and army and navy appointments.

The cholera is increasing at Stettin, and cases have occurred at Dantzic. Fears are entertained that it will spread rapidly in the latter place, and in the Baltic provinces generally.

A committee of the House of Commons, recommend that it is most desirable that legislative measures should be introduced without delay by Government, for rendering the adoption of an efficient police force on a uniform principle imperative throughout Great Britain.

Sir James Walker Drummond, Bart., and his bride, arrived at his romantic seat, Hawthornden, Midlothian, on Friday week, from the south, when the honourable Baronet was welcomed by public rejoicings from his tenantry.

LONDON WITHOUT CABS.

ON Wednesday morning, probably for the first time since the first introduction of hackney-carriages, the streets were cleared of those vehicles, the several cab-stands, or rather the drivers and their masters, had joined in "a strike," and not a cab was to be seen. Hitherto, a cab-stand might be deemed perennial; day and night it existed; but ubiquitously it disappeared on Wednesday morning, in consequence of the act of Parliament which came into operation a few days since. "Cabby" complains, not so much of the lowering the ratepf charge per mile to 6d. instead of 8d. as the abolition of back fares; and the compromise desired is said to be that this back fare may be charged for distances of three miles beyond some fixed spot after nightfall. "Cabby" complains that by the new system he starts from an ever shifting centre to an ever-receding point of distance, and may be compelled to travel any anywhere, at any time, six miles from himself. Cabby seems nothing settled, even if it be nothing more than the restoration of that indefinite fixture known during the last half century as "the place where Hicks's Hall formerly stood." He objects to being taken from Waterloo-bridge to Dulwich at two o'clock in the morning for 2s. 6d., or from Tottenham-court-road to Southal

THE MAN WHO THINKS THE STRIKE A JOKE.

for 5s. 6d. So the cab proprietors gave their men notice simultaneously not to call at their stables after Tuesday; and on Wednesday morning the sun rose on a city without cabs. The first to feel the inconvenience was the traveller by early railway-trains into and out of London—who found himself three or four miles from everywhere, with a leather trunk, a hat-box, a carpet-bag, fish rod, umbrella, and waterproof coat to carry. As the day progressed, the desire for cabs became more urgent—people found themselves at a full stop without knowing why. The railways suffered the greatest possible inconvenience. At every station piles of luggage waiting conveyance, and mobs of jeering bystanders advising the calling of a cab that would not come, confronted the impatient traveller. At none of the railways was the inconvenience more felt than at the London and North-Western. Train after train brought an accumulation of luggage, and each hour added to the harassing of impatient passengers from all parts of the country. Fortunately, the day was fine; and the appliances of a railway are so multifarious that they can be expanded to meet almost any possible emergency. Cabs being altogether wanting, the railway authorities, by going a step lower in the scale, were enabled, in some measure, to meet the contingency. Spring vans for the accumulation of heavier luggage, light carts and even wheelbarrows for the immediate urgency of single passengers, were pressed into the service; and, by the active employment of all the officials, the difficulties were considerably diminished. The privation was variously met by the public: to the railway traveller with a carpet-bag it was a grievance to laugh at, and he handled lightly; but, to the traveller who had his family and their appurtenances, the inconvenience was "no joke."

A meeting of cab proprietors was held at the National Hall, Holborn, on Wednesday, to consider what steps should be taken under the circumstances. The principal of the Hasp Cab Company was in the chair. The chairman addressed the assembly, and pointed out the oppression and injustice of the bill which had just become law; and told them that it was utterly impossible for them to live under that law if carried out in its stringency.

Mr. Beadle moved, as the first resolution, "That for any distance within and not exceeding two miles the fare shall be one shilling."

Mr Merredew moved as an amendment, That the fare for the first mile be 1s., exceeding one mile, and under two miles, 1s. 6d.; two miles, and under three, 2s.; three, and under four, 2s. 6d.; for every additional mile, or fraction of a mile, 1s."

After a rather disorderly discussion, the original motion was put and carried.

The following resolutions, after some further conversation, were then put, and carried by acclamation:—

For any distance exceeding two miles the rate of 6d. for every mile and for every part of a mile over and above any number of miles computed, and in like manner for every fractional part of a mile for any distance above four miles from the General Post-office.

When more than two persons shall be carried in or upon any hackney carriage, a sum of sixpence to be paid for each person, in addition to the other fares

When two or more persons shall be carried in or upon any hackney carriage, with more luggage than can be carried inside the carriage, a further sum of 2d. for every package carried outside the said carriage to be paid by the hirer, in addition to the fare.

That the right of appeal be granted against the summary award of a police magistrate.

A large subscription was entered into, and £200 at once put down. A vote of thanks was given to the chairman, and a pledge unanimously given to keep the cabs at home on Thursday, and to place full confidence in the committee which had been appointed.

A second meeting was held on Thursday, in which a determination to continue the present strike was exhibited both by the proprietors as well as the drivers of cabs; and it was also stated that the omnibus proprietors were about to join the movement.

INTERVIEW WITH MR. FITZROY, M.P.

The following letter has been forwarded to Mr. Fitzroy on behalf of the proprietors, and a deputation of their body waited upon that gentleman on Thursday afternoon, to support its suggestions:—

SIR,—The committee of the Metropolitan Hackney Carriage Proprietors, who have frequently had the honour of seeing you upon the subjects of the Hackney Carriages (Metropolis) Act, beg most respectfully to inform you that they have been requested by a large meeting of their fellow tradesmen to convey to you the views of the trade, and also to submit some suggestions as they believe would enable them to carry on their trade with credit to themselves and with satisfaction to the public.

As to Fares.

For any distance not exceeding two miles, the sum of 1s., and no hackney carriage should be compelled to work at 6d. per mile, except within a circle of four miles from some central point.

For every mile, or part of a mile, beyond the distance of four miles from such central point, 1s. and for which sum the hirer shall be entitled to return to such point of the circle as the carriage shall have first passed.

When more than two persons shall be carried in or upon any hackney carriage a sum of sixpence for each person in addition to the fare shall be paid for the whole hiring.

Personal luggage, contained in carpet-bags portmanteaus, or hat-boxes, to the extent of 56lb. should not be charged for the carriage of luggage of other descriptions shall be made subject to an agreement, which shall be legal and binding.

When hored by time, 2s. shall be paid for the first hour, and 6d. for every fifteen minutes, or any portion of fifteen minutes beyond.

Alterations as to Discipline.

Clause V.—line 4—To erase the words "both" and "outside."

Clause VI.—after line 5, to add the words, "except when the hirer or driver shall require the distance to be measured."

Clause VIII., line 3. That the words "if required" shall be inserted after "deliver," and the penal clause (17) shall be altered accordingly.

As to Appeal.

That an appeal from the decisions of either Commissioners of Police or Magistrates to a superior court shall be allowed in all matters of dispute arising out of the working of this or any other act related to the discipline of drivers.

That as the Hansom cabs can in no way participate in the increased fares permitted by this act, the proprietors shall be allowed to fix such rate of fares as they may deem expedient, provided that such rate of fares shall be distinctly established inside, and that such rate of fares shall not be altered without the week's notice being given at the proper office.

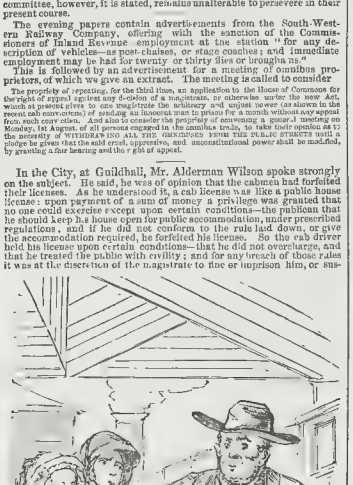
The result of the interview with Mr Fitzroy was not of a favourable character as regards the above suggestions. The determination of the committee, however, it is stated, remains unalterable to persevere in their present course.

The evening papers contain advertisements from the South-Western Railway Company, offering with the sanction of the Commissioners of Inland Revenue employment at the station "for any description of vehicles—as post-chaises, or stage coaches; and immediate employment may be had for twenty or thirty flies or broughams."

This is followed by an advertisement for a meeting of omnibus proprietors, of which we give an extract. The meeting is called to consider

The propriety of repealing, for the third time, an application to the House of Commons for the right of appeal against any decision of a magistrate, or otherwise under the new Act, which at present gives to one magistrate the arbitrary and unjust power (as shown in the recent cab convictions) of sending an innocent man to prison for a month without any appeal from such conviction. And also to consider the propriety of convening a general meeting on Monday, 1st August, of all persons engaged in the omnibus trade, to take their opinion as to the necessity of WITHDRAWING ALL THE OMNIBUSES FROM THE PUBLIC STREETS until a pledge be given that the said cruel, oppressive, and unconstitutional power shall be modified, by granting a fair hearing and the right of appeal.

In the City, at Guildhall, Mr. Alderman Wilson spoke strongly on the subject. He said, he was of opinion that the cabmen had forfeited their licenses. As he understood it, a cab license was like a public house license: upon payment of a sum of money a privilege was granted that no one could exercise except upon certain conditions—the publican that he should keep his house open for public accommodation, under prescribed regulations, and if he did not conform to the rule laid down, or give the accommodation required, he forfeited his license. So the cab driver held his license upon certain conditions—that he did not overcharge, and that he treated the public with civility; and for any breach of those rules it was at the discretion of the magistrate to fine or imprison him, or sus-



THE MAN WHO THINKS THE STRIKE NO JOKE.

pend his license; and the commissioner of police had the power to take the license away entirely. This had been done already in many instances; and it was his opinion that the present combination came under the head of misbehaviour, and that the licenses should be suspended, if not withdrawn entirely.

HER MAJESTY AND THE FLEET.—With her Majesty's convalescence is intimately connected the revived rumour that there is to be a review of the magnificent fleet at Spithead, and that it is likely to take place next Tuesday. It is confidently stated that the fleet will be more powerful than any ever assembled at that memorable station; and the minds of nautical men recur, for an adequate comparison, to the famous review when the Allied Sovereigns visited England in 1814. It is reckoned that no fewer than 27 ships—including 5 bearing more than 100 guns each, and mounting 1424 guns in all—will manœuvre before the Queen.——It is also said that the Royal visit to Ireland will take place about the 22nd or 23rd of August, and that her Majesty's stay will extend to a week or ten days; but it is not intended that, beyond a day's excursion in the county of Wicklow, the Royal trip will go further than the Irish metropolis. The Duke of Newcastle, it is believed, will be the Secretary of State accompany the Queen

A NEW START IN GERANIUMS.—The movement this year is destined for a white ground flower, which, besides top petals, as rich as any we have, and of a fine satiny texture, has three lower ones broad enough to show, with a beautiful spot in the centre of each, after the fashion of *Nonsuch* and *Oculatum*. The size of the flowers above rather than below average. Four, five, and six in a truss, which looks noble and elegant. The habit is good, foliage rich and of good colour; and, as a whole, the appearance is far more beautiful than anything we possess with a white ground, while it is strikingly novel. There is no doubt it will be the parent of a new race, and in time beat itself by its offspring, but it will be some time before anything will surpass the original; and all who have seen it, admit that it would be the most striking of all the light flowers in the most *recherché* collection. It is to be named Lady Paxton.—*Glenny's Quarterly Review.*

ROBBERY BY A POLICEMAN.—A police-constable, named Alfred King, belonging to the Wilts constabulary, has been privately examined before the magistrates, and committed to take his trial as the forthcoming Devizes Assizes, for breaking and entering on Sunday, during Divine service, the dwelling-house of Mr. Fulford, grocer and draper, Barford, and stealing therefrom the sum of £16 2s.

CHESS.

TO CORRESPONDENTS.

F. R., PHILIP, SIGMA, and OTHERS. We must refer you and other correspondents who have sent Solutions of Problem No. 492, to the author's mode of effecting mate, which is given in the present Number

RUGBIENSIS.—They are not difficult enough. Concentrate your attention upon composing one position about four moves deep, and after you have again and again submitted it to examination, send it to us.

DELTOID.—If you will favour us with an address it will save us a good deal of stence.

ISAIAH TOR.—You can demand another Queen for every Pawn which reaches his 8th square.

W. H. T. of Box, R. W.—They shall be regarded as in the next Number

H. T. & F. P. You will find the terms of the match between Messrs. Löwenthal and Horwitz in the August number of the Chess-players' Chronicle. We cannot afford space for them.

BATH DUO and OTHERS.—The beautiful Problem, No. 494, admits, unfortunately, of a common-place solution in three moves. We shall save the author a Solution next week.

CANADIAN.—What reception any Englishman would meet with who had the temerity to visit France or Germany for the purpose of begging subscriptions to wager against the chief player of either of those countries, and while on such an incredible mission employed himself in insulting and vituperating all who were not disposed to countenance and support him, is what we dare not venture to predict; but you may be assured his stay would neither be very long nor very agreeable.

SOLUTIONS OF PROBLEM No. 493, by W. B. of Leamington; Jack of Shrewsbury, Devaron, J. P. L., of Wandsworth, J. W., Dereven, J. N., Mr. Jellyby, Agnes, H. P. L., Gregory, W. P. S. S., are correct.

SOLUTIONS OF PROBLEM No. 492, by Dereven, Hollandia, J. P., J. T. W., Philip, Tiro, W. H. P., H. B. of Isleworth, are correct. All others are wrong.

SOLUTION OF PROBLEM No 492.

WHITE.	BLACK.
1. Kt to Q B 5th	Q takes P (ch), or (a)
2. B to Q B 2nd (dis. ch.)	Q to K 4th (ch), or (b)
3. B to K 4th (ch)	K takes Kt
4. K takes Q.—Mate.	

(a) 1. K to his 4th
2. B to K B 2nd (dis. ch.) Q to K Kt 4th
3. B takes Q (ch) K to his B 3rd
(If K to B 5th, then R to D 5th—Mate.)
4. Kt to K 4th Mate.

(b) 2 K to Q B 3rd
3. Kt to Q B 5th (ch) K to Q 3rd
4. B to Q 7th.—Mate

In this problem, Black has other ways of playing for his first move; but none by which he can delay the Mate.

PROBLEM No. 495.

By E. A. M. M., of India.

BLACK.

Black: K at Q Kt 6th; Ps at K Kt 3rd, K B 4th, Q 3rd, Q B 4th, Q R 4th and 7th. White to play, and mate in four moves.

No. 836.—By E. M. H., of Hull.—"*Undone.*"
White: K at K R 3rd, R at K 6th, Bs at Q R 2nd, Kt at Q B 7th; Ps at K B 4th, Q B 3rd, and Q Kt 2nd
Black: K at Q B 4th; Ps at K R 4th and 5th, K B 4th, and Q B 5th.
White to play, and mate in five moves.

MAILS FOR AUSTRALIA.—The next mails for Australia will be forwarded by the *Ventura* sailing vessel, under a contract with the Postmaster-General. This vessel sails from Plymouth on the 5th August next, after the arrival at that place of the north mail; and all letters and newspapers for South Australia, Victoria, New South Wales, and Van Diemen's Land, reaching Plymouth previous to her departure, and not addressed to be sent by any other vessel, will be forwarded by her. The packet rates of postage will be chargeable on letters by the *Ventura*, but no charge will be made upon newspapers. The mails will be made up in London on the evening of the 4th August, and at Plymouth on the morning of the 5th. Those postmasters whose instructions direct them to send their letters for Plymouth by cross post, will of course forward the correspondence intended for these mails in the same manner.—General Post-office, July, 1853.

THE AMERICAN CRYSTAL PALACE.—By the arrival at Liverpool, on Thursday, of the *Lady Eglinton*, in eleven days from Quebec, we learn that the New York Crystal Palace was opened on Thursday, the 14th inst., in presence of an immense assembly. The President and General Scott were present.

PARIS FASHIONS FOR AUGUST.

IT is difficult to recommend such articles of ladies' dress as may meet the requirements of the variable weather of the present season. One day very light dresses are necessary; next day, and sometimes even on the evening of a hot day, an entire change is indispensable. But, as light colours are fashionable, there are materials to be found which unite the light colour with the advantage of being a little thicker and warmer. For instance, nankeen is much sought after for the country, as it is not very liable to become creased, nor to be torn by briars during a rural walk. To make it somewhat stylish and tasteful, it is ornamented in front with plain lacings of wool, all of the same colour, in three rows on each side of the hem in front, upon which are placed small bells or buttons of wool also. The colours preferred for these lacings or braidings are garnet, green, or red-current colour. In place of these lacings are sometimes worn three rows of festoons of the same colour; and the sleeves are similarly trimmed on the inner side and behind. White *piqué* has the same advantage as the nankeen. It is worn festooned also; and the dress buttoned up to the neck with basquines, made rather longer than formerly. Jaconet is in high favour, as are also stamped foulard dresses. They are made of two kinds—one with small patterns for half-dress, with *volants*, or plain; and the other with large patterns, used for dressing-gowns.

To guard against the chill of evening, Turkish vests are made to put on after dinner, over a light dress. These vests or jackets are rather short, and have no waist. They are generally made of taffetas, lined with Florentine; they are worn black, and may, for the sake of elegance, be braided in the same colour; and a single thread of gold may be added. These jackets may also be worn of lighter colours, appropriated to the colours of the dress. Those of pearl grey lined with pink are charming, and assort well with almost all the light colours of the season. For dresses for hot days white muslin has an incontestable superiority. It is worn plain, with a large hem on the edge of the petticoat; the body plain, with basque trimmed with bands, festooned or embroidered. A coloured ribbon is also passed into the hems, or the puffings, or *boullonnés*. To complete these summer dresses, light ornamental articles are worn over them; as mantelets of lace, with narrow velvet, trimmed

MISS GREENFIELD'S CONCERT, AT STAFFORD HOUSE.

with two volants of lace. Shawls of black lace are also gracefully effective upon a white dress; white shawls are also made in imitation of guipure.

Gumbrelles are very useful articles, and they begin to take rank amongst what is fashionable. Hitherto, they have been made in silk, mostly plain, or with some coloured patterns. Last year some lively patterns were added; this year, they are worn made of lace. We have remarked two—one of white guipure, lined with blue; the other of black lace, lined with cherry-colour. It must be understood that all these gumbrelles have the form called *marquise*.

THE ILLUSTRATIONS.

Dress of white muslin, with small bouquets spread over the ground, of the same colour. Corsage *à la vierge*, mounted to the shoulders upon a wrist (*sur un poignet*), and tied at the waist by a wide taffetas ribbon, blue or pink; canezou of same muslin, large, without waist, with volant; the front and the head of the volant, as well as the sleeves, ornamented with a *bouillonné* of ribbon the same as the band; small cap of guipure, with a similar ribbon, to correspond with that which ties round the neck; a collar of lace. Bonnet of crape, ornamented with flowers placed upon the poke. Dress of foulard and canezou, with pattern, and four volants on the petticoat; the fifth being formed by the one which is placed at the bottom of the pardessus. The sleeves are large, and slit inside up to the top, which is finished, or is lost in a jockey; to the elbow they are tied back by ribbons.

The little girl wears a nankeen dress, with ornaments in coloured velvet, forming a knot at the back of the body; bonnet of Italian straw or leghorn, with feathers; pelisse of black taffetas; and dress of plaid poplin.

PARIS FASHIONS FOR AUGUST.

GRAND CONCERT AT STAFFORD-HOUSE.

A GRAND morning concert took place on Saturday last, at Stafford-house, by the kind permision of her Grace the Duchess of Sutherland, for the benefit of Miss Elizabeth T. Greenfield, the negro vocalist. Many distinguished vocal and instrumental artists gave their assistance on this interesting occasion; among whom were Miss Rosina Bentley, Madame Dreyfus, Mr. Sims Reeves, M. Bottesini, M. de Valandère, and the Lavenu*ire*, under the direction of Mr. Jules Benedict. The concert, which was held in the principal drawing-room, commenced at three o'clock, at which time the room was full. A raised platform at the west end of the room was occupied by the artists and the instruments, the company, nearly all of whom were in full morning costume, being seated in rows of chairs and couches, as in the pit of the opera. The concert was a natural and not ungraceful sequence to the public and distinguished reception given at Stafford-house to Mrs. Harriet Beecher Stowe and her friends.

Among the airs sung by Miss Greenfield were:—"I know that my Redeemer liveth:" "Home, sweet home;" the "Cradle song," by Vincent Wallace; and a new song, composed for her by Mr Chs. Glover, entitled "I am free." The artistes acquitted themselves admirably, and were much applauded. Between the first and second part of the concert, tea, coffee, ices, fruits, and other refreshments were handed round; and at the close, the picture-gallery, the south drawing-room, and all the state apartments, as well as the gardens, were thrown open to the company, who spent some time in examining the magnificent collection of pictures, and the many rare and costly objects of art which are collected in the *salons*.

Among the company were the following distinguished personages, in addition to the Duchess of Sutherland—Lord Grosvenor and Lady Constance Grosvenor, the Duke and Duchess of Argyll, the Ladies Lascelles, Prince Czartoriski, Madame Bunsen, Mdlle. Bunsen, the Marchioness of Aflesbury, the Ladies Pelham, Viscountess D'Alté, the Marchioness of Hastings, the Dowager Lady Ashbrook, Lady Caroline Murray, Lady Jane Walsh, Miss Walsh, the Lady Mayoress and family, Lady Anne Dashwood, Lord Frederick Hay, Lady Thomas Hay, the Hon H. Powis, the Hon. Mr. and Mrs. Wm. Cowper, Sir John Walsh, the Hon. Mrs Shaw Lefevre and the Misses Lefevre, Miss Hope Vere, Mr. and Mrs. Monckton Milnes, Mrs. Alexander, Major and Miss Price, Miss Howard, Mrs. Henry Villebois, Miss Talbot, Miss Trafford, Mrs. L'Estrange, &c.

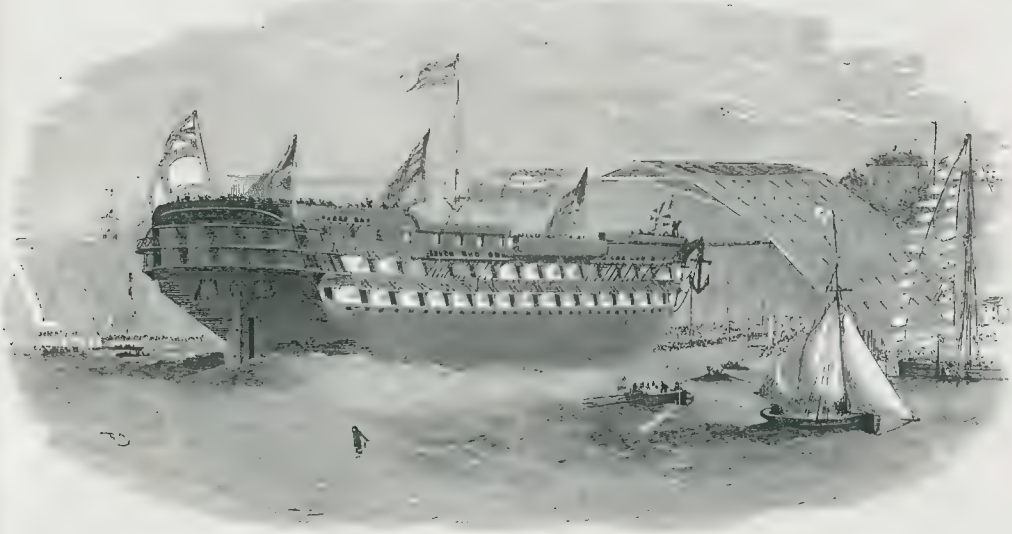
TESTIMONIAL TO M. JULLIEN.

THE departure of this indefatigable *entrepreneur* for the United States has been chosen, by his very numerous friends and admirers as a fitting occasion for presenting him with a very gratifying testimonial to his merit. The presentation took place at the Hanover-square Rooms, on Monday morning, in the presence of some hundred persons. The gift consists of a superb baton such as is used by musical conductors. It is valued at two hundred guineas. The stick itself is ebony wood, and is mounted with rich [illegible] of different designs [illegible] with [illegible] serpents, [illegible] next is a circlet of [illegible] and the whole is surmounted by a [illegible] of sixty guineas. Upon a neat escutcheon is engraved the following inscription:—

BATON PRESENTED TO M. JULLIEN.

Presented to M. Jullien
By the Members of his Orchestra,
The Musical Profession of London,
And 5000 of his Patrons, Admirers, and Friends.
July 11, 1853.

This very elegant Bâton has been manufactured by Messrs. Cherrill, of Newcastle-place, Clerkenwell.



LAUNCH OF "THE CRESSY" SCREW STEAM-SHIP, AT THE ROYAL DOCKYARD, CHATHAM.

LAUNCH OF THE "CRESSY."

Thursday week, the 21st instant, this noble 80-gun screw steam-ship was launched from her Majesty's Dockyard at Chatham, in the presence of an extensive circle of naval and military officers, the nobility and gentry of the neighbourhood, and numerous parties from London. The *Cressy* was designed, in 1844, by the Chatham Committee on Naval Architecture, consisting of Messrs. Red and Chatfield and the late Mr. Creuze. Within the last twelve months it was decided that the *Cressy* should be changed from a sailing to a screw steam-ship; and her form of body, which is fine abaft, rendered it an easy task to adapt her for a screw propeller, without its being requisite to increase her length—which has been the case with the greater number of ships built expressly for sailing, when it afterwards became desirable to convert them into screw steam-ships. The *Cressy* was entirely built under the superintendence of Mr. F. J. Laire, Master-Shipwright at Chatham Dockyard, and is of the following dimensions —

Length over all	.. ..	251 ft. 2 in
Length between perpendiculars	..	198 5
Length for tonnage ..	.. .. ..	162 1⅞
Breadth, extreme ..	.. .. ..	50 0
Breadth for tonnage ..	.. .. ..	54 4
Breadth, moulded ..	.. .. ..	53 6
Depth in hold ..	.. .. ..	21 8½

Burden in tons, old measurement, 2637 80 94.

She has engines of 400-horse power, on Maudslay, Sons, and Field's double piston rod direct-acting principle.

At twelve o'clock the gates of the dockyard were thrown open, and the public admitted to witness the launch. At half-past twelve Miss Percy, daughter of Vice-Admiral the Hon. Josceline Percy, was conducted to the bow of the vessel, where she broke a bottle of wine on the bows, at the same time naming the *Cressy*, and wishing success to the vessel. In three minutes afterwards, Miss Percy, with a chisel and silver-mounted mallet, after two sharp blows, cut the slender cord that appeared to hold the splendid ship, and at the same moment the *Cressy* glided majestically over the ways prepared for her into the Medway, amid the cheers of the numerous spectators; the band of the Royal Marines and the Dockyard band playing "Rule, Britannia."

MEMORIAL OF THE DARDANELLES, AT CASSIOBURY, HERTS.

MEMORIAL OF THE DARDANELLES.

In the delightful gardens at Cassiobury, the seat of the Earl of Essex, near Watford, are preserved two granite balls, which were fired from the Castle of Abydos, at the entrance of the Dardanelles, into the *Endymion* frigate, in 1807. Beneath one of the stony missiles is the following inscription:—

These shots of granite, from the ruins of Alexandria, were fired from the Castle of Abydos, on the Asiatic side of the entrance of the Straits of the Dardanelles, into the *Endymion* frigate, commanded by the Hon Captain Bladen Capel; when the squadron under the command of Sir John Duckworth entered those Straits, in the year 1807. The larger shot weighs upwards of seven hundredweight, and was fired at the distance of a quarter of a mile: the lesser killed and wounded fifteen men.

The pedestal of masonry upon which the shots are placed is covered with ivy; and between the two shots is a sculptured head in stone. The diameter of the largest shot is about 23 inches.

BRIGHTON REGATTA.

THE grand aquatic meeting at Brighton commenced on Thursday week and, although the bad weather on Friday rendered it necessary to defer a portion of the sport to Saturday, the Great Schooner Race for 120 Guineas amply compensated the visitors for the postponement. The course was to start from a flag-boat off the Chain-pier towards the west to a boat moored off Shoreham harbour, out about five miles, to another boat facing the pier; thence to a boat off Rottingdean, and back to the Chain-pier, three times round, making a distance of at least 52 miles As the last rounding of the west boat, the *Sverige* hoisted her balloon jib. She had previously set her foretopsail, which the *Alarm* had not nor did she make any alteration during the match. This additional canvas now began to do its work, for she ploughed through the water in rare style, and was evidently creeping on her competitor. They came in as follows:—

Alarm	.. ..	3h. 45m.
Sverige	.. ..	3 47

The *Sverige* thus lost by two minutes in a distance of 52 miles, performed by the winner in 4h. 30m. At the termination of the match she had re-

THE BRIGHTON REGATTA.—THE START FOR THE SHIPOWNERS' PRIZE.

duced the distance rather more than two minutes. If we may venture an opinion, it would be that the *Sverige* had not sufficient canvas for her build, which was evidenced when she increased it. We can imagine what the effect of the addition of a foretopsail and balloon jib would have been on the *Alarm*, and we may draw the inference that the latter is the superior vessel.

The next match was for Four-oared Galleys, not to exceed 30ft. in length. First bont, £15; second, £7 10s.; third, £4.

Arrow (Mr. J. Nottidge), Ramsgate	.. .. ..	1
Lelia (Mr. T. Tutt) Hastings	.. .. ..	2
Surprise (Mr. A. Farrell), Hastings	.. .. ..	3

Three others started, but were not placed.

The contest between the first and second boats was a very severe one. In returning, opposite Regency-square, they were bow and bow for some boat's lengths; but the Ramsgate men pulled faster than their Hastings competitors, and won by some distance.

After the sailing, the cliffs were thronged with carriages and promenaders, the afternoon being fine. There was a display of fireworks from the Chain-pier in the evening; but the weather had changed, and a drizzling rain marred the pleasure. There was also a concert at the Pavilion, which was attended by about 500 persons.

As we have already stated, on Friday the weather was so bad, that the sports were postponed to Saturday, when the Regatta was resumed under the most favourable auspices—the weather being delightfully fine with an abundance of sport.

The first was the race for the Hotel-keepers' Prize of £50, with £50 added by the Regatta Committee.

Yachts.	Tons.	Owners.
Arrow	109 ..	T. Chamberlayne.
Ellen Thynne ..	68 ..	E. L. Thynne.
Aurora	60 ..	Le Marchant Thomas.

The start took place at 11.40, with a fine steady breeze from S.W., and smooth sea. A l were very smart in setting their sails; the *Aurora* getting her topsail first set, and making a short board on the starboard tack; the others on the port tack. All had to go about before rounding the western spot boat; before reaching which, the *Arrow* went to windward of the *Aurora*, which had for some time kept abreast of the *Wildfire*. At the western boat the *Wildfire* were first round, at 11 h. 46 min. 30 sec., the *Arrow*, at 11 h. 49 min., and the *Aurora*, at 11 h. 51 min. After going three times round the course, the race concluded as follows:—

Arrow	.. ..	4h. 44m. 15s.
Wildfire	.. ..	5 1 0

The next race was the Second-Class Prize, for the Shipowners' Purse of 50 guineas; for 15 tons and under 30:—

Yacht's.	Tons.	Owners.
Merlin	7 ..	— Bertram.
Emetic	22½ ..	Major Martin.
Phantom	25 ..	S. Lane.

The start took place at 12h. 55m., over the same course, but only twice round. This was won by the *Phantom*, beating the *Emetic* by 0m. 5 sec.; the *Merlin* being "nowhere."

Of the other races, the following are deserving of a passing notice:—

The Skiff Match was won by J. Tull's *Sylph*; Waight's *Kraker* being second.

For the Pleasure Luggers' Prize, J. May's *James* was first; and B. Bent's *Albion* second.

Second-class Pleasure-boats.—B. Kent's *Royal Frederic*, 1; C. Payne's *British Lion*, 2.

In the Oyster Smacks' Race, Bockridge's *Claude* was 1; and Grigg's *Navarino*, 2.

The Regatta dinner took place in the evening, at the Ship Hotel; H. P. Tamplin, Esq., the High Constable, in the chair. It was very largely attended; and the usual toasts on such occasions were done an ple justice to.

The accompanying Illustration represents the start for the Shipowners' Prize of fifty Guineas, won by Mr. Lane's *Phantom*.

NATIONAL SPORTS.

GOODWOOD RACES.—TUESDAY.

A very lowering morning ushered in the Goodwood Meeting, and threw over it an air of dulness which not even the abundant programme of sport could altogether dispel. The company, which scarcely reached a numer.cal average, was composed chiefly of gentlemen—the patrons, amateurs, and professionals of the turf. Only a few ladies appeared upon the Grand Stand. The front row of the building reserved for the exclusive occupation of the Duke of Richmond, we observed the noble proprietor, who, we rejoice to learn, is nearly recovered from his recent indisposition, several members of his Grace's family, and the distinguished guests who are participating in the Hospitalities of Goodwood House during the meeting, formed a numerous party. The arrangements for the day were as follows:—

Craven Stakes.—Ireland's Eye, 1. The Little Savage, 2.
Match, £100.—Bybia, 1. Gavotte, 2.
Sweepstakes of 5 sovs. each, with £50 added.—Farmer's Boy, 1. Himalaya, 2.
Match, £200.—Petrel, 1. Jullien, 2.
Ham Stakes.—Alemble, 1. Sortie, 2.
Trafalgar Stakes.—Sittingbourne, 1. Umbriel, 2.
Match, £50.—Whittington, 1. Game Pullet, 2.
Levant Stakes.—Bay Colin, 1. Egmont-dale, 2.
Sweepstakes of 300 sovs each.—Ilex, 1. Sackbut, 2.

WEDNESDAY.

As though to recompense the racing world for the disappointment caused by the cheerless state of the weather on Tuesday, this morning opened all smiles and sunshine, and tempted many a Londoner to taste the fresh air upon the Sussex hills. The special and ordinary train from London-bridge conveyed during the morning troops of racing amateurs to Chichester and Drayton road station; from whence to the course—a distance of five miles—visitors usually proceed by public or private vehicles.

The Goodwood Stakes—to which, next to the Goodwood Cup, the great.st interest attaches—was the most important of the day. A large amount of money had been invested on it, and, contrary to expectations, Adine, an outsider, cut down the favourites, and bore away the prize, to the great delight of the fielders, who thereby netted a considerable stake The attendance on the course and on the Grand Stand and enclosures was very numerous, and the extreme fineness of the day enabled the ladies—of whom there was a brilliant assemblage to display their elegant summer costumes in the reserved portion of the enclosure at the extremity of the Grand Stand. The racing details are annexed:—

Sweepstakes of 300 sovs each, for fillies. Mayfair, 1. Exhibition, 2.
Handicap Plate of £50. Cheddar, 1. Jessamine, 2.
Goodwood Stakes.—Adine, 1. Trifle, 2.
Sweepstakes of 300 sovs each, for colts.—Eulogist, 1. Vanderdecken, 2.
New ards' Cup.—Longhow, 1. Nabob, 2.
First year of the Great North and South of England Biennial Stakes.—Marsyas, 1. Scythian, 2.
Drawing Room Stakes. Nutpecker walked over.
Sweepstakes of 10 sovs each. Vaultress, 1. Maidstone, 2.

THURSDAY.

Produce Match. Empress Catharine, 1. Whittington, 2.
Sweepstakes of 100 sovs.—Cineas, 1. Cobnut, 2.
Handicap Stakes.—Lascelles, 1. Umbriel, 2.
Two-year-old Bentinck Memorial Autocrat, 1. Dervish, 2.
Goodwood Cup.—Jouvence, 1. Hervine, 2.
Four-year-old Bentinck Memorial.—Voodle, 1. Harbinger, 2.
Three-year-old Memorial.—Sittingbourne, walked over.
Molecomb Stakes.—Andover, 1. Mincemeat, 2.
Sweepstakes of 50 sovs.—Cobnut, 1. Catherine Hayes, 2.
Duke of Richmond's Plate.—Black Swan, 1. Corybantes, 2.

FRIDAY

Sweepstakes of 50 sovs.—Whittington walked over.
Sweepstakes of 100 sovs.—Adine, 1. Ambrose, 2.
Rous Biennial Stakes.—Boisrdo, 1. Quince, 2.
Chesterfield Cup.—Satyr, 1. Zingara, 2.
Nassau Stakes. Mayfair, 1. Nicoline, 2.
Nursery Stakes.—Vixen, 1. Lady Bird, 2.
Queen's Plate.—Torment, 1. Hex, 2.
Cowdray Stakes.—Canteverta, Dear Me (dead heat).
March Stakes. LeyLourne, 1. Heriot, 2.

CRICKET.—SUSSEX (WITH G. PARR) v. ENGLAND.—This match (begun on Monday) was brought to a conclusion on Wednesday, in favour of England by 197 runs. Score:—England, first innings, 138; second, 227. Sussex, first, 50; second, 78. There were 5000 or 10,000 spectators on the ground during the three days. The proceeds are for the benefit of Lillywhite, sen., who now "quits the field."

REGATTA AT KINGSTOWN HARBOUR.—The Royal St. George's Club Regatta commenced on Tuesday. The principal race was for a piece of plate, value 150 sovereigns. The following yachts started for the prize:—*Volante*, 48 tons; *Cynthia*, 50; *Coralie*, 26; *Irish Lily*, 79; and *Minerva*, 55. The race was admirably contested. It was won by the *Volante*, beating the *Irish Lily* and the others by 8 m. 17 sec. The second prize of 50 sovs., was won by the *Onda*, 20 tons.

MUSIC.

BRADFORD MUSICAL FESTIVAL.

The preliminary prospectus for the Festival at the extraordinarily fastrising town of Bradford, in the West Riding of Yorkshire, has been issued. This interesting musical celebration, which is under the especial patronage of her Majesty and Prince Albert, will take place on Wednesday, Aug 31, and Thursday and Friday, Sept 1 and 2, in the new edifice St. George's Hall. The Earl of Harewood, the Lord-lieutenant of the West Riding, is the President; and the Archbishop of York, the Bishop of Ripon, the Earl of Carlisle and the Earl of Zetland (Lord-Lieutenants of the East and North Ridings), are also among the patrons. Mr Costa will be the conductor of a magnificent orchestra, which includes all the players in the Royal Italian Opera band, with additions from the Philharmonic Society. The choruses will be selected from the numerous choirs and choral societies in Yorkshire and Lancashire, under the drilling of Mr. W. Jackson, of Bradford. The principal vocalists are Madame Clara Novello, Miss Dolby, Mr. Wilbraham, Mr. Sunderland, Miss Freeman, and Madame Castelian; Mr. Sims Reeves, Mr. Lockey, Signor Gardoni, Signor Tagliafico, Mr. Weiss, Mr. Winn, and Herr Formes. Mr. J. L. Hopkins, of the Exeter hall Sacred Harmonic Society, will be the organist. The scheme of the performance is full of interest. On the first morning, Mendelssohn's oratorio "St Paul" will be given; on the second, Handel's "Messiah;" and on the last morning a MS. Credo, by Mendelssohn, presented to the Festival Committee by the executors of the composer, will be heard for the first time in this country. Costa's "Baptismal Anthem," performed at Buckingham Palace, on the 28th ult., at the christening of Prince Leopold, will also be given; besides gleanings from Handel's "Israel in Egypt," and "Haydn's "Creation." At the three evening concerts, symphonies by Mozart, Mendelssohn, and Beethoven; and overtures by Weber, Auber, Rossini, Herold, Mendelssohn, and Beethoven, will be executed; and the vocal selections will be from the most popular operas of the French, Italian, English, and German masters.

MUSICAL DOINGS

A concert was given at Sadler's Wells Theatre last Monday, for the benefit of the unemployed chorus singers of her Majesty's Theatre. The programme included the names of Signor Piccoli, Signor Gassier, and Herr Ganz, as conductors. The Napoleon, the boy pianist; G Collins, Inanzini, Bottesini, and Mr. John Thomas, as instrumentalists; and Mdme. Angri Mdlle. Favanti, Signor and Mdme. F. Lablache, Signor Gardoni, Mr. Allen, Wilbraham, Miss Bassano, Miss Stabbach, Miss Julia Harland, Mrs. A. Stone, Miss R. Isaacs, Mrs. G. Tedder, and Burdini, as vocalists.

Signor Guglielmi gave an evening concert at the Beethoven Rooms on Wednesday, aided by Mdme. Angri, Mdlle. Doria, Mdlle. Cesarini, Signori Gardoni and F. Lablache, M. Lefort, Mdlle. St. Marc, Piatti, Rotiesini, Bazzini, Ilyle, Ayrton, Mateo Mattei, and Arthur Napoleon (juvenile pianist), Piatti, Pilotti, Benedict, Herr Ganz, &c.

Our Paris letters mention that M. Corti is making engagements to re-open the Italian Opera House, in October; and amongst the artistes named are Madame Frezzolini, M. and Mdme. Gassier (of whom much is expected), Gardoni, Ronconi, Fazzolini, &c.

New York papers record the doings at the Italian Theatre of Madame Stefanoni, Madame Bertucca, Salvi the tenor, Marini the basso, Rovere the buffo, Lossi, Benevantano, Bagnoli, &c.

Madame Clauss, the pianist, Mdlle. Agnes Bury, Madame Donna, and Herr Hobert, were engaged at the first Gentlemen's Concert, at Manchester, last Monday, under the direction of Mr. Charles Hallé

The Grand Opera, in Paris, will here-opened in a fortnight, with Meyerbeer's "Huguenots."

Dr. Bexfield's oratorio "Israel Restored" was performed at the Music-hall, Leeds, under the composer's direction.

MUSIC IN IRELAND.—We learn that Mr. Harris, the spirited manager of the Dublin Theatre, intends to produce a new opera by an old composer—the veterna Signor Lanza, now in the 83rd year of his age, and celebrated as the teacher of Braham and other eminent vocalists, as well as the author of the best methods of singing. The maestro will, we understand, himself conduct the performance for three nights; his daughter, Miss Lanza, will appear in some of the theatre, undertaking the part of the heroine. The title of the opera is "Hamet and Zelena." A public rehearsal of the music having tested its merits, the highest expectations are entertained of its success. The getting-up of the piece is conducted to Mr. Levy.

BRIDGWATER MADRIGAL SOCIETY.—On Monday the members of this society gave a grand concert and pic-nic at the residence, on the Quantock-hills, of Sir Peregrine Acland, Bart., brother of the Right Hon. Henry Labouchere. There was present a large assemblage of the *élite* of Bridgwater, Taunton, Weston super-Mare, Minehead, &c. The concert commenced at four o'clock, and the vocalists and company assembled in a deep glen, at the bottom of which, by the side of a stream, was placed the pianoforte. About 40 pieces of music were performed. The first piece sung was "A fair and holy love," by Donato; followed by "Here, in cool grot," by Lord Mornington; "When the west with evening glows," by Mendelssohn; "Hark! hark! the lark," by Attwood, &c. Several duets were remarkably well executed, and their effect among the hills was truly delightful. The day's entertainment concluded with the pic-nic.

WARMINSTER ATHENÆUM.—On Thursday (last week), the anniversary fête of the Warminster Athenæum was given at Longleat with great éclat Upwards of 4000 persons were present, and the delightful park and gardens were, by the kindness of the Marquis of Bath, thrown open to the holiday-keepers. The band of music were provided by the committee; lectures on popular science were delivered; and the entertainments concluded with a grand display of fireworks after dusk. The company were ably addressed upon the advantages of literary institutions, by Mr Henry Danby Seymour, M.P., who occupied the chair, and felicitously illustrated the great value of the Warminster Athenæum, and the many interesting associations prompted by the celebration of its anniversary in the historic domain of Longleat: for which enjoyment the company gave three hearty cheers for the noble owner—the Marquis of Bath.

CAN THE AZTECS SPEAK?—The human oddities called by their exhibitors "The Aztec Lilliputians," suggest a most interesting problem to the philosophic mind. Though not dumb, they have no language; and, though full of spirit-, and speaking loudly enough when told to do so, they scarcely at any time speak of their own accord. The words they then give utterance to are not their own personalities, acquired since they have been under the care of their present guardians. Mr. Waterton in a paragraph copied into the *Times*, doubts whether it is possible for the Aztecs to understand a word they say or sing, and still be unable to utter a vernacular language. Yet it is perfectly certain that they do present the anomaly. We were distinctly informed by their intelligent exhibitor that they do not speak to one another, and that they are unable to utter a word in any other tongue than the English, of which they do not speak more than forty words. But, understanding perfectly that which they are told to do, they do it promptly if they will, and still be unable to utter a vernacular language. Yet it is perfectly certain that they do present the anomaly. We were distinctly informed by their intelligent exhibitor that they do not speak to one another, and that they are unable to utter a word in any other tongue than the English, of which they do not speak more than forty words. But, understanding perfectly that which they are told to do, they do it promptly if they will, and still be unable to utter a time The explanation of this curious phenomena, as given by the exhibitor, on the authority of the Spanish Velasquez, is—that, while the Aztec children were in the worship of silence, as a priests in the pagan city of Iximaya, they were kept isolated from the people, and from the other members of their own caste never spoken to, and never permitted to speak. This worship of silence was a worship common to the Egyptians of old, and some of the remote Asiatic tribes at the present day, appears to be the description of worship which the Mayan Indians pay to these Aztec Lilliputians. Their dumbness is their sanctity; their being adored in silence, and prevented intercourse with other human beings, is the origin of their dumbness. Such, at least, is the solution of the problem which is given at the Hanover-square Rooms, and upon which we pronounce no opinion of our own. It has been said by some who have examined them that the nervous system of the Lilliputians, the organs of speech are in a state of torpor, and act only under powerful stimuli whence it has been argued that they have an insufficient nervous system. But this reasoning does not appear to accord with their quickness of vision, their celerity of movement, and their animated demeanour. It is interesting to know whether this torpidity approaches to atrophy of the nerves, or whether the stimulus of unremitted attempts at education will awaken the latent power of clothing ideas with language. In every respect these little beings present plenteous matter for contemplation to every one who will regard them as they deserve to be regarded—seriously, and with careful scientific scrutiny

THE KING OF PRUSSIA.—His Majesty has awarded Captain Duckett, author of a German Technological Dictionary, the "gold medal for science and art," as a mark of his approbation of that officer's laborious undertaking.

PRESERVATION OF HAMPSTEAD-HEATH.—A numerous meeting of artists was held in the Flaxman Gallery, University College, on Saturday last, to consider the benefit to be taken by the artists to preserve Hampstead-heath and the neighbouring grounds in their present order, for the purpose of art study, and with this view to urge their acquisition by the public. Sir William J. Newton took the chair, and was supported by Messrs Stanfield, R.A., Cockerell, R.A., Cruikshank, Fye, Lucy, Fripp, Edds, (Carl) Haag, Pickersgill, &c. Some resolutions, favourable to the above object, were adopted; and a petition to her Majesty founded upon them having been also adopted, the following resolution was carried amidst cheers:—"That the meeting, looking upon his Royal Highness Prince Albert as the patron and encourager of arts, do urgently request his Royal Highness to take charge of the petition and present it to her Majesty."

THE THEATRES.

ROYAL ITALIAN OPERA.

The subscribers who looked forward to the second performance of Donizetti's "Favorita" last Saturday night were doomed to another disappointment; the excuse put forward on this occasion being Mario's "indisposition." In the substitution of Rossini's "Otello" for "La Favorita," whether as regards composition or execution, there was nothing to regret. Nothing on the entire European lyric stage can approach the terrible grandeur of Tamberlik's "Otello." His acting, whilst unsurpassed by in breadth, vigour, and earnestness, is even exce led by his singing, producing, in fact, effects on his auditory which not even Rubini nor Duprez, in their best moments, was ever able to accomplish. In the duo with *Iago*, sustained with such irony and maliciousness by Ronconi, the house was roused to a burst of enthusiasm at Tamberlik's searching notes—the altitude of which from its chest is quite a phenomenon. Grisi's *Desdemona* is admitted to be one of her best assumptions, although it is not the "gentle" heroine of Shakespeare; being a southern virago, in fact, quite capable of encountering the Moor in his fiercest mood. Lagliaccì's *Elmiro* (Brabantio) falls from comparison with Lablache, no great fault, therefore, of the former gains taking artist. Whilst Lucchesi and Mdlle. Belini are on the establishment, it is astonishing how Madame Coati and Signor Stagelli could be permitted to massacre the music of *Emilia* and *Rodorigo*.

PRINCESS'

A new farce has been produced at this theatre—a slight dish after the more substantial feast of "Sardanapalus." It is from the French, and called "Chesterfield Thinskin," a part acted by Mr. Harley, and exactly suits that him—that of a nervous, fidgety individual, who stands on punctilios, of which he is himself scrupulously observant, and who threatens the duel wherever they happen to be neglected. The performer was amusing, and the piece well received.

ST. JAMES'S.—GERMAN PLAYS.

In venturing on English drama, the German company challenge competition, and naturally awaken natural envy. To the general merits of Herr Devrient's *Hamlet*, acknowledgments, however, have been gratefully rendered; but a new candidate has found greater difficulty. On Friday week Herr Ganz made his first appearance as the representative of *Othello*: and, as such, stands high in the estimation of his countrymen. Differing as it does in costume, conception, and general business of the scene, we are not the less inclined to admit its merits. The whole tragedy was performed in a more subdued key than usual on the English stage; with, in fact, a familiarity of tone proper to the domestic drama. In the third act, however, full vent was given to the passion, and Desdemona proved that he possessed tragic power with great stage skill. *Iago's* poison having taken effect, he becomes suddenly hoarse, and the words distil from him decidedly and with painful effect. We may remark, that the whole of the fourth act was differently cast from our stage version. It commenced with *Othello's* epilepsy—never presented on the English boards—*Bianca* having an interview with *Cassio* to return the handkerchief; and thus the full grounds for *Othello's* jealousy are exhibited, and his conduct justified in the manner originally designed by the poet. The concluding closescene before *Emilia* and *Desdemona* is also restored, with the pathetic tale of Barbara and the Song of the Willow, which Fraulein Fuhr chanted in low and despairing tones, that extorted tears from the sternest. We felt a truth of what sore Lave asserted, that Shakspeare is better understood in Germany than in England. Here was a proof of it. Equal proof, also, was given of good taste in the omission of the Roderigo murder-scene, which always on the English stage excites both horror and laughter. Fraulein Fuhr, in the character of the gentle wife, rewarded us much of Miss Faucit. The grace and significance of her acting in the last scene now-a-days unequalled It should also be remembered that the addition of the closet-scene adds to the importance of the character, and an opportunity for effect not enjoyed by English actresses. The rôle, indeed, is evidently on our stage sacrificed to the *Iago* and *Othello*; actors, doubtless, having undertaken the reduction of the play. This duty on the German stage has been left, as it ought always to be, to the poet, who, as translator and stage adapter, has thus done justice to Shakspeare and the actress, as well as to all the other performers

On Monday, "Fiesco" was performed for Herr Devrient's benefit. This play is not actable, as not only defining a certain stage of Schiller's mental and artistic development, but anticipating one of his later forms. The character itself is an elaborate dramatic portrait, wonderful for the skill with which by the distribution of light and shade, a part without stage elements of interest is rendered superbly effective. Much of its success is owing to the contrast between the assumption of *Muley Hassan*, the Moor of Tunis, performed by Dessoir Never was more versatility shown than by this actor. Who would identify this exceedingly comic assumption with the dignified Moor of the preceding evening? To those who recollected how dull and *preachy* the whole play of "Fiesco" was, when performed lately at Drury lane, it must have been a matter of great surprise to witness the manner in which it was mounted: produced by the German manner of acting the parts. It is clear that English actors as much need the traditions of the German stage for the due performance of German dramas, as German artists require those of the British theatre, in order to give the full effect to their marvellous versions of Shakspearian tragedy. Preference, however, for either is simply an affair of taste, and admits not of dispute. It should, therefore, be exempt from criticism.

THE CAMP AT CHOBHAM.

SATURDAY

A VERY brilliant field-day took place on Saturday, in which the whole of the troops were engaged. A great number of spectators were present, availing themselves of that rare atmospheric phenomenon, a fine day. The day's proceedings passed off with great éclat.

MONDAY.

This was a grand drill day for all the troops. The details are somewhat varied to other field days, and the two divisions—the cavalry and the artillery—went through various evolutions, and then returned to the Camp.

TUESDAY.

A very numerous muster of visitors came down to Chertsey, though they were doomed to utter disappointment in regard of witnessing any military evolutions. All the men remained in their respective cantonments, and prepared themselves as well as they could, by a long day's rest, to undergo the fatigues of the next day's pontooning at Runnymede.

WEDNESDAY.

This was an important day in the history of the Camp. Lord Seaton marched his division to Runnymede, threw a pontoon bridge over the bend of the Thames there, fought a sham battle in Magna Charta Island, and, the enemy having been defeated, the bridge was taken up and returned by Staines to the Camp. An accident took place on the pontoon bridge just as the last field battery was crossing it, by which two horses were drowned. The bend of the river at this point has a depth of nine or ten feet, and the team drawing one of the guns became unmanageable, the six horses, gun and all, tumbled in, sweeping with them several of the Sappers. The men escaped with a ducking, and four of the horses were cleverly rescued, but the two wheelers, weighed down by the carriage, could not be saved.

The number of visitors was immense, not only at Runnymede, but also at Chobham, where several thousands of persons patiently waited in the rear of the troops to the Queen's arrival. There were present the Duke of Atholl, the Duke of Leeds, Earl of St. Germans, Earl of Cardigan, Lord Overstone, Lord Adolphus Fitzclarence, the Right Hon. Sidney Herbert, and a large number of members of both Houses of Parliament, with their families.

THURSDAY.

This was all but a holiday at the Camp—the men resting after the work of the previous day—the bare marching to Runnymede and back being about fifteen miles.

It is rumoured that the break-up of the whole Camp will take place on the 20th of August next, though many of the officers confidently assert that it will be carried on till the middle of September

Amongst the novel objects of interest, combined with the portability necessary for military encampment, is a mode of obtaining pure water at the Camp. A filter of porous stone (we believe Ransom's patent) is placed over the mouth of the tub, which is then filled from a reservoir with water, which permeates through the stone to the interior, and thence is conveyed, by a conduit pipe, through the barrel: at the exterior of which it terminates in a tap, by which it may be drawn off in any quantity, the filter being always charged with pure water, rendered delightfully cool by the refrigerent body around it

SAVE-ALL WATER-TAP.—A great proportion of the water supplied to the poorer districts of large towns is absolutely wasted. This is part calurly the case with public taps in yards and courts. From negligence of one sort or other, more than half the water is lost. Frequently the taps are "left running" all night. A water-tap and box for public places is suggested, that would entirely prevent waste It consists simply of an ordinary tap, fitted at the side with a lever and *weight*. When the weight is raised, it falls into its vertical position, and shuts off the water.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JULY 28.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading	Thermometer: Lowest Reading	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches
	Inches.	°	°	°	°	°		Inches.
July 22	29.700	67·0	59·0	61·6	— 0·2	91	S.W.	0.01
" 23	29.685	72·4	61·7	67·1	+ 3·5	70	S.W.	0.09
" 24	29.804	72·0	54·4	60·4	— 1·5	86	S.W.	0.04
" 25	29.758	72·6	52·1	60·8	— 1·1	77	W.	0.00
" 26	29.725	67·4	54·3	59·3	— 2·6	87	S.W.	0.07
" 27	29.926	71·1	53·2	62·3	+ 0·2	86	S.W.	0.00
" 28	29.738	71·0	58·0	60·9	— 1·3	95	S.W.	0.30

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the barometer decreased from 29·79 inches at the beginning of the week to 29·57 inches by 3h. p.m. on the 22nd; increased to 29·64 inches by 9 p.m. on the 23rd; decreased to 29·48 inches by 9h. a.m. on the 25th; increased to 30·01 inches by 9h. a.m. on the 27th; decreased to 29·86 inches by 9h. a.m. on the 28th; and increased to 29·86 inches by the end of the week. The mean reading for the week was 29·810 inches. The mean daily temperature has been below its average every day from the 16th to the 26th (with the exception of the 19th, when it was slightly above), the mean defect being 2·2° daily. The mean temperature of the week was 61·0°; being 1·0° below the average of thirty-eight years. The highest reading of the thermometer during the week (74·0°) and the lowest (51·7°) both occurred on the 23rd: the r difference (22·3°) shows the range of temperature during the week. The least daily range of temperature during the week was 8·0°, on the 22nd; the greatest, 22·3°, on the 23rd; and the mean for the week, 15·1°. A thunder-storm occurred on the night of the 27th, accompanied by heavy rain. Rain fell to the depth of 0.85 inch during the week.

JAMES GLAISHER.

Lewisham, July 29, 1853.

HEALTH OF LONDON.—During the week ending July 23, the number of births registered in the metropolitan districts was 1060: of which 543 were boys, and 517 were girls. The average number in the eight corresponding weeks of the years preceding 1853 was 1026. The number of deaths registered in the week was 971. The estimated number deduced from the average of the ten corresponding weeks of the ten preceding years, and corrected for increase of population, was 1126—the actual mortality is less, therefore, than the estimated by 155. During the week 2 persons died from the effects of intemperance, (their average is 3·67); of these, 2 were due to small-pox (its average is 18); to diarrhœa, 72 (its average is 100); to cholera, 8 (its average is 88), and to typhus, 31 (its average is 40). To dropsy, cancer, &c., 30 (their average is 43). To tubercular diseases, (their average is 137): of these 148 are due to consumption (its average is 18 in excess of its average). To diseases of the brain, nerves, and senses, 94 (their average is 116): of these, 28 are due to convulsions, (which is 16 less than its average). To diseases of the heart and blood-vessels (their average is 29). To diseases of the lungs and the other organs of respiration, 102 (their average is 77): of these 46 are due to bronchitis (in excess of its average by 24). To diseases of the stomach, &c., 70; and to violence, privation, cold, and intemperance, 36 deaths are attributed.

CITY OF LONDON CORPORATION REFORM.—The City of London Municipal Reform Association has issued an address, stating that within the last few weeks more than 4000 bankers, merchants, manufacturers, and trad esmen have been summoned to take up freedoms whereby to continue their respective pursuits within this commercial capital of the world, and that 10,000 more are under a similar liability. The parties so situated are earnestly urged to co-operate and appeal to the Royal Commissioners appointed to inquire into the present state of the corporation. The association is, in fact, a Municipal Reform League for the correction of all abuses in the corporation.

COMMERCIAL BANK OF LONDON.—On Saturday last the clerks of this bank received a quarterly ten per cent upon their salaries for the last year. It is only a few days ago the directors of the Sun Fire Office did the same to their *employés*; and we are informed it is in contemplation by the Joint Stock Banks of the City generally to grant out the principle, as the profits have been so unprecedented in banking during the last six months.

BANQUET AT THE MANSION-HOUSE.—On Saturday last the Lord Mayor gave a splendid banquet at the Mansion house to her Majesty's Ministers and three hundred guests. Among those present were Lord Aberdeen, the Lord Chancellor and Lady Cranworth, the Earl and Countess of Carlisle, the Duchess of Sutherland, the Duke and Duchess of Argyll, the Duke of Newcastle, Viscount and Lady Palmerston, Lord and Lady John Russell, Mr. and Mrs. Herbert, Sir W. Molesworth, M.P., Count Walewski, the Austrian Ambassador, Baron Brunnow, Marquis Wagram, the Marquis d'Azeglio (Sardinian Minister), Viscount Canning, Viscount Hardinge, &c., &c. The usual loyal and general toasts were given, and a very pleasant evening passed by the company.

FREEDOM OF THE CITY OF LONDON.—In the Court of Aldermen on Tuesday, Alderman Wire inquired if it were true, as reported, that 10,000 summonses had been issued against tradesmen within the last month, for not having taken up the freedom of the City; and the reply was, that no such summons had been issued since 1st April. Seven summonses to the number of 4023 had been issued from March to the 29th of April; of that number 414 had taken up their freedom; 764 had been allowed time; 698 had claimed exemption; 1092 were many of them dead, removed, or did not attend; and 165 belonged to the privileged parish of Christchurch. The cost of the freedom is £6 3s. 8d., of which £3 3s. goes to the Government.

THE ROYAL SOUTH LONDON FLORICULTURAL SOCIETY.—This old established society on Tuesday held another of its shows at the Royal Surrey Zoological Gardens, which was well attended. On one occasion the flowers were as nearly as possible exhibited on the spot selected for that purpose, and included some excellent specimens of Cape heaths, roses, stove and greenhouse plants, verbenas, carnations, hollyhocks, picotees, cut flowers, fruit, &c. An extra military band was in attendance, and performed several pleasing and popular airs

PHILOLOGICAL SCHOOL.—On Thursday Sir J. Hamilton, Bart., presided at the Literary Institution, Edward-street, Portman-square, over the interesting occasion of the presentation of the prizes to the pupils of this excellent institution who had distinguished themselves during the past year in the prosecution of their studies. The scene was one of much interest, and will have the effect of stimulating the youthful aspirants to increased exertion.

UPPER INDIA RAILWAY.—On Thursday a meeting of the scripholders in this company (the object of which is to make a line from Allahabad to Delhi—was held, when an agreement, approved by the East India Company and the Government, was presented by the East Indian Railway Company, by which the whole line of railway from Calcutta to Delhi, a distance of 990 miles, will be under one management, as approved. The total capital will amount to £7,000,000. Of which 4,000,000 is to be found by the East Indian Railway Company, and 3,000,000 by the Upper India Company.

HYDE-PARK IMPROVEMENTS.—The department of Woods and Forests have caused an improvement to be effected in the equestrian ride in Hyde-park, known as Rotten-row. This important and much frequented portion of the park has been widened to nearly double the former width, the entire distance from the bridge opposite Albert-gate to the south-eastern entrance to Kensington gardens. This equestrian ride now extends, in a straight line, the whole distance, and is of equal width; from Hyde-park-corner to Kensington, a distance of 2 miles and a half, and presents a very noble appearance. In order to effect this improvement, it has been requisite to include a large number of fine trees, which will not be removed. They extend for a considerable distance down the centre of the ride, and cause it to have a very rural and picturesque appearance.

THE SEWING MACHINE.—The Lancashire Company that has taken this machine in hand has opened offices on No. 2, Lawrence-lane, Cheapside, for the two-fold purpose of gratifying scientific curiosity, and selling single machines at the lowest possible cost to those desirous of availing themselves of them. Mr. C. Jenkins, the inventor, shows its action; and, with amazing rapidity, it stitches away with a precision and evenness perfectly marvellous. There appears to be no sort of work which it will not perform. Any part of a garment (but the button-hole), boots, socks, and sail-cloths, are each and all—whether fine or coarse, plain or ornamental work—taken by this willing automaton, and equally well performed.

FIRE AT THE ROSEMARY BRANCH TAVERN.—On Wednesday morning, about four o'clock, a fire was discovered under the stage of this well-known summer out-of-door establishment at Islington. On its discovery every available assistance was afforded, but unfortunately without effect; and before a sufficiency of engines arrived, the whole building was in a burning mass. Under the pit flooring were seven horses of value; and, although the most strenuous exertions were used, not one could be saved: several valuable dogs were also destroyed. In two hours the destruction of all the property was complete; which, it is to be regretted, was not insured. How the fire originated is not at present known.

CHURCH, UNIVERSITIES, &c.

GENERAL ORDINATIONS.—Arrangements have been made by the following prelates for general ordinations during the present year:—Sunday, Sept. 18—Bishop of Lichfield, at Eccleshall. Sunday, Sept. 25—Bishop of Worcester, at Worcester; Bishop of Lincoln, at Lincoln. Bishop of Chester, at Chester; Bishop of Llandaff, at Llandaff; Bishop of Peterborough, at Peterborough. Sunday, Dec. 18—Bishop of Bath and Wells, at Wells; Bishop of Lichfield, at Lichfield; Bishop of St. David's, at Abergwilly; Bishop of Chichester, at Chichester; Archbishop of York, at Bishopsthorpe; Bishop of Exeter, at Exeter; Bishop of Ripon, at Ripon; Bishop of Oxford, at Christchurch; Bishop of Salisbury, at Salisbury; Bishop of Worcester, at Worcester.

PROMOTIONS AND APPOINTMENTS.—The Rev. R. Smith, to a Minor Canonry in Chester Cathedral. *Rectories:* The Rev. C. Borlon, to Hartley, Suffolk; the Rev. G. T. Kingdon to Pyworthy, Devon; the Rev. E. J. Phipps, to Stansfield, Suffolk; the Rev. F. A. L. Wood, to Devizes, Wilts; the Rev. H. P. Thomas, to Nash-cum-Upton, Pembroke; the Rev. J. Moore, to Kelvernstone, Norfolk; the Rev. J. Taylor, to Croxton Keyrial, near Grantham; the Rev. M. O. Normon, to Barby, near Melton Mowbray. *Vicarages:* The Rev. P. S. Ashworth, to Tibberton and Bredicot, Worcestershire; the Rev. J. M. Cox, to Misterton, Somerset; the Rev. E. Haf, to Little Cawthorpe, near Louth; the Rev. E. H. Lorne, to Cobham, near Gravesend; the Rev. J. Griffiths, to Wigfenhall St. Mary, near Lynn. The Rev. Edmund Leachman, M.A., St. John's College, Cambridge, has been appointed Chaplain to the Hospital of St. Luke, Middlesex.

The *Windermere*, which left Geelong March 2nd, has arrived, but the quantity of gold she brings is not known

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the Government Loan Commissioner has shown a more pacific tendency than in the previous week indeed, most parties in the City regard the Eastern question as virtually settled—the money business transacted in it is rational seeming to have been comparatively small; nevertheless, the value of Consols has been mostly supported

The shipments of bullion to the Continent have continued on rather an extensive scale. The authorities at the Mint have been compelled to issue a notice of a further extension in the period of the re-delivery of coin for bullion; and it is presumed here that the supply will be to the extent of nearly £500,000 sterling. The Bank of England has continued to decline of late, even though we have had large imports from Australia and the United States. According to the last return, it was £18,038,348—or £39,826 less than in the previous week. It has been intimated that, should bullion continue to flow out, the Directors of the Bank of England will make money dearer. That we shall be compelled to forward large amounts abroad, to pay for the foreign grain and flour, does not admit of a doubt, as it is evident that home produce will fall considerably beneath our wants. Any material accumulation of bullion is, therefore, not to be anticipated. From Australia and America we shall, no doubt, continue to draw large sums for the all-important reason, that our trade there is rapidly extending itself. The primal ar arrival of bullion has been 877 293 dollars from New York.

On Monday the Three per Cent Consols were done at 99⅝; the Three per Cents Reduced, 99⅜; the New Three-and-a-Quarter per Cents, 101⅝; Long Annuities, ending January, 1860, 9⅛; Bank Stock was 220, India Bonds marked 2is to 28s.; and Exchequer Bills, par to 3s. prem. There was a moderate business passing on Tuesday, at the above quotations. On Wednesday Consols were 99⅝, both for money and the account. Bank Stock was 220 to 220½; India Stock, 256 to 258. The amount of stock "accepted" at the Bank of England is now £1,703,344; at the South Sea House, £1,191,297.

In Consol Market, on Thursday, was extremely inactive, and prices were about one quarter per cent lower than on the preceding day. The Three per Cents were chiefly dealt in, at 99⅝, both for money and time. The Three per Cent Reduced marked 99; and the New Three and a-quarter per Cents, [illegible]

[illegible] Market, on Friday, was extremely inactive, and prices were barely supported. Consols left off at 99⅝ for money and time. The Three per Cent Reduced, 99⅜; Long Annuities, 9 5-16; Bank Stock, 220; India Bonds, 2is to 28s.; Exchequer Bills, 3s. to 2s. prem. Bank Stock, 220 to 222. The Portuguese financial agent has given notice that he has succeeded in converting upwards of £2,000,000 of Stock. The Portuguese Committee have arranged the amount of certificates which they intend issuing to represent the unpaid interest. The Five per Cent Bonds of 1841 will be issued at £100 each, with a coupon for part of 2il 10s. for every £100 Stock. The Four per Cent Bonds of 1845 will have £21 in certificates, and the Three per Cents of 1848, £1 10s. For every £100 [illegible] there will be certificates issued for £3 10s. for two years' interest.

The Foreign Exchanges are still very unfavourable to the country, and we learn that very small portions of the Australian gold now find their way into the Bank of England, the greater part of it being sent direct to the Continent. Money for commercial purposes has been in good request, yet the demand has been freely met, at from 3½ to 3¾ per cent per annum for the best paper.

Miscellaneous Shares have been in moderate request. In prices, very little alteration can be noticed. Australasia Bank have been done at 31¾ to 32; British American, 61; Chartered of India, Australia, and China, 28¾ to 29; Commercial of London, 35; English, Scottish, and Australian Chartered, 10¾; London Chartered of Australia, 17¾; London Joint-stock, 23; Union of Australia, 29¾; Union of London, 31¾; Universal Australian Agricultural, 3¼ to 3⅝; Crystal Palace, 7 ex new; Ditto, of France, 5 to 6 prm.; Netherlands Land, 3¾; Peel River Land and Mining, 4¼; Scottish Australian Investment, 2¾; Van Diemen's Land, 16¾ to 17¾; Hungerford Bridge, 12; Waterloo, 4¼ to 5½; Vauxhall, 2¼; Albion Insurance, 98; Atlas, 22¾; County, 121; Globe, 142 to 144 ex div.; Law Life, 56; Ditto Fire, 42 ex div.; London, 81; Pelican, 45; Provident Life, 41; Rock Life, 8⅜; Royal Exchange, 240 ex div., Victoria, 5⅜; Berlin Waterworks, 2¼; East London, 128; Grand Junction, 73¾; Kent, 84¾; Southwark and Vauxhall, 88; West Middlesex, 113¾ ex div.; London Docks, 124¾ ex div.; St. Katherine, 93¾ ex div.; Southampton, 39; Victoria, 62¾; Canada Six per Cent Bonds, 116; Do., 114¾ ex div.; City Navigation Bonds, 103; Hudson's Bay, 22¾; Peninsula and Oriental Steam, 77; Do. New, 4¼; General Screw Steam Navigation, 2¾; and General Screw Steam, 3⅞ to 4.

Owing, in some measure, to the setting, the Railway Share Market has ruled very inactive, and prices have, in some instances, been almost nominal. The principal dealings have been in London and North-Westerns, Lancashire and Yorkshires, Great Westerns, York and North Midlands, Midlands, Dovers, and Great Northerns. The total "calls" for August are only £267,131, of which upwards of £90,000 is by foreign railways.

The following are the official closing money prices on Thursday:—

ORDINARY SHARES AND STOCKS. Eastern Counties, 13¼, Great Northern, 87¾; Ditto, B Stock, 135¾; Great Western, 80¾; Lancaster and Carlisle, 107; Lancashire and Yorkshire, 78¾; Ditto, West Riding Union, 91; Leeds Northern, 15¾; London and North Western, 119¾; North E., 55½; South Eastern, 72¾; South Yorkshire and River Dun, 13; West Cornwall, 9¾; York, Newcastle, and Berwick, 69¾; York and North Midland, 69¾.

LINES LEASED AT FIXED RENTALS.—Midland Bradford, 107¾, Royston and Hitchin, 131, Wear Valley, 32¾.

PREFERENCE SHARES.—Caledonian (£10) 10⅞; Eastern Counties, No. 1, 1¾ prem.; Great Northern Redeemable at ten percent prem., 11⅜; Ditto, Four-and-a-Half per Cent Scrip, 8¾; Great Western Redeemable, at Four-and-a-Half per Cent, 10⅜; Ditto Irredeemable, Four per Cents, 99¾; Midland, Four-and-a-Half per Cent, 5¾; Oxford, Worcester, and Wolverhampton, 17¾; South Eastern, 9⅝; Ditto, Four-and-a-Half per Cent, 13⅜, York and North Midland H. and S. Purchase, 10.

FOREIGN.—Antwerp and Rotterdam, 3; Belgian Eastern Junction, 1¼; Grand Central of France, 1¼; Grand Trunk of Canada, 8¾; Hamilton and Toronto 8 per Cent, 108¾; Luxembourg, 1; Ditto, Dividend, 1¼; Ditto, Canal, 1¼; Northern of France, 8⅝; Ditto, Bonds, 14¾; Paris and Lyons, 20¾; Paris and Orleans, 37¾; Sambre and Meuse, 9¾; South Eastern of France, 2½; Upper India Scrip, 5 prem.; Zealand, 3¾.

All Mining shares have been heavy, and prices have given way. On Thursday, Agua Fria were done at 2¾; Great Nugget Vein Scrip, 2¼; Linares, 9¾; Ditto, New, 1¼; and United Mexican, for the account, 4.

Friday Evening.

In the early part of the day, Consols were steady at 99⅝; but, several sales having taken place, the price declined to 99⅜, with a very inactive market. The Three per Cents Reduced have been 99¼; and the New Three-and a Quarter per Cents, 101¾. Exchequer Bills have been ex 3s. to par, at 4s. discount to par. Foreign Bonds and Railway Shares are very dull.

THE MARKETS.

CORN EXCHANGE (Friday).—The quantity of English wheat received up to our market this week, constwise, has been somewhat on the increase. Fresh up-to-day the receipts of that grain were very moderate; hence, the show of samples was by no means extensive. For all kinds we had a very inactive demand, and Monday's improvement in the quotations was hardly supported. The imports of foreign wheat have exceeded 20,000 quarters, chiefly from the westward. Good red Baltic parcels sold at full prices. In other kinds only a limited business was doing. There was a moderate inquiry for floating cargoes of wheat and beans, at previous rates. No Egyptian barley was brought forward, but the supply of foreign was large. The trade ruled dull, and prices had a downward tendency. Malt was in fair average supply and moderate inquiry, at late rates. The show of oats being on the increase, the coal trade was dull, and prices gave way from 6d. to 1s. per quarter. Beans, peas, and flour sold at last week's currency.

ARRIVALS.—English: wheat, 1850; malt, 940; oats, 4080 flour, 660 Irish: oats, 3770. Foreign: wheat, 21,130; barley, 14,310; oats, 10,750; flour, 4040 sacks, 8400 barrels.

English.—Wheat, Essex and Kent, re l, 48s to 53s; ditto, white, 52s to 56s; Norfolk and Suffolk, red, 48s to 53s; ditto, white, 52s to 56s; rye, 32s to 34s; grinding barley, 25s to 31s; distilling ditto, 32s to 34s; malting, 32s to 37s; Lincoln and Norfolk malt, 55s to 56s; brown ditto, 46s to 52s; Kingston and Ware, 57s to 60s; Chevalier, 61s to 63s; Yorkshire and Lincolnshire feed oats, 20s to 24s; potato ditto, 23s to 27s; Youghal and Cork, black, 19s to 21s; ditto, white, 20s to 24s; tick beans, new, 36s to 38s; ditto old, 39s to 42s; grey peas, 32s to 36s; maple, 36s to 39s; white, 38s to 41s; pollers, 42s to 45s; potatoes, Yarmouths, new, 65s to 80s; Scotch, 70s to 90s; Suffolk, 30s to 40s; Rochfords and Yorkshire, 30s to 42s, per 19th lb. *Foreign:* French flour, 37s to 42s per sack; American, 23s to 29s per barrel.

Seed Market.—The sale for linseed is steady, at very full prices. Black Sea, on the spot, is worth 45s 6d., and off the coast, 46s. 6d. per quarter. Parcels from Alexandria are worth 47s. 6d. The best Calcutta rape is firm, at 56s. per quarter. Cakes support the late advance. Linseed, English, sowing, 54s. to 59s.; Baltic, crushing, 47s. to 50s.; Mediterranean and Odessa, 48s. to 49s.; hempseed, 30s. to 42s. per quarter. Coriander, 12s. to 14s. per cwt. Brown seed-lees, 8s. to 11s.; white ditto, 7s. to 9s.; and tares, 4s. 6d. to 5s. 6d. per bushel. English rapeseed new, £21 to £24 per last of ten quarters. Linseed cakes, English, £8 15s to £10 5s.; ditto, foreign, £8 5s. to £10 0s. per ton. Rape cakes, £5 to £5 5s. per ton. Canary, 45s. to 47s. per quarter. English clover seed, red, 45s. to 60s.; white do., 44s. to 64s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8d. to 8½d.; of household ditto, 6d. to 7½d. per 4 lb. loaf.

Imperial Weekly Average.—Wheat, 51s. 10d.; barley, 29s. 4d.; beans, 34s.; peas, 31s. 6d.; rye, 33s. 8d.; oats, 21s. 6d.; rye, 33s. 8d.

The Six Weeks' Average.—Wheat, 48s. 1d.; barley, 29s. 3d.; oats, 20s. 5d.; rye, 33s. 8d.; beans, 33s.; peas, 32s. 5d.

Duties.—Wheat, is.; barley, is.; oats, is.; rye, is.; beans, is.; peas, is.

Arrivals of cattle up to our market have to report very limited demand. Prices, however, are supported. Common sound oxen is worth 3½d. per lb. The stock in the Cattle Market is now 27,417,000 lbs., against 24,100,000 ditto at the corresponding period in 1852. Up to Saturday last duty was paid on 24,918,000 lbs., leaving 2,499,000 ditto, the same time last year.

Sugar.—The demand for nearly all kinds of raw sugar has been in a sluggish state; nevertheless, the quotations are barely so low as to induce a prime. Fine yellow Barbadoes has changed hands at 32s. 6d., low to good ditto, 31s. 6d. to 32s.; good to fine yellow Mauritius, 31s. 6d. to 32s. 6d.; low to middling, 28s. 6d. to 30s.; good to fine brown, 31s. to 33s.; fine white Bengal, 30s. 6d. to 32s.; low to good, 30s. 6d. to 31s. 6d.; good to fine grocery, 33s. to 34s.; grocery Madras, 28s. 6d. per cwt. Refined goods have commanded full prices, viz., from 34s. 6d. to 35s. 6d. per cwt. Crushed steady. The total deliveries to the 23rd instant were 3,646,616 cwts., against 3,421,520 ditto in 1852.

Coffee.—The market has been firm throughout the week. In the general quotations scarcely any change has taken place. Good ordinary native Ceylon, 45s. to 46s. 6d. per cwt.

Tea.—All kinds have changed hands on a fair extent at the quotations. The white Bengal is worth 19d. per cwt.

Rice.—We have had only a moderate sale for Irish butter, at barely the quotations. Foreign parcels are firm. English steady, at 90s. to 105s. per cwt. for the weekly London and No. 0 Is. per dozen lbs. for fresh. Bacon is in request, at late rates. Hams [illegible] heavy, sale to 68s. Limerick, 64s. to 66s. per cwt. In the value of other kinds of provisions scarcely any change has taken place.

Tallow.—A steady business is doing in this market. P. Y. C., on the spot is quoted at 43s. 3d., and 43s. 6d. for delivery during the next three months, 3ls. per cwt. Town tallow, 39s. 6d. per cwt. net cash; rough fat, 2s. 10½d. per 8 lb.

Oils.—Sperm oil has been quite nominal, and we have had no upward tendency. Cocoa-nut and palm have ruled dull, but rape is in demand. Linseed, 29s. 6d. to 30s. on the spot.

Spirits.—The sale for rum is very firm, at extreme quotations. Brandy is active, and [illegible] Geneva has ruled somewhat dull.

Hay and Straw.—Meadow hay, £4 0s. to £5 5s.; clover ditto, £5 0s. to £6 0s.; and wheat straw, £1 16s. to £2 2s. per load.

Wool.—About 28,000 bales of wool have now changed hands at the public sales; but there are yet 32,000 pieces to come forward. Prices have ruled 1d. to 1½d. per lb. below those obtained at the previous auctions.

Potatoes.—The supplies are seasonably good; nevertheless, a large business is doing, at [illegible]

[illegible] Cassop, 12s. 3d.; Denham, 12s.; Hough Hall, 17s.; Kinlet, 17s. 6d.; Tees, 18s. 6d.; Eden Main, 17s. 3d.; Belmont, 17.; Lambton, 17s.; West Hartley, 16s. per ton.

Hops (Friday).—The accounts from the plantations are by no means favourable, yet [illegible] since our last week's prices. The duty is called £100,000. Mid. an. East Kent pockets, 130s. to 140s.; New Kent, 120s. to 130s.; Weald of Kent and Sussex, 110s. to 120s.; Farnham, 130s. to 140s.;

THE GOODWOOD RACE PLATE.

THE three superb prizes which have been run for during the week at Goodwood, are very interesting episodal compositions from English history: and the personages and incidents are characteristic and appropriate to the occasion for which they have been selected and designed.

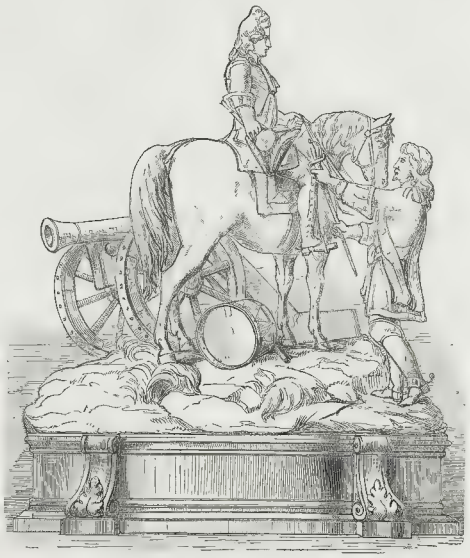
The first of the three groups is a picturesque illustration of the old English sport of Hawking, in the reign of Henry VIII., in the account-books of whose 20th year a goshawk and two falcons are priced at £2, and five falcons and a tersil at £6. The incident selected by the designer, Mr. Alfred Brown, is the gallant Henry Howard, Earl of Surrey, presenting a beautiful hawk to the Princess Mary, daughter of Henry VIII. This group has been beautifully executed in silver, by Messrs Hunt and Roskell.

The second of the groups is from the chivalrous reign of Edward III., and represents the incident in which originated the escutcheon and motto of the Prince of Wales. The episode is thus related:—At the battle of Cressy the old King of Bohemia, who was blind, upon hearing that the French had lost the day, ordered his horse to be tied to the horses of two French knights, and then threw himself into the midst of the English army, where he was killed. It is said that the Black Prince took the feathers out of the helmet of the king, and that the Prince of Wales's escutcheon then first contained the three feathers and the motto, "Ich Dien." The group consists of three figures—of the King of Bohemia and the two knights. The aged and blind King is in the centre mounted, wearing in his helmet the plume now known as the Prince of Wales's Feathers. The two knights are preparing to mount their horses to fulfil his request. The action of the men and horses is appropriate and spirited, and the story is well represented. The group has been designed and modeled by Baron Marochetti, and beautifully manufactured in silver by Mr. Hancock, of Bruton-street.

The third group, designed by Mr. Cotterill, illustrates the surrender of Marshal Tallard to the Duke of Marlborough, at the Battle of Blenheim: the Marshal is presenting his sword to the victorious Duke; the accessories are broken cannons and weapons strewed upon the ground. The portraiture and costume of the figures, and the anatomy of the horse are excellent. The capture is thus narrated:—Marshal Tallard after having in vain applied for succour from the Marshal de Marsin, who, with the Elector of Bavaria, commanded on the left of the defeated army—was swept away in the flight of the French cavalry; and, being surrounded by the fugitives, was taken prisoner, near a mill, behind the village of Sonderen, not far from the Danube, by M. de Bornenburg, a Lieutenant-Colonel of the troops of Hesse, and Aide-de-Camp to the Prince of Hesse-Cassel. The Marquis de Montperoux, General of Horse; MM. Teppeville, de Tilby, and de la Valière, Majors-General; M. de la Messlière, St. Ponange, de Ligonais, and other officers of note, were likewise made prisoners, and tendered their swords to the English Commander. This group has been ably executed in silver, by Messrs. Garrard, of the Haymarket.

GOODWOOD CUP.—THE EARL OF SURREY PRESENTING A HAWK TO THE PRINCESS MARY.

STEWARDS' CUP.—THE BLIND KING OF BOHEMIA



CHESTERFIELD CUP.—SURRENDER OF MARSHAL TALLARD TO THE DUKE OF MARLBOROUGH.

THE BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.—The twenty-third meeting of this association commences its sittings at Hull on Wednesday, the 7th of September. The first general meeting will be held on the evening of the same day, at eight o'clock; when the address will be delivered by Mr. W. Hopkins, M.A., F.G.S. The secretaries for the meeting are Mr. Henry Cooper, of the Hull Literary and Philosophical Society, and Mr. Bethell Jacobs, President of the Hull Mechanics' Institute. The committees of sections will meet daily from the 8th to the 13th September inclusive.

HOLYROOD PALACE.—Sir William Molesworth has agreed to an arrangement of a character very favourable for the public, with reference to the opening up of Holyrood Palace. One most important part is that the Palace will be open every Saturday without any charge. Improvements will also be made on the grounds; and, altogether, the alterations on the present system will be hailed as a great boon by the inhabitants of Edinburgh, as well as by strangers visiting the city.

THE GREAT NORTHERN RAILWAY.—The magnificent hotel, now in course of erection by the directors of this company at their station at King's-cross, is rapidly drawing towards completion. Some idea may be formed of what this hotel will be when finished, when it is stated that it will be five stories high, 150 feet long, and 64 feet wide, exclusive of vaults and the necessary outbuildings.

ORPHANAGE AND ASYLUM FOR IDIOT CHILDREN, AT BALDOVAN, NEAR DUNDEE.

WE are glad to perceive that the sympathy of the public with the privations of idiotic or defective children is extending itself to Scotland, where an Orphanage or Asylum for the reception of this hitherto neglected class was founded with Masonic honours on the 7th inst. The project of the erection and support of this admirable institution originated in the enlightened zeal and benevolence of Sir John Ogilvy, Bart., of Inverquharity, who, with his lady, has for several years taken a lively interest in the progress of the efforts now making to train the feeble minds, and otherwise to ameliorate the condition of the fatuous and imbecile. The site of the Asylum is on the grounds of Baldovan (the residence of Sir John Ogilvy), about four miles from Dundee, on the bank of a small stream called the Dighty, which runs within sixty feet of the front. The house will be sheltered by rising grounds presenting precipitous fronts of rock—from the north and east winds.

The front of the building comprises matron's apartments, a large gymnasium, and class-rooms for each sex. At the back are dining-rooms, lavatories, and commodious culinary offices. The upper floor contains four large and lofty dormitories; also six smaller bedrooms for boarders, with baths and every possible convenience. On this floor, also, are bed-rooms for the matron and domestics. Water is laid on to the top of the house; and every possible care has been taken to ensure perfect ventilation and drainage. The building is to be constructed of rubble stone, with Caen stone dressings; the roof covered with red and black plain tiles. Over the foundation-stone was placed a brass plate, with the following inscription:—

The Foundation Stone of this Building, erected by Sir John and Lady Jane Ogilvy, as an Asylum for the Treatment of Defective Children, was laid on the 7th day of July, 1853, by the Grand Lodge of Scotland; John Whyte Melville, Esq., of Bennochy, Deputy Grand Master Mason, officiating, assisted by all the Lodges in Dundee. Architects: Messrs. Coe and Goodwin, London. Builders: Charles and Alexander Cunningham of this parish.

The style of architecture which has been chosen for the Orphanage harmonises well with the picturesque site; being what is technically known as half-timbered. The walls are to be of squared rubble work with Caen stone dressings; the eaves will overhang *à la cottage ornée*, and have ornamental supports. The internal arrangements have the approval of the benevolent Dr. Guggenbühl, who has seen the plans.

The architects are Messrs. Coe and Goodwin, of London—the same gentlemen who designed the Dundee Infirmary; Messrs. Cunningham, of Downfield, have contracted for the mason-work; and Mr. Bower, of Mains, for the wright work.

A Bazaar and Fancy Fair were appointed to be held at Baldovan House, on Thursday last, in aid of the Orphanage funds.

We are happy to add that her Majesty and H.R.H. Prince Albert have signified their intention of bestowing their patronage on this excellent institution.

ORPHANAGE AND ASYLUM FOR IDIOT CHILDREN, AT BALDOVAN, NEAR DUNDEE.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JULY 30 1853.

REVOLUTION IN CHINA.

We do not know whether the word Revolution, in its ordinary sense of political change, can justly be applied to the series of extraordinary events that are now taking place in the old and effete empire of China. Yet, although our information at present is but scanty, imperfect, and contradictory, sufficient seems to be known to prove that a vast social, if not political, regeneration of that country is at hand. A populous region, hitherto almost hermetically sealed against the rest of the world, is about to be laid open to the influences of Christianity, and of the fertile ideas of Western Europe. The artificially stunted tree is to be allowed to shoot up; and the system of nature is to replace to some extent, not yet clearly discernible, the antiquated and artificial system which has so long held the Chinese in tutelage and imprisonment, and prevented the legitimate development of their race. The rebellion under TIEN-TEH has held head too successfully against all the forces that the Emperor could bring against it, has achieved too many victories, and has established itself too firmly over the best parts of the Empire, to permit the world to doubt the fact—even though our acquaintance with the details is not of the most reliable kind—that the old Chinese policy, both internal and external, has received a shock from which it cannot recover.

The Christian character of the rebellion, of which mention was made in this Journal on the 4th of June last, has been confirmed by all recent letters and despatches from China. The rebels having taken possession of Nankin, and holding, by this means, the key of the Empire, Sir George Bonham, Governor of Hong-Kong, and British Plenipotentiary in China, proceeded up the Yang-tse-Kiang in April last, in her Majesty's ship *Hermes*, to announce to TIEN-TEH the neutrality of the British Government. This was prudent and wise policy. It is no part of the duty of Great Britain to uphold any established Government against the wants and wishes of the native population, even although such a Government should be more reasonable in its conduct towards us, and more desirable in itself, than the Tartar dynasty of China has ever proved. In proceeding up the river, Sir George Bonham had abundant evidence that the revolution—or insurrection, whichever it may be—partook largely of the iconoclastic character. The waters were strewed with the fragments of images and idols, which the insurgents had broken up. The Plenipotentiary sought and obtained an audience with the Chief; and in a document bearing his signature and those of other British *attachés* to his mission, which is published in the *North China Herald*, that reached Europe by the last mail, &c., gives TIEN-TEH the title of "His Majesty," and claims protection for British trade and for British subjects in every part of the Empire where that personage may penetrate. Sir George also procured some of the religious books which are circulated by and held sacred among the rebels, from which it appears evident that Christian ideas, although rude and corrupted, have taken possession of their minds. Whether the form of Christianity be derived from the Jesuits, or from the Protestant missions, it is impossible to state. Neither of them has much reason to boast of the proficiency of their pupils; for the Christianity of TIEN-TEH and his followers possesses little of the pure and holy spirit of the Gospel, but much of the spirit of persecution and wickedness. Elsewhere will be found a *fac-simile* of the papers which have for years past been circulated among the Chinese by the Protestant missionaries of England, with a view to the dissemination of the great truths of Christianity in a manner likely to excite and retain the attention of the natives. But, from all we can learn of the sentiments and opinions in the camp of TIEN-TEH (the Prince of Peace), he "preaches peace with warlike meanings;" and has embraced Christianity only to disfigure and pollute it. The "Triad societies," of which the original object was the expulsion of the Tartar Emperors, and the Tartar race, and the establishment of a native dynasty and government, have nursed the rebellion, and supplied it with its armies. A spurious kind of Christianity has been engrafted upon this root; and the result is, not only the rebellion, but an explanation and defence of it, in the shape of a politico-theological and poetical manifesto, entitled "the Trimetrical Classic." Each verse of this curious document consists of four lines, and each line of three words. It recapitulates the leading facts in the Old and New Testaments, with occasionally a perversion or misinterpretation, which would be ludicrous were the consequences not so important; and adds to this a short summary of Chinese History since the birth of Jesus Christ until the year 1837. At that period "a younger brother of Jesus Christ," bearing the name of HUNG-SEW-TSEUEN, appeared in China, whose mission was to subdue the "King of Hell." In this mission he is declared to have succeeded, and to have ascended into heaven; leaving his ulterior object—the expulsion of the Tartars and the establishment of Christianity—to be accomplished by his successor, TIEN-TEH, the present leader of the rebel forces. The mission of HUNG-SEW-TSEUEN is described in the following lines literally translated from the "Trimetical Classic:"—

God has sent his Son
With orders to come down into the world,
Having first studied the classics.
In the Ting-Yew year (1847)
He was received up into heaven,
Where the affairs of heaven
Were clearly pointed out to him.
The great God
Personally instructed him,
Gave him odes and documents,
And communicated to him the true doctrine.
God also gave him a seal,
And conferred upon him a sword,
Connected with authority,
And Majesty irresistible.
He bade him, together with the elder brother,
Namely Jesus,
To drive away impish fiends,

WALLACHIAN PEASANTRY AND TROOPS.—(SEE NEXT PAGE.)

With the co-operation of angels.
There was one who looked on with envy,
Namely, the King of Hades;
Who displayed much malignity,
And acted like a devilish serpent.
But the great God,
With a high hand,
Instructed his Son
To subdue this fiend.
* * * * *
Having overcome the fiend,
He returned to heaven,
Where the great God
Gave him much authority.

The mission of TIEN-TEH is described in a similar style:—

In the Mow-Shin year (1848)
The great God came down into the world;
Where he married His Son
How to sustain the weight of Government.
God has set up His Son (Tien-Teh)
To endure for ever,
To defeat corrupt machinations,
And to display majesty and authority.
Also to purge the world,
To divide the righteous from the wicked;
And consign them to the misery of hell,
Or bestow on them the joys of heaven.
Heaven manages every thing,
Heaven sustains the whole:
Let all beneath the sky
Come and acknowledge
The new monarch.

The actual amount of Christianity in the mind or purpose of the leaders of the Chinese rebellion may be judged of from these extracts. It must be stated, however, that, if their creed be correct, their morals are described by the English in China to be purer than those of the Chinese in general; and that, with the exception of their ferocity in war, they may stand in favourable contrast with the Tartars and Buddhists, against whom they are fighting. In this respect, however, their practice, though rejected as true Christian doctrine, differs in no perceivable respect from the conduct of more decided Christians in other parts of the world.

The people of Europe, distracted as they are with the fears of more important events at home, yet look forward with daily increasing interest to the progress and termination of this rebellion. They see in it the large possibility of good to the whole human race. If TIEN-TEH succeed, he is likely to prove a more enlightened and enlightening Potentate than the successive Emperors of the present Tartar dynasty have ever shown themselves to be. He claims to be the representative of the native Chinese—a race who, in all ages, of which we have any record, have exhibited patience, industry, and ingenuity, and who in more recent times have proved in themselves the possession of curiosity and enterprise sufficient to cross the Pacific and to help to colonise California. If imbued with Christian ideas, as there is every reason to believe, he will, of necessity, attempt to break down the barriers which have so long shut up this remarkable country and people from the great world around them. Even should he not succeed, the narrow escape of the present Emperor will, perhaps, teach the alien rulers of the Chinese to rely more upon the people, and upon the righteousness of humanity than they have hitherto done. In either case, events seem rapidly ripening towards great changes. The Far East, we cannot doubt, will, soon or later, be emancipated from the semi-barbarous and utterly unsocial policy which, in the pride and ignorance both of rulers and of people, has for long ages prevailed amongst them. Even the spurious Christianity of TIEN-TEH, and the "Trimetrical Classic" will operate for good. It will open the eyes of the multitude to blessings that have been long denied or concealed, and will lead the people in due time to strive for a fuller and purer comprehension of that true religion which civilises and refines the world.

THE MOLDAVIANS AND WALLACHIANS.

MODERN travellers are struck by the resemblance of the Wallachians of the present day to the traits of the Dacian captives sculptured in marble on Trajan's Column at Rome. The people are proud of their noble origin, traceable to the Dacians and the Romans; and the memory of their ancient prowess and condition, and their traditions, faithfully handed down and cherished by the poorest for a period of eighteen hundred years, still exercise an empire over them which cannot fail to make them impatient under the ignoble yoke of Russia.

The regions now divided under the names of Wallachia, Moldavia, and Transylvania, formed the kingdom of those terrible Dacians so frequently mentioned in the odes of Horace. They were descended from the Scythians, or Sarmatians, and were, at one period, so formidable to Rome, that Domitian accepted the terms of a disgraceful peace, dictated by Decebalus, one of their Kings. Trajan, to revenge this defeat, twice led his victorious legions to the shores of the Danube. The Dacian kingdom fell under Roman sway, and Roman colonies took possession of the territory so long plunged in barbarism. Up to the third century the country was governed by one of the Roman pretors, but when an invasion of Goths and Huns fell upon Dacia, the Emperor Aurelian recalled his colonies, and the country fell a prey to various races of barbarians. The name Wallach is declared by the Wallachians to be a modern appellation, only known to history since the twelfth century, and applied to them by foreigners alone. The people of the Principality call themselves Romanu, Romanu; they call their country Wallachia, "Tsara Roumaneska," Roman land. The Wallachian arms consist of the Roman eagle, to which a cross has been added. M. Demidoff adds:—

If, in the last place we look at the masculine and robust physiognomy of the population, bearing an incredible resemblance to the Transteverin of the present day, if we search into their language, their games, their festivals, we shall find undoubted traces of the glorious origin to which the Wallachians lay claim.

M. Demidoff is distinctly of opinion that the people of Wallachia are the representatives of the Dacians and Romans, and that the Slavonians who came into the country as conquerors constitute the nobility of the land. The belief that the Wallachians are descendants of the Roman colonists sent by Trajan into Dacia derives some further confirmation from the fact that the Wallachian language is apparently derived from the Latin. According to Thunman not less than one half of all the Wallachian words are Latin. The Wallachians are not confined to Wallachia; but also inhabit Moldavia and some parts of South-Western Russia. The higher classes in the Middle Wallachian provinces show themselves inclined to adopt European civilisation, but the lower classes are an ignorant and idle race, depraved by the tyranny of their Turkish masters. Instances of premeditated murder rarely occur; with but few exceptions this crime is committed in drunkenness, wine in Wallachia being very abundant and cheap. The laws punish murder with death, but capital punishment has fallen into disuse, and sentence of death is commuted to perpetual labour in the salt works. The religion is that of the schismatic Greek Church, as it is called by the "orthodox" Russians. It does not appear to hold any great empire over the minds of the people, but they observe its outward forms, and particularly the austerities of fasting, with scrupulous exactness. The people attend Divine service with every sign of respect, and the number of churches in Wallachia and Moldavia bear witness to the ardent zeal with which outward worship is honoured. Education is so well attended to, that in a few years there will be but few who cannot read and write. The annual tribute paid to the Porte by Wallachia amounts to 1,400,000 piastres, which is in future to be paid to the Russian Commander-in-Chief. The monies current in Wallachia and Moldavia are the Russian silver rouble, the golden ducat, the Austrian zwanziger, and the Turkish piastre, aspre, and para.

The various castes composing the population are divided into three classes—the Boyards, the Wallachian husbandmen, and the Tsigans or Gipsies. The Boyards are the possessors of the soil; but they are for the most part poor and embarrassed. Exclusive masters of all public offices, exempt from all the burdens of the State, these proud noblemen have given themselves up to luxury, which has undermined the fortunes of the whole class. M. Demidoff gives the following graphic description of the Wallachian Boyards:—

Nothing can be more elegant than their personal state and retinue, which is always son ewhat theatrical; but if we remove from the presence of the chief of the house, and throw a glance at the tribe of tattered and idle retainers, at his equipages, too numerous to be elegant, at his vast and dilapidated mansion, we are struck with the melancholy and wretchedness lying beneath this appearance of luxury. The refined manners of the master, the gracious air and talents of the women of his family, the facility and correctness with which the languages of Central Europe are spoken by them; the taste, the tact, the very frivolity of the conversation—everything combines to show that this society is equal to the most distinguished in Europe; but, beyond the door of the drawing-room, a filthy and repulsive crowd of idle servants and gipsies, scattered about the ante-rooms, and sleeping on the very staircase, remind you that you are in Wallachia, and that all this civilisation has not shaken off the muddy crust which envelops it, and deprives it of all its lustre.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

ALL the world is flocking hither to be present at the Fête of the 15th. Hardly a soul is coming to life awakening, for the moment, from the effects of the moral chloroform so unsparingly administered to it every year to keep its existence in suspension till the return, real or supposed, of the modern French, the foreign and diplomatic aristocracy of the Faubourg St. Honoré, and the aristocracy of wealth and commerce of the Chaussée d'Antin; that of the Faubourg St. Germain can now hardly be considered to count in the Lying and moving world of amusement, occupation, and display. Lodgings are letting; railroads are discharging vast cargoes of foreigners and provincials; *cafés* become perfect Babels; *cochers de fiacres* enrich themselves with the sums of which they cheat those innocents—*à tout Seigneur, tout honneur*; however, they are not nearly so bold or so expert at this game as their London *confreres*. And the most beautiful and striking portions of the capital are being rendered unsightly and untidy masses of scaffolding, litter, and paving-stones, for a fortnight before and a fortnight after this grand affair of a few hours, which is expected to cost the bagatelle of a hundred thousand pounds, taken from the pockets of a people who never fail to swear or jeer at all such *national* demonstrations: witness the fête of last year, in which *les illuminations* were called *les humiliations* by the *people*, for whose especial edification and divertissement they were supposed to be displayed. No one, be it fully understood, likes to amuse him or herself better, or *pire*, of which they are justly so fond and so proud, in a state of disfigurement, disorder, and confusion perfectly disgusting to behold, for at least a month—exotic feelings of anger and ridicule, instead of pleasure and admiration; and we are fully persuaded that the policy which supposes that the working classes find in these fêtes a distraction which serves to keep them in good humour, is one of the most mistaken notions of modern times.

A *Napoleonienne* banquet is to take place at the Jardin d'Hiver, on the 14th, in order to keep the guests free for the fête of the following day. It is to be presided over by M. Belmontel, who last year held the same post on a similar occasion, at the Thermes, the suburb immediately outside the barrières de l'Etoile, de Courcelles, &c.

The walls of Paris are plastered with immense bills, depicting in a huge woodcut the attractive horrors of the bull-fights at Bruxelles, which excite so much curiosity and attention here, that the administration of the Northern Railroad is said to be in treaty with those of Belgium to organise monster pleasure trains, to enable the Parisians to profit by these edifying and humanising diversions.

On Sunday a grand dinner was given at the Palace at St. Cloud, to the Queen Marie Christine of Spain, at which the Prince Jerome and his son, the Princesse Mathilde, the Duc de Blangares, &c. In the evening the troupe of the Théâtre Français performed "Le Mari à la Campagne."

The *ci-devant* Jerome and the Prince Napoleon have broken the ice, by visiting the Queen at the Malmaison. Some persons are still of opinion that there is more truth than is generally supposed to be in the report o the alliance in that quarter. The young lady selected by rumour as the bride-elect of the Prince, is extremely attractive, and possesses qualities which are likely strongly to influence his choice. However, we must add, that this idea is extremely partial, and we suspect the e is little cause for its foundation at present. The Empress has presented to M. Auguste D'Avilla a splendid medal, bearing her effigy, as a proof of her approval and acceptance of the dedication of a volume of re-hashed poems of which he is the author. The Prince Napoleon intends, it seems, to give a course of receptions during the winter, to which all the principal heads and persons of letters are to be invited. The report has gone about, as such reports never fail to do on such occasions, that a general amnesty was to be declared on the 15th instant. It appears that the fraternisation of the rumour consists in the fact that the Minister de la Justice is preparing a *travail* for a certain number of partial pardons, or commutations of punishment, but nothing more.

The *correspondance particulière* of the *Independance Belge* states a project of the Duc de Nemours in visit Frohsdorff, and half promises its readers the perusal of two letters on the subject, one written by the Comte de Chambord himself. It also states the intention of that Prince shortly to visit England.

As the final crisis of the Eastern negotiation approaches, some misgivings are felt upon the Paris Bourse as to its pacific termination. The explanations given by Lord Clarendon in the House of Lords on Tuesday night (*vide* Supplement), respecting the proceedings of the Russian Government in the Danubian provinces, produced an unfavourable effect on the speculators at the Bourse. The demand of the British Government for explanations as to the extraordinary and oppressive conduct of the Russians in the Principalities will, it is thought, convince the Emperor that the time is past when the mask in which he has hitherto shrouded his policy can still be worn.

It is admitted in Paris that the moderation of Lord Aberdeen has been productive of good, while, perhaps, the French Cabinet has not so easily obtain. While it may still be a question open to discussion, or to doubt, whether, in the event of war, Austria and Prussia would take a decided part with England and France against Russia, yet the adhesion of those powers to the policy of resistance to the aggressive designs of the Emperor Nicholas is of the utmost value, and it is not denied by the French Government that that adhesion is chiefly, if not entirely, owing to the conciliatory spirit in which Aberdeen's Cabinet has conducted the negotiations up to the present moment, and perhaps to the personal influence of that noble Lord. The Emperor of Russia up to a comparatively recent date, could not believe that a common action was possible between the Governments of France and England, or indeed any other question; and this belief very probably led him too far to easily recede. It is positively asserted in the political circles of Paris, that all hesitation or evasion, or delay, on any pretext whatever, will be taken by the European Governments as a refusal to accept the propositions of arrangement, which form a middle term between the demands of one and the concessions of the other, and to evacuate the Danubian Principalities. The belief is general that the English Government is unanimous in its resolution to resist the encroachments of Russia; that it has duly and maturely weighed all the consequences of that resistance; that though most earnestly desirous of maintaining peace, it will not shrink from that resistance, even should war be the consequence; and that it is well aware that if war were the consequence it would be general. The attitude taken by France is equally decided.

The Prefect of the Basses Pyrenees has been officially informed that the journey of the Emperor and Empress to Pau has been postponed, and will not take place this season.

Letters from Brest state that a certain activity is displayed in the arming of vessels.

The French Government have instructed their Consul-General at Bucharest to remove his flag.

DENMARK

The Danish Government have caused a bill, or draft-project, to be published, containing some modifications, unfavourable to popular liberty, of the Constitution now in force; but this bill is to be submitted to the discussion and vote of the Chambers when they re-assemble, and it has not been promulgated by Royal authority.

We receive from Copenhagen alarming reports of the ravages of the cholera. From the 24th to the 26th ult. there were announced 393 new cases, of whom 132 died, making altogether 4184 cases, with 2174 deaths. In one of the newspapers the proposition is made in order to find space where the sick can be brought out of their wretched damp hab tations, chiefly cellar lodging, and better bestowed for medical attendance, that the houses of those should be taken who have deserted the town. The number of these is estimated as high as 30,000. their lodgings are known by the windows being coloured throughout on the inside with whitewash. The most frequent passengers in the streets are the carpenters' people carrying home the coffins; omnibuses convey full loads of corpses to the burying grounds, where hands are insufficient to dig the graves, and clergy are wanting to read the burial service. Last Sunday, 170 coffins were lying in one churchyard, exposed to the broiling sun, and had lain there since the Thursday previous. The Council, which was held last Saturday, under the presidency of the King, to take into consideration what measures could be adopted to stay the plague, arrived at no satisfactory conclusion or resolution. The people attribute this to the incapacity of the Ministers, who, doubtless, have enough to engross their attention in their own political embarrassments. The lower orders divide their day between work and funerals; the rackets are to be heard rollicking in taverns, and shouting, "Let us eat and drink, for to-morrow we die." The rich have applied within the last few days to the number of 14,000 for passports to leave the place; the Hereditary Prince has his consent, and has resolved on staying in Copenhagen to serve as an encouragement and an example. A committee has been formed for preventing the extension of the cholera; they cause all the wretched inhabitants of still more wretched tenements to be brought into better dwellings, and feed and clothe them: the police have dispersed a number of "rookeries" or poor lodging houses—the women and children are found in almost all cases destitute of body and bed linen. The committee has already received 20,000 rix-bank thalers in contributions.

The people of Hamburg which town has hitherto escaped a visit from the cholera are bestirring themselves to send medical and pecuniary assistance to Copenhagen.

PORTUGAL.

By the *City of London* steamer we have dates from Lisbon to the 30th ult. We hear of the renewal of negotiations, and the probability of an arrangement between the Government and the Bank of Portugal, but no hope was entertained of an understanding with the foreign fundholders while Portugal failed to recognise the claims of its creditors. The railroad contract, approved by the Lower House, ran some risk of rejection by the Upper Peers. The Cortes were expected to close about the 8th inst. The grape disease continued to spread, and was likely to become a serious affair for a country like Portugal, which depends so much upon its wines. A public meeting had been called upon the subject for the 1st inst., at the office of the Lisbon Commercial Association.

AMERICA.

By the United States mail steam-ship *Pacific*, we have advices from New York to the 23rd ult. It is stated that the appointment of Mr. J. A. Dix as Minister to France is not to be confirmed for the present, owing to strong representations from the Southern States.

Letters from New Mexico announce the withdrawal of the Mexican troops from Medilla Valley, by an order from the Government. The citizens of Santa Fé had petitioned Congress for the removal of the Indians from that State.

The coroner's inquest on the persons killed in the Gravazzi riots at New York to the 23rd ult. is stated to be concluded, but the jury were unable to agree upon a verdict. The result caused great excitement in Montreal. A court-martial had been commenced on the officers and men engaged in the affair.

We have been permitted to make the following interesting extract from the letter of an Englishman now in South America. It is dated "Iquique, 10th June." He crossed from Navy Bay to Panama, which he describes as the most detestable journey he ever made. He says:—

The Americans are making a railway between the two places, and have got the first eighteen miles finished. The difficulties have been tremendous, as it goes through a swamp. They piled it with piles from twelve to eighteen feet deep, and then laid the rails on the top of the longitudinal tie-beams. They are now doing it up with the roof [illegible] and further on; and in course of time it will become a good [illegible]. One of their great difficulties has been to get men, as the strongest do not stand it above two months on the average. It was said, at one time, that every foot finished had cost a man's life; but I was told that the total number of lives lost did not exceed 4000. They ship them away to New York as soon as the climate affects them, to give them, as the superintendent told me, "a chance for their lives."

I have been up at the Lantena with Mr. South (the place where the nitrate is principally worked), and we remained there three days examining the nitrate grounds; they are of extraordinary richness: and I should pronounce them inexhaustible. The cost of making the nitrate, and extracting it afterwards, is the roughest that can be conceived, and for every ton they get they waste ten.

Besides personally examining the grounds, I am of opinion that they have not been deposited from a salt lake; but my experience is not sufficient to enable me to form an opinion how they have been formed, except to say that there is not the smallest evidence to support the opinion that they are of volcanic origin.

The mines in this province are very rich, but the high price of labour prevents them being worked to any great extent at present.

I like this place very much, but the inhabitants of this coast are almost all poor, and many of them are deep in debt. If they get money into their hands they never purchase cards (that is all sport). Gentlemen were pointed out to me at Lima that have lost £20,000 in one night; and it is nothing uncommon for a working man to lose £100 at one sitting.

Much as Australia and California have been praised, I doubt if a man will do better there than here, provided he remains steady. Seven men are each getting £1 per day, loading nitrate for us; and the lowest wages are 7s. to 10s. per day; while living is not higher here than in England, with the exception of clothes.

The young men sent out by the commercial houses in England are, with rare exceptions, deep in debt, though they have large salaries; and extravagance among all classes is the order of day.

CALIFORNIA.

(From our own Correspondent.)

SAN FRANCISCO, June 15th, 1853.

The change that has taken place in the tone of moral society in this country in the last three years is greater than those who have not been resident here can form any just conception of. The sudden and great development of its abundant mineral wealth brought quickly to its shores a numerous and most heterogeneous population, amongst whom were men of loose principles who considered fraud in business transactions smart and clever, who frequented the gambling-tables (which by day and night were never closed), and who, in short, indulged in all kinds of licentiousness. For a time large accessions of *exprèses* from the Australian colonies, and of most abandoned characters from Spanish America and other parts, continued to pour in, and as there was new and unformed municipal state of the city they had free scope for the display of their ruling passions; they quickly plunged the better portion of the community into consternation at the audacity and frequency of their robberies and murders. The judicial executive was unable to meet the evil; so the citizens, taking the matter into their own hands, formed themselves into a Vigilant Committee, and by the steadiness and earnestness of their purpose, and the activity of their operations, quickly purged the country of the band who had almost taken possession of it.

From that time society has been settling down to the order and moral tone of olden countries; and at the present day gambling, although left untouched by any legislative enactment, has almost died out—being confined almost exclusively to those whose profession it is, and to people from Spanish American parts. Substantial stone and brick churches are being raised in all parts of the city—public libraries and reading-rooms are established—lectures on literary and scientific subjects are frequently delivered—debating societies (not political) have their meetings—and extensive provision is being made for the support of public schools and charitable institutions.

We have been in great measure led to these remarks by a kind of epidemic mania for duelling that has broken out upon us during the last two weeks—outraging public opinion, and setting order at defiance. This barbarous and absurd practice was at one time so common and ridiculous, and cast such a stigma upon California, that it was made a law of the state that all concerned in duelling should be disfranchised, and disqualified from holding any office in the state.

This law, and the death, in a duel, about a year since, of a Mr. Gilbert, the editor of the *Alta California*, who commanded the respect and

term of his fellow citizens for his talents and moral worth, put a check this barbarous practice, till the spell was broken last week by a hostile meeting between Dr. Gwin, Senator, and Mr. M'Corkle, Representative of this state at Washington. They met a short distance from this city, with rifles at sixty paces; and, after delivering ineffectual shots, plantations were entered into; they found out that the one did not mean this, and the other did not intend that; that they had been altogether misunderstood; so they returned home very ridiculous, and of course very dignified. Three days after, another meeting was arranged between Mr. Nugent, editor of the *San Francisco Herald*, and Mr. Brenham Hayes—the subject an offensive "leader." They met also at rifles, but at twenty paces. They both fired without hitting; but, as they "meant mischief," at the second fire Nugent's arm was shattered, and the ball traversed the muscles of his back. He has since been in a very dangerous state, but to-day his physicians report favourably. The next day a third meeting occurred between two young men who came to this country together, and who had been friends for years—a silly love quarrel and a challenge. They met with army revolvers; the second shot Mr. Toby mortally wounded Dr. Crane in the abdomen, and he was taken home to die. To-day there are rumours of two other duels.

Public feeling is disgusted with these criminal and barbaric doings; and it is felt that our community is disgraced in the eyes of the civilised world

Our population is steadily on the increase. By the last quarterly custom-house returns, the number of passengers who have entered this country by sea are as follows:—Men, 16,405; women, 2924; children, 727; making a total of 19,856. Of this number, 12,756 have left during the same interval, so that we have an increase of 7131.

This year's overland emigration has not yet commenced to arrive: by the eastern papers we learn that, according to the most reliable information, the number will far exceed that of the two previous years, and will not be less than 60,000. The above emigrants are said to be chiefly agriculturalists, who are bringing over the plains, with their families, their horses, herds flocks, and farming implements.

The French population in California is also much on the increase. Of the arrivals last quarter, 1293 have been French; and, according to the *Echo du Pacifique*—one of their journals in this city—there are not less, this time, in this country, than 32,000; and that, before the end of the year, that number will be increased an additional 8000.

Probably this city contains 5000. They are engaged in all occupations. They are bankers, physicians, speculators in land, importers, wholesale merchants, retail-dealers, mechanics, and day-labourers. They are from all parts of France, from Paris, from the North, and the South, and from Alsace. They preserve all the characteristics of their country—they live together, have their own cafés, restaurants, estaminets, and hotels. They learn our language very slowly; probably because very few of them intend to make California their permanent home. They do not avoid the error of comparing this country, the growth of only 3 years, with their own, the growth of a thousand; and, as they see the comparison is very much in favour of the latter. With the exception of Tahiti, the French have no foothold of their own on the Pacific; but, they have no inconsiderable commerce, and San Francisco is fast becoming the head and depôt of this commerce. The French almost monopolise some professions here—such as the importation of wine, fine cookery, wig-making, and gardening. They have in the largest public-house in the city, and are well represented in the others. They have a theatre with a good troupe, which they support well. They have a benevolent society, which has expended large sums of money, and done much good; and they have two newspapers, which are well conducted; but, unlike the German population, of whom we shall speak in another letter, they take but little interest in local or city politics from the fact, we presume, of their not amalgamating with the people.

Our report of the mines for the past two weeks is again most encouraging. From north to south the mines are doing well, and in many localities are taking out immense quantities of gold. The numerous other companies that have already been completed, or are now fully finished, will render an immense track of auriferous earth available. Gigantic operations are on foot to facilitate the working of the other fields, which have been lying untouched for want of water. The extent of virgin earth now being worked is as large as it has been within the last two years. As fast as the diggings in one are exhausted, new ones are discovered in some other locality.—M.

CHINA.

Letters and papers from China confirm the telegraphic announcement, reported in our last, of the fall of Nankin; and add that Amoy has been taken by the insurgents, whom, it seems, our Plenipotentiary has to recognise as reigning authorities. We have also increased, though still insufficient and perplexing, information of the religious characteristics of the revolution, which forms the subject of an article in another column. The great insurrectionary movement of the disciples of Tsing-wang, which is interpreted to mean "the Prince of Peace," has already been effectually met by the Imperialist troops, and on any point on which the Mandarins and the Mantchoo authorities have not attacked they have been routed and overthrown. Upon the Mantchoo Tartar troops the rebels make war with great ferocity, and many thousands of them have been slain. The general rise pursued by the middling and trading classes, which are so numerous in China seems to be to barricade themselves in their houses, and to take no part in the contest until it should be more clearly seen which side is likely to come off victorious. Upon the rivers and in the other maritime cities the Imperialists had still some hold, because the insurgents appear to be inferior to them in their war junks, or means of water communication. But Amoy had fallen into the power of the rebels on the 19th of May, after a severe combat, and a subsequent attempt of a Chinese admiral to retake the place was repulsed with loss.

For the present everything is paralysed by uncertainty and terror. While the fertile district of Fokien trade is for a time suspended, and an outbreak was anticipated at Canton, which may be productive of still more serious consequences. The next mail will be looked for with great interest.

NATIONAL SPORTS.

BRIGHTON RACES. WEDNESDAY

Trial Stakes.—Snowdon Dunhill, 1. Pharold, 2.
Second Year of the First Brighton Biennial Stakes.—Sittingbourne, 1. Sapphire Dayes, 2.
Nursery Stakes.—Pantomime, 1. Adune, 2.
Marine Plate.—The Heriot, 1. Puritan, 2
Brighton Nursery Stakes.—Cyrus, 1. Sine-qua-non, 2
Railway Plate.—Tortoiseshell, 1. Mrs. Nutting, 2.
Crown Plate.—Maidstone, 1. Himalaya, 2.

THURSDAY

Grand Stand Plate.—Hungerford, 1. Sandhurst, 2
Second Biennial Stakes.—Tomboy, 1. Antigone and Musician ran a dead heat for second.
Brighton Cup.—Arioste, 1. Harbinger, 2
Second Biennial Stakes.—King Tom, 1. Student, 2.
Pavilion Plate.—Madame Landeau, 1. Hambletonian, 2
Sussex Plate. Nightshade, 1. Jessamine, 2.

FRIDAY

50 Sweepstakes.—Andover walked over
Garret Stakes.—Surprise, 1. Abdallan, 2
100 Plate.—Andover, 1. Quince, 2
Brighton Club Stakes.—Allneston, 1. Garforth, 2
100 Plate.—Maidstone, 1. William Rufus.
Brighton Club Plate.—Sylphine, 1. Vauliress, 2
Cheltenham Stakes. Surprise, 1. Farmers' Boy, 2.

CRICKET.

ELEVEN OF ENGLAND v. TWENTY-TWO OF ZINGARI.—This match was concluded on Tuesday, thus:—England, first innings, 89; second, total, 159. Zingari, first innings, 200. Winning in one innings.

FOUR OF ALL ENGLAND v. FOUR OF SURREY.—This exciting and novel match was played on Tuesday and Wednesday, at the Oval, Kennington, where a large number of persons had assembled to look at what is rarely of a first-class single wicket match. It will be seen that England won by eight runs. England, in their first innings, made 61; and the second only 1·8 for all, 32. Surrey, in their first innings made only 14; and in the second, 10. in all, 24.

DOGGETT'S COAT AND BADGE.—On Monday the above boat-race took place, over the usual distance. There were six competitors, and they came in as follows:—Evans (Tower), 1; Kilsby (Bankside), 2; Barrett (Old Barge House), 3; Jubbington (Horsely down), 4; Barrett (Old Barge House), 5; Davies (Battersea), 6.

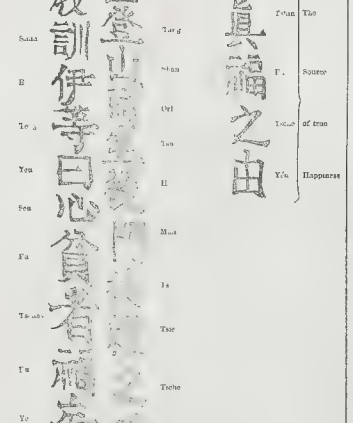
ROWING.—CHAMPIONSHIP OF THE THAMES.—On Wednesday the gentlemen (Mr. James Paine, Mr. Rippingale, Mr. Smith, and Mr. Edge), contended for the honorary distinction bestowed by having to row bridge Mr. J. Paine was the winner; Mr. Rippingale, 2; Mr. Nottidge, 3; and Mr. Smith, 4.

CHRISTIANITY IN CHINA.

We have been favoured by a Correspondent (Mr. W. Bramston, Blomfield terrace, Paddington), with the accompanying Illustration of the means by which the texts of Christianity have for many years been promulgated by Protestant missionaries in China.

Mr. Bramston states that, when in China, he was daily at the house of the late Rev. Dr. Morrison, and at that time they were busily engaged in taking texts from the Bible, printed in Chinese characters, with a picture on one side to call the attention of the Chinese, similar to one here engraved. These were pasted up and circulated at Macao, Canton, and Honan. Some of the lithographs were executed by Mr. Bramston. The printing-press was removed from Macao to Canton, on account of the Portuguese Governor prohibiting the printing at Macao, as it was contrary to their faith that the Holy Scriptures should be made known amongst the people. Many thousands of texts were printed in this manner. It was simply the Word of God that was circulated in this way, and it was generally gladly received. Sometimes the late Mr. Morrison (eldest son of Dr. Morrison) and Mr. Bramston went far into the interior for a walk with a little money (small Chinese coins) in their pockets to insure a good reception from the people: in this way they distributed many hundreds. Mr. Bramston has accompanied the Rev. Mr. Gutzlaff in the same manner, at Macao, without the city, among the poor at a place called "the Campo," giving away St. Paul's Epistles and other portions of God's Word.

In addition to the Picture, we have Engraved the title and two commencing lines of the Bible text (St. Matthew, c. 5, v. 1. 2), printed in Chinese characters, with the pronunciation affixed.



1. And seeing the multitudes, he went up into a mountain: and when he was set, his disciples came unto him:
2. And he opened his mouth, and taught them, saying,
3. Blessed are the poor in spirit: for theirs is the kingdom of Heaven.

AUSTRALIA.

We have received the following letter from a Correspondent, describing "The Choicest Spot in the Colony:"—

St. Kilda, Melbourne, March 1, 1853.

My dear Fairybody.—When I last wrote, I had not time to say much about this place, and as I am now unable to go out, in consequence of a dust-storm, which has been raging for hours, I will try to give you some idea of our colonial comforts. I am living about three miles from Melbourne, in the bush, and in sight of the bay. The situation in Fairyland would be delightful; and it is certainly pleasant in quiet weather, particularly after rain. I go down before breakfast and dip in the sea, call for the milk on my way home, sweep out the sitting-room, breakfast with appetite, and walk into Melbourne, feeling little fatigue. As I am on my feet all day, I sometimes ride out or in, or do both (as I call each one). The house, for which we pay four guineas a week, consists of three rooms and kitchen. It is unfurnished, and has not a shelf, cupboard, or other convenience. It is built of uprights and rough palings; the inside *walls* papered; the ceilings of the sitting-room and bed-room canvassed, and not papered. The roof is made of rough palings; and in the daytime the sun shines through the chinks, and at night the moon; and in wet weather the rain converts the whole into a large watering-pot. I have not grown under its influences, but never was better in health, though I feel a hundred different currents of wind about my bed, and have had to turn out sometimes and erect an umbrella to sleep under.

To-day caps anything I have seen. While I am writing three or four lines, the dust accumulates on the paper so thickly, that it is not easy to read the writing (you will say, "it is not easy to read it *without* the dust!")—the floor, table, and everything in the place has the same quantity of dust upon it as is usually seen on the roads about London after a very windy day in summer. It is blowing a hurricane of hot wind; and were it not for the too evident grittiness of the atmosphere, you might think, on going to the window, that you were in a London fog. I have breakfasted with difficulty, by spreading a newspaper over the things, pulling out my bread and butter, &c., snapping off a bit, and popping it back under cover as quickly as possible. Another newspaper over my head shoots down the sand in a shower around me, while eddies of it are flying in all directions, bringing to mind Miss Landon's definition of dust—"mud in high glee"—and making one wish she were here to enjoy it. The dust-storm was preceded by a hot air last night, loaded with locusts, moths, queer-looking flies of all kinds, spiders, earwigs, and various other visitors, in addition to the usual companions, or intruders into what used to be called an "Englishman's castle"—as the shape of house-flies, fleas, yellow bluebottles, bugs, lizards, musquitoes, tarantula-spiders of the size of sixpenny crabs—which spiders are said to be very venomous—rats, mice, daddy-longlegs, whopping grasshoppers, and many other delicacies. Even when we have no wind, the dust is abominable, except immediately after rain; and the whole place was evidently not long since under the sea, and ought to be there still. You go out for a walk, after a good scrubbing, with your socks and hinds clean; having indulged in the expense of a clean shirt: you return with every wrinkle in your face full of black sand, and your socks so caked that you may hear the lids grit as they open and shut. How the ladies manage to look so cleanly I don't understand; but cleanliness is a comparative matter, and probably what we call clean shirts, &c., would in England appear much dirtier things than the linen in which *Sir John Falstaff* was so charred. I have not yet made my appearance in society here, but some of my friends have, and one of them was at a grand farewell party the other evening, given by a Mr. G——, who has amassed a large fortune, and returns to England by the *Blackwall*. My friend's description of the company does not make me anxious to go out. He tells me that the young ladies were of a very primitive character, and conversation an unknown accomplishment amongst them; but, after several trials, he detected in obtaining a common beauty's opinion of Melbourne.

"Do you not find this place dull?" he asked.

"No," replied the maiden; "not dool, but doosty!" This was his only nugget for the night.

Seven p.m. The hurricane has continued, and blown down several buildings in Melbourne, most of the shops having been closed. "Canvas Town" is a wreck of squalid rags. We can see one shop in the bay, which has had her foremast, almost and part of her mizen, carried away since morning, and no doubt much other mischief has been done. I have just been in the sea, and found the sand and water quite warm; and the wind, though abated, is still hot. The bush was on fire last night, and it is said that, had we not had rain, the bush fire would have been very extensive.

I have hitherto been describing St. Kilda, the "choicest spot in the colony;" and, if you wish further particulars of the town itself, I need only tell you to multiply the vermin and dust by ten, and you will not have a bad idea of Melbourne. Two hours' rain, however, converts the whole of the dust heap into a huge bog, extending to St. Kilda and all around Melbourne. The eagerly bookmakers who describe the place in such glowing colours, ought to be compelled to sleep this rainy night in one of the miserable tents in Canvas Town, or rather to amuse themselves pulling the wet tents with a tea-cup. The town has some respectable buildings, and some of the streets are good; but a large part of it be puffed-place is more like the lower end of Waterloo-road, London (or what it used to be), than any place I have seen. All new comers are stunned by the state of things, and many a time has Mrs. Chlaholm been heartily wished in a place where I suppose is even more disagreeable than this. There are already in my line who lack employment; and great fears are entertained with respect to the winter, when tents and make-shifts will be no longer available. Still, persons find full employment at very high wages, as almost everybody is building land and building. Owners of land and houses are coining money. Land which cost £1 an acre is now selling at £25 a foot, and £50-houses are realising £1000 per year. Money-making consoles and reconciles everybody to the rough, dirty mode of life, and the "gentry" of the place seem quite unconscious that they are living in a dirt and semi-barbarism. A sense of perfect freedom and independence, however, makes up for many wants; and I suppose I shall gradually become as unconcerned about this brick-field kind of life as my neighbours. The reward of industry is much more certain and speedy than in spending, bequeathed England; and, with all the defects of this place, a man with a head on his shoulders is a fool to remain struggling for life in a mother country which has heaped wealth on her idle children, and leaves the coarse crumbs to those who labour for her. But in coming here the poor man will find her affection still pursuing him through her agents: so far from providing even temporary shelter for those who are to create a demand for her productions, and help to enrich her, she exacts from the friendless and too often destitute adventurer, before he can throw his limbs down to sleep, a rent of 6s. a week for a few feet of sand and bog whereon to pitch his tent or erect his miserable pole and rag! For what are called "Government emigrants," some slight provision is made; but of the thousands of men, women, and children suddenly poured into this dust-hole, no more appears to be thought than of so much more dirt added to the heap; and, in fact, here, as in England, people must and do express not by the aid, but in spite of Government.

I have not time to say more now, except that I am very well, and that I am always yours sincerely,

F. B. F.

INAUGURATION OF THE NEW YORK EXHIBITION.

(From our own Correspondent.)

NEW YORK, July 14, 1853.

At last the New York Exhibition is opened. "Better late than never" says the old adage; in this case, however, later would have been better. Not half the articles are in their places, and the greater part of that half not even in the Building; it will be fall six weeks before the Exhibition assumes that appearance which it should have presented on the morning of the opening. Many are the excuses and explanations to account for the delay, and loud and deep are the complaints of exhibitors. It still remains to be proved whether the undertaking will be successful or not. The enthusiasm of to-day seemed more on behalf of the President than the Exhibition; and when the speechifying and the ceremonies were over, and groups of inquiring minds promenaded around the Building, now stumbling over a packing-case, or having to return to disengage some portion of dress detained by unfinished carpentry, and in their walk, occasionally discovering some work of art strangely upsetting its head in a quarter where least expected—they seemed disappointed, and disposed to consider that great plans were due somewhere.

Early in the morning trumpets were sounding, calling out the various troops of militia and volunteers, and bands were playing and escorting their particular regiment to the appointed rendezvous. At the corner of every street soldiers—both horse and foot—were seen hastening to join their comrades; flags were run up to the top of the Liberty-poles, as well as to the flagstaff which surmounts almost every hotel; the "Stars and Stripes" were hung out of windows all over the town with as much advertisement stuck on in some form or other, for Jonathan has always an eye to business); the sashes were thrown up, and ladies endeavoured to find some amusement in anything that might occur for two or three hours, to while away the time till the President approached.

About nine o'clock the regiments had formed, and commenced marching to the Battery; each regiment perfectly independent, and, having its own band, proceeded along the Broadway as soon as ready. First, a cavalry regiment, the band playing some lively air; then a foot regiment, and so on.

While all these preparations were going on in New York, the Committee of Reception, having chartered the steamer *Josephine*, proceeded, with some favoured guests and military and naval officers, to the Jersey shore to receive the President from the authorities of Jersey city, and convey him to New York. The boat was decorated with the United States flag, and flags of the separate states, and presented a very gay and lively look.

The President embarked at the Cunard Steam-ship Company's dock, a portion of which was set apart for the purpose. In the same dock lay the steam-ship *Arabia*, the British and American flags flying from her masts. The officers of the *Arabia* were not behind in their attentions to the President, but vied with brother Jonathan to do him honour. The sailors of the *Arabia*, under the command of Mr. Hockley, her chief officer, ran out from the shore to the *Josephine* a long gangway, which was covered with carpeting, and a hand-rail on each side decorated in good taste with signal flags. This compliment to the President was highly appreciated, and elicited favourable remarks on all sides. The cannon boomed in the distance; music heard indistinctly, intermingled with shouts, announced the approach of the President; the firing became more rapid, the bands more distinct, until, at five minutes past nine, the President arrived on the dock, and immediately embarked. The *Arabia* fired a salute of 21 guns, and paraded all hands on deck; cannon from all the wharves and docks within sight or hearing, kept up a continued fire, which, joined to the cheering and shouting, was perfectly deafening.

The *Josephine* steered down the bay, to enable the President to have a good view of the magnificent harbour of New York, as well as to give the vessels in the river an opportunity of saluting and cheering him. As the President approached Castle-garden, the scene was animated and beautiful beyond description. Let the reader imagine the effect produced by forests of shipping decorated with flags, the rigging alive with human beings, and the decks of those vessels sufficiently near to catch a glimpse of the President, crowded with the democracy of the Empire City. The vessel neared the shore; and the President, standing in the fore-part of the vessel, exposed his head to the sun by continually bowing to the "sovereign people." The bands played "Hail, Columbia," "Yankee Doodle," "The Star-Spangled Banner," &c.; and amidst firing, cheering, and music, the President of the United States was welcomed to New York by the Mayor, Corporation, and city authorities. In Castle-garden the President received the congratulations of the Mayor, and responded in a speech of a thoroughly national tone and feeling, which elicited the uproarious applause of all present. He then reviewed the troops drawn up on the Battery, after which the procession formed and proceeded along Broadway towards the Crystal Palace.

The President was mounted on a fine black charger, which, though very old, is a noble animal. This horse carried General Pierce through the Mexican war, and is, as may be supposed, a great favourite. The fact of the President being on horseback in a great measure disappointed the people on the line of procession. It was expected, and, indeed, announced that he would be in a barouche drawn by six greys; but he preferred proceeding on horseback, and did so at the head of the procession, in many cases passing by before any person in his immediate neighbourhood was aware of his approach. All along the route flags and streamers were flying from every available point. The windows were filled with well-dressed ladies, who testified their delight by waving their handkerchiefs. The Astor House Hotel was very tastefully decorated with national flags. Immediately after the President had passed this point, the rain came down in torrents, and soon drenched the procession to the skin. The effect on the people in the streets was perfectly magical: they did not go away, they vanished; where they went, and how they went, remains a mystery. Some gentlemen offered the President an umbrella, but he refused, saying:—"He should not melt, he could stand the rain as well as any of them!" The most curious part of the incident was, that half a mile further on there had been no rain at all; and, on the President's arrival in the neighbourhood of the Crystal Palace, the people were perfectly astonished to see him and all in the procession wet through.

The President having arrived at the Exhibition, it was thought advisable that he should take some refreshment; and, in true republican style, he and the gentlemen accompanying him entered a saloon opposite the Crystal Palace. During his stay in the saloon some thoughtful person procured him a change of linen, and before entering on his duties in the Exhibition he availed himself of the kindness. While the proceedings outside were so interesting, it must not be imagined that nothing of interest was going on in the interior. Platforms were erected, on which seats were placed to accommodate those who, either by position or favour, were fortunate enough to secure an invitation. The whole of the interior management, however, was very bad, and I can say, with very great truth, they manage these things better in England. The tickets not being numbered, and no account taken of the quantity issued, they who arrived first obtained the best seats; and, thus, on a front seat might be seen a shopkeeper of "Broadway," and three or four seats behind a Minister of State. On the floor, in front of the platform, seats were placed in any way it suited the occupiers to fix them; and by the time the President and his suite arrived, the way was so blocked up, that it was with difficulty they could reach the platform. By dint of great exertion, however, a way was cleared sufficient for the President to pass through; a chair, of course awaited him; but not so fortunate were the naval officers who accompanied him. All the seats being filled, these gentlemen, the only persons on the platform in uniform, were compelled to sit on the floor.

STATUE OF WASHINGTON, BY BARON MAROCHETTI, IN THE NEW YORK CRYSTAL PALACE.

The doors of the Exhibition were opened at ten o'clock, and the proceedings announced to commence at one; but, owing to unavoidable delay, in consequence of the rain, the President did not arrive till two o'clock. While waiting for the President, the public had an opportunity of observing the decorations. The dome was very much admired as to form, but the style of decoration is anything but pleasing, all is hard and harsh; positive colours and violents contrasts meet the eye on all sides, and bespeak a want of education in this department of art. A few years ago, however, this was not much better understood in England, as Mr. Owen Jones can testify. Around the galleries the same style of decoration is used as at the London Exhibition—the scarlet cloth behind the railing, the names of the departments in white letters on a crimson ground, and so on. The general effect is much the same as the Great Exhibition on a small scale—something like looking at the Great Exhibition through the wrong end of an opera-glass. The chief objects in this Exhibition—or, rather, the more prominent objects, are—the statue of Washington, by Baron Marochetti; "Christ and the Apostles," Thorwaldsen's great work; and the London favourite, Kiss's "Amazon." Many other works of great beauty I have had a peep at as they stand half unpacked, and others will, no doubt, be added to the list. General Scott, with his arm in a sling, showing he had not recovered from his fall in the street, was a prominent object on the platform: he rose to pay his respects to Lady Ellesmere, and as he walked back to his seat was loudly cheered.

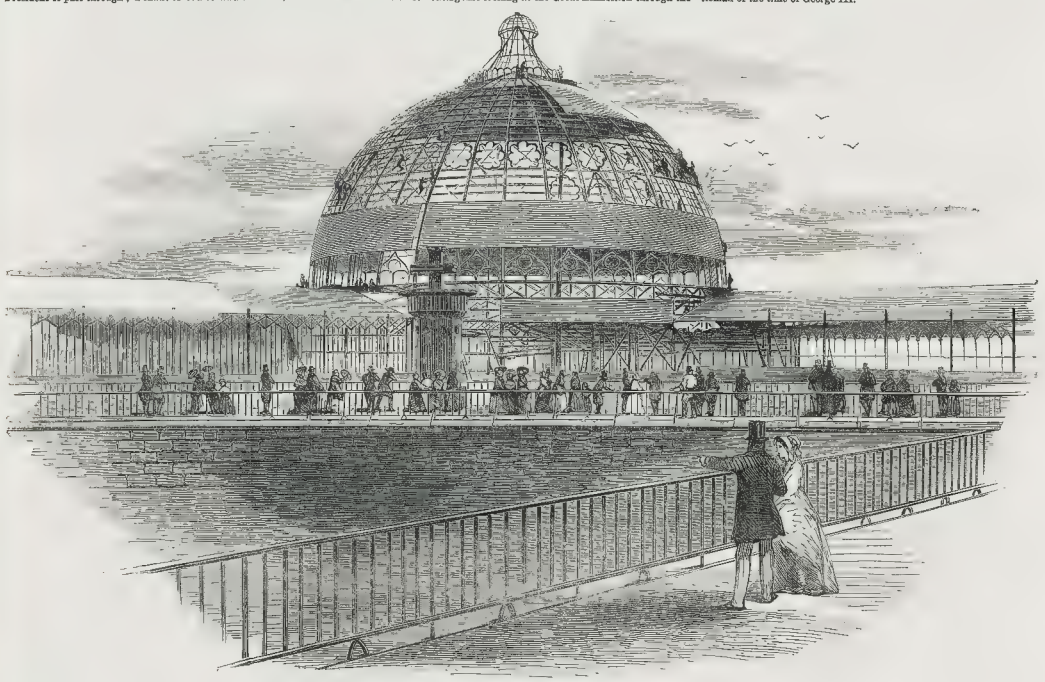
It was now two o'clock, and all eyes were directed towards the principal entrance. The President approached silently and quietly, with his suite; when, on arriving within a few feet of the platform, he was recognised, and heartily cheered, but not with such a spontaneous burst as our Queen elicits on such occasions. On his arrival on the platform, the band which commenced playing immediately on his being recognised, continued playing to enable the President to rest a little. He seemed thoroughly fatigued, and looked very unwell; occasionally he pressed his hand on his forehead, as if in great pain. He was dressed in deep mourning for his only son, whom he lost some time ago by a railway accident. A prayer was then offered by Bishop Wainwright, the President holding his hat in his hand, and bending forward towards the Bishop in a most devout manner. After the prayer a hymn was sung by the New York Harmonic Society, to the air of the Old Hundredth Psalm. The Hon. Theodore Sedgwick, the president of the Crystal Palace Association, then addressed to the President in an eloquent speech. The President replied; and the conclusion was the signal for general cheering. Cheers were also called for, in favour of various persons whose names I could not catch, and were responded to with more or less enthusiasm.

A general rush then took place on to the platform, to shake hands with the President, and his friends had great difficulty in preventing him from being seriously hurt. However, with great exertion, he was conducted off the platform, highly delighted, I have no doubt, to escape so easily. In the scuffle many mounted the reporters' table, which was placed in front of the platform. The table, with at least forty people on it, at last gave way, and came down with a crash, causing a temporary alarm. Fortunately, no one was hurt; and, the President having retired, the people gradually dispersed some to different parts of the Building, and the greater part making their way either home or to some refreshment-room, having been in the Building from ten to four o'clock. At no time were there more than 5000 persons in the Exhibition; although there were, probably, 10,000 outside, to see the President. On his return, the President entered the barouche drawn by six greys, and was driven off at a rapid pace to the Astor House, escorted by a company of Dragoons. Thus ended the inauguration of the New York Crystal Palace.

[In our next Number we shall engrave the interior of the Crystal Palace during the opening ceremony; which want of space compels us to omit this week.]

STATUE OF WASHINGTON.
BY BARON MAROCHETTI.

This fine Statue of Washington occupies the post of honour under the centre of the dome of the Crystal Palace, and stands on a temporary wooden pedestal, crowned with crimson cloth. It fully sustains the still growing reputation of the sculptor. The grandeur of the general effect is remarkable. The easy manner in which Washington sits the horse, and the calm and yet powerful expression in the features of the great man, all tend to stamp it as a triumph of art. No trappings, tassels, or useless ornaments deck the horse or rider: the plain sword hangs negligently by his side; and with the exception of the pistol-holsters, and the epaulettes on the shoulders of Washington, there is nothing to distinguish him from a private gentleman of the time of George III.



THE NEW YORK CRYSTAL PALACE.—FROM A PHOTOGRAPH.

THE EAST SUFFOLK ARTILLERY ENCAMPMENT, AT LANDGUARD FORT.

THE EAST SUFFOLK ARTILLERY.

THE training of this fine Militia Regiment was closed on the 26th ult., by the inspection of the corps, by Colonel Gordon Higgins, R.A. The history of the regiment is remarkable, as showing the result of careful training, with good materials, and competent instruction.

This regiment was on the Light Infantry establishment at the training of 1852, which lasted three weeks, during which time the men had not arms placed in their hands. This year they assembled on the 1st of July, as an Artillery corps, composed of 564 of all ranks, under the command of Lieutenant-Colonel Shafto Adair. With the exception of the Adjutant, Captain Love, not one of these officers had been in the regular service, and not above ten or twelve of the non-commissioned officers and privates. They reckoned in their ranks two gunners of the Royal Artillery. The officers and non-commissioned officers of the permanent staff generally passed the months of May and June in acquiring Artillery drill at Woolwich or other stations.

The spot selected consists of a spacious sweep of greensward to the north-west of Landguard Fort, Ipswich: from the traces still remaining it formed the site of an encampment fifty years ago. Surrounded by a belt of marsh land, the site is approached from the shore opposite the harbour by a roadway, and by a bridge constructed with planks. Having crossed this, the spectator was at once introduced to the Camp. On the right, was pitched the tent of the Colonel-Commandant, Shafto Adair; on the left, the tent of Captain Love, the Adjutant. The next row of tents was appropriated to Major Pytches and the other officers; in the rear another row afforded accommodation for their servants. Next was the encampment of the bulk of the regiment, which consisted of two long rows of tents, running parallel with each other, and consisting of the right and left wings. In the rear, on the west, stood the hospital and surgery tents; on the south, was the tent appropriated to the guard; whilst midway was a large oblong building, in which the business of the canteen was conducted. In the immediate vicinity, the camp kettles upon a series of fires blazing in a long trench, served as the kitchen. The Camp on the southern edge was lined by a double row of sentinels; two also being posted upon the bridge, already described; and on their immediate right stood four brass six-pounders. The scene was animated and picturesque—with the long rows of white tents tipped with red dotting the green sward at regular intervals—the Union Jack floating from various points, the piles of carbines at the entrance of the several tents, the old fort in the immediate foreground bristling with cannon, the rural scenery in the rear stretching as far as the eye can range, and the beautiful ocean reflecting from its surface the bright blue sky of summer. With these auxiliaries the Camp at Landguard Fort was even more picturesque than that at Chobham.

On the 1st of July the regiment encamped, and, under their guns, prepared to lead a soldier's life under canvas. They had never inhabited tents, nor cooked their own food at the camp fire. Their previous training in Ipswich had scarcely been long enough to familiarise them with their officers or comrades; and for more than one-half of the period of training the peninsula on which Harwich stands and the German Ocean, was scourged with hurricanes and deluged with rain. The soil, however, was porous and dry, and the commanding officer had provided the tents with cocoa-nut fibre mats, in place of straw.

Of the twenty-five days previous to that of inspection, two were occupied in distributing arms and clothing: two were lost through the inclemency of the weather; and four Sundays intervened. These eight entire days were to be deducted from the total, leaving but seventeen days in which to acquire a knowledge of manual and platoon exercise, of company drill, and of manœuvring in battalion, as well as of the management of heavy ordnance.

On the day of inspection the manœuvres commenced with the general salute, followed by marching past. Line was then re-formed for manual and platoon exercise. On the intelligence that the enemy had landed, the line was formed into close column, and the camp was quitted for the field.

The column next deployed into line and advanced, covered by the skirmishers and field-guns on each flank. Finding the enemy in force, the line retired by the right of division, forming a square on the leading division, and receiving the gunners of the abandoned field-guns, bringing with them the side-arms, linchpins, &c., of the spiked guns. The column of march being re-formed, took ground to the left, and again advanced in column, forming square; line was re-formed, covered by skirmishers and the field-guns as before, ending with a charge, driving the rear-guard of the enemy into their boats, under a heavy fire of guns and musketry.

The inspecting officer declared himself highly gratified and surprised at the proficiency and steadiness of the regiment.

In the afternoon, the regiment assembled on Parade in Landguard Fort,

THE CAMP AT CHOBHAM, BY MOONLIGHT.—(SEE NEXT PAGE.)

and proceeded to man the Eleven Gun, or Beaulieu Battery, with two detachments selected from each company. These were put through their drill by the instructors, and afterwards commanded by the Lieut.-Colonel, and directed by the regimental officers and non-commissioned officers of this branch of training. The inspecting officer expressed his approbation, observing that ammunition for real practice alone was wanting to secure the efficiency of the regiment.

This plain statement shows what has been effected by a single regiment, under competent instruction. True it is that this corps has shown itself to be of the soldierly breeding, patience, and docility which is perfectly consistent with civil excellence; but it is rather our desire to show by example what an excellent material of defence exists in this country, properly developed. Perhaps the most remarkable feature of the present well-determined system of military preparation is this, that no thought of aggressive war is thereby promoted. Our experience in all ranks

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer during the week has been subjected to slight changes, only its mean for the week was 29·903 inches at the he ght of 82 feet above the level of the sea. The temperature was below its average on the first three days and above its average on the last four days. From July 10 to July 31 the mean daily temperature of the air was below their averages, excepting on two days only, viz., the 12th and the 27th, on which days it was about their average. The mean daily defect for the period was 2·3°. The mean temperature of the week was 61·8°, being 0·3° below the average of thirty-eight years. The mean reading of the barometer for the month of July, at the level of the sea, was 29·912 inches. The mean temperature of the air was 60·4°, be ng 1·6° below the average of thirty-eight years. The mean temperature of the dew-point was 54·7°. The mean degree of humidity was 83, complete saturation being represented by 100. The mean daily range of temperature was 18·9°; and rain fell to the depth of 5·9 inches.

ERRATA.—For the mean reading of the barometer at the level of the sea for the months of March, April, and May we gave, read 29·975 inches, 29,888 inches, 29,923 inches, and 29·907 inches, respectively. The numbers printed at the end of each month have been those showing the mean pressure of dry air at the level of the sea.

Lewisham, August 5, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending July 30 the births of 1521 children were registered in the metropolitan districts: of these 769 were boys, and 752 were girls. The average number in the eight corresponding weeks of the years 1845–52 was 1344. The number of deaths registered in the week was 1004; a result which, though not unfavourable as compared with the usual mortality of the season in London, gives indication of that increase which is characteristic of the summer mortality of towns, as distinguished from that of the winter months. The deaths returned in the two preced ng weeks were 904 and 971. The estimated number deduced from the average of the ten corresponding weeks of the years 1843–52, and corrected for increase of population, was 1176. This series of weeks embraces the high mortality from cholera in 1849, and the average is, therefore, greater than it would be if derived exclusively from years less remarkable for the prevalence of disease. To zymotic diseases 270 deaths are attributed (their average is 291); of these 3 are due to small-pox (its average is 17); to diarrhœa 81 (its average is 102); to cholera (its average is 100); and to typhus 46 (its average is 38). To dropsy, cancer, &c., 32 (their average is 41); To tubercular diseases, 203 (their average is 183); of these, 148 are due to consumption (which is 52 in excess of its average). To diseases of the brain, &c., 128 (their average is 114). To diseases of the heart and blood-vessels, 56 (their average is 31). To diseases of the lungs and of the other organs of respiration, 70 (their average is 73). To diseases of the stomach, and of the other organs of digestion, 59 (their average is 72); and to violence, privation, and intemperance, 48 deaths are attributed (being 20 in excess of their average).

CITY OF LONDON MUNICIPAL REFORM ASSOCIATION.—Wednesday night the first public meeting of this association was held in Farringdon Hall, Snow-hill, for the purpose of nominating a general committee of management and ward committees of improvement, the appointment of officers, and the adoption of requisite measures for the effective organization of the body. The chair was taken by Mr. Weightman; and Mr. Acland gave the meeting a brief history of the movement for corporate reform, and complained that since the Legislature undertook to deal with the question, it had excluded the city of London from the provisions of the bill by which it had reformed the municipalities.—The intention of the meeting was convened was fulfilled; and the proceedings terminated.

IMPROVEMENT OF CAMBRIDGE-COURT, MARYLEBONE.—Among the praiseworthy efforts now making for the improvement of the dwellings of the poor of the metropolis, is the formation in the district of Trinity, St. Marylebone, under the auspices of the Rev. Thomas Gardner, the Rector, for the purpose of purchasing a court well known in that neighborhood for the immoral and disorderly habits of its inhabitants, and of effecting in the room of its present wretched tenements a number of well arranged and wholesome lodging-houses for the poor. A bazaar in behalf of this benevolent object has recently been held in the crescent gardens, Portland place, which was attended by upwards of 2000 visitors. The proceeds of the sale amounted to above £400, in addition to which many liberal subscriptions were received. One contributor individual, impressed with the great importance of the work, promised to do ation of £500 provided that £1600 shall have been raised to meet it before the month of March next. The whole sum required is £2400 towards which £1400 is already subscribed.

BRITISH BENEFICENT INSTITUTION.—From the fourth annual report of this excellent charity, which has just been published, we are glad to perceive that its finances are in a highly prosperous condition, and that its prospects are not encouraging. Though only founded a few years ago, for the purpose of affording assistance to the widows and unmarried daughters of persons once in affluent circumstances, or occupying a high position in society, its operations have already exceeded the most sanguine expectations. At the present moment twenty four annuitants are upon the funds, receiving each £30 per annum, and the increasing support which the institution is enjoying, justifies the hope of a speedy extension of its sphere of usefulness.

MEDICAL SOCIETY OF LONDON.—Several gentlemen resident near or in the metropolis, Fellows of the Medical Society of London, have resolved to form a Physiological Society for the promotion of that particular part of science, physiology, so intimately connected with the proper application of medical and surgical knowledge. The Physiological Society will commence its meetings in October next, in the rooms of the Medical Society of London, in George-street, Hanover-square, to which all Fellows are eligible for admission.

TERMINATION OF THE CAB STRIKE.—In obedience to the recommendation of the committee, issued late on Friday night week, a large number of the cab proprietors resumed their usual avocations the next day, from which time there has been no want of cabs. Early in the day the proprietors held their final meeting at the Cranbourne Hotel, when Mr. Hyder explained the reasons for the committee giving the advice that the cabs should be sent out as usual. He said they had seen that the withdrawal of the cabs had created a great public inconvenience on Monday, and so on Thursday, and on Friday it was still worse. If they in all human probability that Sunday would be still worse, the interest of the public would not permit them to allow such a state of things to continue. Most of the proprietors present were convinced of the correctness of the advice tendered, and it was resolved—that, however, without considerable grumbling, that the recommendation of the committee should be acted upon. It will be seen in our Parliamentary report that some amendments and improvements have been made; and others, before the amended bill becomes law, will no doubt be added.

THE CITY POLICE.—On Tuesday evening a meeting of the constables of the City police was held at the Flying Horse Tavern, Tipplegate, for the purpose of approving certain alterations which had been made in a petition to the commissioner of the City police. The petition, as amended, prayed for an increase of pay, on account of the dearness of lodgings within the City and the increased price of provisions. It was approved, and then signed by 500 of the men.

STRIKE OF LABOURERS IN THE LONDON DOCKS.—On Monday the labourers, to the number of 200 employed in the tobacco department of this extensive establishment refused to work unless they received six pence a day more, or three shillings per week. About nine o'clock a consultation took place with a view of appointing a deputation to wait upon the dock officials, but nothing definite was arranged.

STRIKE OF THE MARKET-GARDEN LABOURERS.—On Monday morning the whole of the labourers, to the number of about 600, employed in the market-gardeners' grounds in Fulham, refused to work on the ground that their wages were not sufficient to maintain them. They have been in the receipt of 14s. per week for working from five o'clock in the morning until seven o'clock in the evening, and they have now asked from their employers an increase of their wages to the extent of 2s. per week. This the masters have steadily refused to accede to.

SOUTH-WESTERN RAILWAY ACCIDENT.—The Hon. F. Scott, Chairman of the South-Western Railway Company, and Mr. J. Beattie, the superintendent of the locomotive department of that company, surrendered on Monday, at the Croydon Assizes, to take their trial on a coroner's Inquisition charging them with the manslaughter of Charles Cannon. Mr. Bodkin prosecuted, and the Attorney-General defended. Early in the trial, the Chief Baron stopped the trial, and a verdict of acquittal was given.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

Lord KINNAIRD withdrew the Combination of Workmen Bill, in consequence of the objections urged against the measure by the Lord Chancellor, Lord Truro, and other noble Lords.

INDIA BILL.

Earl GRANVILLE, in a speech of some length, moved the second reading of the India Bill.

The Earl of MALMESBURY commented in strong terms upon the conduct of the Government in delaying so important measures to so advanced a period of the session, when it was impossible for their Lordships to discuss them properly.

The Earl of ELLENBOROUGH said that the measure was no doubt an improvement upon the present system; but, at the same time, it was a bit-by-bit kind of reform that was unworthy of the greatness of the subject, and of a wise and responsible Government.

After a lengthened discussion, the bill was read a second time.

The other bills on the paper were then advanced a step.—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

In the early sitting of the House of Commons, the South Sea Company's Arrangement and Trusts Bill was read a third time, after considerable discussion;

The Filotage Bill passed through committee;

The Betting-houses Bill as amended was considered, and ordered to be read a third time on Monday.

At the evening sitting—

In reply to Mr. M. Gibson, the CHANCELLOR of the EXCHEQUER said that the time which had elapsed since a proposal was sent out to the colonies for a low and uniform rate of postage was too short to put the Government in possession of all the replies that they expected to receive to such a proposal. The replies which had been received were all favourable to such an arrangement, but the most important of these answers were yet to come. The basis of the proposal was that ocean postage should be low and uniform, and should include the whole charge from the place from which the letter was sent to the place of its destination. He should be glad to see a Parliamentary inquiry on the subject instituted in the early part of next session.

SOUTH-SEA, &c., ANNUITIES BILL.

On the order of the day for going into committee upon this bill, Sir F. KELLY repeated his objections to the three alternatives proposed by this bill to be given to the holders of Stock.

The House subsequently went into committee upon the bill.

After some discussion the bill passed through committee.

The House then went into a Committee of Supply when several votes were agreed to

THE FLEET AT SPITHEAD.—The review of the fleet at Spithead is appointed to take place on the 11th inst.; and will, we understand, be on a scale of magnitude and splendour never before witnessed. As at present arranged, the different vessels composing the fleet will move into action at eleven o'clock. We believe the Admiralty will place steam vessels at the disposal of the members of both Houses of Parliament, and other eminent persons; and from Gosport an ample supply of boats for the general public will be provided, to enable them to view the manœuvres to advantage. Every facility, in the shape of early express trains between the metropolis and Gosport and other parts of the line, will be provided by the South-Western Railway, so that the immense mass who will congregate to see this unparalleled spectacle may do so with every convenience to themselves. The *Magicienne*, 16 guns; the *Valorous*, 16; and the *Vulture*, 6—all paddle-steamers—have joined the fleet here. The *Tribune*, 30, is hourly expected from Sheerness. The *Jason d'Acre*, 130, and the *Sibylle*, 40, are to come from Plymouth; and the *Neptune*, from Portsmouth harbour, early next week, to add to the glorious display.

NEW PRINTING MACHINE.—The correspondent of the *Times* thus describes a new printing-machine in the Great Exhibition at New York. The machine "is a new printing-press, which prints from uncut paper, rolling from a cylinder, and cuts and folds with perfect regularity 30,000 copies per hour. There is no counteraction in the process, and consequently no time lost in returning motion. Both sides are printed at the same time, and 30,000 per hour is a low estimate, since, by increasing the speed, they can be printed as fast as paper or cloth can be unrolled from a cylinder. The inventor declares that he can print a mile of a newspaper as fast as a locomotive can run on a railway. With perfect machinery and arrangements he may do it. His present experiments demonstrate a practical principle, and the invention is looked upon with wonder and delight. I shall describe this invention hereafter in detail."

DEFACING THE COIN.—A government bill was printed on Thursday to prevent the defacing of the current coin of the realm. Any person wilfully defacing any coin shall, in England or Ireland, be guilty of a misdemeanour, and in Scotland of a crime or offence, and liable to a fine or imprisonment, at the discretion of the court. A tender of coin defaced is not a legal tender, and any person tendering or uttering such coin will be liable, before two justices, to forfeit and pay any sum not exceeding 40s.

BRAZILIAN WAR STEAMER.—A fine screw steam-ship, named the *Rebecka*, was launched on Thursday from the building yard of Mr. Green, for the Brazilian Government. The dimensions of the vessel are—Length over all, 171 feet; breadth, 27 feet; depth, 15 feet; 600 tons. Her armament is one 68-pounder on slide, and six 32-pounder carriage guns. She will be rigged as a three-masted schooner, and will sail for the Brazils in about four months. Two other steamers for the same Government are in course of construction by Messrs. Green, of larger dimensions.

COLONIAL ESTIMATE.—By a supplementary estimate published on Thursday the sum of £3500 is required as a portion of the salary of the Governor of Jamaica. The salary is £5000; and it is proposed that £3500 shall be voted annually for a period of three years on certain conditions, the colony providing the balance of £1500.

SOUTHAMPTON.—The *Ripon*, Captain R. Moresby, took her departure on Thursday afternoon, with the outward East India, China, and Mediterranean Mails, for Gibraltar, Malta, and Alexandria. Among the passengers is his Highness Prince Ernest of Leiningen.

LABOUR STRIKE.—The strike at the London Docks continues; but, the company having obtained several hundred labourers from other than their ordinary sources, the work of the establishment has been carried on without much serious interruption.

DREADFUL ACCIDENT IN SAVOY.—Two English gentlemen, Mr. Clark (son of Mr. Clark, near Doncaster), and Mr. Goldsmith (son of the capitalist), were making an excursion on the Mountain of Salève, near Geneva, on the 26th ult., and were returning by a different path, when Mr. Goldsmith discovered he had left a book behind him. They returned to seek it; but, missing the pathway, fell into one of the gorges of the grand Salève. Mr. Clark, in his fall, broke his left thigh, and had his right ankle crushed: he remained all night in this dreadful state, and early in the following morning, he managed to attract the attention of some peasants; and after much difficulty, was safely got to the foot of the mountain, where every attention was paid to him. Search was then made for Mr. Goldsmith, and his body was found lifeless in a chasm of the mountain. Her Majesty's Consul has taken charge of Mr. Goldsmith's effects. The sad occurrence has created a great sensation in that locality. A medical man has been sent by the friends of Mr. Clark to Geneva to bring him home as soon as he can bear the journey.

FOREIGN.

THREATENED WAR BETWEEN RUSSIA AND TURKEY.

Intelligence from Jassy, dated July 28, states that the Russian Government, though it allows the Hospodars of Moldavia and Wallachia to retain their titles, and nominally also their powers, has decreed that those princes shall have the assistance of a Board of Government, to consist of three members, to be appointed by the Czar. All political and administrative measures are to be submitted to this council, and its decisions are to be final. The two Principalities, have, moreover, been ordered to furnish a contribution in kind.

Several young Boyards, having shown their disgust at the burdens imposed upon the country by the invading army, have been seized and pressed into the Russian regiments, where they will have to serve for a term of three years.

The cities of Jassy and Bucharest are to be fortified, to assist the operations of the Russian army. This does not look as if the Czar contemplated a speedy evacuation of the Danubian Principalities.

We have from Beyrout, under date of the 19th ult., that the greatest disorder prevails in Syria. The Christians are leaving Antioch and Aleppo, and repairing to the towns on the coast. At Laodicea the Turks have made an attempt upon the life of the Russian Consul. It seems clear that, if some decisive course be not soon given to the action of the people, Turkey will be threatened with internal convulsion of the most formidable character

The latest news we have from St. Petersburg comes up to the 26th ult; a letter of that date maintains that the Emperor would be very unwilling to receive an Ambassador from the Porte, unless he brought with him the Russian ultimatum signed; that the English and French proposals had been set aside because they seemed to proceed from a misunderstanding which the circular despatches of Count Nesselrode were intended to remove; that the task of Austria was the removal of all the Porte's mistrust of Russia's pretensions; and even any note in disclaimer on the part of Russia would be a matter of difficulty, as the Emperor had already expressed himself on that point. The feeling was that negotiations must necessarily be carried on for a long time, until the Porte can be brought to give way. Nothing had as yet had any success in convincing the Petersburg Cabinet that there really were sound reasons why the Porte could not give way.

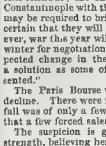
A letter from Paris, written on Thursday evening, says "The French Cabinet does not reckon with any confidence on receiving a favourable reply to the propositions which have been sent from Vienna to the Emperor of Russia. A rejection is not anticipated, but an evasive answer is considered very probable. The question now seems, what course the English and French Governments will take in the event of rejection or evasion of the propositions? Will they go to war? This is not the present intention of either the English or the French Government. Only yesterday, a person, very high in office, and whose opinion has hitherto had great weight in the French council, said, 'It is a great error to suppose that if the Emperor of Russia should reject our propositions, war will ensue. The negotiations will still continue; the only difference will be that we shall negotiate at Constantinople with the fleets lying under the walls. Three months may be required to bring these negotiations to an end; and it is not certain that they will be concluded even in three months. But time, however, war the year will be impossible; and we shall then have the whole winter for negotiation.' Unless, therefore, there should be some unexpected change in the intentions of the Cabinets, we are not so near as publication as some of the English and French journals have represented."

The Paris Bourse was very heavy on Thursday, and with a further decline. There were no attempts to make large sales, consequently the fall was of little importance; but the markets was in such a state that a few forced sales would have caused a considerable depression.

The suspicion is gaining ground that Russia, over-confident in her strength, believing herself to have reached a point at which she may defy all resistance, has now ceased to entertain any respect for the opinion of her compeers in Europe, and thinks it no longer necessary to maintain even an appearance of respect.

OBITUARY OF EMINENT PERSONS.

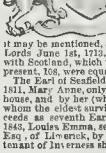
FRANCIS WILLIAM, SIXTH EARL OF SEAFIELD.



The Earl of Seafield died August 30th. His Lordship, who was born March 6th, 1778, succeeded to the family honours at the decease of his elder brother, the late Sir Lewis Alexander Grant, Bart., of Grant, who became, in 1811, fifth Earl of Seafield, by the death, issue-less, of James, Earl of Findlater and Seafield. This second Earldom, with remainder, in default of direct heirs male, to heirs general, was granted in 1701 to the eminent lawyer, James Ogilvy, Lord Ogilvy of Deskford and Earl of Findlater. Of his Lord-ship it may be mentioned, *en passant*, that he made a motion in the House of Lords on the 1st, 1712, for leave to bring in a bill to dissolve the Union with Scotland, which was refused by a majority of four only. The Peers present, 108, were equally divided; the proxies, 13 for, and 13 against.

The Earl of Seafield, whose decease we record, married, first, May, 1811, Mary Anne, only daughter of John Charles Dunn, Esq., of Highamhouse, and by her (who died 27th Feb., 1826) had several children, of whom the eldest surviving son, John Charles, Viscount Reidhaven, succeeds as seventh Earl. His Lordship married, secondly, 17th August, 1845, Louisa Emma, second daughter of the late Robert George Mansell, Esq., of Laverick, by whom he had no issue. The Earl was Lord-Lieutenant of Inverness shire.

JAMES, LORD RUTHVEN.



The death of this nobleman took place at Freeland, in Perthshire, on the 27th ult., at the age of seventy five. His Lordship succeeded as fifth Lord Ruthven Baron, Dec. 27, 1789; and married, Dec. 20, 1813, Mary, daughter of Walter Campbell, Esq., of Shawfield, by whom he had no issue. The title consequently devolves on his only surviving sister, Mary Elizabeth Thornton, wife of Walter Hore, Esq., of Harperstown, county Wexford. The dignity was originally conferred, in 1651, on Sir Thomas Ruthven, of Freeland, whose great-grandfather, the Hon. Alexander Ruthven, was younger brother of the ancestor of the Earls of Gowrie.

MARY, COUNTESS OF MINTO.

The Countess of Minto died at Nervi, near Genoa, on the 21st ult., aged 57. Her Ladyship was the eldest daughter of Patrick Brydone, Esq. She married, in 1806, the Hon. Gilbert Elliott (eldest son of the first Lord Minto), who subsequently—on his father's elevation to an Earldom—became Viscount Melgund, and is the present Earl of Minto. The issue of the marriage consists of five sons and five daughters. Of the former, the eldest is Viscount Melgund; and of the latter, the second, Frances-Maria, is the wife of Lord John Russell.

SIR WILLIAM WARRE, C.B.

THIS gallant officer, who died recently, attained the rank of Lieutenant-General Nov. 1851. He served in Spain and Portugal, at the Cape of Good Hope, and in Ireland. In his services with the Portuguese forces as aide-de-camp to Marshal Beresford, he was invested with the Order of the Tower and Sword; and for his participation in the Peninsular war, he received the gold cross of Knighthood. Sir William Clinton, he received the insignia of the Order of St. Bento d'Avis

In 1808, he obtained from his own Sovereign the Companionship of the Bath, and in the following year, 1809, he married, the Lady Georgina, only daughter of the 6th Foot was given to him. Sir William was born in 1784, and married, in 1812, the youngest daughter of C. Thompson Maling, Esq., of West Herrington, county Durham

VALUE OF FREE-TRADE.—The Mayor of Manchester holds certain charities, which are distributed in kind at this season of the year. The following notice has been posted in the Town-hall: "Clarke and Marshall's Charities. By order of the Mayor. In consequence of the advance on goods, and less distress existing than heretofore, the quantity of articles for distribution will be considerably reduced." This is an important testimony to the effect of that Free trade policy, which has supplied employers with orders and the employed with work.

CHARGE OF CONSPIRACY TO KILL THE EMPEROR OF FRANCE.—On Tuesday, a Frenchman named Edouard Raynaud, about thirty-five years of age, was brought before Mr. Jardine at the Bow-street Police Court, charged with having conspired, with divers others, to murder Louis Napoleon, the Emperor of France. The prisoner, a sickly-looking man, of short stature, had just arrived from Southampton. In the custody of Sergeant Sanders, to whom a warrant for his apprehension had been granted, upon the application of the solicitor to the Treasury. The proceedings on the present occasion occupied a few minutes only, the prisoner hemg remanded till the principal witnesses can attend. It appears that the prisoner addressed two letters to Prince de Joinville; in the first of which he proposed a scheme for the destruction of the Emperor's life, and requested the Prince's co-operation and assistance. In the second letter he offered to go over to France and accomplish the murder of Louis Napoleon, intimated if the Prince would give him £20.—On the following day, the prisoner was again placed at the bar, when the Prince de Joinville (who appeared to be very deaf) attended, and deposed to the truth of the above statement. The prisoner admitted to the police-sergeant that he had written the two letters, but regretted he had done so. Mr. Jardine committed the prisoner to Newgate for trial, offering to take bail —himself in £100 and two sureties in £50 each.

GAS FROM WATER.—A company has been formed in London, under the direction of Lord Howard de Walden (the English Minister in Brussels) and Sir J. W. Waller, called "The Electric Gas Company," for the purpose of making gas by the decomposition of water by electricity. Patents have been taken out in France and other Continental countries

THE GREAT CAB STRIKE.—SKETCHED BY GEORGE THOMAS.

ARRIVAL OF A TRAIN.—NOT A CAB TO BE HAD.

AND so we have had a rebellion! London—that for so many years has been one of the firm things of Europe—our sober, Conservative, law-loving London has had a rebellion. The notion seems monstrous, and yet it's a fact. For three mortal days has it been in the grip of an outbreak, and suffering not a little from repressed circulation. A wild cat has been trying to stifle our elephant, and who are the culprits? Ah, there we have to blush! Who but our own London cabmen, who, naturally belonging to the party of progress, chose to become retrograde, and back all their vehicles into their stables. But what has been the general effect of this crisis? Why, evil and good. How many appointments it has broken—how many payments cut off, only the Post-office knows. But then, on the other hand, what health it may have led to let the doctors reveal. Let them tell us how many who, compelled to try walking, have got attached to the novelty, and made it a habit. How many a poor dyspeptic, a bankrupt in body, by this little compulsion, has been set on his legs again! Now, of a crisis so memorable we would preserve a few records; we would endeavour to perpetuate its opening day—not so much in detail as by a rapid synopsis. With our Artist we would glance at its most prominent features, and endeavour to fix and send them down to posterity.

EVERY ONE HIS OWN PORTER.

SCENE AT THE GREAT WESTERN RAILWAY STATION DURING THE CAB STRIKE.—PASSENGERS IN A STORM

THE GREAT CAB STRIKE.—SKETCHED BY PHIZ.

THE CABMAN'S LAMENT.

NEWSPAPER OPINIONS OF THE STRIKE.

We rise then on Wednesday in our usual spirits, and, seated at breakfast, try our first plate of ham; but we have much more to swallow. We hear this strange news, a pang shoots across us! We remember that this morning we expect a friend from the country—a very dear friend; rich, old, and intelligent; and the amiable godfather to three of our boys. He is somewhat old fashioned, and detests carpet-bags: they crease his best clothes, and ruin his wig-box. He adheres to a trunk as to an old institution. We see his predicament—with his ponderous box, at a favourite station, and not a cab to be had. We scarcely pause for our boots, and rush off to his rescue.

INSIDE OF STATION.

Swift as is our pace, the news has outstripped us, the station is crowded, and every soul sees his fate. Is it for pen or for pencil to depict their expression? Had they heard that the Russians were bombarding the Tower, or the House over night had screwed up the Income-tax to twenty per cent, would there be a deeper or sadder display of bewilderment? Could they speak, they'd all cry, "Not a cab to be had in London!—is the world at an end?" But their senses return, and they see their position. There's but one thing to do. They must become their own porters, and carry their own bags! And here begins that long train of revolutionary incidents, which reaches its terminus only at the close of the day. Young and old, coarse and lovely, the low and refined, all stand on a level, all partake the same plight. In

THE RUSH FOR OMNIBUSES, AT THE SOUTH-EASTERN RAILWAY TERMINUS, LONDON-BRIDGE.

vain come the promptings of self-preservation, in vain memory ponders on the old proverb, "*aide toi*" the fact defeats everything; they must carry their own luggage! and who can do that through the broad streets of London? Is it that loveliest of girls who has come up to town to spend three months with her aunt, and looks over a rampart of parcels and boxes like a beautiful captive in an old school romance? What can she carry beyond her hopes and her fears, and a bag full of letters signed Henry or Charles? Is it that elderly gentlemen who can scarce bear his age? or that fashionable youth who finds it enough to carry off his pretensions? And every instant a fresh train comes thundering in, and pours out accessions to their numbers and terrors. Not a cab's to be had; but they've lived in the hope of one; and now the hope must be divided into homœopathic proportions. At last the calm ceases. Nature must have her way. A hundred mouths open; and the half-dozen steam pipes confess that they're beaten. Cries, threats, and maledictions rise up in wild discord. We think of Mr. Yearsley, and make a rush out of doors.

OUTSIDE THE STATION.

But here, pausing an instant, we see a reaction. The sturdier of the victims, growing desperate, at last have grasped their bags manfully, and are now striding out—their sinews somewhat strung by the sight of these "busses," which offer to a part of them a chance of escape. This transition is cheering: we see at last self-reliance, and fancy this disaster will have its moral effect, will develop the individual, the great end of all culture, and teach them the power of self-respect and support; and

DISCUSSING THE QUESTION IN THE TAPROOM.

ANY CONVEYANCE BETTER THAN NONE.

the women soon follow them, bearing also, and as bravely, their own proper burthens. But what is this crowd that tries to block up their way, that derides and misleads them, and enjoys their vexation. Is it possible that humanity can have sunk to such depths? 'Tis a gang of the rebels who have created all this suffering, and who, not content with creating, must come to gaze at their victims. We feel at this moment a strange longing for Claribl —a wild Cherokeeism. We yearn for a tomahawk, to try the strength of their skulls. We fancy we see a return of the old Pagan saturnalia, wherein the servants became masters, and the masters were made slaves. But all honour to manhood! The mass of the sufferers rise to the event—they prove themselves equal to its trying demands. Firm, erect, guarded, they stride on their way. But these are men. There is woman—helpless, all-confiding woman—who leans on man's aid, and fondly trusts in his promises; and oh! Cabby, Cabby! are thou the fiend to deceive her?—to trifle with her hopes at such a moment as this? What—say you'll get a cab for her—that you'd run all the way to Brompton to oblige such a lady—she whom you have so often plundered without a complaint, are you so sunken as to laugh at, now you can plunder no longer?

THE RUSH TO THE "BUS."

But the reaction is growing. Hope has dawned on the station—the news has shot through it that, if there are no cabs, there are at least "busses" in being—"busses" that will drain them dry, twenty at once. We have not paused to depict all the results of the panic; we did not linger to contemplate those pitiable beings whom the news of "no cabs" had rendered utterly prostrate—that elderly gentleman who, sunk on a package, perhaps mourning, with *brahma*, "Time and the hour runs through the roughest day;" or, sadder still, that old lady who, crushed by the blow—worse than even her bandbox by the heel of a porter—seems waiting not so much for a cab, as a hearse. Yet, even to their spirits can hope find its way—the "bus" is the star that gleams at last on their gloom. Might we not vary the poet—

The hope that for a space did fail
Now rose and formed a general hail,
And "Busses" was the cry.

Except in before them, and rising and strengthening, collecting senses and boxes, at last out they pour, to those doors which swing open like kind hearts to the suffering. But a "bus" after all has but limited goodness. It can hold but so many—it cannot stretch like its charges. So what a crush and a struggle to gain its interior. Talk of a seat in Parliament, when could it weigh in value with one in a "bus"? The scene is growing painful—self defence is the first law. But we are forced to confess that the door of a "bus" is no sanctuary for gallantry. We believe it would have tried the soul of even the chivalrous Burke. We are even getting disgusted, when fortunately the evil gets another abatement.

ARRIVAL OF THE CARTS, &C.

Relief is arriving for goods, if not for man. Aid has been summoned from all parts of the neighbourhood, and now it comes, rattling in all possible forms, the poorest and meanest not wholly contemptible From the decent glass-coach to the positive wheelbarrow—from the handsome Baroushe to the primitive truck—everything on wheels has a vame this morning; and in they all roll, mingled up with that nondescript medium a fly. People usually complain of the flies at this season; but now they are all welcome. This event brings composure, if not satisfaction Even that irate foreigner who has "*sacré*'d" so frightfully for the last twenty minutes, believing he has tumbled into an English *cenaste*, and that the cabs were all employed in carrying about the insurgents, even he becomes calm, seeing his property is safe, and sallies out with a wheelbarrow, whistling a polka. The great mound of luggage, as lofty as Nimrod, is quickly attacked; and old and young, poor and gentle, all pass out at last; and the procession is brought up by a piece of philosophy—a costermonger's cart, carrying an officer's luggage, and he seated amidst it, composed and content, as if the whole affair were a bit of campaigning. Ah! worthy costermonger, you have sold many a good apple; but when have you ever trundled such a pippin as this?

THE CABMAN'S LAMENT.

And so the evil at length finds a peaceful conclusion, and we went on our way. When the question arises, where all this while lurk the mass of the rebels—those crafty reactionists who have caused all this panic? Where are our cabmen, and what are they doing? A group is before us, and we are pearly enlightened. A vocalist, one of that great promenade band who start forth in London to set history to music, is vigorously emitting "The Cabman's Lament." Our readers will see this is a deep piece of policy. Our cabman is aware that he is at war with the middle classes, and perhaps with the upper; but he would stand well with his own; and hence one of his tribe who has the poetic affiatus, conveys what he feels to be his wrongs to the world, and in verse which has the merit of being highly original. Had we space, we should be happy to dilate on the beauties of this production; but dense that this age is unimaginative. The whole affair is imaginative, grievance and verse. We will give a brief specimen. After dilating on the wrongs which have led to this crisis—after alluding to Shakspeare, saying, Cabby's, like Othello's, occupation is gone—after stating that Common Sense recreants to "starve man and horse," and "would drag a fellow's vitals out by regular Mayne force," he concludes with the following, which, we fear, alludes to Mr. Fitzroy :—

And if he would ride to Old Nick, I solemnly declare
I would drive him there most cheerfully, and charge *him no back fare*.

READING THE NEWSPAPERS.

We pass on, and at the next turning are further informed as to what our cabmen are doing. They are grouped at a tavern door, eagerly reading or listening to the opinions of various "able editors" upon the Strike—all strongly condemnatory of Cabby. Our cabman, we need not say, is always a grand politician, but has a plan of his own to decide party principles, which certainly is not always in accordance with "Ded." Liberals with him are those who pay double fares; and no old Tory is any one who will pay eighpence. But in his present position he is a great deal more definite. He is an open Protectionist; he stands up for the old scale and a struggling interest, which is always over-loaded. Our cabman, like the Derbyite, complains of his burthens, if he can find an opportunity to see what the House is doing, and how there members behave whom he has conveyed there, he has good cause to-day when he watches the effect of his own manly resistance—a Parliament that is conspiring to plunder and starve him. But we can learn little here: we must enter the tap-room if we would know his opinions, where he is sitting in committee, not of the House, but the whole trade, with smoke, oaths, and eloquence rolling about him.

DISCUSSING THE QUESTION.

We thread a dim passage loaded with the odour of dead beer, and boldly open the door of this chamber of council a room twelve feet by twenty, crowded up to its threshold. There is danger in this, we are not one of the band; our shirt is a clean one, our chin newly mown: we are obviously a spy on the oppressed ones' proceedings; but we take the right course; we order a pot of ale, and make a friend of the man near us by begging him to share it. We are accordingly a gentleman who takes up their cause. We perceive in an instant that the proceedings are conducted with proper formality. There is a table in the centre, a chairman at the head of it, and speakers who occupy the floor in succession. This is clearly a House of Commons to the senate of Proprietors that is sitting in Holborn. We had meant to visit this senate, so fitly presided over by a chairman named Cabby: so excited by a Rider who felt warmly for the Drivers; and, moreover, a Beadle who, urging the merits of idleness, was do ng all he could to convey the group to a workhouse. But we must confine ourselves to the Commons, and even here we must again report in disjointed. We can only snatch from its wealth of argument a few of the gems. We heard, then, the speakers on the point of their wrongs, the mileage and measurement. They had lived by extortion, why should they still? We heard of the strike as their only resource. It was only by screwing the public they could hope to screw Parliament. A moral force movement: their strike had no weapons. The cabman, like *Hamlet*, speaks daggers, but uses none. Last of all, we were told of the tyranny of magistrates, who treated poor cabmen just as women are treated who get out of a cab on a cold rainy night: the beaks, as they called them, always sided with the gentleman, whatever the charge, and for this heinous injustice they saw but one cure. If the cabman was wrong let him go to gaol for a month, and if the gentleman was wrong—let him have a month, too; they had had liberty and fraternity, but they wanted equality; and with this proposition, which was received with loud cheers, and which fitly wound up this revolutionary morning—we shut up our note-book, and make for the street.

B. B.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Lord LYNDHURST once more called attention to the claims of the Baron de Bode, and recommended them to the favourable consideration of the Government. The Baron had a Claim settled under a treaty founded in equity. There was, moreover, no fund in existence out of which this claim could be satisfied; and it would be necessary, if it were admitted, to raise £1,500,000 for the purpose. Lord TEURO insisted that it would be a disgrace to the country if their Lordships rejected the claim. Lord MONTEAGLE thought that the question should not be rejected. Lord HARROWBY declared his opinion that nothing but the extent of the injustice prevented the acknowledgment of the debt. The Earl of ABERDEEN saw no reason for departing from the course taken by preceding Governments, and regretted that his duty to the public forbad him to accede to the appeal for mercy which Lord Lyndhurst had urged. Upon a division, the motion was rejected by a majority of sixteen to six.

HOUSE OF COMMONS.—MONDAY.

At the early morning sitting, Mr. ADDERLEY, on moving the second reading of the Juvenile Offenders Bill, which he did not propose to press forward this session, stated that its sole object was to sanction the permissive establishment of reformatory schools to which young criminals might be sent, and the adoption of a new system of treatment, including industrial training, instead of imprisonment in ordinary gaols. Mr. BAINES expressed his perfect concurrence in the object of the bill, which embodied the principal recommendations of the Committee. Lord PALMERSTON also assented to the second reading of the bill, with a full understanding that it should stand over till the next session The bill was read a second time, and ordered to be committed that day three months.

The House then went into committee on the Naval Coast Volunteers Bill. Sir J. GRAHAM gave a general outline of the measure, the object of which is to raise a volunteer force for the naval defence of the coast, limited to 10 000 men, to be trained 28 days in the year, the period of enlistment not exceeding five years, her Majesty being empowered, in case of invasion, to require the services of the men afloat for a period not exceeding a year, except under special circumstances. The clauses of the bill were agreed to by the committee, without amendments.

In the evening, the Landlord and Tenant (Ireland) Bill, the Tenants' Compensation (Ireland) Bill, and the Merchant Shipping Bill, were severally read a third time.

The Crime and Outrage (Ireland) Bill and other bills were read a third time and passed.

On the report upon the Hackney Carriage Duties Bill, Mr. LOWE moved a clause which provided that, when the driver was hired by time, and was detained longer than an hour, he should be entitled to 1s. for every fifteen minutes. This clause was agreed to, and added to the bill.

Mr. F. SCULLY moved a clause empowering the Commissioners of Police to prevent the withdrawal of carriages from public use, by the infliction of a penalty for the offence and forfeiture of the license, which was not objected to on the part of the Government, but he consented to defer the motion until the third reading of the bill.

The back-fare clause gave rise to much desultory discussion, and various suggestions were offered for a new radiating point of the circumference, instead of Charing-cross At length, on the motion of Mr. Lowe, Temple-bar was substituted for Charing-cross

About two o'clock the second reading of the Missionary Bishops Bill was moved. Mr. KINNAIRD opposed it. Lord SEYMOUR asked if Government had sanctioned it. Mr PHILLIMORE, while contending that it was unapprehended, admitted the impossibility of carrying it. The bill was therefore lost.

HOUSE OF LORDS.—TUESDAY.

An important statement was made by the Earl of CLARENDON this evening, upon the Russo Turkish dispute, in answer to a quest on by the Marquis of Clanricarde, which will be found at length in our Supplement.

ADULTERATION OF COFFEE.

Lord TORRINGTON presented a petition, complaining of the Treasury minute which permits coffee to be mixed and sold with coffee.

The Earl of ABERDEEN asserted that the mass of persons preferred the mixture of chicory with coffee to the pure article, and defended the Treasury minute.

Lord WALSINGHAM thought the Government were bound to prevent unfair trading, and to protect the poor. The minute issued by the late Ministry was one calculated in many respects to do justice to all parties.

Lord BEAUMONT thought the noble Viscount had made out a very strong case. After a short conversation the subject dropped.

HOUSE OF COMMONS.—TUESDAY.

In the House of Commons, at the early sitting, on the order for going into committee upon the Charitable Trusts Bill,

Lord J. RUSSELL, in moving that the Speaker leave the chair, reminded the House that, at an early period of the session, in announcing the general views of the Government with respect to education, he had urged the necessity of establishing a better management and an improved application of the funds of charitable trusts—a subject which had for more than fifty years engaged the attention of Parliament. He had stated that it was proposed, as many of these charities had reference to education, that the body intrusted with the direction and superintendence of their administration should be the Committee of Privy Council for Education, with the necessary legal assistance. This bill, which had passed the other House, had been there referred to a Select Committee, who had paid very great attention to the subject, and they had recommended, in order to separate the questions of administration and superintendence from politics and party, that there should be persons named by the Crown, and holding office during good behaviour, to whom the general administration should be confided; in which suggestion the Government had concurred. He should propose, he said, a few alterations of the bill in the committee. He proposed that Roman Catholic charities should be excluded from the operation of this bill, but, however, with a view of omitting them permanently. The House then went into committee upon the bill, the clauses of which were agreed to, after much discussion; the amendment of the 60th clause, exempting Roman Catholic charities, being deferred by Lord J. Russell until the report. The House resumed, Sir F. THESIGER said, he really must congratulate the noble Lord and the Government upon the near approach of the passing of this bill, after a delay of thirty years. He was quite sure that it would prove highly beneficial

In the evening, on the question that the Speaker leave the chair, that the House might resolve itself into a Committee of Supply,

Mr. HUME urged the claims of the Geographical Society, which had petitioned for rooms for its accommodation. The CHANCELLOR of the EXCHEQUER acknowledged the usefulness of the Society; and said that the Government were considering his request.

Mr. T. DUNCOMBE called attention to the defective state of the law for the trial of controverted election petitions, as illustrated in the case of the inquiry into the withdrawal of the Norwich petitions. Lord J. RUSSELL admitted that the state of the law was defective; and assured Mr Duncombe that the necessity for a remedy should not be lost sight of; adding that some progress has been made in drawing up a bill on the subject.

Lord D STUART complained of the state of the metropolitan police, but under existing circumstances would not press for a select committee on the subject.

Mr. J. PHILLIMORE moved an address to Her Majesty to cause the case and memorial of the Parsee merchants Jevanjee Merjee, and Pestonjee Merjee, to be referred to the Judicial Committee of the Privy Council. He described the case of these merchants, who were native subjects of the British Government, and had had the management of certain cotton districts in Berar, in the territories in the Nizam. They complained that they had been grossly wronged by the Nizam, and the East India Company had not only not interfered for their protection, but were at this moment in possession of the very lands upon the mortgage of which they had advanced money to the Nizam. He stated the balance due to the merchants from the Nizam was £260,000. Sir C. WOOD denied that the East India Government were called upon to interfere to enforce payment of an alleged debt due from the Nizam. A debate took place, and the motion was virtually negatived, by 111 votes to 41. The House then went into committee *pro formâ*, and resumed immediately

On the order for the second reading of the Colonial Church Regulation Bill, Lord J. RUSSELL moved that it be deferred until Monday, in order that the House might see the amendments which had been prepared by the Solicitor-General. Mr. KINNAIRD, entertaining the strongest objections to the bill, moved to defer the second reading for three months. The SOLICITOR-GENERAL said, if the amendments were laid upon the table, it would be found that the bill was reduced to one-tenth, and that they would accomplish two objects—first, that there should be preserved the most perfect religious equality among all denominations in the colonies; and, secondly, that the colonies should be left to the free and uncontrolled management of all their affairs, ecclesiastical and civil. The objects of the bill were explained by Lord J. Russell and warmly defended by Mr. ROUNDELL PALMER. The CHANCELLOR of the EXCHEQUER took a general view of the *status* of the Church of England in the colonies, and of its exigencies. Mr. V. SMITH, Mr. HENLEY, and Mr NEWDEGATE, opposed the further progress of the bill, and Mr. KINNAIRD's amendment being agreed to, the bill is lost.

The Universities (Scotland) Bill was read a third time, and passed.

Mr. HEYWOOD moved for leave to bring in a bill to remove Dissenters' University disabilities. Sir R. INGLIS opposed the motion; and on the advice of the CHANCELLOR of the EXCHEQUER, it was withdrawn.

HOUSE OF COMMONS.—WEDNESDAY.

EPISCOPAL AND CAPITULAR ESTATES BILL.

Mr. WIGRAM moved to defer the second reading of the bill for three months, on the ground that the late period of the session would prevent the passing of the bill this year. After some discussion, Lord RUSSELL, in deference to the feeling of the House, consented not to proceed further with the bill, which was accordingly withdrawn.

On the order for the committal of the Expenses of Elections bill, Colonel SIBTHORP moved to defer it for three months; but, upon a division, this amendment was negatived by 85 to 19, and the House went into committee. Several hon. members took objection to the clause prohibiting the employment of bands of music and flags at elections. After a protracted and somewhat angry discussion, the bill was in effect lost.

The Naval Coast Volunteers Bill was read a third time and passed.

At six o'clock the House adjourned.

HOUSE OF LORDS.—THURSDAY.

ROYAL COMMISSION.

The Royal assent was given by commission to the following bills, viz.:—The Succession Duty; Common Lodging-houses; Convicted Coiners Detention; Savings Banks Annuities; Coinage Offences, Colonies; Colonial Bishops Act Extension; Patronage (Scotland); Taxing Officers, Common Law Business (Ireland); Bankruptcy (Scotland); Land Revenue; Copyholds; Customs Duties; Duchy of Lancaster; Parliamentary Stamp Duties; Stamp Duties (No. 2); Resident Magistrates (Ireland); Turnpike Trusts Arrangements; Shannon, &c.; Contagious Prevention; Battersea Park; Westminster-bridge; Spitalfields to Shoreditch Improvement; Pimlico Improvement; Wallsend, otherwise Whittlewell, Forest; London Docks; Electric Telegraph Company of Ireland; Victoria (London) Docks; Holme Improvement (No. 2); Whitechapel Improvement; Westminster Improvement; West London and Crystal Palace Railway; and a vast number of railway and other bills—in all upwards of 100. The Lords Commissioners were the Duke of Argyll, the Marquis of Breadalbane, and Lord Colchester.

On the motion of the Earl of CHICHESTER, the Parish Vestries (1st & 2) Bill was read a third time and passed. The Municipal Corporation Act Amendment Bill; and the Burghs Harbours (Scotland) Bill were severally read a third time and passed. The Brecon Collegiate Church Bill passed through committee. The Summary Jurisdiction (Ireland) Bill, and the Petty Sessions (Ireland) Bill were read a third time and passed. The Entry of Seamen Bill passed through Committee. The Sheriff's Court (Scotland) Bill, and the Highway Rates Bill were severally read a third time and passed.

HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair at twelve o'clock.

On the order of the day for reading the Bedford Charity Estate Bill, second time, Mr. WILLIAMS said that the object of the bill was to place the charity under a better system, by giving its management a new board. The amount of the revenues of the charity was about £12,000 per annum, and its distribution had occasioned a great deal of content and were new to the promotion of political objects. The bill would place the distribution under the Lord Chancellor, which would get rid of the evils complained of. Sir J. WALMSLEY moved that the bill be read a second time that day three months. It was an attempt to take away the patronage from the parties to which was now exercised by the inhabitants of Bedford. No less than 1600 out of the 1800 inhabitant householders of Bedford had petitioned against the bill. Sir F. THESIGER supported the bill; the second reading of which was ultimately carried by a majority of 70 to

Mr. HAYTER moved a new writ for the southern division of the county of Stafford, in the room of Major-General Sir George Anson, who has accepted the office of Chiltern Hundreds.

Lord J. RUSSELL expressed a hope that, on Wednesdays, Government business would be allowed to take precedence. Mr. PHINN said he had a motion on the paper respecting convents which could lead to no practical result, as he understood it was intended that no division should take place on this subject. He was, therefore, not desirous to interfere with public business by bringing it on. Mr. NEWDEGATE said he was obliged to persevere, and not allow the House to be defeated by such a plea. Mr. PHINN replied. Lord J. RUSSELL said he would not press the second reading of the Education Bill, and he had hoped others would also give way to pressing public business. Mr. SPOONER said, he could not consent to give way with respect to the Nunneries Bill, and he knew others who were equally resolved.

CHARITABLE TRUSTS BILL.

The bill, as amended, was considered.

On the proposition of Lord J. RUSSELL, that when the trusts belonged to Roman Catholics, their management should be entrusted to persons of that persuasion,

Sir F THESIGER said he viewed the amendment to the bill with the greatest alarm, and the more so because of the time at which it was introduced. Surely Quakers and Jews were equally entitled to a similar exemption. It was, he contended, visionary to suppose that any commission or any Attorney-General would at the present or any future time attempt to abolish one of those Roman Catholic trusts, merely because it came within the operation of the law against superstitious usages. And, if so, such a clause was perfectly unnecessary in his own point of view, while highly objectionable in others.

Lord J RUSSELL said that the suspicion on the part of the Roman Catholics that this bill might be mischievously directed against Roman Catholic charities, many of which are illegal, was, in his opinion well founded. If the Jews had considered that a similar application for exemption, and had shown as good grounds for such an exemption as had been done by the Roman Catholics, he should have proposed a similar clause in their favour. Monies left for masses for the dead was declared by law to be left for superstitious uses, and, of course, an illegal trust.

Mr. NEWDEGATE asked the House if it was prepared to allow the aggression of Cardinal Wiseman and others to exempt Roman Catholic charitable trusts from the operation of a law to which all other sects were to be subjected? The exemption now proposed involved, in his opinion, most dangerous consequences.

Mr. HEADLAM could only sufficiently express the gratification he felt at the speech of Lord J. Russell, and cordially supported the clause; but proposed an amendment, limiting its operation to two years, in order that legislation on the subject of Roman Catholic trusts might within that time be carried out.

Mr BOWYER supported the exemption.

Sir F. THESIGER said he would take the sense of the House upon the clause of the noble Lord, for he could not accept it even as amended by Mr. Headlam

The House then divided, and the numbers were For the clause, 87; against it, 76: majority, 11. The clause was then added to the bill.

The Yeoman Usher of the Black Rod appeared at the table, and summoned the Commons to attend at the bar of the House of Lords to hear the Royal Assent given by commission to several bills which have received the assent of both Houses of Parliament

On the return of the Speaker, some other amendments were disposed of, and the Bill was ordered to be read a third time on Monday next.

The Assessed Taxes Bill, as amended, was considered, and ordered to be read a third time to-morrow.

The House then adjourned until six o'clock.

At the evening sitting, on the motion of Lord PALMERSTON, the Truck Act Amendment Bill was ordered to be read a second time this day three months.

On the motion of Sir R. H. INGLIS, which was seconded by Lord J. RUSSELL, it was resolved that in the event of the unavoidable absence of the Speaker from illness or otherwise, the Chairman of Committees be authorised to take the chair.

JAMAICA.

On the motion for going into Committee of Supply, Lord J. RUSSELL entered into a statement with reference to the condition of the colony of Jamaica, which he contrasted with that of Trinidad and British

Guiana, much to the disadvantage of the former. The evils under which Jamaica suffered the Government attributed principally to the perversion of representative institutions. The noble Lord then proceeded to state the measures which the Government proposed to adopt for the benefit of the colony one of which was the reduction of the interest of its debt under Imperial guarantee; and another to declare by enactment that money-bills should only originate in the House of Assembly, as in the British House of Commons, with members of the Government. To carry out those measures, the Government recommended to her Majesty the appointment of Sir M. H. Barkley as Governor, at a salary of £700.

Sir J. Pakington attributed all the evils under which Jamaica was suffering to the legislation of 1846, and complained of the conduct of the Government in not bringing forward those propositions at an earlier period of the session.

After some discussion, the House went into Committee of Supply.

On the vote of £55,000 for the British Museum, Mr. Hume complained of the great delay which had taken place in preparing the catalogue, and of the vast sums that had been expended on the building. He subsequently proposed to reduce this vote to £46,000. Sir E. H. Inglis said that the catalogue was progressing as rapidly as possible. Sir W. Molesworth said there was still a great want of accommodation at the Museum, arising from want of funds, but he hoped the difficulty would be diminished by the next session. The original vote was ultimately agreed to.

The sum of £11,626 was voted for the Board of Health; £15,687, for the Incumbered Estates Court (Ireland); and £10,920, for Light-Houses.

Various other votes were discussed and agreed to in the course of the night.

The other orders of the day having been disposed of, the House adjourned.

MUSIC.

The Musical Festivals at Bradford and Gloucester, and the concert of artists, native and foreign, are the anticipated events after the close of the Italian Opera season. The members of the Orchestral Union have resolved to visit the provinces in the Autumn; their successful performances at the Hanover-square Rooms justifying their laudable endeavours to make amateurs in the country acquainted with the symphonies and overtures of the great masters.

Another speculator in the unfortunate Parisian Italian Opera-house has been compelled to give up the Government privilege. M. Corti's name must be added to the list of those directors who have vainly essayed to sustain in the French capital, since the Revolution of 1848, the music of the south. Unless the Emperor should grant a "subvention," sufficiently large to pay nearly all its expenses, it will be, in fact, impossible to have an Italian Opera-house in Paris.

The production of a new opera, called "Tony," by the Duke of Saxe-Coburg-Gotha, the brother of Prince Albert, is looked forward to at Hanover with great curiosity. It will be given in September.

THE THEATRES.

ROYAL ITALIAN OPERA.

The season is rapidly drawing to a close. Spohr's "Jessonda" has been announced for production this evening (Saturday). Last Tuesday the presence of her Majesty and Prince Albert in the Royal box, after their recent indisposition, was witnessed with the utmost satisfaction by the subscribers and public. The first act of "Norma," and Verdi's "Biglio tor," were the entertainments for the extra night on Thursday. Donizetti's "Lucrezia Borgia," and the second act of his comic opera, the "Elesir d'Amore," were in the programme. At the termination of the campaign, Grisi and Mario will make their farewell tour in the provinces, prior to their departure for America.

ST. JAMES'S—GERMAN PLAYS.

On Saturday the German company played for the last time at this theatre, signalising the occasion with the second performance of Schiller's "Wilhelm Tell." But it was on the previous evening that the crowning demonstration of the Teutonic genius had been exhibited. The same poet's great and elaborate classical tragedy "Die Braut von Messina," was then performed. To this play, known to the English public by the able translation of Adam Lodge, M.A., a lyrical tone is given by the admission of a chorus, which mingles in the action, and consists of the alternate two uniformly brothers, who partake their feelings, and shine in their reconciliations and reverses. The characters of the drama are strictly sculptures in motion; and are introduced and then combined with nice regard to art.

STRAND THEATRE.—On Monday evening a new musical piece was produced here, entitled, "Home, Sweet Home; or, the Ranz des Vaches." A young soldier returns to his native and rural home, only to find in a wealthy widow the love of his early years, to whom he had resolved, before he made the discovery of her altered circumstances, to fulfill the vow pledged in the days of his simpler times. The widow, *Madame Germance*, was cleverly played by Miss Lanes. The drama—which was interspersed with some charming music, selected from the productions of Sir Henry Bishop—was deservedly successful. The burlesque of "Sambo Dampalus" continues attractive as ever.

WYCHESTER.—This theatre will open on the 22nd inst., under the able management of Mr. Edwin Holmes, with "The Lady of Lyons," the heroine being performed by Miss Edith Heraud, who is engaged to support a series of leading parts during the first fortnight.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—I our reporter, in speaking of my Digging Machine, at Tiptree Farm, has been led into two serious errors, which, as being injurious to my interest, I trust you will kindly correct in your next Number. He says, "Samuelson's Digging Machine, which, as a substitute for the plough, was but moderately successful with eight horses, as a harrow was very efficient."

The fact is that the Digger was worked with five instead of eight horses, and was never used as a harrow at all. What the amount of its success may have been as a substitute for the plough it would be presumptuous for me to say; but I may be allowed to add that Mr. Mechi, who purchased the Machine in question, and is working it regularly, in substitution, not only for the plough, but also for the fork in his opinion, with advantage, both in the case of horse and human labour, and in the perfection of tillage obtained.

I have no doubt Mr. Mechi will, if asked, confirm all I have said.

I am, sir, your obedient servant,

B. Samelson.

[It appears that the Digging Machine was worked with five horses in the first instance—one in the shafts, and four in front, two and two abreast: to these, after a short time, two more were added. The mode of harnessing led our reporter, who was not intended to be more than the horses, to imagine that two horses were working next the Machine. As to the value of this ingenious Machine, time will be the test; but it seemed more useful for pulverising, than for turning and leaving like a plough, or digging like a spade.]

WESTMINSTER IMPROVEMENTS.—Very considerable progress is now being made towards the removal of those unsightly buildings contiguous to Victoria-street, by the sale of the materials of the old workhouse of St. Margaret and St. John, in Dean street, and which has recently been effected. The demolition of the buildings has rapidly proceeded, and a very extensive area, stretching from Dean street to adjourning the brewery, has been cleared, thus exposing, however, a number of dilapidated hovels, which must be shortly razed, in order to complete the improvements.

RAILWAY FROM FENCHURCH-STREET TO KEW.—This route of railway communication, the distance from Fenchurch-street terminus to Kew being 18¾ miles, was opened for traffic on Monday, the newly-opened portion of the line completing the half-circle round London. After leaving the old line at Hampstead-road Station, the trains take the London and North-Western, and proceed nearly as far as Willesden, when they go off to the left, over the Great Western Railway, and through a portion of Acton. It continues its way in almost a straight direction to the loop line of the South-Western Railway, and terminates within a short distance of the waterworks near Kew-bridge.

ACCELERATION OF THE MAILS.—An acceleration has just been made in the night mails to and from the north, by which the time for replying to letters will be increased at Manchester and Liverpool by about half an hour, at Carlisle by two hours and a quarter, and at Edinburgh, Glasgow, Perth, and Aberdeen by about four hours.

THE EDINBURGH CABMEN.—The cabmen of that city have petitioned their masters for a rise of wages. Many of the men have only 10s. a week, and the greater number only 12s. The advance, no doubt, will improve the character of the men. The men have also petitioned for the withdrawal of cabs from the stands on Sunday, which will not inconvenience the public, as cabs so required are generally ordered privately.

CHESS.

TO CORRESPONDENTS.

R. F. Woolwich.—If you will send an address, a copy of suitable rules for a newly-established Chess-club shall be forwarded.

Roderick Random.—No. The Problem is quite right. Look at it carefully once more.

El. Alpin, Mallow.—Many thanks for the trouble you have taken. A letter shall be despatched short.

F. D., Bruges.—We shall expect to hear from you on your return.

A Subscriber.—We are quite as desirous as you can be that a complete list of all the Chess-clubs in the kingdom, with the times and places of meeting of each, should be published. Such a list would be of great convenience to Chess-players generally, and would eventually prove beneficial to the Clubs themselves. Self-evident as all this must be, and notwithstanding our repeated applications to the members of Clubs to furnish us with the required information, we are not yet in possession of the names even of most-third of the Chess societies in Britain.

A. A. Harrow.—Your diagram is quite unintelligible.

Inquirer, Leeds.—The details of each point as "W. Sq. 1," instead of attempting to describe them in drawings.

Lilliput.—[illegible] not quite right, but certainly ours should number their columns, [illegible] and address.

J. M., Antigua.—We have not space, nor is the subject worth it. Such a squabbling affair what is only intended for an agreeable recreation is absurd, and must end in making Chess and Chess-players ridiculous, if not put a stop to.

Solutions of Problem No. 485, by J. P., R. F. of Woolwich, Walter, Major G., Ernest, Lilliput Lane, Mardy, P. T. W., are correct.

Solutions of Enigmas, by J. P., Sophia U. P., Dabory, S. P. Q. R., P. T. W. [illegible], Dipsos, Dryden, are correct. All the rest are wrong.

*** A host of Chess Communications and Enigmas remain unanswered for the present.

SOLUTION OF PROBLEM No. 490.

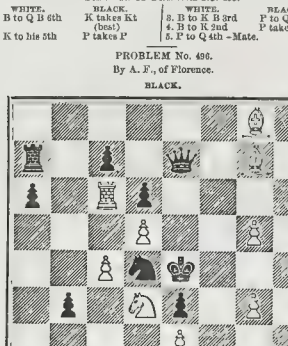
PROBLEM No. 493.

By A. F., of Florence.

BLACK.



WHITE.

White to play, and mate in six moves.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR, I am old-fashioned enough to look with suspicion upon all loud mouthed pretension, and cannot be persuaded, because a man is called "Signor," or "Monsieur," or "Herr," that he must needs be an epitome of all the talents. We have heard a great deal lately about Herr Harwitz's challenges, counter-challenges, and the like; and I must say, whatever his other qualifications may be, modesty and decent respect for the country whose hospitality he subsists on are not of the number. But let that pass. What I wish to ask is—how it happens that, while this professor (who is, I hear, a resident of Breslau) has a townsman of such acknowledged prowess as Herr Andersson—one willing and anxious to encounter him—living within a stone's throw, he did not "set up his bills" at home; and, instead of defying "the wide world to match himself," restrict himself, in the first instance, to an offer to play any one in that city? To leave a ready opponent at his own door, and come over to England and fulminate a challenge "to play any one," savours more of vaulting than true valour. And this appears to be the light in which his behaviour is regarded in Germany; where, if I am correctly informed, he has not a single backer, and where his challenges and vaunings are but very sparingly noticed.

I should be glad also to know, since the amateurs of Germany take no part in the subscription for backing Mr. H——, and he himself, it is notorious, does not risk a shilling on his own part, whether the stakes are to come from, in the event of his really playing Mr. Staunton? I presume they will be found by British amateurs. I hope, if this is the case, the Chess community will be favoured with the names of these truly patriotic supporters of native talent. I am, Sir, truly yours,

A Member of the Northern and Midland Counties Chess Association.

THE NEW CHEMICAL PORCELAIN.—In a lecture recently delivered at the Royal Institution, on the manufacture of glass and porcelain, by Dr. E. Frankland, F.R.S., &c., Professor of Chemistry, Owen's College, Manchester, the following explanation was given of a new manufacture introduced at Worcester by the Messrs. Grainger:—"Chinese porcelain," said the lecturer, "is still, in certain respects, unrivalled; but, for the manufacture of an article which approaches very nearly to the Chinese *hard porcelain*, we are, in this country, indebted to Messrs. George Grainger and Co., of Worcester. The porcelain manufactured by the firm, and which, from its resistance to corrosion, its purity, semi, or chemical porcelain,' is decidedly the purest and best of English manufactures that is ever come under my observation. The body is semi-vitrified through out; free from lime; and possesses immense strength. The glaze is free from lead, very hard, and resists the action of the most corrosive liquids; both the glaze and body also bear sudden changes of temperature without cracking. All these qualities render it admirably adapted for dinner and dessert services; and it is, in fact, already extensively used for these purposes, and is less costly than ordinary china. The employment of this porcelain in the construction of vessels for chemical purposes has been very successful, and has rendered the importation of the expensive Berlin ware almost unnecessary. To the excellence of this portion of Messrs. Grainger and Co.'s manufactures I can bear testimony, having myself used their chemical vessels for a considerable length of time in my own laboratory."

UNSEALED CORRESPONDENCE.—Among other expedients adopted to avoid the present high rates of ocean postage is the practice of sending letters across the sea by private hands *unsealed*. A person may convey a portmanteau full of letters in this way without charge upon them for the transit service. It is impossible to estimate the extent of the unsealed and unpaid correspondence, especially between the myriads of emigrants in the British colonies and other countries and their friends in the mother country. A gentleman recently returned from a long residence at Port Natal, Africa, thus describes the extent to which this practice is carried by the inhabitants of that colony. "To show their disposition to correspond, I will mention the fact that whenever a ship was about to sail with passengers *home* for such the emigrant still looks upon Old England—they were pressed to take charge of numerous letters and post them on their arrival. It was so on my leaving the colony; and if the anxiety shown by the emigrants to get their letters ready for me, could have been witnessed by the inhabitants of this the fatherland, it would have aroused sufficient feeling and determination to abolish this unwise tax upon their correspondence. To avoid it, and still communicate with those they held dear, I had placed under my care numbers of letters unsealed, and written on sheets of paper, *without their folded*, and the money given me to purchase the penny stamps, and post them on the various destinations. Now who could or would refuse to do this? No one who knew what the heart of an emigrant feels. Accustomed to respect and obey the laws, I yet felt it an act of duty and kindness to become thus an agent in avoiding them. To reflect for a moment—the secrets of family correspondence to be thus exposed rather than lose an opportunity of sending home a line! Now had there been an Ocean Penny Postage, I should not have been solicited to bring a single letter: it would have been thought an imposition."

NEW CAB FARES.—(Simpkin and Marshall, and W. and H. Smith.)—The change in the law has demanded the correction of the "Distance Map for ascertaining cab fares &c." Here we have the map of the metropolis, printed in red, and the distance and fare tracts side respectively (a direct half mile) printed in blue. Upon the map margins are the new laws and regulations relative to cabs and cabmen, and a table of fares, &c. The badge, the numbers, &c., [illegible] fare, waiting time disputes &c. comprised in the [illegible] and, in a few words, are convenient with right understanding of the matter.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The usual Ministerial white-bait dinner will be given this day week, the 13th inst.

The *Bengal*, with the heavy portion of the East India, China, and Mediterranean mails, arrived at Southampton on Tuesday morning; and the *Cadiz*, from Constantinople, Malta, and Gibraltar, the same day.

A Queen's messenger left London on Wednesday evening for St. Petersburg, conveying the instructions to Sir Hamilton Seymour (our Ambassador there), alluded to by Lord Clarendon on Tuesday.

Mr. Oliveira has postponed to next session his motion for a select committee on the state, &c., of the bridges over the Thames.

The King of Hanover, as well as the Queen, have taken the measles. The two young Princesses are also suffering from the same complaint, but the Crown Prince has recovered.

Lieut.-Colonel Shiel, her Majesty's Minister in Persia, has arrived in this country on leave of absence.

Major Gordon Cumming, jun., of Altyre, lately killed with the rod, in the Spey, fifty-nine grilse and sa mon in six days.

Three large tobacco manufactories were destroyed by fire, at Richmond, Virginia, on the 15th ult., entailing a loss of upwards of 40,000 dols.

Prince Frederick William, heir-apparent of Prussia, and the Prince Consort, Lord High Admira. of the Prussian navy, will shortly visit Portsmouth to inspect a small squadron of that nation about to refit at that port.

General Anson has issued his farewell address to the electors of South Staffordshire, whom he has represented since the year 1832.

The Queen and the rest of the Royal family of Portugal have just removed from Cintra to Mafra, where they intend to spend the summer.

Mr. Thomas Spong, of a brewery firm at Leeds, was killed on Monday night, by being thrown out of his gig, on his way home from Bradford.

The first two subscribers to the Dargan Testimonial (for the Dublin Exhibition) are Mr. Fairbairn, of Manchester, and Dr. Hayden, of Dublin, each for £100.

It is confidently expected that Parliament will be prorogued by her Majesty in person, on the 18th, or at furthest, on the 20th of this month.

The Grand Duke Constantine, Grand Admiral of Russia, arrived at Odessa on the 17th ult.

Those connected with the Queen's Eastern dominions will be glad to learn that the East India Road have agreed to give to the Amalgamated Railway Company a guarantee of 4½ per cent on the sum of £5,000,000.

A Jewish widow, named Leipman, keeper of a common shop near Wellclose-square, is under the horrible charge of burning her newborn infant. She was with difficulty defended from the summary vengeance of her neighbours.

Mr. Nathaniel Hawthorne, the distinguished author of the "Scarlet Letter," and other works of fiction, has been appointed Consul at Liverpool for the United states.

The Select Committee of Accidents in Coal Mines has published its first report. It contains the evidence of Mr. Joseph Dickenson, Mr. H. F. Mackworth, Mr. Edward Cayley, and Mr. Martin Jude.

The Schools of Declamation and Acting established in Paris are not likely to fail for lack of students—160 having applied for admission during the current year.

The United States have contributed 1600 dollars to the subscription list for raising a monument in London to the memory of Jenner, the discoverer of vaccination.

A man was killed accidentally last week, near Salisbury: while getting over a gate, a hunting-knife, carried open in his pocket, penetrated the femoral artery, and he died to death.

A letter from Schiraz, in Persia, by a Swedish physician, gives a dreadful account of the almost total destruction of that town by an earthquake, on the 21st of April. Nolless than 12,000 persons perished by the disaster.

The deliveries of tea in London last week fell off to 588,992 lbs. For two months the decline has been enormous, and the entrances in June have immensely increased, owing to the reduction in duty.

A letter from Mentz, of July 28, states that the Emperor of the French has conferred the grand-cross of the Legion of Honour on Prince Emile of Hesse.

The three-quarter portrait of Mr. Pitt, by Mr. Hoppner, bought a few months back by Mr. Moffatt, M.P., has just been presented by that gentleman to the National Gallery,—and may be seen in the principal British room at Marlborough House.

Two distinct shocks of an earthquake were felt in Portland, U.S., on the 27th June, between five and six o'clock. Many citizens were aroused from their beds by the rocking and shaking.

The amount realised during the war, by the combined forces in China, from property captured or detained, amounted to £103,697 18s.; and the expenditure in Canton batta to the troops, to £441,557. The account is rendered by the East India Company.

A terrible storm broke over Dieppe on the 29th ult. Two persons were killed with the lightning, and a house was set on fire; but the flames were soon extinguished.

A finance committee of the Royal Commission of the Exhibition of 1851 was held on Tuesday. There were present, Earl Granville (chairman), Lord Overstone, Sir A. Spearman, Bart., Sir W. Cubitt, and Mr. Edgar Bowring (secretary). Capt. Owen, R.E., also attended.

It appears from a return, moved for by Mr. Pellatt, the reduction under the new scale of duties for the assessed taxes, to the twenty highest contracts of composition, within the London district, effected under the previous act, will be considerable. In most instances the new rates do not reach a third of the former charge.

The pupils of the Lycée Bonaparte have raised 103fr. for the relief of the workmen who were injured while constructing a house in the Rue du Havre.

On Sunday last, as Mr. Lord, a dyer, at Shelf, near Halifax, was gathering some cherries, the branch of the tree gave way, and he fell backwards on the edge of a stone fence, and broke his neck.

The value of the specie imported into the United Kingdom last week was unusually small, amounting to but £104,000. The shipments were nearly to the same amount—£100,000.

It is stated that Mgr. Sacconi, Apostolic Nuncio in Bavaria, is destined by the Pope to replace the late Mgr. Garibaldi as Papal Nuncio in France.

On Monday the bill which has passed the Lords was printed by order of the Commons, to authorise the consecration of British subjects to be bishops in foreign lands without difficulty. All hands, however, have been set on in the manufacture of general hardware and hollow iron ware, and large consignments will ere long be forwarded.

The meeting of workmen in every thousand—has been ordered by the Emperor Nicholas, "for the purpose of equipping his land and sea forces." The Jews are ordered to furnish their contingents, like their co-religionists in other parts of the Empire.

A deputation from the Metropolitan Counties Branch of the Medical and Surgical Association had an interview with Viscount Palmerston on Monday, at the Home Office, on the subject of the Vaccination Bill.

The *Queen of England*, Captain Baillie, from Melbourne, Port Phillip, arrived on the 21st inst., with 40,305 oz. of gold dust on board, valued at £161,858, and with the following passengers, viz. Mrs. J. M'Laren and family, Mr. and Mrs. Archibald, and Dr. J. J. Evans. Captain Baillie reports having discovered a comet while on his passage homewards.

PAPIER MACHE VILLAGE FOR AUSTRALIA.

A PAPIER-MACHE VILLAGE FOR AUSTRALIA.

Building houses with cards has been a favorite pastime of many a past generation; but it was reserved for the ingenuity of the present day to construct habitations of paper. Yet of this frail material is manufactured the "village" shown in the accompanying Illustration.

Papier-mâché has long been extensively employed for the interior decorations of houses; but to Messrs. Bielefield is due the merit of applying the elegant material in external constructions; and, having been commissioned by Mr. Seymour—a gentleman about to take up his residence in Australia—to manufacture for him a certain number of portable houses, the *paper village* was executed, and temporarily set up at the works of Messrs. Bielefield, near the Staines station of the South-Western Railway. The village is composed of ten houses, including a villa, with nine rooms, 12 feet high; a store-house, 80 feet long, with four dwelling-rooms (sitting-room, two bed-rooms, and kitchen, with cooking apparatus); and houses of different sizes, of from two to six rooms. The Villa on the left of the upper Illustration has a drawing-room and dining-room, each with a bay-window; also, a hall, several bed-rooms, two closets, and kitchen. The interior decorations are so complete as to render it next to impossible to fancy yourself in any other than a brick dwelling. The mantel-pieces in the drawing and dining-rooms are of papier-mâché, have a caryatidal figure on each side, and are of bold design.

The material of the several houses is of patent waterproof, papier-mâché, and the construction is also patented. It consists of paper and rags, beautifully ground and reduced to pulp, which, when dry and pressed, become as hard as a board. There is no lath-and-plaster, yet the walls are solid, indeed more so than in half the partitions of houses built in the present day. They are also double walled, so as to allow of free ventilation all round, and in the roof. The roofs are nearly flat, being just sufficiently curved to throw off the rain. The flooring can be taken up in large square pieces, joists and all. The walls and ceilings are in like compartments, and afford every facility for either taking down or raising with despatch. One of the smaller houses has been taken down and re-erected in the space of four hours.

ROOM IN A PAPIER-MACHE VILLA.

During the late floods, these houses were nearly two feet under water, yet were not injured.

We are assured by Messrs. Bielefield, the patentees of this new material and construction, that it will make good buildings for barracks, park-lodges, and shooting-boxes for the Moors; as well as for additions to houses, as billiard-rooms, &c.

EXTENSIVE SHOW OF PINE-APPLES.

About ten years have elapsed since Messrs John and James Adam and Co., of Pudding-lane, Lower Thames-street, sold by auction the first large cargo of Pine-apples imported into England; since which time they have annually held large sales of this luxuriant fruit; and this extensive trade has, doubtless, acted as great encouragement to the growers and shippers, in conveying the fruit to this country in as perfect a state as possible. The fastest sailing fruit schooners, of about 120 tons burden are carefully selected for the voyage; and they are fitted in a very superior manner, by which means both the beauty and the condition of this fruit are well preserved.

The *Prospero*, *Ipswich Lass*, *Susan*, *Isabel*, *Black Cat* (of the two last of which Messrs. Adam are the owners), and a few other vessels have been principally employed in this trade, and have generally performed their passages in a very short space of time; some of the above-named having brought cargoes in less than 24 days.

Eleuthera, a small narrow island, one of the Bahamas in the West Indies, is the place from which the greater quantity of fruit is imported. There are annually cultivated large quantities of pines, which have a very beautiful appearance. When approaching ripeness, they are plucked from the ground with the entire root, and are carefully stowed on board the vessel in the same state.

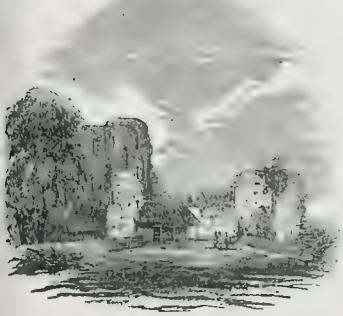
Originally some little difficulty existed respecting the manner of showing the prices when offered for sale; but this has been overcome by Messrs. Adam, who have built a new warehouse upon a very convenient plan, where the Pines are exhibited to the best advantage.

Our Artist has represented one of the rooms, with a fine display of the beautiful fruit.

The cargo of the *Susan* has just been sold by Messrs. Adam, who are daily expecting the arrival of the clipper schooner *Scud*, with a cargo, which will be the last arrival this season.

GREAT SHOW OF PINE-APPLES.

MEETING OF THE BRITISH ARCHÆOLOGICAL ASSOCIATION, AT ROCHESTER.



ALLINGTON CASTLE.

VISIT OF THE BRITISH ARCHÆOLOGICAL ASSOCIATION TO KITT'S COTT HOUSE.

EASTGATE HOUSE, ROCHESTER.

The tenth annual meeting of the British Archæological Association commenced at Rochester on Monday (last week). The list of patrons was confined to the Lord-Lieutenant of the county (Earl Cowper) and the Bishop of the diocese; but there was a goodly array of vice-presidents—of whom some are working archæologists. The place of meeting on this occasion was well chosen as an archæological centre—furnishing much of the work of the occasion at its heart, and distributing the rest over an area lying within reasonable circumference. At one o'clock there was a meeting at the committee-room at the Guildhall; and at two the members assembled generally in the same place, to hear the President's address.

The President was Mr. Bernal—long the member for the city in which the Association was met; and he delivered a long and elaborate address on the study of archæology and its immediate application, which at once justified the choice of both place and president. The speaker gave a comprehensive sketch of the various objects of interest they had to examine in Rochester and the adjacent district. Of Rochester-bridge (about to give place to a new structure in course of formation by Messrs. Fox and Henderson), he said: "The bridge of Rochester has undergone frequent and considerable mutations. Originally constructed of timber in the reign of King Edgar, it was maintained by Dunstan, Archbishop of Canterbury, and by the contributions of other great owners of lands in the adjoining districts. It was often extensively repaired. In the reign of Richard II. the stone bridge was erected by Sir Robert Knolles and John Lord Cobham, at their own cost. Estates of some value were granted in perpetuity for the repairs and support of the fabric, which was completed between the seventeenth and twenty-second years of Richard II. In the time of Elizabeth an Act of Parliament, the result of a previous commission of inquiry, was obtained, by which two wardens and twelve assistants were directed to be elected annually for the management of the concerns of the bridge: the rental of the estates appropriated thereto being considerable. The record-room, or bridge-chamber, stands near to the east end of the bridge. Underneath the same is the site of a porch of a chapel, or chantry, which was founded by John de Cobham, at the time of the building of the bridge. This chapel, formerly called Allesolven, or All Souls, was intended chiefly for the use of travellers; and three chaplains were appointed to officiate in it, at a salary of £6 each yearly, payable out of the income of the bridge estates.

The address was followed by a paper, read by Dr. Beattie, "On the history of Rochester Castle;" and a visit of inspection to the Castle, under the guidance of Messrs. Ashpitel, Bally, Duesbury, Godwin, and Whichcord

Mr. Duesbury read a "description of the remains;" and stated, generally, that the space within the walls was usually, in mediæval castles, divided into two courts—the one surrounded by stables and inferior offices, and the other by guard-houses and inferior offices and residences; and that, in the highest and least accessible part of the inclosure, a "keep," or strong tower of ultimate defence was erected. The remains of this castle wall show that it was of great height and strength. "The portion now standing to the south-west (continued Mr. Duesbury) is, I imagine, nearly forty feet high, especially towards the river, which swept round the foot from the bastion, at the south-eastern corner, at the back of the keep, to the sally-port, or strong gate, at the north-east angle, which flanked and commanded the ancient bridge. The entrance from the land side was in the curve of the wall to the north-east. This appears to have had circular bastions at the entrance, with a curtain between. The space inclosed is about four acres. From the earliest ages, even in the time of the original Britons, before the coming of the Romans, this was an important place of defence, and very naturally so, since it guards the pass of the only river between the south coast and the heart of the country. The keep is square on plan, and measures, exclusively of the entrance-tower, about 70 feet each way; there are square towers without buttresses to three of the angles; but the fourth, viz, the north-east one, has a circular tower—this, however, being carried up square at the top. The entrance-tower, about 17 feet by 30 feet, is on the north side. The building has four stories, and is from 105 to 110 feet high to the top of the towers. The middle wall is 5 feet thick, and the outside walls 12 feet thick; the walls are built of rough or unsquared Kentish ragstone, with freestone (oolite) dressings and quoins. In the centre of the division-wall is a well: it is circular, 2 feet 9 inches in diameter, and faced with ashlar all the way down. It is stated to be about 60 feet deep to the water. This building has been a ruin for upwards of 200 years; and a certain Sir Walker Welden, a descendant of Sir Anthony Welden, who lived in James I.'s time, sold the stone steps of the staircase to a mason from London. He wanted to sell the whole building as old material, but fortunately it was not worth the expense of pulling down." Mr. Duesbury took a novel view of the question of the age of the castle; and, considering that "Rochester was a stronghold in the time of the aboriginal Britons; that the Romans had an important station here, and from time to time, during the 400 or 500 years (nearly 500) they were masters of Britain, they walled the city, and built and enlarged the castle, so as to make it a place of exceeding strength and security; and recollecting that, in the Saxon times, Rochester was more known as a castle than a city—Bede calls it, 'the Castle of Kentish men'; and above all, bearing in mind that at this the most important pass in England, a very strong fortress would always to a certainty be maintained," Mr. Duesbury concludes, that Gundulph did not *build* this tower, and that the present ruin is of Anglo-Roman and Anglo-Saxon workmanship.

ROCHESTER CASTLE.—ENTRANCE TO THE KEEP.

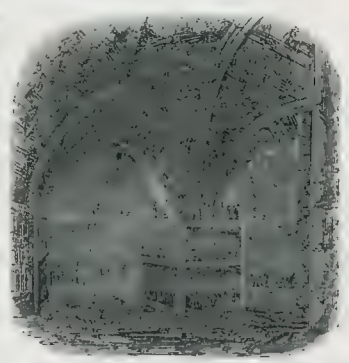
As the centre of our group of Illustrations, we have engraved the entrance to Rochester Castle from the ground-floor, showing in the upper part the noble columns and arches of the middle story, and a small portion of the basement chamber.

The chief features of Tuesday's proceedings were the inspection of the Cathedral, when Mr. Ashpitel, who has for several years officiated in this respect for the Association, delivered a discourse on its architecture, and afterwards accompanied a large audience round the building. Mr. Ashpitel confined himself to the history of the architecture that the see of Rochester was founded by Ethelbert in the year 600, and that Justus was the first ordained bishop in 604. From that point to the Conquest there is but one mention of the cathedral—the interment of Bishop Tobias, by Bede.

According to one authority, Gundulph rebuilt and perfected the cathedral and its offices; according to others, he died before it was finished, and this work was left to his successor, Enulphus. It is clear from the annals that this latter prelate built the chapter-house, dormitory, and infirmary; and not only is there evidence of the junction of old and new work in the triforium, but the style of the west front corresponds better with that of the chapter-house than the original work of Gundulph. Mr. Ashpitel exhibited a plan, in which was delineated the existing Norman work, and showed that it was possible that the present Gundulph's tower had originally been one of two central towers, open below to the church, and forming a species of transepts, as at the

ROOM IN THE RED LION INN, STROUD

THE COLLEGE-GATE, MAIDSTONE.



VAULTS IN THE CROWN HOTEL, ROCHESTER.

Cathedral of Exeter. In absence of direct evidence it seemed at least to be a probability. The rest of the original plan was made out in the same way. The church was not consecrated till 1135, and in that year was burnt down with all its offices. It seems to have been renovated by Bishop Asserlin; when, in 1177, it was burnt down again. In 1215 the city and castle were besieged by King John—both taken, and the church plundered of even the crucifixes. In the meantime a strange event took place. Miracles were said to be worked at the tomb of one William, an eminent traveller to the Holy Land, who was murdered by his servant for the sake of his money. This news attracted hosts of pilgrims, by whose offerings William De Hoo was enabled to build the whole choir. Mr. Ashpitel then pointed out an error in the reading of the chroniclers, and showed that when it was stated that Richard Eastergate led built a south aisle and Richard De Wulestone a south aisle that what was meant was in effect the Dutch cross aisles or transepts, and that the difference in the styles of architecture fully bore out this view. He then gave the authorities which described the works of Hugo De Hethe, particularly the raising the tower, and afterwards described the particular chapels of St. Mary, and the elevatory to the nave, which was of the same period.

Mr. W. H. Black fully corroborated Mr. Ashpitel's translation as regarded the transepts.

Mr. Ashpitel's paper was followed, during the day, by visits to several ancient houses and other places of antiquarian interest, in Rochester, including St. Margaret's Church, St. Catherine's and St. Bartholomew's Hospitals, and the Temple Farm-house, near Strood.

At a meeting in the evening, the following papers were read:—By the Rev. Mr. Hugo, "On the Biographies of Gundulph, Ernulph, and other early Bishops of Rochester, with notices of their Labours in the building of the Cathedral, Castle, &c., from the *Textus Roffensis*, and William of Malmesbury;" by Mr. Essell, "On an Inscribed Stone found in the Medway;" by Mr. Jerdan, "On Documents relating to the Spanish Armada and the Defence of the Medway;" by the Rev Beale Poste, "On a Attack on the Dutch on the Medway, in the Year of Mercy in 1667," by Mr Ha lwell, "On Ancient Sports, Pastimes, and Customs of the County of Kent." Mr. Back's discourse, identifying the *Textus Roffensis* as the work of Humphery, the precentor, was one of the most valuable results of the congress. Mr. Pettigrew read a paper showing very considerable labour and research, on the "Leper Houses of Kent, and their establishment in England;" Mr. Monckton, some observations on Guvel land (the Kentish custom of descent to the youngest son); Mr. Steele, an account of the interesting remains found at Strood; and Mr. George Wright, a pleasant paper of associations connected with the well-known church and sea-mark, Reculver.

Part of Tuesday was devoted to the examination of old houses in Rochester and Strood, three of which we have engraved. Two of these are, Eastgate-house, in the High street, Rochester—very picturesque, and possessing some finely ornamented ceilings; and the Red Lion, at Strood, with a room remarkable for the size of its beams, which bear evident marks of the Tudor period.

The Crown Inn, Rochester, there is evidence to prove, has portions of the residence of one Symond Potyn, probably built early in the thirteenth century. Passing through a doorway, in the situation of the original entrance from the High-street, and descending a flight of stone steps, you reach a vaulted room, running north and south, about forty feet long, fifteen feet broad, and fifteen feet high: it is vaulted with three bays of vaulting, the arches next the side and end walls springing from flat piers, which project beyond the face of the wall. The transverse and the diagonal ribs spring out of these piers without capitals of any sort. The ribs are of the plainest pre-decorated chamfering in of the vaulted ceiling is of squared chalk. On each side of the door from the street is an original window. The crown of the arch of the vaulted storehouse is about eight feet above the present ground, and the floor of the present level of the street. On the west side of the centre bay is a door from which an arched passage leads into a second vault about eighteen feet square, the floor being on the same level as the street. The height to the crown of the arch is not more than ten feet from the floor. The vault has an oval, oval to oval in the centre, so that it is divided and vaulted into four bays, and the whole forms a square, with the first described apartment. The substructure of the Crown Inn is a large rambling erection, constructed of timber and plaster, and of later date than the vaulted apartments described. Several fine ancient beams and carved mantels, are of the time of Henry VII., and there are to be turned over a few panelled beams and minor details of the same period in middle parts of the house. A very interesting room on the Railway upon the ground floor is known as the Association, and is reported in the *Builder* of last week.

Wednesday was a first excursion day, when the places visited by the Association included Bartlow Church, Cowling Castle and Church, Cliffe Church, and Cobham Hall. Bartlow Church was in the programme, but was passed for want of time. At Halstow there is an ancient font, and in the basement is part of a fourteenth-century brass of good character like unto one gateway to Cowling Castle. Cowling Castle is a fine old bold mediæval church, and for the sculptured charter on the face of one of the towers, with its seal, apparently of bronze.

Here was the case-hardened and moated manor house of John de Cobham in 1380. Its present owner hospitably extemporised a luncheon on the grass, having first taken the party of Archæologists over the grounds. At the chapel of Cowling Church has six stone walls on each side, three sedilia, and a piscina of good Early English work.

The church at Cliffe is of the Decorated period, with some beautiful tracery, sedilia, and piscina. On the north side are the remains of a mediæval tomb, or Easter sepulchre. The parish has an hour-glass stand dated 1636. The Early English additions to the transept are curious. On the east wall of the south transept are some mural paintings, described in "Neale on Judgment." A part of which would seem to be as early as the fourteenth century.

The party next went on to Cobham Hall, well known to many of our readers. It is a Late Tudor building of brick, with stone dressings, the wings dated 1582 and 1584; the centre, 1602. The music-room, a very lofty and noble apartment, with an over-adorned ceiling, is said to be Inigo Jones's work. There is an elaborately-sculptured marble chimney-piece in this room, by Sir R. Westmacott. In the other rooms are some marvellous Vandyke, Rembrandt, Titian, and Guido

Cobham Church, with its fine early English chancel, Perpendicular sedilia and piscina, beautiful cinque-cento altar-tomb, and unique collection of brasses in memory of the Cobham family, was visited, and the excursionists returned to Rochester, where they sat down to a public dinner.

On Thursday, a party of the Archæologists visited Kits Coty House. The scene there was a highly picturesque one. A considerable party of the gentlemen, who ascended by a ladder brought from a neighbouring farm. Around stood a group of the members of the Association, with a few wondering rustics, who seemed astonished what interest should be attached to a few old stones. One quaintly remarked: "He says as Coity House is very old, and discussing its probable age and uses of such remains, the party moved from this picturesque scene, and entered the vehicles for Sandling and Allington Castle. Most of the party, however, ridden some distance, alighted, and walked to Sandling, through a pleasantly-shaded, but rather damp pathway. Having inspected this place, they arrived on foot at Allington Castle. These ruins attracted much attention from all; and the beauty of the day added much to the beauty of the dignified mouldering walls. Moving away from this, the party crossed the Medway in a ferry boat, to the inn known as Gibraltar, here the portcullis of an old fortress forms the sign-board. At five o'clock the Archæologists proceeded to dine at Leeds Castle, the seat of Mr. C. Wykeham Martin, F.S.A.

At eight p.m. the Archæological Society met at Maidstone, where an evening meeting was held in the Assembly Rooms. Papers were read by Mr. Hasted on the Earls of Kent; by Mr. Whichcord, on the Polychromy of the Middle Ages, illustrated by numerous drawings from the founder of the Archæologists to the little village of Hollingbourne, where are the remains of some earth-works, in the nature of a fortified camp, indistinctly traced, which the tradition of the neighbourhood ascribes to Dorgist. At five o'clock the Archæologists proceeded to dine at Leeds Castle, the seat of Mr. C. Wykeham Martin, F.S.A

THE SLAVES OF VIRGINIA.

(From the Note-book of an American Tourist.)

The habitations of the slaves of Virginia are usually log-cabins, of various degrees of comfort and comfortlessness. At one end there is a great open fireplace, which is carried out to the wall of the house, being made of clay in an enclosure, of about eight feet square and high, of logs. The chimney is sometimes built of brick, but more commonly of lath or splint sticks, laid up like log-work, and plastered with mud. They enjoy great blazing fires, and as the common fuel is pitch pine, the cabin, at night, when the door is open, seen from a distance, appears like a fierce furnace. The chimneys often catch fire, and the cabin is destroyed. Very little precaution is taken against this danger; it does not cost much to build a new one; timber is yet in the way, and they are glad to have a new one for it in Virginia. Several cabins are often need near together, and they are called "the quarters" On a plantation of moderate size there will be but one "quarters." The situation chosen for it has reference to convenience of obtaining water from springs, and fuel from the woods. On the estate of James River plantations, larger houses, boarded and made ornamental, are more common. In these the family, each having a distinct sleeping-room with a lock-up closets, and every two having a common kitchen or living-room, are accommodated in a single people of the plantation are all attached to some of the families, and live in the cabins with them. Generally the cabins of the slaves that I have looked into have been neat and well furnished, and have had an aspect of cheerfulness and comfort that I have rarely found in the dwellings of the poor labouring peasantry of any other part of the world. They are far superior to huts in the Highlands of Scotland, in which I have found living very filthy and well-informed people.

Formerly, I am told, the slaves were accustomed to celebrate themselves in the evening and on holidays by dancing. It was at length, however, preached against, and all the "professors" so generally used their influence against it, as an immoral practice, that it has generally gone "out of fashion;" and in most of the young ones have contracted a love of reading and wrote occupations for the pastime of holidays and leisure hours. I have not seen any dancing during their holidays, nor any amusement engaged in by the blacks that was not essentially diverting or wasteful.

The general allowance of food to a slave is a peck and a half of meal and three pounds of pork in a week. This is as much meal as they can eat; but they would be glad to have more bacon. Sometimes they do have four pounds, but it is oftener that they get less than three. It is distributed to them on Saturday nights; or, on the butter-managed plantations on Wednesday to prevent their using it extravagantly, or selling it for whisky, on Sunday. The distribution is called the "drawing" and is made by the overseer to all the heads of families, or mothers. Except on the larger plantations, where the cooking is done in the house of the proprietor, there is a cook-house, furnished with a large pot for boiling, and often with a bake-oven. Every night the slaves bake their "mess" for the next day's breakfast and dinner; including not only their meal for that, and their bacon, but whatever they choose to provide otherwise (for instance, potatoes, eggs, or vegetables—to the cook, to be prepared for their day.

Custom varies as to the time it is allowed to them: sometimes at morning and noon; but their times at noon and night. Sometimes each has its meat by cuts, so that he shall know it from the rest; and they observe each other's rights with regard to this punctuously. Suppose breakfast is eaten in the cabins, at sunrise (or a little before in summer, and perhaps a little later in summer), they go to the fields. But frequently they have breakfasted in their cabins, having their work for the purpose at about o'clock. At noon dinner is brought to them, and, as the work presses, they are allowed two hours' rest.

Very punctually at sunset they stop work. Hours are all liberty, except that a squad is decided once a week for shelling corn to go to mill for the next week's drawing of meal, but a short job. They work in the field eleven hours a day on an average. Returning to the cabins, wood "ought to have been" carried by them—it is, commonly, perhaps—but if not, they go to the wood and *tote* it for themselves. They smoke a fire, a very great blazing fire at this season, for the supply of fuel is unlimited, and cook their own supper, which is generally a bit of bacon broiled often with eggs, Indian meal cake, baked in the ashes of the fire, or in preference to a bed, but a pone, some sweet potatoes, roasted in the ashes, and distately after supper they go to sleep, often lying on the floor or a bench, in preference to a bed, but two o'clock they very generally rise, and cook, cold, what they call their "mornin' bit," then sleep again till breakfast.

The young people have plenty to eat, probably fed better than the proletarian class of any other part of the world. I think that they generally save their ration of meal. A planter having, I suppose, fifty slaves, told me that occasionally they receive bushels of meal weekly, but he had not been there a week, to be sold before then. Upon inquiry, he always found that it belonged to only two or three individuals, who had traded for it with the rest, as he added, that too often the exchange was for rye, which, as it was contrary to his rules, the owner of low alleged, and kept concealed. They very fond of whisky, and sometimes make themselves by the free use of it. To show how well they were supplied with eggs, he told me that once a vessel came to anchor, before off his place, and the captain came to and asked leave to purchase some eggs of his. He gave him permission, and called the collect them for him. The cook asked if she should bring. "Oh! all you can get," he said; and she returned, after a time, with boys assisting her; she had found nearly two bushels, all the property of the negroes, and were willing to sell at four cents a dozen. This I explained to me that it was very bad economy to allow an abundant supply of food to his slaves. The negroes were very fond of good living, if not well provided for, knew well enough how to provide for themselves. It was, also, but simple to have them well lodged and clothed.

Providence is generally considered in Virginia a special trait of African character; and by none is more so than by the negroes themselves. I think that is a mistake. Negroes, as far as I have observed at the north, although suffering from the competition of habits acquired by themselves or their race in slavery, unless they are intemperate, are improvident than whites of equal educational advantages; much more so than the newly-arrived Irish, though the Irish are soon infected with the desire of accumulating wealth and acquiring permanent means of comfort. This opinion is confirmed by the experience of the city missionaries, one of whom has informed me that in the most populous class of the city of New York reside, black and white in the same house, the rooms occupied by the blacks are generally much less bare of furniture, and the means of subsistence better than those of the whites.

I observed that the negroes themselves follow the notion of the whites in Virginia, and look upon the people of their race as naturally unfitted to provide for themselves far ahead. Accustomed, like children, to have all their wants provided for, their whole energies and powers of mind are habitually given to obtaining by means of temporary ease and enjoyment. Their masters, and the lower order of whites, acquire somewhat of the same habits from early association with them, and by constant practice confirm them. The negroes depend much for the means of enjoyment themselves upon presents. Their good natured masters (and their masters are very good natured, though capricious and quick-tempered) like to gratify them, and are ashamed to disappoint them—to be thought penurious. So it follows that with the free negroes habit is upon them: the habits of their associates, slaves, make the custom of society that strongest of agents upon weak minds. The whites think improvidence a natural defect of character with them—expect it of them: as they grow old, or as they lose any means of gaining a livelihood, charitably furnish it to them: expect them to pilfer; do not look upon it as a crime—if they do, at least, consider them but slightly to blame; and so every influence of association is unfavourable to providence, forethought, or economy.

CURIOUS PHENOMENON.—A letter has been received from Athens contains the following:—"A very curious phenomenon has, in a great measure relieved the fears which were entertained of the failure of the crop of currants. For the last six years this disease has re-appeared, and in a short time all the fruit was covered with a white blight, the precursor of its complete destruction. Suddenly, myriads of small green insects, which came no one knows from whence, settled on the vines, and towards were ins. Short space of time completely cleared of the white blight by those insects, which devoured the white substance with the greatest avidity, and soon restored the fruit to its wonted beauty. Let agriculturists and naturalists explain this phenomenon if they can."

UNITY FIRE ASSOCIATION, BIRMINGHAM.

THE celebration of the laying the foundation or inscription-stone of this building [illegible] on Wednesday, a large number of [illegible] deputations from London, Nottingham, Sheffield, Manchester, [illegible] Bradford, Norwich, &c., assembled shortly after twelve o'clock in the Town-hall, where a very elegant breakfast was served, and the Company for some time amused by performances on the magnificent organ.

About half past one o'clock a procession was formed, and, preceded by the new engine of the Company, decorated with flowers and evergreens, and the 81st brigade men, proceeded to the site of the intended building, which was gaily decorated with flags and greens, &c., in a manner suitable for the occasion. The

(*Continued from page* 83.)

very limited proprietary. A few great capitalists were frequently the sole shareholders of the undertaking. Yet they have amassed enormous profits. The problem of the Unity Fire Insurance Association appears to be: If the interest of 200 shareholders will produce such results, what will be the result of the combined interests of *thousands* of shareholders, each one having the success and welfare of the institution at heart? To secure this interest, the capital is fixed at £1,000,000 sterling, divided into 500,000 shares of £2 each, with a deposit of 5s. per share. The profits are divisible in the proportion of one-third to the shareholders and two-thirds to the insurers. The result of the principle of thus identifying the interest of the shareholder and the insurer is, that the deed which bears date the 22nd of July, 1852, has, in twelve months, been signed by nearly four thousand shareholders, including bankers, merchants, professional men, and traders of all kinds, resident in most of the important towns in England; while already the institution has insured nearly three millions of property. For the midland districts a fire brigade is in course of organization; and at Birmingham the Association is now engaged in erecting a central office, an Engraving of which we this day present to our readers; and which, when completed, will be an architectural ornament to the town. In Birmingham the Unity possess nearly 800 shareholders.

The architect of the offices now building is Mr. S. Hemming. The style is modern Italian. The whole area of the site is occupied with vaults; whilst the ground story is appropriated to the offices of the company, which comprise boardroom, secretary's room, and general office; to two other set of offices; and to the establishment of the fire brigade, consisting of engine-house, firemen's rooms, stabling, and cottages for the use of the firemen. The three floors are each arranged into three distinct sets of chambers, approached by a stone staircase, and communicating, by means of fire-proof corridors, with the various offices. The principal elevation, in Temple-street, will be four stories in height; the basement of which is rusticated with ashlar face; the upper stories, of best red brick and Bath stone dressings, surmounted by a deeply-projecting cornice, with stone parapet. In the centre will be placed a sculptured group of Britannia supported by Prudence and Justice. The sole contractor for the work is Mr. Charles Jones, of Duke-street, Birmingham.

THE UNITY FIRE INSURANCE OFFICES, AT BIRMINGHAM.

ROYAL ST. GEORGE YACHT CLUB REGATTA.

THE aquatic sports commenced on the 26th ult., in the harbour of Kingstown and Bay of Dublin, under the auspices of the patrons and members of the Royal St. George Yacht Club.

In the earlier part of the day the weather was lowering and tempestuous; sharp showers of rain fell about eleven o'clock, accompanied with squalls from the south-west; but, after a heavy shower or two, the weather cleared up; and the wind, veering round to the northward, blew in a steady topsail breeze from the north-west during the day, to the great delight of the yachtsmen in harbour, who revelled in the certainty of a spanking half-gale, well calculated to develop the weatherly qualities, and test the speed under canvas, of as fine a fleet of yachts as we have seen for a long time moored in the harbour of Kingtown. As the rain cleared off, the view, in the bright sunshine on land and water, was singularly beautiful. The spectator, looking seaward, might behold the harbour crowded with yachts of all sizes, build, and tonnages—from the magnificent cutter of the Vice-Commodore, and the rakish schooners and beautifully-moulded clipper craft of various visitors, to the not less beautiful but tiny pleasure-boats belonging to the category of the "Ringsend squadron" or the "Carlisle-bridge fleet."

The harbour also contained several merchant craft, including a Grecian brig, from Smyrna; a Russian barque, and a Yankee brigantine. The yacht of the Vice-Commodore, covered from deck to truck with flags of a thousand hues, formed the centre of a fleet of pleasure craft. Myriads of small pleasure-boats might be seen flitting across the harbour, or stretching outwards across the bay. In mid-harbour were moored two of the mail steamers; whilst farther out towards the eastern pier, her Majesty's noble steam-frigate the *Blenheim* rode at anchor, and was decked in honour of the occasion with signal flags of varied colours.

On shore the prospect was scarcely less brilliant and exciting. The jetty, as also the harbour piers along their entire extent, were thronged with spectators. The road outside the chains of the jetty promenade was crowded with the equipages of nobility and gentry. The bastions of the railway-station terrace, and the signal towers of the two Royal Yacht Club-houses, were surmounted by flag staves bearing the English ensign, the white cross of St. George, and the green burgee of Ireland. The *élite* of the nobility and gentry were present. Her Excellency the Countess of St. Germans arrived at the Royal St. George Club-house at about a quarter before two o'clock, and was conducted to a *fauteuil* prepared for her on the Club-house terrace, commanding a view of the harbour. Before the aquatic sports commenced, her Excellency, and a large party of the nobility and gentry inspected the *Blenheim*.

The first Sailing Match was for a prize of a piece of plate, value 150 sovs., presented by the Royal St. George Yacht Club, open to all yachts of 25 tons and upwards, belonging to Royal Yacht Clubs; a time race; the long course twice round the bay. Five splendid boats started for this race, and came in as follows:—1, *Volante*, 46 tons, R. Craigie, R.T.Y.C.; 2 *Marina*, 55, W. J. Foster, R.W.Y.C.; 3, *Cynthia*, 50, H. Roe, jun., Esq., R.St.G.Y.C.; 4, *Irish Lily*, 70, R. W. Hillas, Esq., R.W.Y.C.; 5 *Coralie*, 35 A. E. Byrne, Esq., R.W.Y.C. This was a beautiful race; the five splendid yachts above named started a few minutes before eleven o'clock. The *Volante* took the lead from the first; but, on approaching the Kish buoy, she lost way in coming about; but she soon made up for this temporary check. The yachts came in in the following time: *Volante*, 4h. 37m.; *Marina*, 4h. 47m.; *Irish Lily*, 4h. 46m. 17s.; *Cynthia*, 4h. 51m. 37s.; *Coralie*, 4h. 55m. 35s.

The second prize, value 30 sovs., was contested by ten yachts, all under 25 tons, round the short course twice. The following yachts started:—*Onda*, *Tern*, *Virago*, *Fingal*, *Champion*, *Kelpie*, *Mask*, *Rogue*, *Spray*, and *Imp*. The *Onda* came in first, having run the course in 4h. 33m. 20s. The *Kelpie* came second, doing it in 5h. 6m. 22s. The others were not placed.

The third prize, value 5 sovs., was contested by nine yachts, under five tons The *Swan* came in the winner, in 3h. 33m. 18s. The *Sheen*, *Ariel*, and *Medora* came in almost immediately after. This was a closely-contested race. In this race an accident of a serious nature occurred to one of the competing boats named the *Bat*. In running home, the boat had reached the second flag-boat in the harbour, when a heavy squall caught them, in which the *Bat* was capsized; when the crew, who were struggling in the water, were assisted by Mr. Joseph A. Clarke, jun., of Liverpool, who was sailing the celebrated American boat, the *Tweard*, and thus lost his chance of winning, which, from his position in the race, was a very favourable one.

The first Rowing Match, for 40 sovereigns, presented by the Kingstown Railway Company for four-oared boats, was contested by the *Umbra* and *Mystery*, University Club boats, by the *Rifle*, *Kingstown*, and *Falcon*, Cork Club boats, and by the *Nemesis*, which came in first, after a brilliant race.

The other rowing and punt matches were contested with great spirit, and the sports of the day did not conclude until a late hour. A series of brilliant fireworks were exhibited from the club-houses and yachts in the harbour after dark.

The sports of Wednesday comprised some interesting matches.

The members of the Royal St. George Yacht Club gave a *déjeûner*, which was attended by upwards of five hundred of the nobility and *élite*. Shortly after three o'clock her Excellency the Countess of St. Germans and her suite reached the landing-place from the barge of the *Blenheim* ship of war, and at five the Viceregal party and the other guests were assembled in the banqueting-room. On this occasion the extensive boat-house, the lower range of the building, had been handsomely fitted up for the *déjeûner*, leaving the suite of apartments above for dancing and evening refreshment saloons. Dancing followed, and was kept up with great spirit and animation until a late hour.

The members of the Royal Western Yacht Club entertained a large party of friends, about 150 in number, on board their club yacht, *Owen Glendower*. After having partaken of a very elegant repast, the company assembled on deck, where dancing to the music by the splendid band of the 90th regiment was kept up to an advanced hour of the evening.

ILLUSTRATED LONDON NEWS

No. 637.—VOL. XXIII.] SATURDAY, AUGUST 6, 1853. [WITH NUMBER AND LARGE PRINT, } 1s.

THE TRADE AND COMMERCIAL SYSTEM OF RUSSIA.

THE attitude assumed by Russia towards Turkey has naturally directed attention, not only to the military and naval resources of the Czar, but to the state of his commercial relations with Great Britain and the rest of the world. Mighty as Russia is, and weak as Turkey may be, it is found that the trade of Russia with Great Britain has long been stationary, while that of Turkey has been rapidly progressive. The declared value of British exports to the two countries is, on the average—

	Turkey.		Russia.
1831-33 ..	£941,192	..	£1,436,606
1849-51 ..	£2,875,174	..	£1,436,883

The former, therefore, increased three-fold in eighteen years, and the latter was stationary. But Russia has a population of upwards of sixty-two millions; and Turkey in Asia and Europe—to which, alone, this return applies—has less than twenty-five millions. The population of the former consume of our goods more than 2s. per head, and of the latter less than 6d. Such facts may cause exultation in Russia, where the old policy of isolating nations from one another still prevails, and savage independence is preferred to social enjoyment; but the nation which consumes little of other people's produce must have little of its own, and stationary imports implies that a nation is standing still. If imports be not increased, exports can only be increased by giving them away, or by emigrants carrying them away; and thus stationary imports implies stationary trade and stationary wealth. The trade of Russia may be extended, it may be thought, in another direction; but, as England has a large trade with almost all the world, and as her trade with other nations increases they prosper, there are grounds for presuming, from the trade with England being stationary, that Russia is not generally prosperous.

In fact we can state, on different authorities, that the total trade of Russia is very small. Mr. M'Gregor states that seven-twelfths of the exports of Russia come to England, and it appears that five-sixths of them come to the West of Europe. The trade of Russia is classed under four heads—that with the West of Europe, that with Asia (Bockhara, Persia, China, &c.), and that with Poland and Finland. The two latter are in fact provinces of Russia, but, having been recently acquired, they are not incorporated in the general trade system. Excluding them, the rest of the empire is under one common and general system, which is attended with the great advantage of having no other custom-houses than those on the frontiers; and in all the large space between them, as in our country, goods may be freely and untolled transmitted from place to place. Passing unnoticed the trade with Finland and Poland, which is trifling, the whole of the trade of Russia with Asia amounted on the average of the three years 1846-48, to—imports, 14,201,641 silver roubles; and exports, 9,890,045. The silver rouble is worth 3s. 2d.; and thus the total annual value of all the imports and exports to Asia, or of the whole trade, is something more than £3,800,000. This is about the half of one month's exports alone from our country. Nor is the Asiatic trade of Russia increasing. The total amount of the imports and exports in 1844, with Asia, was 25,000,000 roubles; and, in 1848, 22,000,000. Now, coming to the total trade of Russia, exclusive of specie, but including the Asiatic trade, its amount was in silver roubles, in—

	Imports.		Exports.
1842 ..	84,533,391	..	89,338,206
1848 ..	90,778,378	..	88,336,847

The variations from year to year, between 1842 and 1848, show that this trade is irregularly and only slightly progressive, while its total amount is comparatively trifling. Turned into English pounds sterling, the total annual value of the imports and exports together may be roughly stated at £27,000,000, or about one-third of the amount of our exports alone. In other words the 62,500,000 Russians have about one-sixth as much traffic as the 28,000,000 English. The trade of Russia, therefore, is comparatively small, and is not rapidly increasing.

This is more extraordinary, because gold was discovered in Russia about 1819; and ever since a large and continually increasing supply of the precious metal has been obtained. In 1847 the produce was 1741 *pouds*, valued at £3,800,000—a small sum compared to the vast produce of California and Australia, but large compared to the previous produce of the whole world, which was estimated at less than £2,000,000 yearly. It appears by the returns of the imports and exports of specie, that the gold produced in Russia has done little more than supply its own wants, for in the six years 1844-1848 the imports of the precious metals were nearly as large as the exports. This may serve to show what an immense quantity of gold is yet really required to carry on the commerce of other and more prosperous nations, and how vain are the fears of those who anticipate unheard-of disasters from the Californian and Australian discoveries. According, however, to all general rules, the discovery of gold should have given a great impulse to the enterprise and trade of Russia. In fact, it appears in the first instance to have had considerable effect, for the trade of Russia during the life of the Emperor Alexander was doubled; but her paralysing commercial system gradually produced its wonted effects, and trade almost ceased to be progressive. The advent of peace, and the gold discoveries, were favourable to the trade of Russia, which, under the Emperor Nicholas, has not gone on increasing as under the Emperor Alexander.

The Government of Russia has for almost two centuries continually and successively extended its territories; but the resources of the people have not increased in a corresponding proportion. At the accession of Peter the Great, in 1689, his subjects were about 15,000,000; his present successor reigns over 62,500,000. But that increase—contrary to the more astonishing increase in the United States, where the people have multiplied, and where conquests of territory have only been made from the unreclaimed wilderness—has chiefly resulted from the Government of Russia acquiring other territory previously reclaimed, and from reducing nations already in existence under its dominion. The Emperor has extended his sway; but civilisation has not accompanied his footsteps. The growth of his power is not from within, but accretions from without. In truth, it is less a growth than an aggregation. Turning to the system by

REDSCHID PACHA, THE TURKISH MINISTER OF FOREIGN AFFAIRS.—FROM A SKETCH BY SIR DAVID WILKIE, R.A.—(SEE NEXT PAGE.)

which the trade of Russia is regulated, it is the pride of the Imperial Government to found and encourage manufactures. It advances its funds for this purpose; it invites manufacturers from abroad, and thus the Government becomes itself a manufacturer, and it makes laws to reward its own industry with a good market and high prices. A rigid system of prohibitions—changed in 1839 into prohibitory duties, so high as in most cases to be equivalent to prohibitions—secure for the Imperial manufacturer, and for all the manufactures established under the Imperial patronage, a perfect and a close monopoly. Some few things are admitted at comparatively low duties—such as antimony, cotton, bristles, sheeps' wool, &c., which Russia neither produces in sufficient quantities, nor can make; but others, such as pocket-handkerchiefs, are subject to a duty of 1 rouble 80 copecs the pound avoirdupois—if of cambric, they pay 5 roubles. Earthenware pays 4 roubles per pound; and, if it have a border, 10. These are only specimens of a tariff extending over all kinds of commodities, and enacted for the purpose of preventing competition from abroad. The State therefore forbids trade. But, as the market for one commodity is always some other commodity—money being only the instrument of exchange—all trade is really barter; and to impede the introduction or production of other commodities than those of the manufacturer is really to deprive him of his legitimate encouragement and reward. The system intended to promote the prosperity of Russia stifles it at its birth. It is well meant, but so were all the similar systems by which the Governments of Europe, including our own, endeavoured, for a long period to bring the balance of trade on their side, and to foster and promote the industry and wealth of their own subjects. Then it was a general opinion that trade was akin to cheating, and only enriched one man or one nation by impoverishing another. We are, happily, better informed; we know that mutual exchange economises labour, and is a mutual benefit. It increases the wealth of all; and even Russia is not a complete exception to the rule, that the extension of our trade, in consequence of the abolition of restrictions increasing our demands, and encouraging the cultivation of corn and other things, has increased the wealth of all the nations we trade with.

For us, and for all the civilised world, the uncivilised condition of Russia is a source of alarm. Had her people a prosperous and rapidly-extending trade, they would be averse from war, and would be careful to preserve the peace of the world. The English and the French, finding an ample stimulus for their activity in the pursuits of peace, have no inclination to molest or disturb their neighbours; but the Russians, having no hope from peace, making no progress, look out for occupation and rewards by invading other nations. The rest of mankind would have no dread of the Emperor's ambition, or of the fanaticism of his subjects, were the Sclavonians and the Calmucks, that yet wander over the plains or haunt the forests of his immense territory, converted into prosperous, peaceful traders, like the bulk of the inhabitants of the West of Europe.

MEMOIR OF REDSCHID PACHA.

An element in the opinion which should be formed in this country of the position and prospects of the Turkish question must consist in a knowledge of the character and antecedents of Redschid Pacha. M. Guizot, on a public occasion called him a "great man." It is the known opinion of Lord Redcliffe that he is the only honest man in the Turkish empire; and he is the historical figure worthy of some study, if only in his capacity as the "Reforming Vizier." But, at this moment, when his conduct and advice are affecting a controversy in which the peace of Europe may be involved, we should know all that is to be known of him.

Of all the Turkish statesmen, Redschid Pacha is the best known to the West. Among the other European "reforms" of the late Sultan Mahmoud was the institution of a diplomatic corps for the organisation of a representation of the Porte at the capitals of our great powers; and Redschid Pacha was the Plenipotentiary, in succession, to Paris and London—in each Court making the acquaintance of all the great European diplomatists and statesmen, from a continued and confidential communication with whom he probably derived those tendencies which subsequently pointed him out as the governing Minister in Turkey—viz., Minister for Foreign Affairs. He had been educated for Government—a rare training in Turkish governors; and his education was one of the best, though, perhaps, with reference to the culture of his country, of too enlightened a kind. He was born in Constantinople in 1802. His father, who died when he was a boy, was a functionary of the Sultan; and he was educated by Ali-Pacha, Governor of the Morea, who had taken as wife one of Redschid's sisters.

Ali Pacha made Redschid what we would call his private secretary; and as Ali Pacha went through the vicissitudes of statesmanship in Turkey—being made Grand Vizier, then disgraced, and then made commander-in-chief of the army which fought against Grecian independence—the young politician had great opportunities, of which, it would appear, he availed himself to the full; for when his patron and brother-in-law died, ruined by his failure in Greece, Redschid had become a well-known and trusted man. He was accepted in high offices of state as a competent bureaucrat; and in Constantinople his faculties as a linguist obtained for him the protection of the Sultan Mahmoud. The "Reform" era of that vigorous man had just commenced; he had annihilated the Janissaries, and, thus freed, was innovating on Mussulmen habits and customs in all directions: and in Redschid Pasha (though we anticipate his title) he found a sympathiser—as bad a Turk, and as good a European—in theory. The Sultan was nearly ruined; he had been beaten in Greece by diplomacy, Russia had beaten his armies; his fleets were gone; and Mehemet Ali, in Egypt, was throwing off a loose allegiance; and he was comforted, in his distresses, by an assurance that he would immediately recover everything when he learned from the enemy, and adopted the European system. The Ministers at the moment were an old and worn-out man and a bigoted man: Khosren Pacha, who, a mimic of Talleyrand, agreed too readily with the Sultan; and Pertew Pacha who, a true Mussulman, opposed everything; and the ardent and ambitious young reformer easily intrigued his way into power between the two. In 1833, he became conspicuous as framer of the treaty of Kutahieh, to which Mahmoud was forced by his defeat at Konieh, and in 1834, with great prestige, he appeared as Envoy in Paris and in London—staying altogether two years in Europe. All his theoretical predilections for European ideas and organisations were confirmed by his experiences in these travels; and he returned an ultra-reformer. Pertew Pacha, in the interval, had reached the highest post in the Ministry, and now summoned Redschid Pacha to Constantinople to act as Minister for Foreign Affairs, and it was a strange illustration of Eastern politics, and one not likely to lessen Redschid's un-Turklike horror of the Turkish system; that before he reached the capital, Pertew had been bowstrung; the order for his death having been obtained from Mahmoud by the other party when his Magnificence was dead drunk! Hence, Redschid Pacha re-entered Constantinople under sinister auspices; but it is indicative of his cleverness that he overcame the danger, and that, in a short time, playing upon Mahmoud's remorse, he had obtained the disgrace of Pertew's murderers, and secured himself complete power. In the East statesmanship is intrigue; and Redschid Pacha was a profound diplomatist. He immediately commenced a vigorous realisation of all the ameliorating projects of the Sultan; and, rapidly, the Turks were insurrectionary—every functionary was conspiring against him; Russia, suspicious, was backing the functionaries, and Mehemet Ali was bidding for Constantinople, as the only true defender of the faith. In fact, Redschid advanced too rapidly; and, having no natural support, either in the country or externally, he fell, and his disgrace was completed by being despatched on an extraordinary embassy to Lord Palmerston, his object in Europe being to effect an alliance against Russia. He extended his travels, this time, farther than on the first occasion; and for the first time in history a Turk was received by the Pope. In 1839 he found himself in Paris, a great political lion in French society; and it was here that the startling news reached him of Sultan Mahmoud's death, and the destruction of the Turkish army by the Egyptians, at the great battle of Nezib. This was the "Turkish crisis," which tried every statesman in Europe; it was the turning point in the hitherto successful career of Redschid Pacha. He proved equal to the occasion: ere he went, he had accomplished that quadruple alliance which baffled Mehemet Ali; and, at Constantinople, his flexible dexterity out-manœuvred all competitors for the favours of the young Sultan, Abdu-'l-Medjid. In the Divan he became omnipotent; and the Hatti-Scherif of Gulhana was the result—that Tanzimat which was to save, but which, according to some writers, has broken up, the Turkish Empire.

We need not enter very much further upon the career of Redschid Pacha. From the first he obtained a hold on the Sultan, and on Lord Redcliffe, who has been for ten years the real arbiter in Turkey; and, despite various intrigues (the last occurred the other day, when his old enemy, the Sultan's brother-in-law, obtained his temporary fall), he has sustained his prominence in the politics of the East. Soon after the declaration of the Tanzimat (reorganisation) he was again in Paris (1841) as Ambassador; and, from that date to 1846, when he became Grand Vizier, his life was a series of struggles with Riza Pacha, to maintain the new system against the old in domestic policy, and in foreign policy, to preserve Turkey, by sustaining, among European statesmen, the theory of that "balance of power," in the interests of which Turkey cannot, it is supposed, be sacrificed to Russia. Of the final struggle with Riza Pacha, an amusing and, we believe, in the main a correct—account is given in Mr. Boyle St. John's new work, "The Turks in Europe." The narrative is a revelation of a Cabinet crisis in Constantinople. "Riza (1846) began to misconduct himself in the opinion of his royal mistress (the Sultan's mother). Her jealousy was excited, and she determined to overthrow him. This, however, was not to be done without the concurrence of Abdu-'l-Medjid, who had now a will of his own, and who was not likely to be pleased by a confession of the real motives of her altered opinions. She accordingly communicated to the young Sultan reports which she had heard of the dissolute life of his Prime Minister, and urged him to ascertain the fact by personal observation. The counsel found favour in the eyes of his Majesty. He was told that Riza, as soon as the busy business of his day was over, used to retire to one of the imperial kiosques on the borders of the Bosphorus, and pass the night in jollity. The morning was generally spent in sleeping off the effects of this debauch, and on Friday, the Mahometan Sabbath, the orgie was generally re-commenced in the afternoon, and continued during the second night. Accordingly, early one Friday, Abdu-'l-Medjid took his caique, and began to visit all his kiosques, one after the other. The navigation was tedious; time passed away; garden after garden was inspected; and no signs of the wassailers appeared. Towards evening, however, the caique stopped at a landing-place, at some distance from which inland there was a kiosque, situated in a vineyard. By this time the Sultan was tired; yet, determined not to be baulked in his researches, he sent one of his attendants with orders to bring him accurate accounts at midnight of whatever he observed. This done, Abdu-'l-Medjid returned to his palace, half re-assured as to the moral character of his Minister. But the attendant, on reaching the vineyard, found Riza, with several other dignitaries, bowl in hand surrounded by dancing-girls, engaged energetically in relaxing his mind, overpowered by political exertions. The dizzy conclave received him with acclamations of welcome; glorying, as topers generally do, that there should be a new arrival to keep them in countenance, or encourage them to fresh excesses. The spy drank, and drank too much; and not till midnight did he remember the commands he had received. Hastening to stagger away, which he did unobserved, he repaired to the palace, where the Sultan impatiently awaited him. The words, which he found it impossible to utter, were unnecessary: his condition spoke for itself. The next day Riza Pacha was dismissed, and Redschid Pacha was named Vizier, and reform became again the order of the day."

Redschid Pacha is emphatically "a man of affairs;" orderly, astute, and busin-ss-like. If he has a failing it is his love of money; and it is a scandal that his star was once dimmed by the Sultan's belief in his tendency to speculation. Were, however, such an accusation well established, such a fault would be regarded as a venial one in such a country as Turkey. His unpopularity arises from other sources. He is too generally regarded as a tool of Lord Redcliffe; and the reason of that suspicion is that he agrees with Lord Redcliffe in considering that the world, and especially Turkey, is to be governed and saved by diplomacy. One cause of his favour with the present Sultan is his aversion to war; and, assuredly, it is not difficult to trace the mind of Redschid Pacha in those recent negotiations which, for the moment, Russia has gained such advantages over Turkey. It is sneeringly said of him, by the burly Mussulman party now clamouring for war, that he is "a poet;" and there is no doubt that he has, in his time, written verses, "for private circulation only." Whether a poet or not, he is not an impassioned one. What conquers the Mussulmans, with whom he is engaged in perpetual battle, is his icy manner and imperturbable stoicism. He is also unpoetic in appearance, being of a fat and ungainly figure.

It is not often that anything is to be said of the domestic affairs of a Turkish public man; but there is in this instance. Not a traveller but has something to say disparaging of the menage of Redschid Pacha. As a reformer, preaching the European system, and discouraging, among other Turkish manners, the practice of polygamy, he confines himself to one wife; and that is a virtue which is sufficiently extolled. But he permits his wife to carry on a villanous trade; viz., the procuring, bringing up, and disposal of, young girls for the harems of others. In another respect he has failed in insisting upon a proper household. When English gentlemen visit him, they complain that they cannot obtain an audience without appeasing, at great expense, the clamours for "backshish" which are raised by his too numerous, dirty, and useless servants. It costs the English Ambassador 500 piastres, whenever he has to visit the Vizier; and, under these circumstances, it is surprising how friendly relations with England have been sustained. It is, however, admitted that he is worth the visit of a traveller. He speaks French admirably; and is candid and communicative, or appears to be so. He is also always complimented upon a remarkable reform: he is found sitting in a chair by a table, and asking the visitors to take a seat on the sofa!

His relations to the Sultan are about to be drawn still nearer by the marriage of his son to one of Abdu-'l-Medjid's daughters—a somewhat disagreeable honour, for it will be the duty of the son to murder all the male children he may unhappily have.

(From another Correspondent.)

The question of the passing moment—the question which has long engaged the consideration of thoughtful men, but which is now pressed upon their attention with overwhelming power, is as to the fate of the to Ottoman Empire. Is it to die out in Europe? Is it to be handed over to the Czar? Or, on its ruin, is a regenerated Greece to arise?

How these questions are to be answered depends much upon the character of Turkish statesmen. France and England can do much, but they cannot give a dead body life or prolong a nationality that has long ceased to exist. For the noble shelter she gave to Kossuth, Turkey deserves well of Europe; and for her consumption of English merchandise, for the scope she gives to our enterprise and skill, she deserves well of us in her hour of need. Even Mr. Macfarlane, no friendly witness, confesses that now English ladies may venture in the bazaars of Constantinople, and that the Christian may now walk her streets without being insulted by the proud fanatics who take the Koran as their guide. With the policy which has brought about this desirable consummation, the name of Redschid Pacha is indelibly associated. He is emphatically the Reform Minister. The change which has taken place in Turkish customs and Turkish laws is due to him, and it is well for Turkey that at this time her destiny is placed in his skilful hands.

All Europe is familiar with the name of Redschid Pacha. To glean, however, the particulars of his life is no easy task. In Turkey the antecedents of a statesman's life are not so well known as elsewhere. Nowhere are the freaks of fortune more widely illustrated than in Turkey. The great man of to-day to-morrow may be an outcast. The outcast of to-day to-morrow may be placed on the pinnacle of power. Nowhere do the extremes of society meet more than in Turkey. The only instance of hereditary rank acknowledged in Turkey were the Dere Beys (valley Lords), who transmitted their title and estates to their next heirs, and, in default of issue, could nominate a successor; and they were abolished by Sultan Mahmoud, the father of the present Sultan. In Turkey the highest Pachas often spring from origins the most obscure. The late Sultan's brother-in-law was a slave; Koshief Pacha, who for fifty years filled the highest dignities of State, was the same; so, also, was the brother-in-law of the present Sultan. Another brother-in-law was the son of a small shopkeeper in Galata. Ali Effendi, who began life as a clerk, was, in 1847, Minister of Foreign Affairs. Thus, in Turkey, statesmanship belongs to no class. Its honours all may aspire to—all may win.

Of the early life of Redschid Pacha we know nothing whatever. In 1834 he was Referdaz to the Divan. In 1836 we find him in the Turkish Embassy at Paris—an office for which his excellent knowledge of the French language and literature qualified him in an eminent degree. Subsequently, he was Ambassador to the British Court. He was first named Minister in 1846. Twice has he been Grand Vizier; thrice has he held his present office—that of Minister of Foreign Affairs. M. Bianchi, late Oriental Secretary to the Foreign Minister of France, says of him:—"Redschid Pacha is not only—by the European celebrity of his name—the first statesman in the Empire, but is also indisputably the Vizier whose past history recalls the greatest services rendered to the country and to civilisation. Among these services may be enumerated the constitutional act of Gulhkane—the quarantines the posts—the abolition of monopolies—the reorganisation of the army—the reform of the currency—the creation of the University; in short, all the important improvements by which Turkey has been favoured by the Sultans since 1838, have either been suggested or prepared, and executed, by Redschid Pacha, under the auspices of these Sovereigns." To Europeans this great act is to be known as the Tanzimat—that greatest of all innovations on the Turkish Constitution, by which religious equality is granted to all the subjects of the Sultan, whether they believe the religion of the State, or bow to the Christian's God. Redschid Pacha has always been at the head of the party in Constantinople opposed to Russia; and between him and Lord Stratford de Redcliffe there has been a friendship of no common kind. Redschid Pacha's open rival has always been supported by the Sultan's mother, the Valide. Lord Stratford de Redcliffe has been the mainstay of Redschid Pacha's power. When he was absent Redschid Pasha's influence daily declined; as soon as it was known Lord Stratford de Redcliffe was fairly on his way to Constantinople, immediately Redschid's house was filled with visitors, and the *Journal de Constantinople* spoke of him with lavish praise.

A gentleman, now resident in Constantinople, and who had frequent opportunities of personal intercourse, speaks of Redschid Pacha in the highest terms. He describes him as well versed in history French and logic—he writes good notes, is very much attached to Europeans, and ever ready to attend to their suggestions; he is very lenient to Christians—a virtue we need not add very rare among the Turks, though happily becoming more common every day. He has been charged with venality—a charge, however, which has never been substantiated. He is a very moral man, discountenances the Turkish habit of keeping a harem, and is the husband of one wife, by whom he has a family. His one fault is, that he is too mild and tender-hearted—that he is not sufficiently energetic for the trying time in which he lives, and the reckless adventurers that ever surround the Court. His age is fifty-two or four; he is of middle stature, has a handsome countenance, good eyes and head. Mr. Macfarlane, who is no admirer of Turkey in general, or of Reschid Pacha in particular, gives rather a different account of his personal appearance. Mr. Macfarlane says:—"I never saw him but once, when he was returning, through the filthy streets of Tophana, from a conference with the Sultan, at Dolma Bagché. He appeared to be a very different man from what he was when in London; he had grown obese, and his complexion had become muddy, he looked gloomy, uneasy, and sulky; but this may have proceeded from the fact, that he was then on the point of being thrust from place and power." In such circumstances a man may well look a little uneasy and sulky. In such circumstances Wolsey broke his heart, and the great Bacon crawled as a worm. We are told, when on the debate of the House of Commons on Lord Melville, the Speaker gave the casting vote against Ministers, even the haughty Pitt burst into tears. Mr. Macfarlane might have had more pity on a Minister about to be deposed.

With all foreigners Redschid Pacha is popular. In Turkey, however, there are a few grumblers who dislike his reforming ways, and sigh, as did our own Lord Eldon and Sir Charles Wetherell, at the approach of inevitable ruin. Of course Mr Macfarlane managed to pick up one of these gentry. To him thus spake our Turkish croaker:—"It is all one," said he, "whether Riza is up and Redschid down, or Riza down and Redschid up. The one cannot govern worse than the other—nor better. Neither of them can be more than a part of a bad and complicated machine. Neither of them can alter the system of government, or check the influence of the Seraglio, or create honesty or good faith where none exist, or awaken conscience in men who never knew the meaning of such a word. Lord Stratford de Redcliffe will support Redschid because he believes him to be not only the better Minister of the two, but also a good and honest man. Lord Stratford de Redcliffe will

find out his mistake. There is a difference, though it is of no consequence to us; Redschid has more of what is called enlightenment than Riza. Redschid has travelled a good deal in Christendom—has resided also in London and Paris. Redschid sometimes reads French books. He is a man of quiet habits and decent life, and not a rake, nor a debauchée, like Riza. Then, while Riza is accused of a leaning towards Russia, Redschid professes the utmost dread and hatred of that power." Still, in this portrait, drawn by an unfriendly hand, Redschid appears in a better light than his great rival. Of course if the world has blundered, if there be no such thing as progress; if that be not our "destined end or way," the great Turkish reformer is an enemy to his country. On the contrary, if there be progress; if the savage can be refined into the civilised and educated man; if humanity can become a great and glorious fact, then Redschid Pacha deserves our sympathy and praise We assume that European civilisation is correct; that woman should be man's companion, that man should be educated; that he should lead a decent life, and practise a Catholic creed. So far as Turkey has been concerned, such has been Redschid's aim. Surely it is better to help in such a work than to go moaning through the streets, as Mr. Macfarlane's informant did, exclaiming "We are no longer Mussulmans, the Mussulman's sabre is broken; the Osmanlies will be driven out of Europe by the Giaour, and driven through Asia to the regions from whence they first sprang. It is *kismet*. We cannot resist destiny."

The Portrait of Redschid Pacha upon the preceding page has been engraved from a fine sketch by Sir David Wilkie, R.A., the property of Mrs. Johanna W. Batty, and to be seen at Messrs. Graves and Co., Printsellers, Pall-Mall.

THE DETERIORATED CONDITION OF OUR SADDLE-HORSES.

Under this title an interesting and important pamphlet has just been published by Messrs. Hatchard. The author writes with the authority of an experienced cavalry officer, through whose hands, or under whose inspection, a very considerable number of horses are annually passing. England has long been famous for the possession of breeds of horses unrivalled for beauty, for swiftness, for size, and power; equally fitted for luxury and labour, for war and chase, for harness and for equitation. For centuries we have prided ourselves on the possession and the cultivation of these noble animals; for more than two hundred years we have pursued their improvement with an ardour in which love of the animal has been combined with the commercial spirit which forms so marked a feature in the English character. We are almost the only settled and civilised race, in whom the passion for horse exercise is found pervading both sexes, and all ages and conditions of life, with little less fervour than among the nomad tribes of the plains of Tartary, the deserts of Arabia, or the pampas of South America. In Spain, in Germany, and in France, the wealthy and the military ride as a matter of state and fashion, and that chiefly when they are young; the humbler classes rarely, except as part of their occupation, and the aged and the dignified seldom, except when compelled for need of other means of conveyance. But with us aged peers, reverend bishops, learned judges, careful bankers, authors and artists, physicians and barristers, set an example, which runs down to the butcher's boy and the costermonger

Among the early signs of success in the errand-boy become a merchant, or the prizefighter grown into a publican, the most frequent is to be found in a horse. The celebrated Jack Langan's ambition was completed, when he grew wealthy, by a white hat and a big horse. As England is one of the few civilised countries in which people ride for the sake of the pleasure of riding, and not for state or fashion, so it is naturally one of the countries in which children of all ranks ride at a very early age. There is no such word as pony in any other language, than the English. While the French boy is beating a miniature drum, or flourishing a tin sabre, the English boy is cavacolling on a horse-headed stick, or mounted on a broad-backed Shelt'e "a world too wide for his *short* shanks."

It would require a very rapid increase in horse-breeding to supply the constantly-growing demand of such a nation as ours, if no causes were at work to check the supply. But it so happens that, large as is the demand for live horse-flesh, the demand for dead mutton is considerably greater, and the supply of it a more profitable transaction. We have no exact statistics of either the one or the other; but the result of all our inquiries leads to the conclusion that thousands of acres formerly devoted to horse stock or oats are now covered with turnips and sheep.

An increased price will soon cure any deficiency in the supply of horses; but price alone cannot create quality. It is the opinion of the author of the work before us that the English saddle-horse is, and has been for some time, deteriorating in constitution and in powers of endurance. He gives his reasons for this belief; and they are worth consideration. He takes the cavalry as an example. He asserts that, even during the Peninsular War, the expense of keeping up our cavalry, from the delicacy of our horses, was "intolerable." That, in the useful qualities, they were inferior to the French cavalry. The late Lord Harcourt told him, in 1826, that the 15th and 16th Regiments of Light Dragoons, which went with him to America, exhibited a union of strength and activity unknown at the time he was speaking; and yet the cavalry horses of 1826 were much better than they are at present.

At the Encampment at Chobham the horses are covered in at the picket-post; while at the encampment at Weymouth, in 1805, horses tied to the picket-post in the open air were kept in the finest condition. This housing of the cavalry at Chobham is one of the many proofs of the deterioration of our horses:—"The Life Guards in Spain had a large portion of their men dismounted by the horses getting sore backs, while only marching up the country to join the army; and a few years afterwards the 1st Life Guards suffered from the same cause in only marching from London to Nottingham."

We have, according to the showing of the author, an expensive force of cavalry mounted on horses unequal to the weight they have to carry, liable to sore backs after a short march, so tender that a brief exposure to the vicissitudes of a campaign would decimate them, and so weak in their legs and feet that a series of moderate marches would render a large proportion useless from lameness. If we turn from cavalry to saddle-horses, we are pressed by the difficulty of finding animals which are at once active and enduring.

The deterioration of our cavalry and of our saddle-horses may be traced to two causes—to one of which our author scarcely alludes We have no longer the large class of useful horses from which our cavalry was drafted before good turnpike roads and railroads put an end to travelling on horseback.

As we have no breeding establishments like those maintained in France, the German States, and Russia, we obtain our horses from private breeders. As long as there was a large demand for good roadsters, there was a large supply, and from this supply, the cavalry were easily mounted. But the demand does not exist. Road travelling with saddle-bags has ceased. Pack horse travelling has ceased. Road-gig driving has almost passed away. Stage-coaches are things of the past generation.

There is no sure demand now for an animal which has not beauty, fashion, and showy action, as well as face. Not one half-bred colt in ten, probably not one in fifty, will make a hundred guinea park hack; the remainder, which might formerly have made plain roadsters, from the diminution of road and coach travelling, are almost unsaleable. Breeders confine themselves to thorough-breds for the turf, of which we shall presently say something; to cart-horses, which, when good, have qualities exactly the reverse of hacks; to harness horses, which must be too large to make good saddle-horses; and to hunters, which may be excellent with faults which would utterly condemn them as roadsters. A big horse can always be sold for a brougham, or a family cruelty-van, or an omnibus; or, if black, for a hearse. But a stable full of compact roadsters of the old school, that would travel for weeks, carrying fourteen stone, twenty five to thirty-five miles a day without being sick or sorry, would scarcely fetch £30 a piece all round, unless they had that showy action and elegant form which are admired in the parks.

But there is another reason for the deterioration of our cavalry horses, on which the author dilates at some length, and with effect We have increased the size and the speed of our race-horses, while diminishing the weights they carry, at the expense of their constitutions and powers of endurance. As yearlings they reach fifteen hands and a half; at two years old they race; at three they acquire the reputation that makes them stud horses; at four they break down, or, if they survive are considered old at six; and are then usually withdrawn to raise stock as swift for a short distance and as feeble in constitution as themselves. With this early maturity have come a host of diseases unknown to horses reared in a more natural state.

Races are now arranged to suit the capacity of the modern feeble race.

By a quotation from the late Mr. Smith's work on breeding for the turf we learn that between 1718 and 1756, races were usually run on distances of four to six miles. We hear of a horse called Exotic, who commenced running in 1760 and continued on the turf until the year 1767. During this period he won eighteen times; and in his seventh year on the turf won a race of four-mile heats in four heats at Peterborough. We have had no such enduring horses in our time except Mr. Mytton's Euphrates, who did not commence running on the turf until he was seven years old. Cartouch, another horse of the same period as Exotic, was only four teen hands high; but it was supposed that no horse was able to run him carrying twelve stone weight. Black Chanse ran from 1737 to 1744, winning five times in one season—at Guildford, Salisbury, Winchester, Lewes, and Lincoln, every race four miles, and every race contested.

If we turn from these and similar records of the constitution and powers of race-horses of the last century to carry heavy weights through four-mile heats, to their portraits, as handed down to us by Seymour and other artists, we find an explanation of their powers in their "short legs, deep bodies, wide hips, and strong loins." Whenever horses of the same stamp are bred now, they are found too slow for our short races, made hunters, and we lose the benefit of their lasting stock. The race-horses of the present day are many of them lame before starting for their first race; others are rendered so for life by running a short race like that called "The Derby." Nearly all are, more or less, infirm from their birth, "knuckling in their pastern joints before they have done an hour's work." They exhibit straight shoulders to an extent unknown to our turf so late as thirty years ago. The young stock show, from their earliest years, constitutional weakness. They cannot move about for some days after they are born. The foals of other breeds move about as soon as dropped. They are forced on as much corn as they can eat, and for the first twelve months the whole milk of a cow is devoted them.

Their weak constitutions are the effect of breeding, without regard to the principles of form, from those animals which acquire a fleeting reputation on the turf. These winners are few in number; and the consequence is, breeding in and in, which accounts for the prevalence of the defects we have recited.

The growing weakness of our race-horses has been met by giving them less to do. The great race of the year is a three-year-old race; and, after three years, weights are so multiplied on a winning horse as to render a long career impossible. "To the Jockey Club, or gentlemen who breed race-horses, it matters not what is the character of their horses as a whole, each individual desiring only to have the best of that whole; and they are content to see their horses lose every quality but speed."

So far we have gone with the author; but when we come to consider his remedies, we can no longer follow his line.

He very justly concludes that to breed backs for moderate speed, long endurance, and firm healthy legs and feet, no stock are equal to well selected Arabs. This has been proved in Prussia, where the breed, deteriorated by crosses with the large, delicate English blood horse, have been restored by the introduction of superior Arabs. We cannot show anything like the performance of the Prussian mountain artillery, which charges up and down places apparently inaccessible to horses without guns. In like manner, in Australia, where great size is not required, and the chief market is found in the Indian cavalry, it is well known that the best stock has been produced by crossing the Arab with the English blood-mares. And, although the Arabs introduced have rarely been of the first class, the performances of the colonial horses on long journeys, at a high rate of speed, have equalled the best work of our ancestors' famous hackneys. There are well-authenticated instances of two hundred miles having been done on grass by colonial horses in three days; while, in drawing Indian artillery, the English-imported horses were utterly defeated in competition with the produce of Australia. Shropshire long possessed a superior class of hunters, crossed with Arabs; introduced by the great Lord Clive. But it is quite hopeless to expect that, as a matter of speculation, the general class of breeders will make use of Arab blood, from which they are not likely to derive any benefit in less than two or three generations. As Arabs are usually small, and not likely to breed either racers, or hunters, or carriage-horses, such experiments must be left to enthusiasts among noblemen and gentlemen, among whom correct principles of breeding may eventually make way.

At present, breeding of race and almost all other horses is conducted on purely empirical principles. A stud horse is chosen because he is the fashion. Those points which are so carefully studied in selecting pure bred bulls, or rams, are rarely considered in breeding a colt. The short-horn, or South Down breeder, seeks to amend the faults of the cow or ewe by corresponding merits in the bull or ram. The breeder of the race-horse, which is the very foundation of all our hunters and backs, looks for such blood as will make his yearlings sell well. As for the ordinary run of breeders of half-bred horses, chance and fancy direct the selection of stallions.

The author of the work which has formed the text of our remarks, desires to see premiums for enduring horses, offered in the shape of Queen's Plates, to be run for in long distances, at heavy weights, without regard to age. We have little faith in any such remedy, unless it be in Ireland, where the usual stakes are insignificant, the tastes of the people for sport strongly developed, and the country peculiarly suited for horse-breeding. Here the stakes in all the great races, and the speculations of betting, reduce Plates and Cups to insignificance. We must trust rather to the general diffusion of information in the true principles of form and of breeding. Few know what is the appropriate form for a horse intended to gallop, and for a horse intended to draw; fewer still how to secure the greatest probability of a well-shaped foal by choosing sire and dam. Yet these things can be taught If they were taught, we should not see well-bred horses crossed with cart horses.

It would be well to teach our infant ploughmen the points of a good cart-horse from models, as compared with the points of a good hackney or hunter, as well as the principles of draught. In like manner, the anatomy of the horse should form part of the instruction of farmers' sons. If it did, the influence would soon rise to the higher classes; and whenever cavalry subalterns, as well as field-officers are, as a body, well informed as to what a good road horse ought to be, the condition of our regiments will improve. At present, we are ruled by fashion. There is no commercial demand for the class of horses required by the cavalry. Our breeders are not sufficiently well informed to know that we should always be trying to amalgamate the loins and quarters of a Cumdix mare with the perfect forehand of a Touchstone. We can hope for nothing from Government interference; we must trust to educating the horse-breeding and horse-buying public; and it will take some time to do that. In the meantime, we commend to the Education Committee of the Privy Council, and to the School of Design, at Marlborough-house, the advantage of circulating through the country models of the points which produce swiftness, and of the points which produce powers of draft. The lecture on the horse would be both popular and profitable in country schools.

THE RUSSIAN FLEET.

A correspondent of the *Times* says:—"On the 15th ult. his Imperial Highness the Crown Prince had inspected the two divisions of the Baltic fleet, lying in the roads of Cronstadt, 37 sail strong, which thereupon put out to sea, as was said, to cruise in the Bay of Finland. British seamen, who have had opportunity of making a nearer acquaintance with these vessels than merely passing by them whilst they lie imposingly at anchor, speak very disrespectfully of their seaworthiness and the talents of Russian sailors in handling their ships. It seems that the greater part of the vessels are older than deal-built ships can generally be kept water-tight, and that the slightest approach to rough weather compels a very numerous and strenuous attendance of hands at the pumps. Jack says they daren't put out to sea, even in fair weather, for fear it should turn foul before they can get back into port. The Russian sailors are admitted, however, to be good gunners." This is by no means a fair or just account of the Russian fleet, for the Russian ships, especially those composing the Baltic fleet, are manned chiefly by Finlanders, a hardy race, the best of northern seamen "Jack" is a prejudiced fellow when speaking of foreign sailors, and in this case we believe he speaks from prejudice alone; for it is well known that the Baltic fleet is exercised more at sea than any other fleet in the world, and they are sure to pick up bad weather in their usual cruising ground. We have no doubt that a British man-of-war, of equal force to the Russian man-of-war, would in an action without doubt, capture or destroy the latter; but we must not underrate our enemy, nor talk of their bad ships, when we have line-of-battle-ships in commission in our navy that could not open their lower deck ports in anything but moderate weather.—*Plymouth Mail.*

THE RUSSIAN ARMY.

The English public has no idea of the extent or nature of the military resources of Russia. We are almost afraid to state the number of soldiers constituting the peace-armament of that country; and, doubtless, it may be considered a joke if we set them down in time of peace, at two millions. Nevertheless, that is about the force. In old times, to talk of Holland was to talk of ships, a great navy, an ever-active commerce, and innumerable colonies. At present, to speak of Russia, is to speak of a great military establishment. The country is a vast camp, and the male part of the people are but one immense army. To be a Russian is to be one of these three things—a woman, a serf, or a soldier. Once under the colours, that transformation about which Curran was so eloquent is effected: the hereditary chains fall to the ground, and the slave is not only enfranchised, but ennobled. Here we perceive a motive power more effective than press-gangs or conscriptions. In order to estimate the warlike strength of a nation, it is not enough to know how many troops it can place under arms, or habitually keeps on foot, but what is the spirit which animates them—whether they are well-disciplined and brave, or the reverse. For example, the Chinese may have a still more numerous army, and certainly they have a smaller space to garrison. But they are not a formidable people. Of valour, the Russians possess that share which seems to have been liberally given to all nations who dwell in cold climates, and are obliged to endure physical hardships. But the nature of their institutions is of still greater effect in rendering them firm and intrepid in the presence of the enemy. The old notion was that the Russians will not turn their backs, because they will be shot if they do. When once they get home, or beyond reach of further molestation, all manner of courts-martial are held, and whoever has fled from the foe is put to death without pity, and without delay. As well be killed with honour in battle, as be executed in disgrace after a defeat. This idea is not without foundation, inasmuch as no army ever existed in which a discipline so rigorous and so stringent was observed. Not even the legions of ancient Rome were subjected to a more unrelaxing treatment.

But severity is not the only spur to duty. Slavery determines and ceases once under the colours. The grades of the army correspond with the degrees of nobility; and there is a military hierarchy which begins with him who gets the first humble "galons" or marks upon the sleeve of his left arm. It has been well observed that religion blends with all those military institutions which have produced a great effect in the world. The most irreligious of conquering armies was that of France, between 1793 and 1812; and even that army had a sort of superstition to compensate for its want of faith. It trusted blindly and devotedly in its "Little Corporal," who was visited, as it believed, by his "red man;" while he, in turn, mused about his star. The Romans of old were invincible, because they thought that they were; and, not to lose time in examples, which will occur in numbers to every reader of history, the modern Russian army is as superstitious a force as ever was marshalled under any banner. Their Emperor, who is, *ipso officio*, Commander-in-Chief, stands to them *loco prophetæ*. He is the Viceregent of the Almighty. All his Ukases have some reference to his divine character. He cannot publish a state paper, without alluding to the sacred mission which he has to fulfil, and to the furtherance and glorification of that *orthodox* faith of which he is the recognised head. That so many Emperors of Russia should have been assassinated as to suggest to a witty person the idea that murder was "the natural death" of a Russian monarch, would show how weak great convictions are to prevent great crimes, only that the criminals have almost always belonged to the aristocracy. The credulous and honest mass of the people never lift their hand against the Czar. With them regicide is parricide. Even the present Emperor's addresses to his subjects show the prevalent feeling. In the instance of the insurrection, which he suppressed by showing himself in the Haymarket at St. Petersburg, and making a speech, he began by lecturing the mob on the reverence due to the Supreme Being, and to his viceregents; and he finished by commanding them to kneel down, and ask first the forgiveness of God and then his. The command was instantly and unhesitatingly obeyed. With this great fanaticism, with its wonderful organisation, and with its prodigious numbers, the Russian army, which is the very soul of the Russian people (all Russia seeming to be itself an army), is formidable indeed. We have mentioned its organisation. We have not here time or space to explain the marvellous pecuniary arrangements by which its efficiency is constantly preserved. A more wonderful instance of economy, and a more striking mixture of the civil and the military life is not furnished by the history of mankind; but we cannot stay to describe the system. In a military sense, those are mistaken who fancy that the Russian army depends solely on brute force, on numbers and on frenzy, for its strength. Nothing can be more elaborate than the manner in which it is trained. All modern improvements are added to this primitive enthusiasm. There is a regiment at St. Petersburg, not a man of which

RUSSIAN INFANTRY.—GRENADIERS.

but belongs to a different corps from that of his neighbours, rank and file. As chemists say that the human body is perpetually changing its ingredients, so is this regiment. No soldier stays in it more than two years; after that he departs for his own proper regiment—for that which he leaves was but a school in which he learned whatever innovations in military accoutrements, and in their use, the march of years might have invented. Like a lamp which is continually emitting its rays and never losing in bulk, this regiment is constantly dispersing teachers throughout the army of the empire—some departing for Poland, and some for Siberia; some carrying the most recent inventions to the garrison of Archangel, and some charged to impart them to the columns on the Pruth. The corps to which we allude is called "the model regiment;" it is composed of the best and most intelligent men of every other; it draughts into itself by degrees, and returns the very *élite* of the army, and is the fountain of all science and progress in matters of war. It is always stationed in the capital. Such an institution might not be amiss in more civilised forces.

We have said enough to give an idea of the organisation of an army which thinks itself destined to conquer the world, and which is the very pick and choice of the nation, with whose flag it is entrusted. The Russian infantry is famous. All pains have been taken for forty years with the artillery; and since the extinction of the Mameluke Cavalry, such light horse as the Cossacks has nowhere existed.

The Prince Paskewitsch is at the head of the active army of Russia. The Russian army, according to the latest returns, is composed of 238 brigades, 318 regiments, 889 battalions, 325 batteries, 1469 squadrons, and 4900 companies. A letter from St. Petersburg states that recruiting is being carried on at a greater rate than at any time since 1848: previously, one, two, or at most three per 1000 were taken; after 1848, this was raised to from four to six. The last conscription began last autumn, and ended by the beginning of this year; and now there is a fresh conscription called for, to the unprecedented extent of ten men in 1000. The numerous and rapid journeys of the Emperor's adjutants to and from St. Petersburg had, for the most part, the acceleration of these levies for their object. Formerly, these conscriptions were made in autumn and winter, when the men were not so much wanted in the fields; but this time it has taken place in the midst of summer.

The *Constitutionnel* gives the following account of the Russian army from a source which it considers to be authentic:—

The Russian army is divided into the troops on active service, the reserve, and the local troops. The active army, of which the headquarters are at Warsaw, is composed of 18 divisions of infantry, or from 216,000 to 252,000 men; of 6 divisions of cavalry, or 28,000 men; of 72 batteries of foot artillery, or 12,960 men; and 864 pieces of cannon; and of 6 batteries of mounted artillery, 720 men, and 48 cannons. The whole force of the active army does not, consequently, altogether, make up 300,000 men, with 942 pieces of cannon.

The reserve is composed of the body-guard, the colonised grenadiers, two colonised corps of cavalry, and of the 5th and 6th dépôt-battalions of the infantry regiments. The whole force of the body-guards and colonised grenadiers is 96,000 men, and 320 pieces of cannon; the force of the two colonised bodies of cavalry is 24,000 men and forty pieces of cannon, as to the force of the 5th and 6th battalions of infantry belonging to the reserve, it is almost impossible to ascertain it with any certainty, as these battalions are only destined in a certain measure to fill up the vacancies which occur in the regiments of the line in the time of a campaign or of forced marches. The total number of the infantry regiments being 120, there would be 240 reserve battalions, or about 210,000 foot soldiers, if these battalions were complete; but, as they are constantly sending their men to the regiments to which they belong, their existence is rather nominal than effective. It would be too much, in fact, to say that this part of the reserve amounts to 120,000 men, but we put down that amount for the purpose of calculation, and then there will be a total force of the whole reserve of 240,000 men and 360 pieces of cannon. The local troops are the corps of the Caucasus, composed of 3 divisions of infantry and 12 batteries of foot artillery; that of Finland, with 4 battalions; that of Orenbourg, on the frontier of Turkestan, with 4 battalions; and that of Siberia, with 4 batteries: in all, from 72,000 to 84,000 men, and 288 pieces of cannon. The regular army of Russia, therefore, consists of 30 divisions, or 120 regiments of infantry, and of 13 divisions, or 60 regiments, of cavalry; and counts, at most, with the reserve and the dépôts, 628,000 men, and 1240 pieces of cannon; to which must be added from 30,000 to 50,000 Cossacks of various denominations, with their light artillery, as well as the interior guard and the gendarmerie. Out of that number there can really be disposed of in Europe only the active army, the body-guards, the grenadiers, and the two reserve bodies of cavalry—in all, 400,000 men, 72,000 horses, and 1,272 cannon: a considerable force, certainly, but not greater than others of the first-rate powers can bring into the field in time of war.

CHEVALIER GUARD. HUSSARS DRAGOONS.

RUSSIAN CAVALRY.

THE TURKISH ARMY.

"The Turkish army, as at present organised and equipped," says a letter from Constantinople, in the *Times*, "has never yet been brought face to face with a European force. In the last Russian war, the Nizam, or regulars, were a few raw, ill-organised conscripts, and the greater part of the army was composed of a hasty levy of irregulars. At present, the regular force that Turkey can bring into the field consists of seven ordous, or camps, each of 35,000 men, and each of these has a redif, or reserve force, of those who, having served five years in the regular army, have still seven years to serve as militia on extraordinary occasions. The strength of this redif varies, of course, according to the length of time that the ordou has been in existence. The Turkish soldier is well fed; he has two meals a day—his dinner consisting of two dishes with animal food, to which twice a week a sweet dish is added. He is also well clothed, and carefully tended as to his comforts; which are not disturbed by over much drill, as is evident by his awkward and boorish appearance, which he never loses, and in which he does not much differ from his superior officers. A foreigner in Turkish uniform is distinguished at once by his smart and erect carriage.

"Besides the regular army, Turkey contains a vast irregular force of great variety, which might be made most useful during a campaign. In European Turkey, the Bosnians are a warlike race, and under their feudal system—which was crushed, though not extinguished, by Omer Pacha—could furnish a large population of fighting men, both foot and cavalry. The horses are small and thickset, but active beasts, and well adapted for their mountainous country; their riders are armed with a long gun, gaily ornamented with mother-of-pearl and silken tassels, besides a yatagan, or long knife, and pistols. The foot are armed in the same manner. This race of Slavonians are remarkable for their large robust frame and warlike spirit. They were bound, under the ancient feudal system, to furnish a large force of armed men for the service of the empire; and in the late war with Russia this force marched towards the Balkan, but were not permitted to pass through Servia, since Milosh, the Servian Prince, was in the interest of Russia, and checked them with the Servian troops. The Bosnians are the most fanatical Mussulmans, and are distinguished from their fellow Christians by wearing the turban; the rest of their costume is like that of almost all the Slavonians of Asia Minor. The Montenegrins, being Christians and under the influence of Russia, could only be counted on as one of the many means of annoyance that Russia has in her hands. South of these, the Albanians, a kilted people, who resemble the ancient Scottish Highlanders even in costume, are entirely composed of foot, and are as hardy, dirty, and savage as any mountain warriors in the world. They are excellent riflemen, and are Mussulmans or Christians, much as their interest suits them. They are employed in garrison work in every remote corner of the empire, and are everywhere the terror of the peasant. The Grand Vizier is an Albanian; indeed, they have furnished many remarkable men. The Bulgarians, like the Greeks, are chiefly Christian, and are, therefore, not to be counted on for the defence of the empire. The Servians have the right of keeping a militia, but it is never called out. The Wallachians and Moldavians have a force, but of the most wretched description, unfit for anything but overawing a mob.

TURKISH SOLDIER.

"In Asia Minor, the Osmanlis compose the agricultural and town populations, and the use of arms is very common among them, though they cannot be called an armed race; the towns generally contain garrisons of regular soldiers, so that the citizen merely dons his arms when undertaking a journey. The nearest Mussulman neighbours to Russia are the Lagi, a small but savage people, inhabiting the ancient Colchis, and, until lately, serving feudally under Dere Beys; which custom still maintains to a certain extent, but nothing like what it was formerly, when a small army could be raised in a few days under the heads of their chiefs ready for active service. These Lagi have a distinct language of the Indo-Germanic family, and are a hardy aboriginal race of red-bearded mountaineers, quite distinct from the Turks, but joined to them by the powerful sympathy of religion. They are all footmen, and are armed with a short heavy rifle, a calmé, or large broad dagger, and pistols. About thirty years ago, an army of 300 of them besieged Trebizond, but were negotiated with, and induced to retire. They are agriculturists and fishermen, and inhabit villages which are thinly scattered in the dense pine forests covering that mountainous tract lying south of the river Phasis. From the coast of the Black Sea to the Taurus chain of mountains a great part of the population is nomad, and, besides the Turks or Osmanlis (and the Armenian and Greek Christians, who are non-combatants), consists of two distinct races—the Turcomans, who possessed themselves of the land before the advent of the Osmanlis, and who wander with their black tents up to the shores of the Bosphorus; and the Kurds on the east, the ancient Carduchi, who harassed the 10,000 Greeks, and who, in the middle ages, gave the great Saladin for the defence of Islam. These latter people are partly nomad, most of them leaving their huts in the mountains to wander with their tents and flocks in the rich valleys during the summer months. These people are found from Ararat to the southern mountains of Persia, and consequently dwell in every variety of climate, and lead from childhood a sort of military life.

"The northern Kurds about Ararat are still the very models of mediæval Eastern warriors, such as Saladin led against the Western knights of Christendom. The adventurous tourist may at the present day, while traversing some broad valley in these regions, suddenly come upon a troop of these Kurds, mounted on active, spare, and high-bred looking horses, and clothed head and trunk with chain mail armour, and armed with the long tapering lance, the mace, the scimitar, or battle-axe; their chiefs being distinguished by the richness of their arms, their superior horses, and the white plume of the egret in front of the polished casque. In the highest mountains the Carduchi are still found among the crags of Bohtan and Julamerk, but are not horsemen. Their arms are the rifle and dagger, both of home manufacture. Their enormous and many coloured turbans and their brilliant costume give them a remarkable appearance; and their fierce melancholy countenance is but an index of that stern fanaticism which but seven or eight years ago sacrificed many thousands of the Nestorian Christian mountaineers. Further south we still find the same people, with the same habits, but first-rate horsemen, who have within the last thirty or forty years substituted guns for bows and arrows; and who, in combat, quickly wheeling round their horses and discharging their guns while fleeing, are, like the ancient Scythians, more terrible in retreat than in onset.

"The Turcomans, who are spread over the whole of Asia Minor, are also a most warlike people. Clans numbering many thousands acknowledge the Sultan as the representative of the Caliphs and the

TURKISH ARTILLERY

Sovereign Lord of Islam, from whom all the Frank Kings receive their crowns; but they are practically independent of him, and pay no taxes but to their own chiefs. In the neighbourhood of Cæsarea, Kusan Oghlou, a Turcoman chief, numbers 20,000 armed horsemen, rules despotically over a large district, and has often successfully resisted the Sultan's arms. These people lead a nomad life, are always engaged in petty warfare, are well mounted, and armed with pistol, scimitar, spear, or gun; and would always be useful as irregular troops.

"South of the Taurus we still find numerous Kurds and Turcomans, but the Arab element begins and prevails, as we travel southward, to the exclusion of every other. The citizens and villagers of Arabistan are not unaccustomed to the call to arms; but the Bedouins, as is well known, are incomparable in all that relates to long marches, sudden onslaughts, plundering convoys, and the harassing of retreating armies. These swarthy savages—poor, ill-armed, and almost naked—are yet far better mounted than any other nomads; and, for anything but actual fighting, would be superior to either Kurd or Turcoman. The Arab is essentially brave, and battle is the breath of his nostrils; but, as he loves his mare better than himself, he dislikes too close combat, lest his four-footed friend and companion should be injured. The Bedouin is seldom armed with any other weapon than a long lance and a rude sabre, though the Arabs about Syria have frequently guns. Many great Sheikhs could on an extraordinary occasion bring 20,000 or 30,000 men into the field, mounted on animals incomparable for speed and endurance, whose riders are endowed with extraordinary instincts for living in and ranging wildernesses, where any other creatures would die of hunger and thirst. Add to these the Druses of the Lebanon, the Yezidees, and other armed non-Mussulmans, who would probably fight where most plunder was to be gained, and you have a rude and imperfect, though, I believe, truthful sketch of the irregulars of Turkey. I have not mentioned the Bashi Bozouks or Hytas, who, like the *condottieri* of mediæval Italy, sell their services to that Pacha who promises most pay and plunder. They are dying out as a force, and do not amount to many hundreds."

THE IMPENDING WAR WITH RUSSIA.

CONSTANTINOPLE, July 25.

Great conferences have been held at the Porte.
A courier has again been sent to Vienna.
The Ambassadors all agree on the acceptance of the demands of Russia, with modifications.
The Banner of the Prophet has not yet been unfurled, nor the Holy Shirt displayed.
The Guards have been sent to Schumla.
Public feeling is more tranquil.
Armaments continue.
Exchange on London, 118.

The decision of the Cabinet of St. Petersburg upon the propositions before it has not yet been ascertained; but the intelligence from the Danubian Principalities, and the firmness with which the Governments of France and England are insisting upon the immediate withdrawal of the Russian troops from Moldavia and Wallachia, give a more threatening aspect to the Eastern question than it has yet assumed. From undertaking the whole civil administration of the Principalities, Russia has proceeded to stimulate or compel the native chiefs to a renunciation of their allegiance. The Prince of Servia "declines" to bear arms against Russia—the Hospodars of Moldavia and Wallachia inform the Divan that they are no more its tributaries. The Sultan replies by ordering the Hospodars to quit the Principalities, disobedience to which may precipitate the long-delayed crisis. Meanwhile the French and English Governments have instructed their Consul-General at Bucharest to remove their flags and retire from the Principalities, and the representatives of those powers at St. Petersburg have been instructed to represent to the Russian Government the grave events by which a refusal to evacuate the Danubian provinces must be followed. The gravity of the crisis will be best seen by a conversation in the House of Lords, on Tuesday night, between the Marquis of Clanricarde and the British Minister for Foreign Affairs, the Earl of Clarendon:—

OCCUPATION OF THE DANUBIAN PROVINCES.

The Marquis of CLANRICARDE: My Lords, seeing my noble friend the Secretary for Foreign Affairs in his place, I rise to put a question to him respecting some reports which have lately been received from the Danubian Provinces of Moldavia and Wallachia. According to the accounts in the newspapers, the Russian military authorities appear to have taken entire possession of that country, and to have proceeded to administer the government thereof. In the reports to which I have alluded, it is stated that the Commander-in-Chief of the Russian forces had ordered the Hospodars not to transmit any tribute to Constantinople; and it has been stated in one report that he went so far as to say that any tribute paid to the Sultan would require to be paid over again to his own master. Moreover, it is stated that those personages to whom the local administration of the country was intrusted had been required to hold no further communication with Turkey (Hear, hear). Now this is virtually and really an assumption of the sovereignty of the country by the Czar, *and it is impossible that such an act as that can take place without leading very directly to a terrible war* (Hear, hear). It is, therefore, of the highest importance to this country, and to this House, that we should have whatever information can be afforded to us, without inconvenience, at the earliest moment (Hear, hear). I hold that it is impossible for Europe, or France, or England to submit to such an extension of territory in that direction by Russia, or to such a virtual subjugation of the Empire, which must be attended with the greatest and most fearful consequences (Hear, hear, hear). The matter is of the utmost importance, not merely to the political balance of Europe, and not merely to the honour of these countries, who are parties to treaties with Turkey, but also to the material interests affecting the welfare of all classes of persons, above all in Germany, in France, and very greatly in this kingdom (Hear, hear). It is a matter on which your Lordships must desire to have the fullest information that can with propriety be given; and therefore I trust my noble friend will not think I am indiscreet if I ask him whether any such accounts or reports as I have alluded to have reached him officially, and whether he can inform the House how far it is true that such an assumption of the sovereignty of those provinces by Russia has really taken place (Hear, hear).

The Earl of CLARENDON: My Lords, so far from thinking that my noble friend has committed any indiscretion in the question which he has put to me, I can assure him that I take so entirely *the same view as he does as to what will be the result, not only to Turkey, but to Europe, and especially to this country, of any permanent alienation of the territory to which he has alluded from the Turkish empire*, that I am glad he has put the question, in order that I may satisfy the public mind, as far as I am able, by giving my noble friend all the information I possess. (Hear, hear.) By a despatch dated the 17th of last month, I learnt from Lord Stratford de Redcliffe that a communication had been made by the Consul-General of Russia to the Hospodar of Moldavia, informing him that his relations with the Ottoman Government were to cease; and that the tribute usually transmitted to Constantinople was to be placed at the disposal of the Russian Government, upon the ground, as was stated, that although there existed no intention of modifying the internal institutions of Moldavia, or altering the existing order of things, yet that during the military occupation of the province the action of the sovereign power must necessarily, though temporarily, be suspended. I have to state, also, that the Turkish Government expected to receive similar information from the Hospodar of Wallachia; but I have received a despatch this morning from Mr. Colquhoun, our Consul-General at Bucharest, dated the 22nd of last month, in which he says that up to that time (though it may have been the evening before) no such communication had been made to the Hospodar of the province of Wallachia. However, such a communication was naturally expected by the Porte to be made to the Hospodar of Wallachia as well as of Moldavia, and it was the intention of the Porte, so soon as it received that information, to order the Hospodars to withdraw and cease their functions (Hear, hear). He further adds, that in that event he should consider it highly improper that the British Consuls in the Principalities should continue to exercise their functions; and I lost no time in communicating to Lord Stratford de Redcliffe the entire approval by her Majesty's Government of that course (Hear, hear). I can only further inform your Lordships that I shall, by the messenger who leaves London this night, instruct Sir Hamilton Seymour to demand from the Russian Government the explanation to which we are entitled of a matter which, as I have stated, I view in precisely the same light with my noble friend (Hear, hear).

In the House of Commons on the same evening, Lord D. STUART—after alluding to the negotiations going on between this country and all the Courts of Europe with relation to the differences which have arisen between the Courts of St. Petersburg and Constantinople—wished to know whether Lord John Russell intended to fix a day, when Mr. Layard might make his long-delayed motion on the Eastern question, or when the Government would be prepared to make a statement on this subject. In reply to this appeal the following conversation took place:—

Lord J. RUSSELL: Upon the last occasion when this important subject was mentioned, the House concurred with her Majesty's Government in opinion that it was not desirable to have a discussion on it in the present state of the negotiations. I am quite ready, however, to give to my noble friend, and to the House, all the information which it is at present in my power to afford (Hear, hear). When the Ambassador of the Emperor of Russia left Constantinople, it appeared to her Majesty's Government that it was desirable that there should be a conference of all the great powers of Europe, in order to endeavour to arrive at terms which might put an amicable termination to the differences between Russia and the Sublime Porte. It was the opinion of Austria that it was not desirable to have any such conference while the matter remained in a state of diplomatic relations; that it would not be desirable to have such conference, unless the Emperor of Russia, by invading the Principalities, should, for a time at least, put an end to the *status quo* of Europe. When that event occurred, the Government of the Emperor of Austria, in conformity with its previous declaration, expressed its willingness to hold a conference; and at Vienna summoned the representatives of the other great powers of Europe to attend, for the purpose of conferring upon the affair of Russia and Turkey. The Minister of Russia did not attend; but the Ministers of England, France, and Prussia attended that conference. Certain terms were then agreed on, which in the opinion of the representatives of the four great powers might be accepted with honour by the Governments of Turkey and Russia. Those terms have been assented to by the Governments of England and France, and, according to our belief, have been transmitted from Vienna to St. Petersburg and to Constantinople. In this state of affairs, I think the House will feel as strongly, if not more strongly than before, that it is quite impossible for me either to say that it is desirable to have a discussion on these affairs now, or to fix a day for any discussion. As the time for the prorogation of Parliament approaches, her Majesty's Government will be ready to give every information, consistent with their duty, with respect to them (Hear, hear).

Mr. DISRAELI: I wish to inquire whether her Majesty's Ministers are induced to believe that there is any particular time when answers will be returned by the Governments of Russia and Constantinople to the terms proposed?

Lord J. RUSSELL: I should not like to be responsible for naming any particular time. I do not know how many days may be required for the consideration of the terms submitted to the two Governments. I should think the proposition probably left Vienna on Sunday last, and therefore the right hon. gentleman will be able to calculate for himself the probable lapse of time before answers will be returned.

Mr. DISRAELI, after a short interval, rose again and said: There was a phrase in the noble Lord's answer to the noble member for Marylebone which appeared somewhat obscure on this side of the House. The noble Lord said that a proposition agreed on at the conference in Vienna had received the approbation of the Governments of France and England. I inferred at the time that that proposition had, of course, also received the approbation of the Government of Austria and Prussia; but somewhat this apprehension appears to exist on this point, which it would be desirable for the noble Lord to remove.

Lord J. RUSSELL: The proposition was, in fact, an Austrian proposition, though it came originally from the Government of France, and no doubt the Government of Prussia likewise assented to it.

It seems that the arrangement which had been contemplated by the Ambassadors of the four powers at Constantinople was not adopted by the Divan; and, instead of agreeing to that solution of the quarrel, the Porte published the protest against the occupation of the principalities which is already known to our readers. On the other hand, although the Cabinet of St. Petersburg had expressed its readiness to listen to the overtures made by France and England, the Emperor Nicholas intimated that, as he had already accepted the good offices of Austria, all communications on the subject would be referred by him to Vienna. Count Buol and the diplomatic body at the Imperial Court hastened to take advantage of this position; and, accordingly, several conferences have already been held at Vienna between the Ministers of the four powers, for the purpose of giving to the proposed terms the full authority of the leading states in Europe. The utmost union is said to have prevailed on this occasion, and all the powers have shown themselves animated by the same desire to maintain peace and to rescue the provinces of the Ottoman Empire from Russian encroachment. It is evident that a considerable advantage has been gained by this mode of conducting the negotiation; for the resistance opposed to the demands of Russia is no longer that of the Western states only, but of the whole of Europe. Vienna is, from its position, the spot where such a negotiation can be carried on with least delay; and Austria is the state which has most reason to dread the permanent occupation of the Principalities and the loss of the Lower Danube. Moreover, as she has now assumed the leading part in this transaction, she is the more bound to give it, in case of necessity, that material support which may be required to ensure its success. For the first time for many years Austria and Prussia have joined with England and France upon a question of first-rate importance, to abate the pretensions of Russia, and to re-establish with all its authority that joint action of Europe on the Eastern question which the Court of St Petersburg has attempted to break.

While the representatives of England and France at St. Petersburg are instructed to put the question categorically to the Emperor, whether he will or will not withdraw his troops from the Principalities, "Russian encroachment" is evidently proceeding, and the symptoms of a permanent occupation of the Principalities, or a further invasion of the Sultan's territories, multiply. The Hospodar of Servia refuses his contingent to the Sultan's army, desiring to stand neutral; and letters from Constantinople of the 18th ult. inform us that the Hospodars of the two Principalities had instructed their agents at the Porte, "that "by superior order" they were under the necessity of "breaking off for a time" all relations with the Government of the Sultan. The Post-office is in the hands of Russia: the Czar's agents conduct the censorship; and twenty commissioners, acting in the name of the Hospodar, but receiving their orders from Prince Gortschakoff, have been appointed to give full effect to all the plans of Russia. The main body of the corps of occupation is marching through Moldavia into Wallachia, and particularly to stations along the Danube over against Bulgaria.

A letter from St. Petersburg, of the 17th ult., states that a deputation of three Boyards, selected from the most influential men of Moldavia, had arrived on the previous day. This deputation came, it is said, with the authorisation of the reigning Prince, to remonstrate against the conduct of the Russian army, which, contrary to the solemn promises made to the Porte, treats the Danubian Provinces as a conquered country, and commits therein numberless exactions.

The *Odessa Journal* reports, on the authority of letters from Ismail, that the Russians have thrown several bridges of boats across the Danube; and a letter from Jassy, in the *Gazette de Cologne*, says:—"We learn that Russian agents are at this moment extremely active in concluding bargains with the possessors of the state forests and private individuals in the Principalities, for timber for ship-building. It is well known that the forests of Moldavia and Wallachia abound in the finest kind of timber for that purpose."

The evacuation of the Principalities is the great difficulty. The French Government declare that it will never do to allow the Russians, under any pretext whatever, to pass the winter where they now are while the combined fleets are obliged to return ingloriously to the places they respectively set out from. Hostilities, supposing them to arise, would, after the winter had passed over, be undertaken with immense disadvantage to all but Russia, as the prestige of the powers would be gone. The object of Russia is evidently to pass the winter in the provinces under pretence of negotiating—negotiating either on the terms of the notes or guarantees, or on the amount of indemnity which it has been stated Russia intends demanding for the expense of her invasion; and it would not be extraordinary if that indemnity were found to be of an amount utterly impossible for Turkey to pay, except by leaving in the hands of her invader the "material guarantee" of the Principalities, to which the Nesselrode circular made allusion.

We have already pointed out that, in defiance of all equity, and with the utmost disregard of all treaties, as of all truth, Russia invaded the territory of her neighbour, because she believed that neighbour weak; and because she was led to believe that no union existed between the maritime powers, and that Turkey would be left to her fate. The Turks contend, with some show of reason, that the mere evacuation of the territory thus violated is not sufficient, and ought not to be considered sufficient. Russia, instead of exacting an indemnity—in other words, a premium on her own injustice—should, they argue, be called upon to indemnify Turkey for the immense injury she has done to her.

The French and English Governments have agreed on the basis of a common action, and have intimated to the Russian Government that all further hesitation or delay on its part in effecting the evacuation of the Principalities will be considered by them as a refusal to do so. The answer of Russia is expected on the 12th inst. The refusal of Russia to reply, or her refusal to act conformably to what is demanded, will, it is confidently believed, be followed by the entrance of the combined fleets into the Dardanelles, and their advance to the Bosphorus. Were Turkey unsupported by the Western powers, it is almost certain that even its acceptance of the Menschikoff ultimatum would not be considered by Russia as sufficient, and that she would still require more.

The resolution of the Porte to summon the two Princes of Moldavia and Wallachia to the presence of the Sultan was adopted at a conference held on the 16th ult., of the Ambassadors of England, France, Austria, and Prussia. It is very doubtful whether this invitation will be accepted, and the Porte will then be under the necessity of superseding them. If the Princes do obey the summons, the Russians will have a pretext for making arrangements of their own for the government of the Provinces. The two Princes cannot be regarded as free agents in the presence of such an overwhelming Russian force as now occupies the Principalities.

Great apprehensions are felt at Constantinople by the friends of the Porte, relative to the state of the country, consequent upon he recent military preparations. The Turkish Government are in a state of bankruptcy, the movement of troops, &c., having been effected mostly on credit—commerce is suffering in its best interests—and a vast assemblage of scarcely disciplined troops are crying out for war. The first of these difficulties may force Turkey to adopt the only salutary course now remaining—that of a loan; the second is an unmitigated evil, whose effects will probably be severely felt for some time to come; and the third is a hypothetical danger, which, if happily averted, must produce a sufficient degree of alarm among the Christians to entail material loss for the country. It is evident that the object of Russia is either war or conquest, or such a state of armed peace as shall exhaust Turkey, and bring her to make the desired cessions of territory.

The movement of Turkish troops to different parts of the empire continues; and the expenditure appears to be of that reckless nature which shuts its eyes to the future. Several parcels of treasure coming from Persia have been taken by the Government on the way, and checks on the treasury given to the owners. The European merchants at Galatz, who have large sums due to them from the Government, have not received a single para for many months past. The troops travel by the steamers on credit, and the provisions for the army are likewise purchased on credit.

Advices from Constantinople, under date July 19, state that the Turkish Government, harassed by the conduct of Russia, and having exposed to the world the injustice of that power, has determined to act with vigour. It has hitherto allowed Russia to have all the ultimatums to herself, and has had to endure the most insulting language that ever one power presumed to address to another with even the slightest show of independence. The note reports, but in a more precise manner, the various arguments employed in its previous communications to Russia; it shows how the Porte evinced every disposition and desire to continue on good terms with its neighbours; that it was always disposed to listen to just complaints, and to remedy them; that no distinction was made between the Christian population and Mussulman subjects; that it has very recently given proofs of its love of toleration, and of impartial justice, in the firmans it has issued, and which sufficiently secure the immunities, privileges, and rights of the Christian population of every denomination. All this the Sultan has done; but if he be required to do anything more, that is inconsistent with his own honour, and, with the honour, the dignity, and the independence of his people, he shall give the same reply he has already given to the ultimatum of Count Nesselrode, namely, a refusal; and that, if the consequence of that refusal be war, war he must accept; but he leaves it to the world to judge between them, and to pronounce its verdict as to the party that rendered necessary so terrible an alternative. The evacuation of the Principalities "as soon as possible" is demanded; and this is made in the ultimatum an indispensable condition of pacific arrangement. The note concludes by reiterating the assurance that the Sultan is ready, should negotiations be accepted, to send an Ambassador Extraordinary to St. Petersburg.

The news from the Russian and Turkish frontiers contains some interesting and important items. The armies of the two countries are almost in presence of each other; and an untoward accident, or the indiscreet precipitation of some subaltern might precipitate a war. Beginning with the Turks, the last news from Bulgaria is that 20,000 troops have been sent to Varna. Omer Pacha is in great force on the whole line of the Danube, certain parts of which he has fortified. On the 16th ult. the Russians were before the fortress of Giurgevo, on the left bank of the Danube, directly opposite Rustchuk, an important Turkish stronghold. The Russian troops marched to Giurgevo, along a road on the bank of the Danube.

Russian vessels have approached close to the mouth of the Bosphorus, and discharged their guns within sight of the forts. All the army of Turkish Roumelia has been paid, and 60,000 Turks are now posted along the Danube longing for action. Two Turkish camps have been formed near the Danube, and one near Varna. All important points have been fortified, and every vessel that is seaworthy manned. 30,000 or 40,000 men, who are collected in Constantinople, are described as stout, swarthy, well-drilled soldiers.

The vanguard of the Russian army of occupation arrived at Bucharest, under the command of Count Aurep-Elout, on the 15th. The Metropolitan, with his assistant clergy, went out to meet the Russians with the cross and holy water. Besides Prince Gortschakoff's occupation, and

the troops already so frequently mentioned, under Generals Dannenberg, Panfutin, and Lüders, the reserves and the rear-guard of the fourth corps are being concentrated at Tula, and put on the war footing. The Russians, by throwing a pontoon bridge across the Danube, between Ismail and the Island of Tschatal, have violated the treaty of Adrianople; which also stipulates that no kind of establishment, excepting the quarantines, may be formed on any of the Danubian islands.

When the Russian troops passed the Pruth, the bridges, which are private property, were found to be so weak that not more than 8000 men a day could cross. Up to the 15th above 80,000 men had entered Moldavia, that is, the whole of the 4th *corps d'armée*, composed of three infantry divisions (16,000 men each), of one cavalry division (4000 men), and 200 guns. Then came one infantry division, one light cavalry division, and 100 guns, all belonging to the 5th *corps d'armée*; ten regiments of Cossacks (of 600 men), two battalions of Sappers, and one battalion of Chasseurs. Two battalions and the Cossack artillery were to pass the Pruth on the 15th. As soon as the Russians had crossed the frontiers on the 2nd, one of Prince Gortschakoff's aides-de-camp, was sent with despatches to Herrmannstadt, in Transylvania. It is asserted that a part of the Russian troops are to encamp on the Transylvanian frontier. An extremely active correspondence is maintained between Prince Gortschakoff's head-quarters and Russia; 116 courier horses are kept prepared at each post station. A part of the Moldavian militia has been sent by order of the Russian Commander to guard the corn magazines and hospitals. The Moldavian troops are also obliged to form a treble line of pickets on the Danube. The Russian officers openly say that the Porte is far too poor to pay the enormous expenses of the Russian army, the daily outlay for provisions alone being 100,000 silver rubles (a ruble is about 2s. 7d). The common soldiers have a strong idea that the Porte has sold the keys of the Holy Sepulchre to the Jews, and that the world will be at an end if Russia does not get them back again.

It is fully expected that the next mail will bring bad news from Belgrade, as the commander of the fortress, who insists on the Servian contingent being sent into Omer Pacha's camp, employs threats. In a note to the British Consul in Bucharest, Prince Gortschakoff promised that the Sulina mouth should at once be looked to. It was added, the express will of the Emperor was, that the commerce of the Principalities should suffer no interruption. Russian notes have also been forwarded to the Hospodars, in which it is required that the provisions for the army shall continue to be supplied at the prices paid on the day the troops first crossed the frontier. This is complained of as being most unreasonable.

From St. Petersburg we are informed of the arrival of Count Gyulai, on a mission from Austria. He is said to be the mediator who is to set matters right, and induce the Emperor to accept the proposals of the four great powers. He is stated to be most assiduous in working out his task.

The Nesselrode state papers, which the world is still looking up to with admiration, in spite of their bad logic and incorrect facts, are currently believed to be the handiwork of a certain Labinski, a Polish Jew of inferior birth and standing, but who by his facile pen has raised himself to a high position in the Chancellor's Cabinet.

Papers from St. Petersburg, up to the 23rd, bring a manifesto from the Emperor, ordering fresh levies to be called out in different proportions to the population, according to the local circumstances, varying from 6 to 10 in 1000. The Emperor of Russia has also issued orders for the Baltic fleet to be got ready for sea. The force consists of twenty ships of the line and fifteen frigates. One division is already complete, and the other will be ready to put to sea very shortly. This is the fleet which was reviewed by the Grand Duke Constantine, and by the Emperor, on the 15th instant.

A piece of intelligence, which has caused a great agitation in Sweden, is, that there is to be an immense concentration of Russian troops in Finland, which is understood to be the Czar's answer to the assembling of a powerful English fleet at Spithead. The united Swedish and Danish fleet, which is out on a so-called evolution cruise, has been ordered to the Baltic. The fleet was under the command of Admiral Crassenstolpe, and had on board Prince Oscar of Sweden, serving as Flag Captain. Great Britain is said to be in close correspondence with Denmark, with reference to all the contingencies of a war with Russia.

THE PRESENT STATE OF THE TURKISH QUESTION.

(From the *Times*.)

It is evident, from the tone assumed by the Government on Tuesday evening in both Houses of Parliament, and more especially by Lord Clarendon in the House of Lords, that, as we approach the final crisis of this Eastern negotiation, the confidence of her Majesty's Ministers in its successful termination does not increase. On the contrary, the conduct of the Russian authorities in the Principalities can only be regarded as a fresh proof of the indifference of the Imperial Government to the rights established by treaty in those provinces; and a power which appropriates the revenue of a foreign territory, professedly held as a temporary deposit, and in time of peace, is obnoxious to the charge of actual spoliation. What can be expected of the forbearance or justice of a state which has advanced thus far, and with such entire recklessness, on the old track of aggression and rapine? Or what confidence can be placed in the assurances of Russia, when every fresh incident that comes to our knowledge affords increased evidence of the avidity with which she fastens on her prey? It was a question whether the honour and the public interests of Europe required that the decisive resistance to Russia should be made when her armies crossed the Pruth, or whether room should still be left for further negotiation. The Cabinets of Western Europe decided—we think wisely—in favour of the latter and more temperate of these courses. The result has been, that we have obtained, to a much higher degree than we had before, the concurrence and assistance of the German States; and that all the world has seen the earnest and undeniable anxiety of the British and French Cabinets to avoid hostilities thus wantonly provoked. But beyond this it is impossible to go; for, in the present state of affairs in the East, it is certain that if Turkey were compelled to yield an abject submission to the demands made upon her, she would be convulsed by internal agitation even more fatal to her existence than the attack of a foreign enemy, and Russia would cease to be the aggressor only to become the protector of her victim. The nature of the case and the state of public feeling in the East determine, therefore, the extent to which concessions can be carried. Beyond a certain point they would become more dangerous than war itself; but, short of that point, there is no great reason to suppose they will induce the Emperor Nicholas to lower his demands, to withdraw his armies, and to lend himself in good faith to the pacific termination of this dispute.

Some of our contemporaries, and most of the Continental journals, have been misled by the importance attached to the negotiations going on at Constantinople, and to the intelligence brought from Turkey by the *Caradoc* and the *Chesapeal*. In reality, nothing has been done at Constantinople, and we are not surprised at it; but, as we stated on Tuesday, the true seat of the negotiations is Vienna, where Austria takes the leading part in the conference. But here, again, our contemporaries are misinformed when they state that the ultimatum of the conference was despatched on the 24th or 26th of July to St. Petersburg, and that the Emperor's answer may be known here on the 10th of August. The last proposals of the conference were not despatched from Vienna till Sunday, or perhaps even Monday last, and they were sent to Constantinople before they would reach St. Petersburg. If a direct answer is received from both Courts at Vienna with the least possible delay, the interval would be about a fortnight; but if, as is probable, a communication has to be made from Constantinople to St. Petersburg, the delay may be even longer. In the meantime, the demand of the British Government for explanations as to the extraordinary and oppressive conduct of the Russians in the Principalities will arrive at St. Petersburg almost as soon as the proposition from Vienna, and will convince the Emperor that the time is past when the mask in which he has hitherto shrouded his policy can still be worn. We have a right to insist on knowing upon what pretext these provinces, with which we have most extensive commercial relations, are thus virtually incorporated in the Russian Empire.

The internal measures of the Russian Cabinet are all of a warlike character. On the 20th of July a ukase was published raising a levy of seven men per 1000 on the population of the eastern half of the empire, which is supposed to amount to twenty-three millions. At the same time the arrears of men (three per 1000) who had been excused on the last levy are called up, so that in some districts the conscription will amount to one per cent. Some pressure has begun to be felt for money to support these enormous military preparations, and the Executive Government applied to the Minister of Finance for permission to use a portion of the gold reserve deposited in the fortresses of the Crown. But this gold is the basis of the Russian paper currency, and the Minister of Finance raised strong objections, which were not for the present overruled, to the appropriation of any part of this fund. The Emperor then applied to the Sacred Synod for a loan of sixty million rubles. That holy body expressed their readiness to obey at all risks the Imperial commands, but alleged that they were the depositories of the property of the Church for the most sacred purposes, and held their purse-strings closed with ecclesiastical tenacity. Thus far these facts undoubtedly indicate the financial weakness of the Russian Government; but, on the other hand, it must be remembered that if war were declared, especially if it resumed the cry of religious supremacy, not only would these efforts be made, but far greater sacrifices would probably be obtained from the enthusiasm of the people. Nothing, meanwhile, is neglected which can influence the ambition and national pride of the Russians, and even the language of public documents is passionate and arrogant in the extreme—at present, however, we are told, without much effect upon the people, who do not believe their church to be in any danger at all.

But the more the Emperor Nicholas assumes this tone in his own dominions, the more does he lower and contract his influence on foreign states. All his attempts to impose his policy on the Courts of Vienna and Berlin have failed; and even at the minor Courts the intrigues of the Russian diplomatists have not been more successful. Of these the most important is Denmark, because she commands the entrance of the Baltic, and undoubtedly owes a debt of gratitude to Russia for her support throughout the late Schleswig-Holstein war. But the independence of Denmark is even more closely connected with her relations to the western maritime powers, and no state is more interested in the maintenance of strict neutrality, in the event of hostilities. We do credit, therefore, the assertion that the Russian Government has succeeded in establishing its hold upon the Court of Copenhagen, and the statement that the Danish Government have proceeded, under Russian influence, to abrogate or impair the Constitution of 1849, is wholly inaccurate. The Danish Government have caused a bill or draught project to be published, containing some modifications of the Constitution now in force; but this bill is to be submitted to the discussion and vote of the Chambers when they re-assemble, and it has not been promulgated by Royal authority. To Denmark, as well as to all the adjacent parts of Europe, the present crisis is of vital importance; for, though this quarrel commenced upon the Bosphorus, the solution it may receive will determine whether or not Russia is to make the rights of foreign states subordinate to her interests or her ambition; and, since such pretensions have been manifested, the peace and independence of the world can only be preserved by the firm adherence of all other powers to the measures necessary to restore the authority of law, and to set bounds to the possibility of aggression.

MEMOIR OF THE SULTAN ABDU-'L-MEDJID.

Abdu-'l-Medjid, the present Sultan of Turkey, though the mildest Sovereign of his time, has gone through one of the stormiest reigns upon record; and, at this moment, he is undergoing dangers and indignities such as Monarch has seldom been exposed to. A sketch of his life may explain how much of his position is attributable to his personal character—how much to the circumstances of the throne he inherited.

As he ascended the throne it was tottering; and he was but sixteen years of age when, in 1839, he succeeded his father—the "reforming" Sultan Mahmoud, who attempted to assimilate the manners and the institutions of Asia with those of Europe; and who signally failed, even with regard to externals. When Abdu-'l-Medjid was girded with the sword of Osman, that monarch-vassal Mehemet Ali was in open revolt: Ibrahim Pacha, having destroyed the Turkish army, was on his march through Asia Minor, on the road to Constantinople, and that Turkish Admiral, to whom, on a memorable occasion, Mr. Disraeli compared Sir Robert Peel, had just sailed with all his fleet into an Egyptian port. All the great Pachas were watching for their opportunity; had he of Egypt succeeded, the Turkish Empire would have disappeared. Lord Palmerston resolved to save it; outwitted the French diplomacy; formed the quadruple alliance, from which France was excluded; destroyed St. Jean d'Acre; checked Ibrahim Pacha; and forced Mehemet Ali to the acceptance of a treaty which re-defined his position and limited his power. The young Sultan could then have tasted repose; but was, apparently, too careless to enjoy it. An empire was in doubtful allegiance; authority, weakened at the very centre, was powerless at the extremities; and the Sultan, who lost as much as he gained by the intervention of foreign aid, and who could not place much faith in the sympathy of Russia, with whom Turkey, towards the Danube, may be said to have been at perpetual war, could have no allies and no strength but in the old Turkish Mussulman population. Yet the very first act of the Sultan, after the settlement of the Egyptian dispute, was (under the influence of Redschid Pasha) to outrage this party by recommencing, with even less disguise and with more contempt, those very reforms which had risked Mahmoud his throne. This was by the famous Hatti Scherif, of Gulhane, or Tanzimat, which among other things gave the Christians unheard-of privileges, and which sweeping away most of the powers of life and death of the Pachas, declared something like social and political equality throughout his dominions. In Europe it was erroneously supposed that this was only a reform in costume and minor matters, needlessly shocking deep-rooted prejudices among the Mussulman population; but it is now better understood, and must, undoubtedly, be recognised as one of the boldest and best measures—at least, in intention, for its application could by no means be universal—which ever emanated from the honourable ambition of a sovereign. The Hatti Scherif reduced into subjection the Dere Beys, who, in various parts of Asia Minor (instances are mentioned in Mr. Layard's works) exercised a practically uncontrolled sway, and whose domination was of the most hurtful and plundering character. Everywhere, as far as it was possible, and to a wonderful extent, considering the actual power and resources of the Sultan, centralisation—which is a blessing in Turkey at least—was enforced. But the consequences were not wholly causes of congratulation. The Turkish character was, in many respects changed, and not for the better. Travellers lamented, thenceforward, that hospitality was no longer met with in the distant provinces; and the reason was, that there were no more entertainers—what may be called the class of grand seigneurs, having been destroyed; the policy of the Sultan being to withdraw hereditary offices, which were the great sources of wealth and grandeur in families, and to create, if possible, what we would term here, a middle class. The other day there was an insurrection in Bosnia, where the Tanzimat had not been extended; and that was nothing more than a revolt against the feudal Lords; and though Omir Pacha suppressed the rising, he did not fail to redress the grievance. Another consequence of the Tanzimat, and one very interesting to Englishmen, was that the breed of horses in Turkey has deteriorated—no great studs being kept up; and emulation and care in improving breeds being no longer witnessed.

This Tanzimat is the key to Abdu-'l-Medjid's reign: as he commenced he has gone on; and, supplementary to the Hatti Scherif, is the firman of May, 1852, whereby perfect toleration of religious belief was declared—a grand act, if it could only have been carried out and enforced. Purity of aim, destitute of vigour, is Abdu-'l-Medjid's characteristic; magnificence of declaration, without adequate means of sustaining the effort, has been the feature of the Turkish Government under both the last and the present Sultan. The complaint of the Mussulmans against him is his unwarlike nature. He abhors war; and it is this weakness of which Lord Stratford de Redcliffe—whose personal influence over him is unbounded—has taken advantage for the purpose of preserving a long peace—certainly inglorious, and probably, in the end, unfortunate, fo Turkish interests. Lord Stratford de Redcliffe is himself a cautious man; and it is unquestionable that the Sultan has several times committed errors from want of proper indignation; as, for instance, when, in 1849, the Russians occupied the Principalities to suppress the "revolution" Russia had hereself excited, and when the Sultan made no protest; and as, also, in the Hungarian war, when the Austrians were driven into Turkish territory by General Bem, and when, again, the Sultan did not disarm the flying but incursive force. A very different course was pursued when the Hungarians, headed by Kossuth, entered Turkey, after the desertion of Georgey. Then Lord Stratford de Redcliffe advised, and the Sultan ordered, before he would treat with them at all, that they should lay down their arms.

The conduct of the Sultan in relation to Kossuth forms, however, a very honourable, as it is a very interesting, episode in his life. There is no doubt that his noblest sympathies were aroused for the Hungarians; and that, personally, he wished them success; although he missed an opportunity which might have given him a strong future position against Russian intrigues or open attacks. The principal fact in regard to the Hungarian refugee history is this—that the Sultan, *proprio motu*, counter to the advice of his Divan, had resolved to give a shelter and protection to Kossuth, against both Austria and Russia, several days before Lord Palmerston's despatch, assuring support, to Lord Stratford de Redcliffe, was written; and all the credit of that creditable transaction, is therefore, due alone to Abdu-'l-Medjid.

Another circumstance worth noting is this, that though the Sultan sent orders that the refugees should be disarmed, he, at the same time, directed Zia Pacha, to whom the orders were transmitted, to pay to them the full value of their arms; and, as an illustration of ordinary administration in Turkey, it may be mentioned that Zia Pacha, whom Kossuth has described as one of the politest men he ever met in his life, kept exactly one-half of the money forwarded for the Hungarians. Bem, and several others of the refugees, it will not be forgotten, turned Mahommedans; and this was in order to avail themselves of a law of the Koran, to which their attention was directed, that no Mohammedan could be surrendered to an Infidel; and it is an historical fact that the Divan urged on the Sultan to give up all those who would not accept the turban. The Sultan resisted this advice by another appeal to the Koran; the Koran commanded hospitality; and, though Lord Stratford de Redcliffe and other Ambassadors at Constantinople assured him that he was risking his throne, he was for the first time in his life vehement and vigorous; and, with or without English aid, he resolved to defend Kossuth and Kossuth's friends and countrymen. His conduct towards them was in every respect noble. They were treated like guests at Kutaya. Kossuth had a guard of honour when ever he rode out; and, as a splendid horse was placed at his disposal, he often galloped out of sight of his guards, and evading them, returned alone to Kutaya. He was often urged to turn these playful escapes into serious earnest; but he seemed to understand the nature of the Sultan, and trusted implicitly to his word. Nevertheless, he would have been carried off had those of his friends who were watching European diplomacy found reason to suppose that the Sultan would give way.

The genuine generosity of the Sultan's conduct on this occasion is only to be understood by reference to his horror of war, which he was risking. Perhaps, however, the course he took is traceable to another aversion always distinguishing him—his horror of capital punishments, which, of course, would have been the Austrian sentences upon the refugees. Various anecdotes are related of this trait in the Sultan's character; but it is not always that he is able to procure mercy. It is a remarkable fact that he is the first Sultan who has not murdered his brother! Abdu-'l-Aziz lives in dangerous propinquity to the throne; and just in the same way as in our own constitutional workings the heir-apparent always leads the Opposition, so Abdu-'l-Aziz is regarded as the head of the old Turkish party; and it was in his name that this party conspired the other day, when, the plot being detected, and the Sultan being unable to protect his brother's adherents, fifteen Imaums, Mussulman students, were bow-strung. All the tastes of the Sultan are gentle and refined; and his predilections have exposed him to the ridicule and hatred of many of his barbaric and more warlike subjects. He is devotedly fond of music; but it is a partiality without power. he has ear without execution; and after a lifetime's assiduity has only succeeded in being able to play one tune on the piano! But then it does service on all occasions: it is a march, which the Sultan plays for everybody with exhaustless complacency. It is said that when Donizetti was visiting the Sultan, and, before all the Court, performed, or had performed, varieties of music, the Sultan went up to the piano, requested the great composer's attention, and smilingly gratified Donizetti by performing this eternal march. Of the arts the Sultan is a warm and intellectual patron. Industry—in the large sense of the term—it is the great object of his reign to promote, to the discouragement of these ruinous accumulations of materials of war in which his father indulged; and it is well known with what liberal ardour he responded to the British invitation to co-operate in the Great Exhibition of 1851. The nobility of his character has been repeatedly demonstrated in regard to money. This spring his mother died; and, like all the wives of Turkish sovereigns, she had accumulated in the seraglio great treasures. She died, leaving the sum of £400,000 to her favourite, Abdu-'l-Medjid; and this enormous sum the Sultan, instead of converting to his private purposes, handed over to the Treasury, for the service of the state. This indifference to money stands out in startling contrast to the manners of all around him; for it is notorious that the Sultan completely fails in checking the venality of the high officers entrusted with administration in his dominions. There are other reforms which he also fails to carry

out, for instance, he cannot set the fashion in costume. It is related that, not long ago, he introduced the novelty of a small peak or rim to his fez. The true Musulmans were aghast: the Pontiff Sheikh (ul Islam) remonstrated such a hat was against the Koran; and the Sultan had to submit: the peak disappeared. But, next day he invited this head of religion to ride out with him; and they rode westward — straight towards the setting sun. The Sultan pointed out every object to the Sheikh: the Sheikh was courteously observant. In order to see, however, he had to put up his outstretched hand at right angles with the forehead, to shelter his eyes from the rays of the sun. The Sultan noticed this, and struck the hand of the holy man heavily with his whip. The holy man was reminded that the Koran forbade peaks to hats; the holy man was corrected, and the peak re-appeared on the Royal fez. By as successful a reading of the Koran, the Sultan has been enabled to indulge himself in his favourite wine - champagne. It is well known that his father died from drinking brandy, to which, consequently, he has a medicinal as well as orthodox aversion. His theory is that the Koran forbids fermented liquors; but that champagne is not fermented, and is, consequently, not illegal drink; and this reading has been highly applauded by the ladies of the seraglio, with whom Abdu-'l-Medjid passes more time than should be spared from Government. Of a handsome person, but not of a robust constitution, he avoids martial exercises, and takes more delight in archery matches than in reviews. Gifted, however, with great perception, the Sultan has been fortunate in the choice of men to whom he has entrusted the care of the army and navy. He seeks the best men from all countries, and the result is that according to Mr. David Urquhart, who is, perhaps, more competent to speak on these questions than any man living, Turkey has nothing to fear from a campaign with Russia. The artillery has been formed, and is directed by Prussians; the infantry by the French; and the navy has long been under the command of Englishmen—formerly of Captain Walker, now of Captain Slade, both holding that grade in the British service. The Sultan, however, does all he can to collect efficient officers and ministers from the Turks; and he yearly sends over crowds of picked young men for European culture; to Paris for the Polytechnic School; to Liverpool for commerce; to London for ship-building; to Manchester for machinery. These students are equally divided between England and France; and the fact is significant as showing that the Sultan has no predilection for one country over the other. He is neither of a French party, nor of an English party; and Lord Redcliffe's great influence over him is merely the influence of a man of commanding ability, great knowledge, and great honour. If he were a Frenchman, the Sultan would follow him with the same fidelity.

ABDU-'L MEDJID, SULTAN OF TURKEY.—FROM AN ORIGINAL PAINTING IN THE POSSESSION OF THE TURKISH AMBASSADOR.

CASTLES OF THE DARDANELLES.

We append a View of the Castles of the Dardanelles. The European shore is on the left, and the Asiatic on the right. The fort and batteries on the European side are called Chelitbawri, or Kelidbar, "the Lock of the Sea." The town and battery on the opposite side are called Chanak-Kalessi, or Sultaine-Kalessi. These batteries are effectively mounted with ordnance of prodigious calibre, which threaten destruction to any ships that might approach the passage of the Dardanelles, from the Mediterranean. The Emperor Alexander used to call the Dardanelles the "key of my house," and it is unquestionably necessary to the march of Russian empire to have the right of free egress and ingress through the gates of the Dardanelles, which are the gates of the Black Sea. We cannot be surprised at the sensitiveness of Russia at the presence of a French and English fleet in the Turkish waters, when we remember that once in the Bosphorus the commerce of Russia in the Black Sea might be easily destroyed, while the forts and naval arsenals of Southern Russia might be blockaded and bombarded by the ships of the combined powers.

THE CASTLES OF THE DARDANELLES.

THE EMPEROR NICHOLAS.

At the present moment a review of the career of the Emperor Nicholas, rendering prominent his personal characteristics, can but be interesting, and may be useful:—

Nicholas, "Autocrat of all the Russias," "Czar of Poland," "Grand Prince of Finland," &c., was born in July, 1796. He was the third son of the Emperor Paul, by Paul's second wife, who was a Princess of Wirtemburg; and on both sides Nicholas is, therefore, rather more German than Russian; and as he has also espoused a German Princess (the sister of the present King of Prussia), the Russian element is infinitesimal in the blood of the present heir to the throne of the Czars. Of the education of the Emperor little has been made known; but it is certain that he had this advantage—that he was not educated as even a probable successor to his father. He was certainly brought up rather as a German than a Russian, and under the supervision of his mother—a circumstance to which is, perhaps, attributable the fact, that when he unexpectedly reached Imperial power, and when his policy was to be intensely Russian, he encountered a great impediment to Russian popularity: he could not write (it is said that he cannot to this day write) a Russian letter. Germans were his instructors; General Ramsdorf in the art of war, for which the young Prince developed taste and capacity; and the celebrated Professor Adelung and College-Counsellor Storch, who took their pupil through arduous courses of modern literature and "political science;" in the latter there being, no doubt, included instruction by Paul's Ministers in that traditional Russian system in which Nicholas has subsequently proved so profound a proficient. Music was another branch of education in which the Royal pupil made some progress, for he reached "composition;" and loyal Russians are frequently expected to admire certain "grand marches," the work of the Emperor Nicholas. The future Emperor first became known to the European Courts after the Peace of 1815. He visited England in 1816; and an immense prestige then attaching to everything Russian, and in especial to a brother, of the Emperor Alexander, he was greatly fêted in English society. He occupied a house in Stratford-street; and Mr. Raikes' "Visit to St. Petersburg, 1829 30," gives, from reminiscences, some interesting facts of the sensation then made by the magnificent Grand Duke. "He was a fine-looking youth, making a conspicuous figure at Almack's in the waltz, and whirling our English beauties round the circle to a quicker movement than they had learned to practise." It is a fact in history that the waltz was only just then coming into fashion; and it is easily conceivable what aid may have been given to the new rage by the handsome and all-victorious Nicholas, whose figure Byron may have had in his indignant eye, when he wrote his satiric verses against what were then considered by large classes as the indecencies of modern dancing. At the end of 1816 he returned to Russia, and he spent the next year in diligent travelling throughout the vast dominions of his brother, making himself fully acquainted with the military, commercial, and political circumstances of each province. In 1817 he married; and the unpopularity of the marriage in Russia was in some degree diminished by the somewhat scandalous readiness with which the elected Empress consented to renounce the Lutheran for the jealous Greek church. From this marriage sprang four sons, who have received the names of Paul's four sons—viz. Alexander, Constantine, Nicholas, and Michael; and three daughters: and in nearly each case there has been a German alliance. From 1817 to 1825 Nicholas would appear to have been engaged almost exclusively in military occupations; and to his efforts mainly was his brother indebted for the maintenance of the efficiency of the Russian army. During this period his character had developed; and his boldness, and his firmness, his essentially soldierly qualities, had made him naturally popular with a savage army, and a still more savage people; and, when circumstances presented him with the opportunity, he was able to seize the Throne.

Into the secret history of his accession—into the surmises which that surprising revolution suggested—it is not necessary to enter; and we will take the facts as they were allowed to transpire to the world. Alexander died suddenly in 1825; his will, protruded to the nation, bequeathed the throne to Nicholas, alleging that the next heir, the Grand Duke Constantine, had renounced the dignity; Constantine himself confirming this declaration, and offering allegiance to his younger brother Nicholas. It

NICHOLAS, "AUTOCRAT OF ALL THE RUSSIAS."—FROM M. DEMIDOFF'S "TRAVELS IN SOUTHERN RUSSIA AND THE CRIMEA."

THE EMPEROR'S PALACE, AT ST. PETERSBURG.

was said that Alexander had died of the peculiar disease of Russian sovereigns; and no rational explanation has ever been given by Russian writers or diplomatists of the abdication of Constantine. Suffice it to say that Nicholas reached the throne, but not without such a struggle as justifies the boast that he not only inherited, but won it, and holds it by right of race and conquest. A vast conspiracy, ostensibly against both the Archdukes, broke out at St. Petersburg, when the news arrived of Alexander's death; and the circumstance demonstrated that the insurrection was wide spread, and systematically ramified throughout the empire. The personal daring of Nicholas conquered the revolt. The troops were drawn up in the great place at St. Peter-burg, roaring tumultuous treason -crying "Constantine and the Constitution!"—the troops being so ignorant, that they thought, when they cried the Constitution, they cried the name of Constantine's wife! The moment was one of those in which a single man decides everything; and Nicholas was worthy of the occasion Hearing in his palace of what was passing, he ordered an open carriage to the door, into which he stepped; and having divested himself of his sword, and of all arms whatever, he commanded to be driven to where the troops were shouting and struggling and awaiting a leader. The carriage presented itself to the eyes of the insurrectionary army; and the martial figure of the Grand Duke was observed with astonishment: he was standing upright in the carriage. He ordered the carriage to stop; and it stopped, amid dead silence. He folded his arms, and looked sternly down the line; and then, in a voice of thunder—that well-known and dreaded voice—he gave the order to pile arms. It was magic! The heroism conquered; the troops dispersed, the capital was the capital of Nicholas; and, consequently, the insurrection was over! He then behaved with great simulated zeal for Constantine; and his success was the greater and more rapid that he was not, apparently, acting for himself. He took the oath of fidelity to Constantine, and imposed the same on the troops and on the great functionaries. He seized the ring-leaders in the conspiracy, and it will be remembered that Festal was one of these, and that he with the rest expiated his treason in the mines and dungeons of Siberia. Then there was an apparent interregnum; and various formalities were gone through, and the suspense was not terminated till December, in the year of Alexander's death, when the new Emperor Nicholas published to Russia and Europe a manifesto, in which he recited these various events, and and announced that his reign had begun. At this point in his career his character changed: his new title was acquired in a bloody baptism—for blood was shed on the first day of his reign—and the scenes he had passed through seemed to affect him ever afterwards. It would be, perhaps, more correct to say, not that he changed his character, but that his old character deepened; at any rate, the gracious and affable, though daring and self-collected, Grand Duke no longer existed; and the mysterious, inflexible, reserved, Emperor Nicholas was in 1826 what he has ever been since. He took up the reins of power with a vigorous hand, and the Empire soon saw that the weak administration which characterised the latter part of the reign of Alexander was over. Nicholas had by this time, fully mastered the knowledge of the vast and complicated machinery of the Russian system; and he commenced at once his consistent career—to intensify and extend the power he had inherited, and to pursue relentlessly, at all sacrifices, the traditional objects of Russian policy both in the East and West.

The Emperor Nicholas is not a man of great intellectual capacity; and the results of his reign are not attributable to his own genius, but to the aggregate sagacity and pertinacity of the confederated diplomatists who pursue, with enthusiasm, the objects of the Russian system. The Emperor is, in fact, a man of narrow mind; and went as a representative man, as a figure in Russia, as a personage at courts out of Russia; but precisely of that class of minds which is inevitably, though, perhaps, unconsciously, ruled by others. But this personal potency has always attached to him, that he is a fanatic, faithfully believing in his "mission"—viz., to sustain the despotic system in Europe—if there must be a choice to make Europe Cossack rather than Republican. And this tendency he indicated at once in commencing his reign; and this tendency was at once understood in the other despotic Courts of Europe. His energy was exhibited with great effect in domestic concerns. One of his first acts was to issue a commission of inquiry into the various abuses of the State; and all the revelations of this committee were acted upon with a vigour which gave the country assurances of at least an honest administrative government. But only to a certain extent has he been successful; the innate villany of the bureaucratic classes in Russia inertly but successfully resisting all the efforts of the Emperor to save his people from the peculations of his many prooonsols. Instances of his *modus operandi*, in this respect, are given by a well-informed, though very partial writer, in the last number of the *Quarterly Review*. The writer says:—"The only way by which he keeps any kind of order is by making journeys at full gallop at the risk of his neck, coming upon the officials before they have time to alter the every-day state of things—promoting the efficient, and summarily degrading the remiss. We may mention one small specimen. The Emperor had received information that the naval stores at the arsenal at Cronstadt—like the water in the fountains at Charing-cross, or 'the army' at Astley's—were carried in at a gate, entered by a clerk, taken out by a side-way, and brought in and entered again—each entry of course being charged to the treasury with the full market price of the article. Determined to catch the culprits *flagrante delicto*, the steam of the Imperial yacht was ordered to be got up forthwith—the great man in person embarked—but just as he was nearing the port, a column of smoke was seen to rise from the dockyard, and in a few minutes all evidence of guilt was destroyed by the fire, which was meant to be as useful a respondent for everything missing as the cat in Dean Swift's 'Directions to Servants.'" There is, no doubt, a good deal of truth in this, and such facts suggest that, after all, even the despotism of a Czar fails to give practical power to the individual when his authority has to be dispersed among a multitude of officials. There is great exaggeration about the "power" over persons of the Emperor of Russia; but it is very plain that his great nobles—though they cannot leave their country without his permission, and would forfeit their estates if they did not return to their country on his order—are, in a great measure, in their provinces, independent; and that, as a class—notwithstanding the systematic attempts of the Czar to impoverish them, by inducing profligacy and extravagance in their habits—they are invincible. It is also palpable—as so many sudden deaths demonstrate—that the Russian system is stronger than the Russian Czar; and that he is as much an instrument as a dictator.

Nicholas early found himself involved in wars: and the successful results confirmed his power. In 1828 a war with Persia broke out, upon well-managed provocation; and, in the end, after two years' fighting, which was prolonged with a purpose—the gold of Russia always fighting for her as much as her lead—Persia was completely conquered, her further exhaustion being secured by her undertaking to pay Russia the whole expenses of the war—namely, 18,000,000 rubles: Russia, furthermore, obtaining new territory. The next achievement of the Emperor was his war, in 1828-9, with Turkey, terminating, after many celebrated actions, in the battle of Schumla, whereby Russia obtained more territory, and vast commercial advantages—certainly to the detriment of English trade in that part of the world. For this war Russia also made the enemy pay—in all, 10,000,000 ducats. Then came the Polish revolt—the struggle, in which Nicholas himself took the part of an indefatigable general—and the "peace," which he announced to Europe "reigned at Warsaw," Poland being erased from the map by the ukase of March, 1832; and Nicholas, announcing to the deputies whom he summoned, "continue to attempt to renew this scattered nationality, and Warsaw shall be levelled with the earth." There have been insurrections since, and the threat has not been kept; Warsaw proving convenient as a capital, whence more easily to negotiate with Europe. Then came the war with Circassia; and the Circassians remain unconquered. When first attacked by Russia they were a handful; but they have now grown into a nationality, daily increasing in strength from the junction of Cossacks and in battles with the Circassians fall yearly thousands of Russian troops—thousands yearly replacing them with that punctuality which only despotism can command. Russian diplomacy, always active and sagacious, pushed beyond Circassia and Persia; and the English army's expedition to Cabul was understood by Russia as the response to her supposed machinations in India. England and Russia were, however, in alliance repeatedly—namely, Europe in the Syrian affair, when, as the Turkish Empire was tottering, and Ibrahim Pacha, with the army of Mehemet Ali, was on his way to Constantinople, England, Russia, Austria, and Prussia (France being left out) intervened, saved the Sultan, and imposed conditions on the too-powerful Pacha, whose force and *prestige* Sir Charles Napier had destroyed at St. Jean d'Acre. The Emperor Nicholas, however, notwithstanding his ceaseless diplomacy at all the courts and in all the cities of Europe—his constant appearance in provocations or arbitrements in Greece, in Denmark, in Germany, and in the Christian provinces of Turkey, did not assume in the eyes of Europe, that attitude of which he was ambitious until after the French Revolution of 1848. Then, at last, he could play his *rôle*; and, to use the laudation of a too courteous Englishman, he then faced Republicanism, and effected reaction. He saved Austria by conquering for her Hungary. The consequences and accompaniments of his masterly intervention, in that case are the news of the day; and it is not necessary to relate, in this place, the story of Russian diplomacy, in the *spring* and summer of this year, in the Danubian Principalities. During all this restless "foreign policy," the Emperor has nevertheless been busy at home. His administration has been pre-eminently vigorous, at all times, in all seasons, in despite of all distractions. But it is doubtful if his army is now in as complete a state as it was when he ascended the throne; and it is very questionable if the Russian Empire is at all secure from that destruction which would follow the first concurrent revolt of any three of the notoriously discontented provinces. But, on the outside, tall is grand and colossal; and all that severity can do is done to sustain the fabric: thousands yearly to Siberia.

A few personal traits of the Czar may be stated. His visit to London in 1844 made Englishmen, directly, or by report, tolerably well acquainted with his person; and it was the fashion then, and has been maintained since by the English writers on Russia, who have been of the courtly classes, and have drawn flattering pictures of the gaudy but somewhat too stern life at Peterhoff, to hold that his Imperial Majesty was the subject of male beauty. It is certain that he is a man of vast bodily strength, assuredly, if not of the finest force of such a physique that he is enabled to go through his vast labours, as his own Minister, and his wonderful and rapid journeys as his own spy. His English visit was a whirl; he was here only a week, yet saw everything, found time for Ascot, and to give a Cup—whence, as Mr. Disraeli has said, the great propriety of an Anglo-Russian alliance—and was gone before it was well-known that he had arrived. The rumour at the time was, that he had come to England in order to detach Queen Victoria from her too friendly relations with Louis Philippe, and that he succeeded by showing her Majesty a private correspondence which he had had with the French King, in which French designs were too carelessly confessed; and it will be remembered that the *entente cordiale* did not long survive; and there was some confirmation for the belief that a Russian alliance was henceforward to be expected, in the fact that, on his departure, the Emperor kissed her Majesty. The Emperor also kissed Wellington. Kissing is, in fact, a matter of course in Russia; and the Emperor carried his gracious custom with him, and kissed everybody. His habit of rapid movement, so surprisingly exhibited in his English tour, has often been amusingly illustrated, more particularly with regard to his Empress, who never moves from St. Petersburg, even to Italy, but she has to calculate on the possibility of his Majesty presenting himself at any turn of the road, at any time of the day; these flying visits having sometimes been made to her by her Consort in the disguise of a common courier or soldier. De Custine, who was no liar, admits, in his celebrated book, that, whatever the other faults of Nicholas, he was then (about 1839) an excellent husband. De Custine's particular grievance with the Czar was that he was a bad host. At the balls at Peterhof there are, says De Custine, from 5000 to 7000 persons, but not one happy face. The expression of the Emperor's face is destructive of gaiety. He smiles with his mouth, not with his eyes. At these balls, it is worthy of remark that the Emperor, who would be the most Russian of the Russians, insists on both sexes wearing the Russian costume, in which even the ladies of the "Moscow party" (the Russian party, as distinguished from the German party) are unconfortable and awkward. The Emperor would also wish only Russian books to be read, and his tariff against French literature is severe; but, despite all his despotism, the French novels go into Russia, and after all, perhaps, they suffice to counteract Siberia. Intensely Russian as he is, Russian to the backbone, to the *mot*, that men of genius are of no country; and he presses into his service, like his predecessors, all the able men whom he encounters. In fact all the great men of the Russian military and diplomatic service, with the exception of Baron Brunow, a Russian by birth, will be observed, a Russian noble—are foreigners, either in race or in religion. It is curious that Protestants chiefly command in the Russian army, and would, no doubt, lead Russian troops against the Turks in the cause of the Greek Church. The Russian Generals who subdued Hungary were Livonians and Protestants.

Of the children of the Emperor Nicholas, three have acted, or are likely to act, remarkable parts in history. His daughter, the Duchess of Leuchtenberg, who was in London the other day, is said to be one of the cleverest women in Europe, with a taste for diplomacy; and a not unnatural conclusion has been, that so accomplished a lady would not come to England merely for what the Continental papers have called "the waters of Torquay." The heir to the throne, Alexander, is a liberal minded man, of a gentle disposition; and, should he ever possess sovereign power, he would, probably, be the occasion of some revolutions. The second, Archduke Constantine, is the head of the Moscow party—intensely Russian and intensely ambitious. Against the last Europe has a great safeguard; he is not a clever man, and he is too violent to be allowed to hold power very long.

THE IMPERIAL RUSSIAN FAMILY.

HER Imperial Highness the Grand Duchess Olga of Russia, accompanied by her Royal consort, the Crown Prince of Wurtemburg, arrived off Woolwich on Wednesday morning, at ten o'clock, in her Majesty's steam-packet *Vivid*, from Ostend.

The Crown Prince and Princess reached Antwerp, from Stuttgard, at an early hour on Monday last, and devoted the day to an inspection of the artistic treasures contained in the museums of that city; passing the night at the Hotel de St. Antoine. The Crown Prince and Princess, attended by the Russian Minister, proceeded to the Court of Brussels, and came on to Ostend on Tuesday afternoon. At the railway station the illustrious travellers were received by his Royal Highness the Prince of Prussia, who, with his family, is at present sojourning at Ostend for the benefit of sea-bathing. The Crown Prince and Princess, accompanied their illustrious relative to the Hotel des Bains, where the Royal party dined together at seven o'clock.

Her Majesty's mail steam-packet *Vivid*, Captain Smithett (who, by the way, seems to have the monopoly of conveying and safely putting the Royal personages who visit these shores), had arrived at Ostend from Dover, early on Monday morning, bringing Count Wielhorski, secretary to the Russian Legation in London, as an escort to conduct the Grand Duchess and her Royal consort to London. By a previous arrangement, the illustrious travellers embarked in Ostend harbour between nine and ten o'clock on Tuesday evening, and shortly afterwards retired to rest. Captain Smithett remained in harbour until half-past one o'clock Wednesday morning, and, quietly putting to sea, accomplished the worst portion of his passage before the Crown Prince and Princess were aware they had left the Belgian coast.

The *Vivid* performed the trip so admirably that her gallant commander was compelled to slacken speed after passing Gravezend, in order to avoid anticipating the hour fixed for the Royal arrival at Woolwich.

A guard of honour, composed of 120 men of the Royal Marines, with band and colour, under the command of Colonel Jolliffe, marched into the dockyard at nine o'clock, from the Royal Arsenal Barracks, to be in attendance to receive the Royal party.

His Excellency Baron Brunnow, accompanied by Count Hudolph, attaché to the Russian Legation, arrived at the dockyard shortly after nine o'clock, and was received by Commodore Eden, Captain-Superintendent, and the other officers in attendance.

On the arrival of the *Vivid* alongside the wharf, his Excellency Baron Brunnow went on board and paid his respects to the Grand Duchess and her Royal consort. In a very few moments her Imperial Highness stepped ashore, amid the roar of artillery and the salutation of the guard of honour.

The Crown Prince and Princess rode in an open carriage with his Excellency Baron Brunnow. The members of the Royal suite followed in two other carriages.

The Royal party drove through Greenwich and Deptford, and over Westminster-bridge to Miwart's, where the Grand Duchess and the Crown Prince purpose to remain a few days, previously to proceeding to Torquay, to join her Imperial Highness the Grand Duchess Marie of Russia.

In the course of the afternoon the Grand Duchess and her Royal Consort paid a visit to Westminster Abbey and St. Paul's Cathedral. The illustrious party drove through Cheapside and other crowded thoroughfares of the City, at a time when they were almost impassable from excessive traffic. The Grand Duchess has never visited England before, and her Imperial Highness was evidently both astonished and interested with the extraordinary vastness of the metropolis.

At half-past five o'clock the Grand Duchess and the Crown Prince, accompanied by his Excellency Baron Brunnow, proceeded to Buckingham Palace to have an interview with the Queen and the Prince Consort.

Lord Charles Fitzroy, Lord in Waiting to the Queen, has been appointed by her Majesty to be in attendance upon the Grand Duchess during her *séjour* in England.

LITERATURE.

RUSSIAN TURKEY, OR A GREEK EMPIRE THE INEVITABLE SOLUTION OF THE EASTERN QUESTION. A Letter to Lord John Russell. By G. D. P. saunders and Stanford, Charing-cross.—THE EASTERN QUESTION IN RELATION TO THE RESTORATION OF THE GREEK EMPIRE. By an Inquirer. Longmans.—Travels in Southern Russia and the Crimea. By M. Anatole de Demidoff. Illustrated by Raffet Mitchell.

The history of the Turks seems now a completed episode in the larger history of Europe. It has had its beginning, and its middle, and its certain end is not far off. Just four hundred years have elapsed since they fixed themselves in Europe, and finally extinguished the Roman Empire. After a protracted siege, and prodigies of valour on both sides, Constantinople was taken by the Turks on May 29th, 1453. Then Mahomet II. assumed the title of Emperor, and a rude tribe of men, originally the "most despised portion of the slaves of the great Khan of the Georgeen," impelled and bound together chiefly by religious enthusiasm, acquired the city of Constantine, and established a great empire on the ruins of that of Rome. The Turks first became known, according to Gibbon, in the middle of the sixth century, and made themselves remarkable for their ferocity. As mercenaries, or as allies, or as an independent people, they were continually at war, and made great conquests. In common with all the nations of Asia, they suffered great vicissitudes, being in turn conquered as well as conquerors. But since their first appearance they have never been wholly absent from the page of history. In the eleventh century, after they had been subdued and converted by the Arabian successors of the Prophet, they rose into great power on the ruins of the Caliphat, and became formidable to all their neighbours, particularly the declining and dismembered empire of Constantine. Their encroachments from that time were almost incessant; and their power, with few checks, continually increased. The Grand Turk, after the conquest of Constantinople, became the terror of Western Europe, and for two centuries it seemed doubtful whether Europe were not, like Asia, to be forcibly converted to Mahomedauism. His victorious progress received its first serious check on October 7th, 1571, when the combined fleets of Christendom—Europe being indebted for its religion and its independence to its season—destroyed the Turkish fleet at the great battle of Lepanto. Till then the Turks had been as powerful at sea as on land, but that victory prevented the Mediterranean from being converted into a Turkish lake. Not engaging in trade, the Turks had no mercantile marine, the surest basis of naval power; and they never retrieved that defeat. Before the end of the seventeenth century the Turkish Empire had passed its climax; and we may date its rapid decline from 1683, when its armies were, for the second time, repulsed with disgrace from the walls of Vienna. Founded on conquest, the principle of its vitality decayed when it ceased to conquer. The nations around it cultivating, to some extent, the arts of peace—improving agriculture, and establishing manufactures and commerce—grew more and more powerful; while Turkey made no progress. By a process which was so general that it appears to be a necessary part of European civilisation, the many small states which prevailed in the feudal ages gradually became consolidated and incorporated into a few powerful kingdoms; while Turkey, like other Asiatic empires, was gradually dismembered by its own great vassals. It became weaker and more contracted as other European powers grew stronger and were enlarged. So much was this the result of general laws, that the Turks made to India, from pausing up the Mediterranean, to passing round the Cape of Good Hope, and the discovery and peopling of America—which aggrandized Western Europe—tended to improve and to weaken the dominions of the Sultan. Thus it gradually came to pass that the Western States grew into strength, that the Grand Turk—formerly the terror of each and all of them—dwindled into helpless weakness. For some years Turkey has existed as a state by the forbearance of some, the support of others, and the conflicting interests of all her neighbours.

But the more important cause of her decay is to be found in her domestic institutions. Of the religion and morality of the Turks it is only necessary to say that they are hostile to intellectual and bodily activity. Practising few arts, being still only rude soldiers, the Turks, individually, make no improvements, and leave most of the duties of civil life to their subjects. All the men of business, the merchants, the bankers, the diplomatists throughout Turkey are Greeks or Armenians. From the first the Turks have only encamped in Europe, and have always lived in it more as a garrison than as citizens. They have remained perfectly distinct in manners, in morals, and in faith, from all the industrious, wealth creating people whom they have continued to rule as conquerors. They have despised the religion of their vassals, have treated it with abhorrence or contempt, and have only tolerated it that they might have slaves to plunder. All the increase of wealth which has taken place in Turkey, if any there be, is the industry of the Christians. They possess nearly all the wealth-creating power. Much fewer in numbers than their subjects, inferior to them in knowledge and skill, as well as in enterprise and industry, wanting all the elements of natural increase, their old military organisation destroyed, their fanaticism cooled down, the very soul of their original greatness having expired, the Turks have utterly, and for ever, lost the means of maintaining or restoring their empire. Whatever may have been the case in antiquity, in modern times national power depends less on the sword than on the knowledge and practice of the useful arts, and the creed hostile to them must in the end be destructive of national greatness. The great change we have noticed, therefore, between the Grand Turk being the terror of Europe, and the Sultan depending for his throne on the forbearance of other powers, is less due to any scheme of policy or any ambition in other states than to their natural increase in power, and the natural decay of Turkey from continuing a rude system of oppression, and from neglecting or despising the useful arts. She has become weak from internal more than external causes; and the Turks have been subdued rather by their own vassals than by foreign states. Turkey has gone through all the phases of vigorous youth, powerful maturity, and decrepit old age. She is an example of the completed life of an Asiatic nation. From Assyria downward, with the single exception of China, the nations of Asia have successively risen to a mushroom greatness, only to perish speedily and for ever.

Though Turkey is still the subject of negotiation and dispute—for her fertile territory is coveted by her neighbours the empire of the Turks has really come to an end. The name remains, but the power has disappeared; and the rest of Europe is really at present discussing the question, without consulting the Sultan, how Turkey is to be disposed of. Russia has long been directing her steps towards Constantinople, and is ready to absorb Turkey. Her ambition is unbounded, her bigotry extreme, her rule demoralising and impoverishing; and its extension is dreaded by all the people of Western Europe. Hence a project of allowing a Greek empire to take the place of Turkey is at present much in favour. Both the writers, the titles of whose pamphlets we have placed at the head of this article, advocate this project; and from the first-named of them we borrow the following statement, which may serve as the basis of every reasonable opinion of the

POPULATION OF EUROPEAN TURKEY

The number of Turks at Constantinople is	..	400,000
Turks in European Turkey and the islands	..	2,600,000
Greeks at Constantinople	.. ..	150,000
Greeks in European Turkey, the islands and coast of Asia Minor		4,650,000
Slavonians, Serrians, &c.		1,200,000

Bulgarians	.. ..	3,000,000
Wallachians (Dacians)	.. ..	4,000,000
Vlaks (of Pindus)	.. ..	200,000
Albanians (Christians)	.. ..	1,600,000
Armenians (Christians) at Constantinople	.. ..	250,000

There are also at Constantinople about 10,000 other Christians of all nations, and 20,000 Israelites, who, from hatred to the Christians, always side with the Turks against them.

Among the 2,600,000 Turks of the provinces, 800,000 in Bosnia are renegade Slavonians, and almost all the Turks of Epirus are renegade Albanians. The Bulgarians are not Slavonians, but of quite a different race, and the Slavonian dialect they speak is a borrowed one. Russia has among them no strength of attraction, excepting as long as she serves their interest.

Of the various people who inhabit Turkey the Greeks are by far the most numerous. They have also the advantage of professing the same creed as the majority of the others, but they are not much liked nor much trusted. Their reputation of being more cunning than courageous, is not in their favour. They are, however, a rapidly-improving people; and their vices are those of an oppressed race. They cultivate the fine arts, they value literature and science, and make great efforts to promote education: young Greeks are found as students in most of the colleges of Europe. They are energetic and industrious, skilful seamen, clever merchants, and versed in all the arts of making money. Distinguished from the earliest periods for great and versatile faculties, remarkable for the shrewdness of their intellect, they have continued to be, and have grown to be, in spite of the oppression of the Turks, a considerable people. In all the marts of Europe they carry on a great trade. Much of the activity in the Manchester market depends on the fact whether or not the Greeks are buyers. The great increase in our trade with Turkey, elsewhere mentioned, is much owing to the Greeks; and the trade is chiefly carried on by and with them. In return for our increasing exports to Turkey, large and continually-increasing quantities of corn are imported from that country and the other countries in the East of Europe. The valley of the Danube, the vast and fertile plains of New Russia, fatherly described in M. Demidoff's book, and all the rich countries of Asia Minor have been stimulated into agricultural activity by our demand for corn; and every week thirty or forty or more vessels arrive from the Mediterranean and the Black Sea, bringing wheat, oats, barley, beans, peas, and maize for our use. The cargoes recently bought may be for the use of Russia, Germany, and sometimes also

ENTRANCE TO THE BLACK SEA—SKETCHED FROM MID-CHANNEL.

CHOTYN AND VARNA.

We resume our Sketches of Russian and Turkish towns which, in the event of a war between the two countries, would become of importance in military and naval operations. We select for illustration this week the Russian town of Chotyn, and the Turkish fort of Varna.

Chotyn, or Choczim, called by the Russians Khotune, is a strongly fortified town of Southern Russia, in the province of Bessaraba. It is situated upon the Dniester, twenty miles south-west of Kamenietz. The population of Chotyn, which formerly amounted to 30,000, had in 1838 diminished to 1700. But the town is still an important military post, and contains a Russian garrison. Until the end of the eighteenth century it was the northernmost post of the Ottoman Empire. The town is memorable for the defeat of the Turks by the Russian army in 1739.

Varna, a port in the Black Sea—the ancient Odessus—is situated in the Turkish province of Bulgaria. The fortifications have been repaired and strengthened since the rumours of approaching hostilities with Russia. As a naval and commercial position, the possession of Varna is almost indispensable to Turkey. The bay is deep, and of great extent; the anchorage safe, and completely protected against the winds of the north and south—the most disastrous to shipping in the Black Sea. Varna has one advantage over its great rival, Odessa, in Southern Russia, that navigation is never interrupted during the severest winter. Varna is the outlet through which the products of the vast and fruitful territory adjoining find their way. In these provinces of European Turkey, the corn of every description cannot be surpassed in weight and nutritious qualities: the wine and fruits are excellent; and oil, tallow, hides, wax, honey, timber, and live stock of every description, are produced in abundance. The commerce of Varna with Great Britain has already increased since the repeal of the Corn-laws; and, if the Sultan would only declare Varna a free port, the inhabitants of the country around would find the market which they need for the sale of the surplus produce of their labour. Such is the fertility of the soil, and the favourable nature of the climate, that the productions of the provinces of which Varna is the natural *entrepôt*, might easily be quadrupled in a few years. The population of the rich and fertile province of Bulgaria are industrious, but they labour under cruel disadvantages in the want of roads, in the absence of which they are obliged to transport the produce of the country on the backs of mules and horses across steep mountains and rugged defiles.

The province of Bulgaria, in the centre of which Varna is situated, forming as it does the frontier of this portion of the Turkish Empire, has frequently been the theatre of war between the Turks and their neighbours—the Austrians and Russians. Having the Black Sea and the Danube for a boundary to the north and east, and being defended by a connecting chain of strong towns and forts from Varna to Widdin, nature and art have made the province of Bulgaria a position of

FORTRESS OF CHOTYN.

VARNA, ON THE BLACK SEA

TERAPIA.—SKETCHED FROM THE ASIATIC BANK OF THE BOSPHORUS.

great strength. Widdin and Silestria are, at the present moment, garrisoned by a large Turkish army, and are capable of sustaining a siege: but the defences of Varna and the towns forming the cordon of fortresses, were so damaged and dismantled by Russian cannon in the last wars waged with the Porte, that, notwithstanding the skill of the Prussian engineers lately employed by the Sultan to repair the fortifications, it is doubtful whether they are capable of offering any effectual resistance to the large and well-appointed Russian army now collected in the Danubian Principalities, under the command of Prince Gortschakoff.

Assuming that the Russians should cross the Danube, and gain *terra firma*, the strong Turkish fortress of Shumla must first be besieged and taken before the Russians could pass the Balkan Mountains, which rise up like a vast wall, towering to the heavens, as if nature had formed an impassable barrier to defend the Eden beyond it. The passes on the Bulgarian side of the chain of the Balkan are abrupt, contracted, and difficult of ascent, and a few trees cut down would bar the passage. The Russians, however, forced the passage of the Balkan in 1829, under Field-Marshal Diebitsch, after defeating the main army of the Turks at Shumla; and it may be doubted whether the Turkish army would be strong enough to avert a similar catastrophe in 1853. Varna might be taken by the Russians on the land side; but the English and French fleets, long ere this could happen, would ride triumphant in the Black Sea, and intercept the transmission of any reinforcements and munitions of war for the use of the Russian army.

GATE OF THE SERAGLIO, AT CONSTANTINOPLE.

THE BOSPHORUS.

We resume our Illustrations of the banks of the Bosphorus. Our first Engraving (on the preceding page) represents the Bosphorus at the entrance to the Black Sea. The view was taken about mid-channel, at the present anchorage of the Turkish fleet. The Asian shore is on the right of the landscape, and the European shore on the left. The high ground on the Asian side, crowned by a Genoese castle, is Anatoli Kawak, the termination of the Bithynian mountain chain of Olympus. The fort on the left, called Deli Tabian, is situated on a promontory formed by the projection of the Thracian chain of Mount Hœmus. On both sides of the Bosphorus, at the water's edge, are batteries pierced for heavy guns, which would open a destructive fire upon the Russian fleet should it attempt to force a passage to Constantinople. As the traveller approaches Constantinople from the Black Sea, the Bay of Bouyouk Déré, with its picturesque dwellings encircling the stream, and the aqueduct of Sultan Mahmoud in the distance seems to close the Strait before the traveller; till, on passing a point, he sees it stretching away to the southward, between the sequestered village of Terapia—a favourite resort of Franks and Greeks, and the memorable "Sultan's Valley," lying, Eden-like, fragrant and cool beneath a lofty hill crowned with a kiosk, memorable for the treaty of Unkiar Skellessi, signed there, as if in mockery, in sight of the windows of the mansions of the French and English Ambassadors. By this treaty, concluded between Turkey and Russia in 1833, the Porte engaged herself not to allow the passage of the Dardanelles to any enemy of Russia.

Our view of Terapia is taken from the "Unur Kol," on the Asiatic side of the Bosphorus, on the northern promontory of Begkos Bay. On the extreme left is the Bay of Terapia; next to which, on the right, are the châteaux of the Greek merchants. The building a little to the right of the centre of the Engraving is the summer palace of the French Embassy, from which the tricolor-flag is flying; and behind it are the magnificent gardens belonging to the Embassy. Still further to the right is the summer palace of the English Ambassador. The view on the right is closed by some Greek houses.

After passing Terapia, the traveller enters another silvery lake, embosomed in hills of all forms but all graceful, covered with fairy-looking villages, among which Kandilly, the scene of Anastasius's exploits, sits pleasantly in the midst of gardens; while arabesqued, latticed palaces—retreats of the wealthy and beautiful of Constantinople—and cemeteries rich with gilding and marble, fringe the water's edge. The visitor then arrives at the castles of Anadoli-Hissar, and Roumely-Hissar, built by Mahomet II., to command the Strait, during his siege of the city; and at length casts anchor near the point of the Seraglio, in the midst of the celebrated basin called the Golden Horn. Constantinople now stands revealed in all her beauty and loveliness, and the traveller understands why the Greeks almost prefer degradation there to freedom elsewhere, and can sympathise with the anguish of the Ottoman when exiled from Stamboul.

We give a Sketch of the Gate of the Seraglio, with its charming avenue of trees. Two Turkish soldiers, in their blue uniforms and red caps, are guarding the entrance.

THE VALLEY AND BAY OF BOUYOUK-DERE.

THE LARGE PRINT OF THE BRITISH FLEET AT SPITHEAD, IN JULY, 1853,

Drawn by EDWARD DUNCAN, *from Sketches made at Spithead by* OSWALD BRIERLY; *and given with the present Number of the* ILLUSTRATED LONDON NEWS.

POSITIONS OF THE BRITISH FLEET AT SPITHEAD, IN JULY, 1853.

THOUGH one of the finest and most famous anchorages in the world, Spithead has not been the rendezvous of a fleet, properly speaking, since 1845, when there was assembled there the experimental squadron under the command of Rear-Admiral Hyde Parker. This fleet was probably the last of its character, consisting of sailing vessels only, with the exception of a few steamers of small size. It comprised the following eight line-of-battle ships, the finest and most efficient that any navy could then produce:—*St. Vincent*, 120, flag ship; *Trafalgar*, 120, *Queen*, 110; *Rodney*, 92; *Albion* 90; *Vanguard*, 84; *Superb*, 80; and *Canopus*, 84. Of these ships the *Trafalgar*, *Rodney*, and *Albion*, form part of the Mediterranean fleet now in Besika Bay, under the orders of Vice-Admiral Dundas, and the *Queen* is at Plymouth, but expected at Spithead. The others are not now in commission. The above squadron sailed from Spithead on the 15th of July, 1845, in the presence of the Queen, Prince Albert, and many foreign Royal personages.

The formation of the present Fleet at Spithead originated in circumstances different from those that now detain it there. In the course of last year much apprehension was excited, owing to the unprotected nature of our coasts; and this was aggravated by the doubts that existed in reference to the policy that a neighbouring Government might—from ambition, or the pressure of circumstances—be induced or compelled to pursue. To so high a pitch did the excitement reach, that, to appease it, Government sent out orders for the immediate return to England of the ships then lying at Lisbon, and one or two others from the Mediterranean. At the same time vigorous efforts were commenced to form a steam navy. The screw ships already building were expedited, and launched as soon as ready, and others were laid down on the vacated slips. The *Sanspareil*, 81; the *Agamemnon*, 91; the *Duke of Wellington*, 131; the *Imperieuse*, 50; and the *St. Jean d'Acre*, 100, were successively equipped and put into commission, as also a number of screw and paddle-wheel frigates and sloops. In May, 1852, Rear-Admiral Arthur Lowry Corry had been appointed to the command of the Western Squadron, whose rendezvous was at Lisbon; but this, as already stated, was brought home, first taking up its station at Cork, and subsequently coming up to Spithead. A Channel Squadron, under the command of the same Admiral, was then formed, consisting of the *Prince Regent*, 90, Captain Frederick Hutton, flag ship; *London*, 90, Captain George R. Mundy; *Sanspareil* (which had been reduced to 74 guns), screw-ship, Captain Sidney Colpoy Dacres; *Imperieuse*, 50 gun screw-frigate, Captain Rundle B. Watson, C.B.; *Amphion*, 34, screw frigate, Captain Charles G. E. Patey; *Highflyer*, 21, screw frigate, Captain John Moore; and *Leopard*, 12, paddle-wheel steam-frigate, Captain George G ffard. This squadron moved from Spithead to Plymouth; and, on the 25th of May it sailed from the latter port on a cruise to Lisbon and Gibraltar. Just at this time, however, the dispute between Russia and Turkey assumed a serious aspect, and appeared calculated to embroil this country with the former power. The Russian Baltic Fleet, which was set down on paper in strong force and efficient equipment, also moved down the Neva from Cronstadt into the Baltic, for the reported purpose of performing some naval evolutions. The shipping and mercantile interests now took alarm at the possibility of sudden hostilities with the above power, in the event of which, and in the absence of the fleet, an incalculable amount of damage might, it was feared, have been inflicted on the commerce of the country by the sudden appearance of a hostile force off the mouths of the Thames, the Humber, and the Mersey. The *Banshee*, 2, despatch steamer, Lieutenant Commander Hosken, which was then the only vessel of war at Spithead, was, consequently, ordered to be in readiness to sail after Admiral Corry, with orders for his immediate return to Spithead. She renamed at that anchorage, however, until the 24th of June, having, in the meantime, been joined by the *Blenheim*, 60, screw steam-guard ship, Captain William H. Henderson, C.B., and the *Sidon*, 22, paddle-wheel steam frigate, Captain George Goldsmith, from Portsmouth harbour. The *Banshee* called at Plymouth, and from thence made the passage to Lisbon in three days. Admiral Corry's squadron did not arrive there, however, till the 11th of June, having made a variety of trials of sailing of a very interesting character. They entered the Tagus at one p.m. on the 11th, and prepared to moor, but before the second anchor was let go, orders were signalled by the flagship for the whole to prepare for sea again. This they did, and moved down to Passo d'Arcos the same night, and the following morning got under way for England the *Leopard* taking the *Prince Regent* in tow, and the *Impérieuse* the *London*. The *Sanspareil* now parted company, and proceeded to the Mediterranean to strengthen the fleet under Vice-Admiral Dundas; but on the 16th a melancholy and disastrous accident occurred between the *London* and *Impérieuse*, and by which an officer and six men were killed, and twelve others seriously injured. It appears that whilst the former was in tow of the latter, the *Impérieuse* stopped for the purpose of "parsing" the *London's* cable; and, going too suddenly ahead, the strain drew the "stopper bolt" from its socket, and the chain running through the hawse-hole with frightful velocity, swung round the two foremost messes. The result was the instant death of the senior Lieutenant of the *London*, Mr. Wellesley Pole Chapman (who attained to the rank of Lieutenant in June, 1842, and whose appointment to the *London* bore date December 1, 1851), together with four ordinary seamen, a gunner's mate, and a private marine; whilst, as already stated, twelve other poor fellows were most seriously wounded. To those fatally wounded death was instantaneous, and their corpses were consigned to a watery grave on the evening of the day on which the dreadful casualty happened, amid the lamentations of the officers and crew of the ship. On the 21st of June the squadron was off the Nab Light, when two ninety-gun ships were again taken in tow, as also the *Amphion* by the *Highflyer*, some of her machinery having become damaged, and the squadron came up to Spithead. In the mean time, the *Duke of Wellington*, 131, screw steam-ship, Captain Henry Byam Martin, C.B. (son of the Admiral of the fleet, Sir Thomas Byam Martin, G.C.B.), having been completed by the Dockyard authorities, had gone out of harbour to Spithead, and taken up her anchorage there on the 7th of June. The *Agamemnon*, 91, screw steam ship, Captain Sir Thomas Maitland, C.B., had also arrived at Spithead on the 18th, from a cruise to Lisbon. The *Edinburgh*, 58, screw steam-gunnery-ship, tender to the *Excellent*, Captain Richard S. Hewlett, had likewise arrived at the same anchorage from Plymouth, as had also the *Ajax*, 58, screw steam flag-ship of Rear-Admiral Purvis, at Cork, Captain Michael Quin; the *Hogue*, 60, screw steam guard-ship, Captain William Ramsay, from Plymouth; the *Arrogant*, 46, screw steam-frigate, Captain Stephen G. Fremantle, from the Scotch Coast; the *Odin*, 16, paddle-wheel steam-frigate, Captain Francis Scott; the *Encounter*, 14, screw sloop, Captain George W. D. O'Callaghan; and the *Nerbudda*, 12, Commander Boyd—the latter *en route* to a foreign station.

Spithead now possessed the following fine fleet:

Ships.	Guns.	Men.	Horse-power.	Tons
Duke of Wellington, screw	131	1100	750	3765
Agamemnon, screw	91	820	550	3674
Prince Regent	90	820		2913
London	90	820	—	2781
Blenheim, screw	60	540	450	1747
Hogue, screw	60	600	450	1750
Ajax, screw	58	500	400	1761
Edinburgh, screw	58	260	450	1772
Imperieuse, screw	50	586	350	2146
Amphion, screw	34	340	300	1474
Sidon, paddle	22	400	560	5328
Highflyer, screw	21	220	250	1153
Orua, paddle	16	276	520	1410
Encounter, screw	14	175	385	998
Leopard, paddle	12	240	560	1412
Comus	12	240	—	884
Nerbudda	12	175	—	415
Banshee, paddle	2	63	360	656
Total	815	7529	6420	34,707

While the above were at Spithead, there were several others in harbour rapidly getting ready to go out: among them the *Neptune*, 120, Captain E. J. Scott, bearing the flag of Rear-Admiral Fanshawe, C.B. Superintendent of the Dockyard; the *Arrogant*, 46, screw-steam frigate Captain Fremantle; *Vesuvius*, 6, paddle-wheel sloop, Commander Wilson; besides a number of smaller vessels, yachts, tenders, &c. On the 2nd of July the ships got under way, and took up their positions in order of battle in three lines. This was a manœuvre of great beauty and effect. The *Duke of Wellington* was the leading ship of the larboard division, commencing from the westward; the *Prince Regent of* the starboard division; and the *Sidon* of the centre. Subsequently this was altered, the starboard and central divisions changing places; and two or three other alterations taking place. This resulted in the following disposition of the various ships:—

WESTWARD

Larboard Division	Centre Division.	Starboard Division	Miscellaneous
Duke of Wellington	Prince Regent	Sidon	Nerbudda
London	Agamemnon	Leopard	Comus
Bienheim	Hogue	Odin	
Ajax	Edinburgh	Banshee	
Amphion	Impérieuse		
Encounter	Highflyer		

EASTWARD

The main features of this disposition have been preserved since, though some variations have taken place. The *Duke of Wellington*, *Agamemnon*, and *Blenheim* have been out on cruises; but the two first named have returned, whilst the *Comus* and the *Nerbudda* have sailed for foreign stations. The *Arrogant* has, however, gone out of harbour, and joined the fleet, and other ships are daily expected to arrive, pending an anticipated grand naval review by the Queen.

The presence of such a fleet successively gives to the anchorage an animated and attractive appearance; the majority of the inhabitants of Portsmouth and the Isle of Wight, making it an almost daily duty to inspect it from the ramparts of the garrison, in order to note its various movements and changes, whilst visitors in large numbers throng into the locality. Since it has been at Spithead the wind has two or three times blown a gale, necessitating the lowering of top-gallant masts &c.; and, on one of these occasions a very distressing accident, though it was happily unattended with loss of life, occurred on board the *Amphion*. It was on the 27th of June when the duty we have named was going forward, and the wind being very high, the iron hook of one of the top blocks broke, the block itself falling on deck and knocking down two seamen, one of whom was severely scalped, whilst the ribs of the other were broken. In another moment the broken hook, weighing upwards of fourteen pounds, fell upon Captain Patey's head, knocking him down insensible. A signal for surgical assistance was at once hoisted, and the surgeon on duty on board the *Vixen* 4, flag-ship, was at once sent out in the *Sprightly* steamer, Master Commanding G. Allen. Before, however, he arrived at Spithead, the surgeon of the fleet there had repaired on board the *Amphion*, notwithstanding the rough weather, and every possible assistance was given to the unfortunate sufferer. Captain Patey's estimable lady was on board at the time of the accident, and never left him till he was brought on shore the following day, and safely placed in the Royal Naval Hospital at Haslar. There he still remains, although we are happy to say he is recovering. The injuries received, however, were so severe as to preclude the hope of his being able to resume the duties of his profession for some time to come; and another officer, Captain Astley Cooper Key, has been appointed to the *Amphion* in his room. Another accident, attended with melancholy loss of life, occurred on the night preceding the above, being caused by the rough weather. Lieutenant F. H. Lambert, and Mr. James Muirhead, assistant surgeon—both belonging to the *Edinburgh* —were both cast ard in going off to their ship; and, together with two watermans' apprentices, were drowned.

In addition to the attraction of the Fleet itself, a beautiful spectacle is presented on the passing of the Queen through it *en route* to Osborne or London, and on Royal birthdays, when all the ships dress out in colours, main yards, and fire a general Royal salute, producing a cannonade of a character rarely heard in time of peace.

For commercial purposes Spithead is used by the Indiamen and Australian merchant ships belonging to the houses of Green, Wigram, Smith, Dunbar, &c.; and also by the American liners of sharing Brothers, which embark and disembark passengers, mails, &c.: the long and oftentimes dangerous voyage round to the Thames, or from it, being thus avoided. During the prevalence of contrary winds large fleets of merchant vessels make Spithead, or the adjoining anchorage of the Motherbank, their rendezvous: and when, as will of course sometimes be the case, these magnificent anchorages are devoid of their accustomed naval and commercial occupants, they wear to the inhabitants of the surrounding port an air of utter desolation—being, in appearance, indicative at once of the total absence of national protection, and the decay of national prosperity. The older inhabitants there remember and gossip of the times when the great fleets were forming at Spithead that afterwards won such glorious victories, and the clouds of merchant vessels waiting for convoy to the East and West Indies, and other countries. Recollections of disaster are, however, mingled with those of victory, and the condition in which the British army, or remnant of one, returned from the Walcheren Expedition, is described with harrowing fidelity. The last departure of Nelson from England is well remembered; and the spot from which he embarked is noticed by a pedestal, which was erected by Lord Frederick Fitzclarence, G.C.H., and which is crowned by an anchor that formerly belonged to the *Victory*, Nelson's ship at Trafalgar. It stands on Southsea Beach, close to Hollingsworth's well-known Assembly Rooms and Baths, and bears the following inscription:—

Close to this spot embarked the Hero of the Nile—alas! for the last time—to take the command of the British Fleet that fought and conquered at Trafalgar, where our Nelson fell. This tribute of respect to the departed hero is placed by an humble admirer, Lord Frederick Fitzclarence, Lieutenant-Governor of Portsmouth, 1852.

The *Duke of Wellington* is, of course, the ship that has excited the largest amount of interest and attention. She presents a combination of size, power, and other qualities, possessed by no other ship in the world. Portsmouth Dockyard has equipped and sent out the largest vessels of war; but she never before sent out such a one as the *Duke*, and it appears probable that that dockyard will not be able to equip another ship that shall exceed her in tonnage. The harbour channel itself appears to have placed a limit to any further increase in the size and draught of water beyond those of the *Duke of Wellington*; when that vessel went to Spithead, having only a portion of her guns, there was barely an inch of water to spare as she passed over the bar off Southsea Castle. The utmost care had to be observed, and the nicest calculations made, to prevent any mishap occurring; and so excellent and perfect were the arrangements that not a single incident of an unsatisfactory character happened. In every department of the dockyard, almost the perfection of mechanical skill was displayed in the fitting out of this magnificent ship. In the shipwright and engineering branches, everything went right, and good fortune appeared to attend upon the vessel in every stage of her progress. She was only launched last autumn at Pembroke, and arrived round at Portsmouth in November. It will be remembered that her name was originally the *Windsor Castle*; but that this was altered to her present name, at the express wish of her Majesty. She was designed by the Navy Office, and intended to carry 120 guns, and to be of 3186 tons burden; but previous to being launched she was cut in two amidships and lengthened, so as to give her her present tonnage, and enable her to carry eleven additional guns. Being fitted with the expansive gear, her engines can work up to three times the horse-power nominally possessed by them. At her last trial at Stokes Bay they gave her a mean speed of 9 902 knots per hour; her first run, with the tide in her favour, realising 11.892 knots per hour. She has since been on a cruise to the Scilly Islands, and has proved herself a most efficient ship in every point of view. She may justly be said to be without a rival in the world. A sister ship to her is now building at Portsmouth—the *Marlborough*.

Another remarkable ship in this fleet is the *Agamemnon*. She was built at Woolwich, and was also designed by the Navy Office. She carries perhaps the largest quantity of canvas of any ship in the service: under full sail she can set 10,859 yards of canvas; and on her recent trial cruise she made nearly twelve knots per hour without any assistance from her screw. In the trials of the latter she has attained nearly an average of eleven knots per hour.

The *Impérieuse* is another instance of a successful ship both as a sailing and steaming vessel, and she also was designed by the Navy Office. During the cruise of Admiral Corry's squadron, in a trial under sail, of one hour and fifty three minutes' duration, with the wind abeam, the *Impérieuse* gained on the *London* 2175 fathoms, and on the *Highflyer* 3390 fathoms. At another run of thirty miles before the wind, she gained on the *London* 1460 fathoms, on the *Amphion* 1560, on the *Highflyer* 2325, and on the *Leopard* 4020 fathoms. These proportions the *Impérieuse* maintained in all the trials. She can steam eleven knots with ease.

Of the *Arrogant*, *Highflyer*, *Amphion*, and *Encounter*, it may be said that they possess certain good qualities; but, having been the pioneers in the formation of the steam navy, they cannot be expected to possess the great excellencies of the *Duke of Wellington*, the *Agamemnon*, and the *Impérieuse*.

The four screw block ships *Edinburgh*, *Blenheim*, *Ajax*, and *Hogue* are old vessels; and the first named is the only one that has ever displayed good steaming and sailing qualities. They were built in the years 1816, and 1818, at Deptford, Rotherhithe, and Blackwall, from the designs of the Surveyors of the Navy, and were some of the first ships altered for the screw.

The flag-ship *Prince Regent* is a fine two-decker. She was built at Chatham in 1823, after the lines of the *Caledonia*, and is a razed 120-gun ship. The *London* is from the designs of Sir Richard Seppings, and was launched at Chatham in 1840.

The paddle-ships of the fleet have never much distinguished themselves. The screw-propeller developes advantages of a character too positive, as compared with the paddle-wheel, to admit of the latter retaining any future prominent position in the Royal navy. The only vessel of this section of the fleet that has exhibited anything of a noteworthy character is the very old speed, is the smallest one, the *Banshee*—which certainly did something extraordinary in her trip to Lisbon, after Admiral Corry, when she enabled the inhabitants of that city to read the London daily papers published only two days prior to the arrival there. She was built for packet service, by Mr Lang, the present master shipwright at Pembroke Dockyard. The *Sidon* is the ship designed by Sir Charles Napier, and which has been the object of much criticism and much censure. It is, perhaps, however, no more than the truth to say that her faults are only those common to vessels of her character and class. Her machinery has frequently given way, but that cannot be laid to the fault of our designer.

The Fleet is provisioned and ready for sea, but an early departure is not yet expected. A grand naval review by the Queen, as already stated, is promised, and looked forward to with much interest. Several other ships are to come up to Spithead from Plymouth, Sheerness, &c. It is understood, indeed, that every ship on the list is to come to that anchorage for the purpose; and, if this intention be carried out, the result will be a naval demonstration of such a character as was never before exhibited in a time of peace.

PORTSMOUTH, Aug. 2.—This morning, at eight o'clock, the ships at Spithead sent up royal yards, dressed ship, and run the life-lines out, ready for manning yards, on the occasion of her Majesty's return to London. At about twenty minutes to eleven o'clock her Queen passed inside the fleet, when a grand general Royal salute was fired, with yards manned. This was participated in by the Prussian frigate and corvette, and a more splendid spectacle it was impossible to witness. The weather was brilliantly fine, and a vast multitude of people thronged the shores, attracted by the cannonade. After the firing had subsided, the cheers of the men upon the yards were heard. Rear-Admiral Lushington visited Commodore Schomberg on board the *Orion*, at Spithead, this afternoon, and afterwards visited Capt. Schirmacher on board the *Amazone*: he was saluted by both ships on leaving. The *Bienheim*, 60, Captain Henderson, is hourly expected to rejoin the fleet from Kingstown; the *Queen*, 116, Captain Mitchell, will be at Spithead to-morrow, from Plymouth, and the *Waterloo*, 120, is expected from Sheerness. The *St. Jean d'Acre*, 91, will follow speedily. This afternoon, after dinner, all the gunboats of the fleet, numbering upwards of twenty, were piped away, and manned and armed as for an engagement. They stretched from Fort Monckton to the Blockhouse Fort when ranged in line, and were guided by signals from the senior officer. They came off the Platform Battery, and there hoisted masts and manœuvred in the harbour channel, apparently prepared to "board" batteries; they then came out of the harbour with masts struck and ranged off the Platform Battery, and commenced a heavy general cannonade with their bow guns, to conclude with the sealing of the great 68-pounders of Blockhouse Fort at the same time, forming a musical spectacle we have not seen upon the like scale during the past ten years. Each boat carried a white or blue ensign and altogether, they made a flotilla of the most formidable character. After opening fire upon the Platform Battery (as previously), the force ranged in divisions, got up masts, up sails, and made for their respective ships; the wind, however, falling light, they struck masts soon after, and pulled across the spitway to the fleet, presenting a moving marine panorama of the most pleasing and picturesque description, which was eminently enjoyed by many thousands of spectators who manned the walls of the town, among whom were a large proportion of visitors from London.

NEW BOOKS, &c.

MR ALBERT SMITH'S NEW WORK
Now ready, post 8vo, 12s 6d., cloth,
THE STORY OF MONT BLANC. By ALBERT SMITH. Illustrated by BIRKET FOSTER.
DAVID BOGUE, Fleet-street

On the 15th August, in post 8vo (336 pages), 6s.,
DR. MERLE D'AUBIGNE'S HISTORY of the REFORMATION, Vol V. 8vo, 16s. THE REFORMATION in ENGLAND
Also, uniformly with Vols I to IV of D'AUBIGNE and Merle's HISTORY of the REFORMATION in the same Sizes, 6s. each in boards, or 7s. cloth.
Edinburgh: OLIVER and BOYD. London: SIMPKIN, MARSHALL, and Co.

Just published, fcp 8vo, with Frontispiece, 6s.
A SUMMER'S-DAY DREAM, with other POEMS. By HENRY FRANCIS ROBINSON.
WILLIAM PICKERING, 177, Piccadilly.

Just ready, price 4s. 6d., cloth,
THE DAY OF TRIAL: an Allegorical Poem. By the Author of "England's Parliament."
KENT and SON, 190, Oxford-street.

Just published, post 8vo, price 6s.,
SOCIAL and POLITICAL MORALITY. BY WILLIAM LOVETT.
SIMPKIN MARSHALL, and Co. London

Just published, price 1s.; per post, 1s 6d.,
HOW to SKETCH from NATURE; or, Perspective and its Application. By NEWTON FIELDING, formerly Teacher of Landscape Painting in the Family of his late Majesty the King of the French
London: BARNARD, 27, Oxford-street

Just published, Second Edition, price 1s.; per post, 1s. 6d.,
ORNAMENTAL LEATHER WORK. A Concise and Clear Description of the Art, known as the IMITATION of every description of RICH OLD CARVING By MARIE LOUISE DE BOVET. Illustrated by Engravings on Wood
London: WARD and LOCK, 158, Fleet-street.

MISS AGNES STRICKLAND'S LIVES of the QUEENS of SCOTLAND.
On the 31st of August will be published, Vol IV of
LIVES of the QUEENS of SCOTLAND, and of ENGLISH PRINCESSES connected with the Regal Succession of Great Britain. By AGNES STRICKLAND, Author of "Lives of the Queens of England." Containing the CONTINUATION of the LIFE of MARY STUART
The Three Volumes published contain the Lives of Margaret Tudor, Margaret Douglas, Mary of Lorraine, the Queen Dowager of France, and Mary Stuart. Embellished with Portraits and historical Vignettes
Price 10s. 6d. each
WILLIAM BLACKWOOD and SONS, Edinburgh and London.

EARLY IN AUGUST,
In large octavo, price One Guinea, cloth,
SOYER'S PANTROPHEON.—The History of Food, and its Preparation, from the Earliest Ages of the World
By the Author of "The Modern Housewife," and the "Modern Cook"
Embellished with Fifty-two Steel Engravings illustrating the Various Gastronomic Marvels of Antiquity.
SIMPKIN, MARSHALL, and Co., Stationers' Hall Court.

CURABLE DISEASES AND DANGEROUS DELUSIONS.
Now ready, price 1s.,
ON the DETERIORATED CONDITION of our SADDLE HORSES: the Causes and the Remedy. The State of our Cavalry, and the Inspection system under which this Force and that of our Army are Administered
London. T. HATCHARD, 187, Piccadilly

NOW READY,
Price 1s. 6d.,
DR. HUNTER'S NEW WORK
Forming the New Volume of Routledge's Popular Literature,"
BURTON and his BITTER BEER; with Remarks on the Use and Abuse of Beer in Disease. Upon the HYPERTROPHY of the HEART, and its Treatment by BUSHNAN, M.D., Author of "Miss Martineau and her Master," "Human Nature and the Homœopathic," &c. &c.
London: WM. S. ORR and Co., 2, Amen-corner.

FRENCH CLASSICS. Abridged in an elegant new form, and gracefully permitted by her Majesty to be used in Educational Works for the Instruction of the Royal Children of England. By MARIN DE LA VOYE, late French Master at Addiscombe.
Télémaque ... 2s | Pierre le Grand 2s
Voyage de Cyrus 2s. | Charles XII 2s
Bélisaire 1s 6d
London: JOHN W. PARKER and SON, West Strand

SUPERIOR SCHOOL BOOKS.
Just Published, Price Six Shillings
A NEW EDITION OF THE NEWTONIAN
BUTTER'S FARMER'S ACCOUNT BOOK, by J. ARTHUR BUTTER, Bookkeeper for one Year; and Joseph, if required a Quarterly Form of Valuation and Inventory of Stock—Journal of Weekly Transactions and Occurrences—Ledger—Cash Account, and seventeen Memoranda, with Examples and Rules.
Also, by the same Author, Price 1s. 6d.,
BUTTER'S GRADUATED COPY-BOOKS, Arranged in Progressive Order, and Graduated to Meet the Capacities of Learners at Every Stage of Their Education. Each Book contains Thirty-two Pages, and is Ruled for Pencil.
BUTTER'S GRADUAL PRIMER. With Engravings. 96th Edition. Price 6d.
PINNEIN and Co., Whittaker and Co., Longman and Co., Hamilton and Co., Parker and Co., Ayscott and Co., London; and Macphail, Oliver and Boyd, Edinburgh; and Robertson, Dublin.

SCIENTIFIC DIAGRAMS for SCHOOLS.
Speedily ready, a New Series of large Coloured Diagrams for the use of Schools, illustrative of the applications of Experimental Science to the Arts and Manufactures.
A SECTION of a BLAST FURNACE for SMELTING IRON-STONE. On a sheet of half an inch to a foot: 3 inches by 21 inches. Price 1s 6d. on paper, 2s mounted on cloth.
2. SECTION of a GAS WORKS, showing the process of the manufacture of coal gas. On a sheet of half an inch to a foot: 3 inches by 21 inches. Price 1s 6d. on paper, 2s mounted on cloth.

THE ILLUSTRATED LONDON NEWS

No. 638.—VOL. XXIII.] SATURDAY, AUGUST 13, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE

"HOW WARS ARE GOT UP IN INDIA" AND IN EUROPE.

GREAT BRITAIN is at the present moment engaged in one war, of which it is impossible to foresee the termination, and is threatened with another, that may be still more protracted. Mr. Cobden has favoured his countrymen with a short and lucid recital of the mode in which the first was "got up." The whole world rings with the manner in which the second has been planned. The able and eloquent apostle of Free-trade has not yet favoured the public at any length with his views upon the second. It is worth while, however, for the sake of contrast, and—what is of far more importance—for the sake of the morality of nations—to consider them together.

It is not every one that has the time, the opportunity, or the courage, to read the ponderous volumes which are published by the authority of Parliament, and known as "Blue Books." Mr. Cobden, having lately distinguished himself as the advocate of Peace, has felt himself bound to investigate the causes of the Burmese War. He has waded through a vast collection of crude and unconnected, if not contradictory, documents; and, after much labour, has mastered the facts, and presented them succinctly to the world. In so doing he has rendered a public service. The facts, as seen through the clear medium of his mind, and as narrated in his pamphlet, "How Wars are Got Up in India," are full of interest. We will not go the length of asserting that Mr. Cobden is always correct in the statements which he makes, or that he is in every instance free from undue bias in favour of the Burmese and against his own countrymen. But his narrative bears so great an impress of truth, and is supported by such full and explicit references to his authorities, that we cannot but believe in his general exactitude. The pamphlet consists of fifty-eight pages only; but every sentence is of importance to the people of this country.

To furnish an abstract of an abstract, and especially of one so close and clear, is not easy. We must, nevertheless, attempt a recapitulation of the leading facts, leaving those who may desire fuller information to seek it in Mr. Cobden's Pamphlet, or in the Parliamentary Blue Books. It appears that in June, 1851, the British barque, *Monarch*, of 250 tons, arrived at Rangoon from Moulmein; and in August, in the same year, another British vessel, the *Champion*, of 410 tons, arrived at the same port from the Mauritius. Charges of murder, ill-usage, or debt, were successively brought against the captains of these vessels, by pilots and seamen, claiming to be British subjects. These charges were heard and adjudicated upon by the native authorities at Rangoon. The one captain was forcibly detained for eight days, and mulcted in fines and fees to the amount of £101. The other was detained fifteen days, and compelled to forfeit £70 for fines, fees, and seamens' wages. Out of these very trivial incidents arose the Burmese War. The two captains, dissatisfied with the decision of the Burmese police, appealed to the Indian Government for redress, and laid their damages at £1920. Their claim was considered valid to the extent of £920 only. Commodore Lambert, who happened to be the British naval commander on the Hooghly station, was immediately despatched to Rangoon, to hear the Burmese version of the story, and to demand redress on behalf of the captains, if, after investigation, he considered their amended claim to be a just one. Lord Dalhousie, the Governor-General of India, anticipating, probably, that the Governor of Rangoon might either be incompetent or indisposed to grant redress, instructed the Commodore, in case of refusal, to forward direct to the King of Burmah a letter written by the Indian Government in anticipation of such an event. When the Commodore arrived at Rangoon, he found there were other cases of complaint. He was beset by British merchants and others, all claiming redress for real or imaginary injuries suffered at the hands of the Burmese authorities. Under these circumstances, he suddenly cut short all discussion with the local Governor, and transmitted to Ava the letter of the Governor-General of India, with an addendum of his own, addressed to the Prime Minister of the King, demanding the dismissal of the Governor of

THE REFRESHMENT-ROOM AT THE HOUSE OF COMMONS.—(SEE NEXT PAGE.)

Rangoon, on the plea "that he interposed endless delays, and disregarded official communications addressed to him." The King of Burmah was so anxious either to do justice in this case, or to avoid misunderstanding with his powerful neighbour, that he appointed a new governor at Rangoon, with full powers to investigate and redress all the grievances, old or new, complained of by the two original captains, and by the supplementary traders of Rangoon. So far all went on smoothly, and there seemed no reason to dread so violent a catastrophe as a war. But, from the days of Hector and Achilles to those of Lord Dalhousie and Commodore Lambert, great events have arisen from little causes, and sanguinary wars from the merest trifles. All Oriental nations, as everybody knows, are mighty sticklers for etiquette. Commodore Lambert was either unaware of this important fact; or, in his intercourse with the new Governor of Rangoon, chose wilfully to disregard it. He sent clerks and inferior functionaries to wait upon the Governor—a man of the very highest rank in Burmah—and directed or allowed them to ride into his "compound," or palace, when they ought to have dismounted at the gate; and to force an entrance at the sultry and unseasonable hour of noon, when everybody in Burmah from the King to the meanest peasant yields to the necessity of a "nap." For these two reasons the English emissaries were not admitted. In the first place the Governor did not wish to receive them because their rank was inferior; and in the second place he was asleep, and no one dared to arouse him, even although the British nation knocked at his door. The envoys of Commodore Lambert "were kept waiting a quarter of an hour in the sun," and departed in high dudgeon. That same evening war was declared against the King of Burmah, by Commodore Lambert. The King's war ship, the only one he had, was forcibly seized and towed away. Submission on his part was thus rendered impossible. The Governor-General of India approved of what had been done. The war was carried on with vigour and success. Rangoon, Martaban, and Prome, were successively taken. In the first encounter the hapless Burmese were slaughtered by hundreds, without any loss of life on the part of the British. Stockades were thrown down as easily and rapidly as if they had been built of card paper. The British found no enemy worthy of the name;—unless it were the climate. In due course the whole province of Pegu was annexed; and it is now a question whether our army will not have to march upon Ava, and "annex" the whole Burmese Empire.

Such is a brief history of this unhappy war, as narrated by Mr. Cobden, on the authority of documents printed by the British Parliament. We should like, with Mr. Cobden, to see the Burmese version of the matter. It is not often that an Englishman has occasion to blush for his country; but if the narrative be a true one, it is time not only to blush and be penitent, but to put an honourable end to a war commenced and carried on under such pretexts. No nation, be it ever so mighty, can afford the disgrace of such a deed. There is a public opinion even in the East, that sooner or later will spread itself throughout all the tribes and populations that yield us allegiance, and cry for vengeance against such an atrocity.

We have thus seen "how wars are got up in India." Let us now consider "how wars are got up in Europe." In the one case, the folly, the obstinacy, and the unlucky perversity of judgment on the part of one or more subordinates, have produced the result that we deplore. In the other case, it is not a subordinate, but a principal, that is to blame. It is no sudden misunderstanding, but a long and deeply-cherished purpose of spoliation and oppression that the world has to condemn. It is no mere error of judgment on the part of a man amenable to human laws for his mistakes or his crimes, but the determination of an irresponsible Autocrat to oppress and to plunder a neighbour whom he imagines to be too weak to resist him. In his war against Turkey the Czar has set public law and morality at defiance; he has outraged every sentiment of right; he has run the risk of convulsing a whole continent, and has imperilled the best interests of civilisation, for the sake of his miserable but insatiable lust of predominence and dominion. When Peter the Great bequeathed to his successors a legacy that did not belong to him, he little dreamed what mischief would ensue. They have each and all become the participators in the crime which that monarch first suggested and recommended. They have pursued their nefarious purpose under every variety of circumstance. They have watched, when they thought watching would be of service; they have waited, when they thought it would be perilous to strike; they have plotted, whenever they could turn conspiracy to account; they have bullied, when they found it safe to be violent, or profitable to be insolent; they have looked for dissension in Turkey, and caused it where they did not find it; and if ever events arose to create coldness or estrangement among the powers of Europe, they seized the opportunity to pounce upon their victim, and to harrass if they could not destroy him. In all these arts and vices of a wicked and pertinacious ambition, the Emperor Nicholas stands pre-eminent above all the sovereigns of his race. What they only imagined, he has done. And if Europe be not at this moment involved in all the horror and misery of a war of races and religions, we owe it to the sagacity and courage of Great Britain and France in the first place, and of Austria in the second, and not to the prudence or virtue of the ruler of the Russias.

We think we but express the common feeling of the British people when we hope that both of these wars will speedily be brought to a close. The British nation is just and magnanimous. When the facts of the Burmese War are thoroughly understood, the common sense and right feeling of the people will demand the honorable termination of hostilities, begun in error, and prosecuted by an unhappy fatality. There is no ambition to serve. The British people desire no extension of territory at the expense of Burmah or any other power. Our Empire is large and unwieldly enough already; and Burmah would be an expensive incumbrance to us, if we had the misfortune to possess it. Honorable escape from the dilemma in which Commodore Lambert and Lord Dalhousie have thrust us may not be easy, but it is not impossible. We owe it to ourselves, even more than to the Burmese, to attempt it at the earliest period consistent with our own dignity and the justice of the case. Our true policy in that quarter is peace; the sooner we make it the better for our credit.

But in Europe the case is different. Great Britain, and the other powers of Europe, are so thoroughly in the right in the attitude which they have assumed towards Russia, that to flinch in the slightest degree would be a crime. Peace, in this case, depends upon our firmness. To yield now would be to invite war hereafter. Happily, Europe is united, and its readiness for war will, in all human probability, preserve peace. If, as seems likely, the Emperor of Russia shall be compelled, without a battle, to withdraw his invading armies from Moldavia and Wallachia, a victory of the right over the wrong will have been obtained, second only in importance to that of Waterloo itself. The victory will be none the less splendid because it will have been bloodless; and by its moral majesty will operate more powerfully to curb the bad ambition of Russia than a score of vulgar victories achieved at the point of the bayonet.

THE HOUSE OF COMMONS REFRESHMENT ROOMS.

IN one particular, the Legislature has had some control over the enormous sums spent, and still to be spent, in the building of "the New Palace at Westminster." The Lords have got a House in which they cannot be heard by the reporters, or even very well by each other; and the Commons have got a House which will not contain them; the fact being that the other day when somewhat more than 500 members voted, there were 100 members who could not get seats at all, and had to wait the division bell in strolling about the lobbies. Then, neither Lords nor Commons approve very highly of the external appearance or the general internal arrangements of Mr. Barry's great building. In regard, however, to these points, there are questions of exoteric taste. The nation has to approve or disapprove; and the architect does not confess to any errors, while he has a large party of friends, in and "out of doors," to applaud his every effort. But in what specially concerns members of the Legislature themselves, their individual comforts and conveniences, while attending their Parliamentary duties, Mr. Barry has had nothing to do beyond taking the instructions of others; and in these respects Peers and Commoners have completely satisfied their most elaborate ideas of elegant luxury. The Houses of Parliament are senates; but they are also clubs: and in the latter point of view what has been done is worth attention. The club of the Lords—their dining-rooms, waiting-rooms, lavatories, &c.—is superbly fitted up.

That of the House of Commons, hardly less plain, is just as finished and admirable. Two of their apartments will bear comparison with the most graceful and grand *salons* of the Pall Mall palatial clubs. The smoking-room, which is on the ground-floor—that is, on the terrace, its windows fronting the river—is a faultless apartment. The dining-room, which is rather a suite of two rooms, is very handsome, and is magnificently furnished. Some slight sketch of the system on which it is conducted may prove interesting

All the world has heard of "Bellamy's." It is a name as intimately associated as that of any great parliamentary personage with our modern constitutional history. Bellamy's was, in fact, a corner of the constitution. But Bellamy's has passed away with rotten boroughs and other congenial props of the British institutions: there is no Bellamy now as "House Keeper;" and with the name has gone the system. It was a very peculiar system—a sort of rotten borough and "in the family." Three generations of Bellamys fed the House of Commons and Lords; and, but for the accident of the Old House being burned, and the New House being built, the probability is, that that system would never have been shaken, and that the Bellamys would have gone on as messmen to the Senate to all eternity. The first Bellamy was a contemporary of Pitt, and Fox, and Sheridan; and it was he who gave the place its fame and name, and made "the Kitchen" an institution. A son succeeded him. A grandson kept the Kitchen in the temporary building—or rather shed—until the other day, until members entered their New Houses, which was only two sessions ago. Under the three the system was much the same; but the change in the customs and tastes of society had, latterly, called attention to the complete inappropriateness of that system to the supply of the new wants: and the glory of Bellamy's had departed long ere the name (which is still to be found, as that of a prosperous wine-merchant firm in Parliament-street) had ceased to be connected with the provisioning establishment. Bellamy's has often been written about; but never so well as by Mr. Dickens, one of the most successful of whose earlier sketches was devoted to the delineation of a department of the House of Commons; with which his own connection with the "Gallery" often brought him in contact. His account relates to the period and the persons subsequent to the fire. He tells us nothing of Mr. Pitt, who used to drink two bottles of port to his dinner of rump-steaks, and then go and deliver a Budget; nothing of Mr. Sheridan, who never could count the bottles of sherry (and who would have been obliged if nobody else had ever counted them) he had drunk while cogniating a great speech against the Treasury bench; nothing of any of the great drinking celebrities, who were as jealous of their reputation as bottle-men as of their fame as orators and leaders, and who managed to combine the life of the *gourmet* and that of the statesman in a manner, and to a degree, which our present public men are at a complete loss to understand, without coming to the late Lord Panmure's conclusion, that "stomachs are going out of the country, Sir." But Mr. Dickens's sketch is still of value, as a daily picture of a scene which many members and "strangers" can still well remember. He requests us, after he has taken us up into the Kitchen, where tables are laid out for dining, to "pause in front of the little bar-place with the sash windows; and to begs attention to the steady hoop-looking old fellow in black, who is its sole occupant." This is Nicholas, the butler, a celebrated character, who saw the unheroic side of a long series of heaven-born ministers, and had strange tales to tell, and was always ready to tell them, of the manners and sayings of the pilots, who found an occasional calm in the storms their kings and country had appointed them to weather. Nicholas was famed for his salad dressings, and his cold punch; and he talked of the last (he has been dead many years dead) with pertinacious perfection. "But (says Mr. Dickens) Nicholas had a great idea of the degeneracy of the times." He lamented the Reform Bill; and especially the clause which empowered the metropolitan districts to return members to Parliament. "We discovered the secret at last: the metropolitan members always dined at home. The rascals! As for giving additional members to Ireland, it was even worse. 'Why, sir (he would say), an Irish member would go up there and eat more dinner than any three Anglish members. He took no wine, drank table-beer by the half-gallon, and went home to Manchester-buildings or Millbank-street, for his whiskey-and water. And what was the consequence? Why, the concern lost—actually lost by their patronage!" Mr. Dickens continues, "Now, when you have taken your seat in the Kitchen, and duly noticed the large fire and roasting-jack at one end of the room, the little table for draining jugs and washing glasses at the other, the clock over the window opposite St. Margaret's Church, the cut bodies and wax candles, the damask table cloth, and bare floors, the plate and china on the tables, and gridiron on the fire; and a few other such anomalies peculiar to the place, we will," &c. He sketches Jane, the waitress, "the Hebe of Bellamy's," who was famed for her wit, which, we may add, was not wit born with her, but was an affair of memory, and got by a sort of knack, from her recollection of the *mots* and repartees of the many distinguished, and with honour-crowned, diners. This Jane is, we hear, still to be seen about the new Houses, no longer a Hebe, but fat and forty; no longer a waitress, but still sure of kindly nods from the old members when she happens to meet them. Much has to be annexed to Mr. Dickens's account; he only details the appearances, and not the system, which we wish to contrast with that at present prevailing. The enormous prices insisted on at Bellamy's are most noticeable; and these applied to members and strangers alike. It should be understood that "the Kitchen" was not, in reality, open as an esoteric apartment special to members, but where members of the Lower House did not often go, preferring the exoteric freer and easier Kitchen, where they saw or took the strangers whom they wanted to talk to, and where they enjoyed the sight of the cooking of the meat, afterwards placed before them. There was every sort of food: chops and steaks—steaks and chops, of course, as Nicholas used to say, by way of a change; and no dinner, even of this fare, was to be had under six shillings. The wine was in proportion: the commonest port, for instance, was from eight to eleven shillings a bottle; and the scale for clarets was of fabulous costliness. When the House of Commons was entered only by the wealthy or by the noble adventurer, these prices were not complained of; but when quiet and thrifty men of the bar and of Change got in, after the Reform Bill, they naturally avoided a restaurant where the monotony of the *carte* was even less striking than the prices affixed. Even as it was, however, it was to the last well attended; and there are stories of the vast credit given by the Bellamys to members, such that "when so-and so died, Bellamy's bill against him, for dinners and for wines furnished to his house, was for £1200." At the time when suppers were not yet unfashionable—when late dinners were—Bellamy's was most crowded about midnight.

Now everything is changed. There is no longer a "housekeeper" to the House of Commons. The House appoints a Refreshment Rooms' Committee, whose business it is to see that the club department of the Senate is as well managed as any other club; and this Committee which the last Bellamy would scarcely have deigned to have agreed with, appoints a steward, who, however, takes the dining room upon speculation, and conducts it on the same principles as the dining-room of an hotel. Since the disappearance of Bellamy, a Mr. H. Wodehouse was the purveyor, but he did not give satisfaction; and the individual who now has the contract is Mr. Steers, lately the steward to the Junior United Service Club. Mr. Steers does not satisfy *everyone*; but it is admitted that he carries on the department far more efficiently than his predecessor. The House votes him, in the Estimates, £300 a year, out of which he undertakes to pay waiters, and to clean and keep in order the dining-room, the smoking-room, and the library. And then he has these advantages—he has no rent to pay—he has plate (the House of Commons is, however, mean enough, for the present, to put up with Mr. Burton's miraculous nickel silver) dinner services, &c., and gas and coals, free. He furnishes his carte periodically to the committee, and then the committee fix the prices, beyond which he is not allowed to go, there being the one fixed club charge for the joint, with the usual sixpence for the "table:" as to the *entremets*, &c., there is, of course, some latitude; but club charges are the rule. The wines he selects himself; but though there is no Tasting Committee, it is clear that the House generally must like such vintages as the committee prefers. On the committee are such profound "political gastronomers" (it is Mr. Disraeli's phrase) as Lord Mulgrave, and Mr. Fitz-Stephen French—gentlemen selected by the House for their notorious proficiency in the art of elegant dining; and so far their *argumentum ad gulam* seems to have produced the best effect on the general temper of the House. One happy invention of Mr. French's—he is the *gourmet par excellence* of the Committee, as he is, also, one of the most accomplished members of the House—may have the widest political consequences upon the connection between Celts and Saxons. The fish dinners for the Roman Catholic members on the "*jour maigre*" is of a character to render impossible any "Irish row" in the House on Fridays. The "House dinners" (to use the club term) generally are excellent. Two or three hundred members dine in the room every day; but the purveying is still a speculation of doubtful results, its nature justifying a somewhat extra rate of charges. For instance, on a Tuesday recently, there was a vast preparation of superb *entrees*; and, on that day, the House was counted out before five o'clock. Of course, members went to Greenwich and Blackwall.

There is no "Nicholas" now, to tell anecdotes; but, if there were, there is the risk that story he would have none to tell. The great tns and the great ones are, in this age, alike moderate eaters, and still more moderate drinkers—Seltzer-water is more generally used than sherry; and, in the dining-room, none of the eminent men who have hard work to do are ever seen over their wine. Even Lord Palmerston—who is a *gourmet*, and who is blessed with one of the largest appetites of his time—a sure guarantee to the nation that his vigour is likely long to endure—is not ten minutes over his dinner. Mr. Disraeli—whose essays on dining, scattered through his novels, indicate great perception and varied knowledge—is not ten minutes longer than Lord Palmerston. Lord John is always seen at nine o'clock in the dining-room; but, alas for a degenerate age, it is only his tea that he is having. These are the prominent instances of our new Senate. We live in a period when the House of Commons works hard and works at night; and hard work at night is incompatible with an encouragement of the art of dining. Whatever party difference there may be in the House, cautious moderation is the spirit evidenced by all in the dining room.

Strangers about the House should know that there are rooms, in connection with the members' rooms, where they can enjoy, at the same time, the members' *carte*. These rooms might be, and no doubt will be, much more comfortable: but the attendance is good, and club *conveniences* are well looked after

LONDON CENTRAL TERMINUS RAILWAY STATION

THE following is an outline of a plan, by Mr. Henderson, of the firm of Fox, Henderson, and Co., for relieving the more thoroughfares of London from their superabundant traffic; and for improving the navigation, bridges, and property on the banks of the river Thames.

The plan is to raise the proposed structure over a suitable portion of the river Thames, on the principle of a viaduct, of sufficient width, erected over the centre of that river, following as nearly as practicable its course, occupying, more or less, as an ultimate and complete scheme, the distance from Westminster-bridge to London-bridge, and offering facilities for making direct communication with the slips in the Pool, &c. The level of the structure proposed would be such as not to interfere with the traffic on the river and on the bridges. Its supports would not injure the views from Whitehall-gardens, Northumberland-house, the Adelphi, the Temple-gardens, &c.; and, far from being open to any reasonable objection, the structure erected would form an ornament to the metropolis; and the London Central Terminus station would thus, without any unnecessary interference with existing property, satisfy in the highest degree the great and urgent requirements of the public service. It is believed that such a station can be not only safely, but economically constructed, upon the principle so successfully adopted and carried under the direction of Sir William Cubitt, at Rochester and proposed by Fox, Henderson, and Co., for the new bridge at Westminster. The station so constructed would divide the river into three parts, the central portion, covered by the railway station, and supported on columns (so arranged as to form distinct channels for traffic, without offering any serious impediment to the passage of barges and small craft), and two ample waterways on each side of the river for the passage of the steamers, without interfering with the accommodation for passengers at the various piers and jetties. Thus, the space under the railway being lofty and open, and the structure itself being confined to limited dimensions, any difficulty on the score of ventilation would be effectually obviated; and, by means of floating feeders connected to the columns, the river traffic might be definitely arranged into distinct traces or streams, so as to prevent risk of collision, and even to provide for increased intercourse. It is considered that the site proposed is the natural one—the only one calculated to meet the exigencies of the case, and essentially right, whether the location of the population, the facilities for communication with the river, or the means of connecting it the railways together, be taken into account. The project has been much discussed privately since 1845; it has been held in abeyance simply because it has not hitherto been considered that the right time had arrived for carrying it out; and the only reason for bringing it forward at this period is the fact that other schemes are projected which are believed to be utterly inefficient in themselves, and which, if adopted, will prove a waste of money, and tend to impede the adoption of the only plan which seems calculated to meet the necessities of the case.

The plan proposed contains, among others, the following advantages:—1. It would, in the most complete all the railways north and south of the river, being convenient for the Great Western, London and North-Western, Great Northern, or Eastern Counties, on the northern side, or the South-Eastern and South-Western companies on the southern side, with their respective tributaries. 2. It would really be central and convenient for as the traffic and population are concerned, affording great facilities for the approach and departure of passengers at the bridges on both sides of the river, and to and from the steam-boats, which could all run alongside, underneath the station. 3. It would also offer great facilities for delivering goods from all parts of the barges and craft in the river and receiving goods from them, either alongside or underneath the station. 4. It would prevent the necessity of passengers from north to south, or vice versâ, changing stations or carriages in the metropolis. It would, in the manner, prevent the necessity of carting goods, luggage and parcels through the metropolis, and thus relieve it of the burden which is already so great, and increases so fast as to render many streets almost impassable. It would afford opportunities of comb ning with such a project, either directly or indirectly, plans for the permanent improvement of the river, its navigation, its water-side property, its bridges, and a good system of water supply and drainage, &c., so as to render the whole creditable to the metropolis of the great nation. 6 The project could be commenced upon a comparatively small scale, in fact as little more than a communication between the northern and southern railways; capable, by proper prearrangement, of being extended to almost any conceivable amount of accommodation; and it is impossible to procure any other site possessing this last-named advantage. 7. Considering the question in all its details and looking to the value of land, it would be an economical station, and, if the improvement of water-side property that might be combined with it, is taken into account, it must, as a whole, rather confer a boon than be a charge upon the metropolis.

LITERARY MISCELLANIES.—No. III.

A CHAPTER ON CATS.

THE "common domestic cat"—as elementary books of natural history call our fireside-sitting, garden-haunting, and roof-frequenting puss—is a creature to whose qualities and true characteristics I hardly think the world does justice. Forlorn old women, who wanted something to love—and, for that matter, prim old maids, who experienced in a less elevated degree the same sensation—were bad patrons for raising puss in the scale of popular favour; and, although great philosophers and great writers—for example, Montaigne, Johnson, Scott, Joanna Baillie—had favourites of the feline race, and left their names to posterity, yet the great majority of men pin their quadrupedal affections upon dogs instead. The quiet characteristics and unobtrusive traits of character of poor puss are passed over unnoticed and unknown. The dog, with moral and instinctive lineaments more *prononces*—and, I do not deny it, more elevated in their nature than are pussy's humbler gifts—has become the universal favourite. You hear the dog's clatter on the stair—never the velvet foot-fall of the cat: the one rouses you, the other produces no effect. Yet the paw of the cat is a thousand times more artistic and curious than that of the dog.

One of the results of the careless estimate of cats—as a species of all but worthless animals, destitute of the fine affection and noble instincts of the dog, and fit only for watching at a mouse-hole—has been to foster, if not to create, among boys a degree of habitual cruelty to the creature, which is anything but creditable to those who allow its practical development. "A good dog for cats," meaning a ferocious bull-terrier which can worry poor puss in a couple of shakes, is a common expression among precocious juveniles; and, unhappily, it sticks to them as they grow. Shooting cats, when they can be conveniently put an end to, is not unfrequently a boy's passion; and in most acts of wanton cruelty—which from time to time we find recorded in print—an unfortunate tabby is pretty sure to have been the victim. Unhappily, puss has got credit for nine lives, and, Heaven knows, that she has frequently full occasion for them all. She also possesses the wretched reputation of always falling upon her feet, from whatever height she may be thrown, and many a cruel experiment has been made to ascertain the fact. We repeat, that people having a taste for dogs are seldom catholic enough in their animal fondness to extend it to cats. You never hear of drowning dogs, or pelting dogs, or having dogs worried, for mere amusement. The creature's more conspicuous gifts are appreciated by these rougher judging estimates, which are unable to make out the subtler delicacies of the cat organisation. The man with a prime terrier for rats—or a mastiff which can throttle a bulldog—or a hound which can pull down a reddeer—or even a poodle which can sit upon its hind legs and yelp at the word of command—not one of these amateurs but will discover and admire the points and motions of the creatures while performing these achievements; but it is twenty to one that they never studied, or never thought it worth while studying, one of the most perfectly graceful things beneath the sun—a cat curving herself for a spring; or one of the most dexterous performances which animal nature is capable of—a cat picking her way among a series either of moveable or hurtful pretty articles, without touching a single one. I myself have a cat which deftly walks from end to end of a chimney-piece, so crowded with the tiny ornaments, that there is hardly a square inch of space unoccupied, and which promenades upon a glass-protected wall as on a Turkey carpet. Place a dog on the chimney piece, and vast will be the clatter of destruction—on the wall, and sore and bleeding will be the paws with which he will howlingly precipitate himself to mother earth.

That cats love localities better than persons, is an axiom in which I feel assured that there is not half so much truth as is generally believed. In many of the cases which are commonly quoted in proof, the cat has returned to her former locality because she can make an easier living there than on unknown grounds. I remember a gentleman abusing a cat for attachment to stone and lime rather than to flesh and blood, because, on his changing his residence, puss had practically refused to change hers with him, and had gone back to haunt the purlieus of a neighbouring granary. I inquired whether the family had regularly fed her. "Oh dear no!" was the reply; "she could feed herself very well, and did so on the rats and mice and small birds about the barn." Then, of course," I rejoined, "the cat has more reason to love the barn than you. It gave her food: she found none here. She might not be aware that you intended to supply her, and animal instinct prompted her—as, if a dog lived on what he could pick up, it would also prompt him, to return to the spot where his wants had been supplied." The plain truth of the matter is that well-treated and regularly-fed cats have no particular attachment to a place. On the contrary, they attach themselves to the persons kind to them, and who often notice them; so that the cry of want of personal attachment on the part of the feline tribe, is very frequently mere slander of ladies and gentlemen who have neglected, perhaps ill-treated, the creatures, and yet expect them to be as fond as lovers. Cats are, in truth, fond of those who are fond of them; and they are as sharp as needles in finding out their real friends, and in shrinking from people "who don't like cats." One of my pussies knows my knock at the door, especially at night, and her mew follows closely on the sound, while generally a couple of other creatures of the same species are waiting with her in the lobby, and the whole three accompany me up-stairs in procession. If they happen to be out of doors at night, a single call will generally bring them scampering home; and if their names prove inefficient, one enunciation of "Cat's-meat!" acts like a spell. It is curious to contrast the mild, and, if I may use the expression, the affable faces of cats which are noticed—perhaps playfully talked to—with the fierce and moody countenances of those neglected creatures which, in London and elsewhere, grow half or wholly wild, among gardens, yards, and outhouses, picking up their living as they can. The two classes seem to belong to different species. The well-kept and well-treated house-cat seems rather civilised than tamed; the neglected and too often persecuted brute outside the window has relapsed into a skulking savage. You never see the two consort together, and the natural playfulness of the species seems in the outcast to have almost entirely vanished. Now, is all this, poor ragged, beaten, pelted, and unsheltered pussy's fault? Far from it. It is too often the fault of her accusers. They do not give her sufficient food. She steals it, gets beaten and driven out; and perhaps in a month or two acquires that horribly stealthy crawl, and that misgiving hungry eye—both of which are quite unnatural, and speak a creature under the influence of constant want and the fear of tyrant man.

A not uncommon phrase in households is that of a "parlour cat" and a "kitchen cat;" and I believe it to be an undoubted fact, that there are differences in the character of the creatures which somehow prompt the one to seek the cheerful light and talk of a sitting-room, and the other rather to brood and nestle in the dimmer and the warmer regions below. The one is always seen conspicuous on the rug, or stretched upon the footstool. The other makes casual appearances upon the stairs, and flies like a spectre at the approach of anybody but the cook. The one creature seems to have a sort of aristocracy in its nature, and it is all but uniformly the handsomest cat of the twain; the other is, most probably, a vulgar, squat plebeian, with its original shyness still strongly present in it. Of my three cats, two I reckon as parlour cats, *pur sang*; and the third has been, by kind usage and encouragement, coaxed into a degree of the same familiarity. Still, however, the natural timidity seems unconquerable. If you make a rapid motion towards the creature, she bounds away like a wild thing. Her two comrades, on the contrary, are frightened at nothing. The room, the occupants, the whole *locale*, seem their own special sphere and natural dwelling-place; and the only period of the day when the three appear to be merged into a common character, is as the hour for the visit of the "cats'-meat-man" approaches; when they are sure to be in waiting at the door, and to set up their sweet voices as soon as they hear that of the vendor of the food. It is to be remarked that they take not the slightest notice of the daily cry of a rival practitioner who perambulates the street at nearly the same time; and that on Sundays, when no prandial visit takes place, they never appear to expect the week-day ceremony, but are perfectly aware of a double quantity of good things being stowed away in a certain cupboard, round which they cluster with arching backs and waving tails.

People not unfrequently cry out that kittens are pretty playful things, but that they lose the *gentillesse* and piquant prettiness of their youth when they degenerate into stupid cats. The complaint is unreasonable enough. The infantine Johnny Tomkins, who kicked, and crowed, and lisped funny imperfect words, and made big eyes at his mother, can hardly be expected to repeat the performances some half-century after, when he is Tomkins and Co., perhaps the mayor of the town, and a churchwarden of the parish to boot. Why, then, should sedate ten-years-old puss, who is getting rather stiff in the joints, and likes better and better the summer's bask, and the winter's warm, be expected to tumble over a ball of cotton, or to lie on his back kicking at nothing at all, like his own son and heir, whom he gravely observes at these amusements, and sometimes tips over with his paw? Mr. Tomkins is not blamed for his matured dignity, why, then, should Mr. Puss? But the fact is, that the playfulness of kittendom can be partially, particularly with healthy and good-tempered cats, kept up, by a little encouragement, even when they have grown into "potent, grave, and reverend seignears;" and that grim old grimalkins, who have drunk their morning's milk for a dozen of years, can be induced to skip and roll and tumble in the most absurdly awkward mimicry of the small fry, which are still indebted for the lacteal fluid to their mothers.

Our feline friends, among their other short-comings, are often, too, with justice, taxed with being savage murderers of pet birds. Many a cat has hung from a branch, or gone over a bridge with a rope and a stone, after being caught crouching beside an empty and open cage with fatal yellow feathers strewed around; while in the cases of mulder masters or mistresses, many a bitter tear has probably been shed over the mangled remnants of "poor Goldy, who would eat out of your hand;" or "poor Bully, who piped so beautifully the 'Banks and Braes.'" To cure cats of the propensity to attack pet birds has always, therefore, been a matter of effort; and a variety of expedients—such as beating the bars of the cages, and burning the cat's nose against them—are more or less in request. Some of these are cruel, and none of them I believe to be really needful. The first thing to be done, to keep cats from birds, is to take care that the cats are well fed, and that no hungry fit may occasionally prompt a breach of moral duties; the second is to familiarise the two classes of creatures, and accustom them to each other's presence. Most birds are killed by cats with empty stomachs, and by those who have not undergone the sort of socialising process which I have described. I have seen people drive away cats for merely looking at caged birds. This is quite a mistaken plan: unless the passion of hunger be roused in the creature, ten to one it is only satisfying its curiosity by the mere contemplation of the "little warbler." At all events, in my own experience, without any particular training, except kind treatment, and often putting the cages with their occupants on the tables for the cats' inspection, the creatures appear to have got so companionable that I have no scruple in leaving some half-dozen birds within the reach of three cats. The animals frequently sit and look at each other; and a green parrot, with a fine talent for biting, has regularly a snap at any whisking tail or incautious paw which may be found within the limits of her very powerful organ. Sometimes this creature will sit quietly on a cat's back, and people have wondered how it was "tamed and taught" to do so. There was no "taming" or "teaching" in the case, further, indeed, than good feeding, and, as it were, making the creatures acquainted and familiar—the birds with the beasts.

The cat, to win his affection, must be more sedulously attended to than the dog. There is no doubt, indeed, but that the gratitude of the one creature is far more easily evoked than that of the other. A dog will often follow a stranger along a street, if tempted by a bit of food—dog-stealers are tolerably well acquainted with the fact; but a cat will do nothing of the sort. Dogs yield to the first kind word or friendly pat—the majority do so, at all events; cats do not fling their friendship away so lightly. True, when won, it is neither so trusty, so pure, nor so elevated as the dog's; but the peculiar character of the creature—its coy yet by no means fickle nature—its suspicious, yet, under certain circumstances, confiding disposition—its peculiar refinement of taste—(a dog gobbles its meat, like a coalheaver over a steak; a well-brought-up cat takes dinner coolly, like a *gourmet*, over a *pate de foie gras*)—and, finally, the general grace and gliding ease of posture of the creature—its perabar cleanliness, and its marked adaptability for household purposes—all these qualities ought, surely, to elevate puss a step higher in social estimation than it has yet ascended.

Let me hope, then, that the reader, if he be one of that numerous class who "hate cats," if he perchance have imbibed the groundless antipathy which Shylock speaks of to the "harmless necessary cat" will pause and look a little more closely into the delicate and dainty nature of the creature which purrs before him—will try to puzzle out some meaning in a face pronounced only by those who have never studied its phases and its shades to be unmeaning; and will ascertain whether a caressing hand and a soothing voice do not forthwith evoke corresponding demonstrations, just as sincere as those of the most petted spaniel, or the most favoured terrier. Let no one deem it unmanly to be fond of a cat. Two of the manliest men the world ever saw—we have mentioned their names—loved their feline dependants; and of one of these this curious anecdote is recorded:—Dr. Johnson, sitting in Bolt-court, by the fireside, with Bozzy on the one hand, Mrs. Williams on the other, and "Hodge" the cat, for which he used to bring home oysters in his pocket, probably announced upon the rug. The great old Pundit, after hearing his pet somewhat deprecated, did agree, that he had seen cleverer cats than "Hodge;" but, suddenly correcting himself, as if (notes Bozzy), he experienced a kind of instinctive idea that the dumb creature at his feet had a notion of the depreciatory nature of his sentence, he made haste to relieve poor puss's feelings by adding, "But Hodge is a fine cat, sir—a very fine cat, indeed."

A. B. R.

THE SONG OF THE EASTERN TRAVELLER.

I've roamed through Eastern isles in all their beauty
Mid spice groves waving o'er waters blue;
But my heart was in the woodland of Australia,
With the gum-tree and the bounding kangaroo:
Where the emu stalks in grandeur o'er the ranges;
Where the wombat eyes me sillily from the glen;
Where the lori spreads her plumage in the sunbeam,
And the dingo slinks demurely to his den.

'Tis then I love to wander in the spring time,
When the breeze from off the mountain summit blows,
And the music of the locust in the tree-top
Lulls nature in the sweets of calm repose.
For then the dreams of future days enslave me,
As hum of fancied voices fill my brain,
And coming millions pass in crowds before me
To reap the golden harvest of the plain.

Fair Asia, deep in pillowed ease reclining,
Looks southward, and arouses from her r[illegible]
Columbia sends a greeting with the sun[illegible]
And Afric shouts her praises in the [illegible]
I wake to find the Southern Cross above me,
Shedding hope upon the lowly and the true:
Ah! my heart is in the Austral Land of Plenty,
With the gum-tree and the bounding kangaroo.

INAUGURATION OF THE NEW YORK EXHIBITION.

IN our Journal of last week, this impressive scene was described by our New York Correspondent. We have engraved upon the next page a view of the platform in the north nave, from a daguerreotype taken during the prayer offered up by Bishop Wainwright. On the platform are three chairs; the one on the left for the President; the centre one for the Bishop; and the one on the extreme left for the President of the Crystal Palace Association, the Hon. Theodore Sedgwick. The President of the United States wore nothing to distinguish him from any other citizen; he is in deep mourning, and stands bending forward on the left of the Bishop. No order was observed, except as regarded the President, the Bishop, and Mr. Sedgwick. The galleries are crowded, as also the staircases on the right, with ladies and gentlemen. No particular costume is observed by gentlemen on public occasions in New York: some wearing white hats, some straw hats, white coats and white trousers; and very few wearing gloves.

From the letter of a Correspondent of the *Morning Chronicle*, dated New York, July 26:—we learn that the articles at that date were being rapidly unpacked and exhibited to view, and that the Crystal Palace really began to make a show. But the number of visitors was limited. Visitors to the Crystal Palace during the week ending on the previous Saturday only amounted to 28,114, and the gross receipts to 8147 dols. It is to be hoped the receipts will increase, otherwise the speculation will pay but poorly.

The average number of visitors thus far has been about 2600 per day and the amount for the Washington monument about 560 dols.

Some of the critics, while lauding the statues of "The Saviour and the Twelve Apostles," declare that the forehead of the Saviour is too low, and that it wants nobility, breadth, and height. This is bold language, when applied to the works of Thorwaldsen. The statue of Paul, in the act of addressing the people, is truly impressive, dramatical, and noble. A noble statue of colossal size has just been erected near "The Amazon." It is the very image of Daniel Webster—his right hand raised as if in the act of speaking, and his left resting on the United States constitution. It is raised on a lofty pedestal, and is striking, impressive, and grand. This fine specimen is an honour to the artist and sculptor; but such is the peculiarity of the New York World's Fair, that his name cannot yet be found. Among the statuary is also a beautiful bend of Minerva, from Italy, the sculptor of which is equally undiscovered. An allegorical group, life-size, representing Washington, Liberty, and the Genius of the Republic, ought never to have been admitted into the Exhibition. It is beneath contempt. People are asking where could have been the sense, the taste, and the judgment of the committee, when they decided upon the admission of such an abortion, of so deplorable a failure, as a specimen of American art? An exceedingly beautiful vase from Italy, in Parian marble, excites much admiration. It is raised to the height of about ten feet, is of purely classic form, and is supported by four upright lions, somewhat after the manner of caryatides. Round the base of the pedestal are exceedingly well-sculptured reptiles and smaller animals; while the exterior of the vase is enriched with classic and allegorical groups in *alto relievo*. One of the most attractive shows in the collection—which may be mentioned here from its connection with the fine arts—is the now increased and extraordinary stock of the useful and ornamental, from the establishment of Minton and Co., of Stoke-upon-Trent, manufacturers of porcelain, earthenware, stoneware, and Parian figures. The china scent jars and vases may fairly compete with the celebrated ware of Dresden; while a magnificent dessert service, supported by Parian figures, and adorned similarly in *alto relievo*—precisely the same in design, character, and the number of pieces, as the service presented by the Queen to the Emperor of Austria—is not, perhaps, to be surpassed in beauty of conception and nicety of workmanship. The porcelain dishes and baskets, with their fretwork, are exceedingly tasteful. Then Minton and Co. show an exquisite cornice, or frieze work, for rooms, in *alto relievo*, with figures, statuettes, flowers, &c., in the cinque della Robbia; also tiles, both polished and encaustic, for the walls of rooms. These specimens are worthy of the most luxurious days of Herculaneum and Pompeii, the ruins of which volcanic cities doubtless furnished the models. John Ridgway and Co., of Staffordshire, have an elegant variety of porcelain and china; as has also John Rose, of Shropshire; nor must we omit to mention the splendid stands of Charles C. Leigh, of 232, Fleckering-street, New York, who is agent for W. T. Copeland, of London; Rose and Co., of Staffordshire; and Pellivagt and Co., and M. Miton, of Paris. The Parian marble statuary, china, earthenware, French flower vases and porcelain generally at these stands, are chaste, elegant, and classic.

English visitors pause before one stand with just national pride—that, namely, where Rodgers and Sons' cutlery, from Sheffield, is shown in all its exquisite superiority. Here are knives with hundreds of blades, all of the highest temper, finish, and polish. On one set of broad blades are views of the Crystal Palace, London, of Windsor Castle, York Minster, Chatsworth-house, Queen Victoria and Prince Albert—all works of excellence in the pictorial art. In another case, Rodgers and Sons show a miniature knife with a hundred blades, all in the size of a filbert. This is a matter more curious than useful; still it proves to what minute perfection manufactures may be brought. Then there is a variety of caps, bullets, and saloon pistols, suggesting every variety of death, from Tomes, of London, also, an emerald, said to be the largest in the world, from the mines of Muso. There is a beautiful stand of basket-making, knitting, netting, and other manufactures by the blind, together with books of raised letters for their reading, from the London Society. These are followed by metallic pens, from Joseph Gillot, of London, manufacturer to the Queen.

The visitors were, up to the date of the letter in question, inquiring in vain for the promised extensive exhibitions of textile fabrics. These had much increased, it is true, since the opening; still there was a sad lack of shawls, silks, cloths, and ribbons. Textile Ireland is admirably represented by Pim's poplins, of Dublin; and Richardson, Son, and Owden's unequalled linens of Belfast. A variety of "premium thread," from Clark and Co., of Mile-end, Glasgow, is a very strong and superior article, and justly called "cable thread." Bourry, of St. Gall, exhibits beautiful lace; and C. Mayer, of Zurich, superb printed cottons; while Plimpton, Stephenson, and Co., of Boston, make a good show of imported silk goods. Genin, of New York, displays a superb collection of fashionable dresses. Von Bruck and Sons, of Crefeld, Germany, have thus far the best show of velvets, silks, and ribbons; but the stand is a much better display of these articles may be seen any day at any large establishment in London; at Stewart's, in Broadway; or at Levy's in Chesnut-street, Philadelphia, than in all the Crystal Palace of New York. Switzerland makes an admirable display in richly and elaborately worked lace curtains, coverlids, and lace generally, of the bobbinet class; also, in watches and in printed cottons. The colours of the latter are, perhaps, rather gaudy for the Anglo-Saxon taste.

The common and musketry of American make are remarkably fine, whether from Ames, of Springfield, Massachusetts, from Colt, or from the United States Government. There was also a stand of arms from Liége; but all the specimens appeared clumsy when compared to those of American manufacture. There is a good show of guns and pistols from Richard's of New Bond-street; but, singular as it may appear to English gunsmiths, America is declared to excel in the manufacture of arms.

The Swiss toys attract much attention, but the toys contributed by Rock and Graner, of Biberach, Wurtenberg, are said to be the best in the collection.

There are great improvements and much taste displayed in porcelain door-handles, contributed by Baptisterosses, of Briare, France. C. A. Friedrich, of Breslau, Prussia, exhibits some beautiful, substantial, and correct eight and fourteen day clocks and alarums.

Thus far have been displayed only two carriages—one from France, rich, but gaudy; and one from England handsome, solid, and substantial. The carriages will be exhibited in the new attachment of gallery and machine-room. There are some magnificent church-bells from Glampet and Regester, of Baltimore. A show of salamander marble—from made to represent marble—by Silas C. Herring, of Broadway, deserves notice and commendation, as does also a finely-toned organ, full of volume and sweetness, constructed on an improved principle by E. Germunder and Brothers, of Springfield, Massachusetts. Although the instrument is not large, yet when its rich notes "up the lofty diapason roll," they nearly fill the Crystal Palace. The clarionet stop produces sounds of exceedingly tender sweetness, while its variety of sound and expression charms every listener. One peculiarity in this instrument is, that the organist faces the congregation. The price is 2000 dollars. Considering its power, variety, and sweetness, the sum is by no means excessive.

The health of Lord Ellesmere is much improved. His Lordship visited the Exhibition, in company with Lady Ellesmere, on Saturday, the 23rd ult. He intends returning to England, via Boston and Halifax; at which latter port he will embark on board a British frigate, probably the *Leander*.

INAUGURATION OF THE NEW YORK CRYSTAL PALACE.—PLATFORM IN THE NORTH NAVE.—FROM A DAGUERREOTYPE.—(SEE PRECEDING PAGE.)

THE NEW GRAMMAR-SCHOOL AT COLCHESTER.

The old school-house of this ancient foundation having become very much dilapidated, the Town-council and trustees of the School, with the aid of the public, have just erected another edifice upon a more eligible site than the old one. The new school-house, of which we give an Engraving, is situated at the entrance to the town, on the London road near the Essex and Colchester Hospital, and stands on a healthy and gravelly soil. Accommodation is provided for 60 day scholars and 20 boarders. The principal school-room is 41 feet long by 20 feet 6 inches wide, and 15 feet high. There is also a class-room, boarders' dining-room, day washing room, and dormitories for boarders; to which is added the head-master's residence, comprising drawing and dining-rooms, study, four bed-rooms, with dressing-rooms; besides *offices*, kitchen, and other necessary offices. The style of architecture is that of the late Tudor, and the building is of red brick; the facings and window mouldings, mullions, &c., being of stone. The play-ground, which adjoins the building on the south side, is about half an acre in extent, and is separated from the master's garden by a wall. The architect is Mr. H. Hayward, of Colchester; and the building has been erected at a cost of between £3000 and £4000.

Colchester Free Grammar-school was founded by Henry VIII., in the year 1539; but it was not effectually endowed until the 25th year of Elizabeth, who, by letters patent, re-granted the revenues of the dissolved chantries in the Chapel of St. Helen and in the Church of St. Mary towards the endowment of a free school.

The exhibitions and scholarships consist of a scholarship founded in 1620, in St. John's College, Cambridge, by the executors of Mary Lewis; and a fellowship and scholarship in the same College, founded by Ambrose Gilbert in 1642, conditionally, in default of the Gilberts and Torkingtons, to Colchester School. Amongst its earliest records (1637),

NEW GRAMMAR-SCHOOL, AT COLCHESTER.

found in the register of the then master, the Rev. W. Dugard, are the following curious particulars—that it was customary in winter for the scholars to bring each a pound of candles to light the School, to subscribe one shilling each to entertain the visitors on speech days, and to dispute (or wrangle) once a week for a sum of money made up of the contributions of each scholar's farthing.

Several celebrated men have received their education at this School. The eminent Dr. Parr was for some time master, and under him the School greatly flourished. Amongst the scholars are to be found the names of an Archbishop of York, and of the present Astronomer Royal, whose name, carved in large characters might, till very recently, be seen on one of the desks in the old school-house. We understand that this, with other similar relics, but of more ancient date, are to be preserved.

The neglected and unhealthy condition of the old school-house for many years effectually prevented all attempts on the part of the masters and others interested in its well-being to raise the school to its proper position. The mastership falling vacant, however, in the year 1851, it was considered a suitable time to attempt the erection of a new school-house; and the project was accordingly mooted by the Town-council of the borough, with whom the election of both masters and free scholars rests. The sum required was estimated at from £3000 to £4000; of this the trustees obtained legal sanction to raise £1200 by mortgage upon the school property, to be paid off in twenty years by a sinking fund, a further sum of £300 it was calculated would be realised from the sale of the old school house; and a committee, formed for the purpose of raising the remainder of the amount required, guaranteed the sum of £1600. The appeal was most liberally responded to, and the whole amount within £50 has been raised.

The appointment of the present head-master, Dr. Wright (formerly scholar of Trinity College, Cambridge, and late Principal of the College, Leamington), has given the greatest satisfaction to the friends of the School, and to the inhabitants of the town generally.

The new building, described above, was opened on Tuesday, the 4th instant, when formal possession was given by the trustees to Dr. Wright. The Mayor (Francis Smythies, Esq., who presided), the Corporation, the Bishop of London (visitor to the school), Archdeacon Burney, a large body of the clergy of the town and neighbourhood, the High Sheriff (J. Gurdon Rebow, Esq.), the members for the borough (Lord John Manners and W. W. Hawkins, Esq.), and a large number of ladies, as well as of the inhabitants generally, filled the school room, and took part in the proceedings of the day, which terminated by a collation at the Three Cups Hotel; at which there were about 200 present, including all the scholars.

BAZAAR AT CARISBROOKE CASTLE, ISLE OF WIGHT.

Last week a Bazaar was held on the old Archery Ground, at Carisbrooke Castle, Isle of Wight, under the patronage of her most gracious Majesty the Queen and his Royal Highness Prince Albert, in aid of the funds for rebuilding St. Thomas's Church, Newport, situated about a mile from the Castle. The scene was gay and animated in the extreme. The stalls, eleven in number, were arranged on the west side of the ground, and extended to a length of 160 feet. Above them were painted the names of the ladies who presided over them. The erection in which they were placed was gaily decorated with festoons of flowers and evergreens, and was surmounted with banners, which waved with every breeze that swept over the landscape. The grey castle-keep, a venerable relic of by-gone ages, looked down in stern majesty on the crowds assembled beneath, recalling those olden times in which the gay and the fair were assembled for a very different object—namely, to preside over the mimic battle-field, and to animate by their presence the knights who contended for the prizes of chivalry.

As the weather was unusually fine, great numbers had assembled from all quarters to witness the magnificent spectacle. The Bazaar was opened at one o'clock on Wednesday, the 3rd inst., with a procession, headed by the clergy of Newport, the Mayor, and the committee; who were followed by the children of the National and Blue Schools of Newport, with banners; and by the choirs of St. Thomas's and St. John's Churches. The whole was preceded by the band of the 23rd Royal Welsh Fusileers. The procession formed at the Castle-gate, and proceeded through the time-worn ruins to the Bazaar ground, where some pieces were sung by the children. They afterwards marched out of the ground in the same order as before. The bands of the Royal Welsh Fusileers, and of the Rifle Brigade, played throughout the day some spirit-stirring music. A scene so truly exhilarating has not often been witnessed in the south of England. The gay and tasteful decorations—the rich strains which floated around the spectator—the stalls piled with elegant and costly articles of various descriptions—the recollection of the events of which the Castle has been the theatre, dimly seen through the mist of intervening years—formed a *tout ensemble* which will not be easily effaced from the memory.

The Bazaar was opened under the presidency of Lady Worsley Holmes, assisted by various ladies of the neighbourhood. The articles for sale were of the most elegant description, and reflected the greatest credit on the ladies whose labour, skill, and taste had been taxed to the very utmost to produce them. We noticed some splendid pieces of tapestry and worsted work, representing important events and remarkable individuals, some beautiful table coverings, enriched with various colours; some elegant screens and groups of flowers; designs for carriage cushions in embroidery; splendid medallions and drawings, and vases of artificial flowers and fruit. On each of the stalls were placed copies of a poem on "Carisbrooke Castle," by the Rev. A. R. Pennington, Curate of Newport, just published.

Nearly 2000 persons visited the Bazaar on the first and second days (Wednesday and Thursday), when the charges for admission were 2s. 6d. and 1s.; and on the third day (Friday), when the charge was reduced to 6d., about 2500 were present. On Wednesday and Thursday the Bazaar was honoured with the presence of the daughter of the Emperor of Russia, now staying at Ryde. On Friday the Hon. Colonel Phipps attended, and made various purchases on behalf of her most gracious Majesty the Queen. The result of the Bazaar has been most satisfactory. Enough has been received to add about £1000 to the building fund, after all the expenses have been paid.

"We congratulate (says the *Hampshire Telegraph*) the zealous promoters of the rebuilding of Newport Church on the unexampled success of their spirited undertaking, which might with propriety be called a 'Isle of Wight Industrial Exhibition.' The music of the bands of the 23rd Royal Welsh Fusileers and Rifle Brigade, was excellent, adding much to the enjoyment of the Bazaar; while the concentration of female beauty could not have been surpassed even in the days of chivalry, when an Island Queen gave balls, and tilts, and tournaments within those walls, now devoted to a higher and nobler purpose, the raising of a temple for the worship of Almighty God."

LORD MARCUS HILL.—FROM A PAINTING BY F. A. SAY.

LORD MARCUS HILL.

For twenty years—from 1832 to 1852—there was no name better known "about the House" than that of Lord Marcus Hill. Individual characteristics rendered him the illustration of a system; and, if historians

BAZAAR IN THE OLD ARCHERY-GROUND, AT CARISBROOKE CASTLE, IN AID OF REBUILDING ST. THOMAS'S CHURCH, NEWPORT.

ever went beyond the surface—or if Lord Marcus had kept such a diary as Pepys compiled—he would live in history identified with that era of British representative institutions intervening between the two Reform Bills—that in 1832 and that (promised) in 1854. Lord Marcus Hill was what Dr. Johnson called "a clubable man, sir," and it was that quality which made him so universal a favourite with the House of Commons during those several sessions in which the House, while fulfilling much of the requisites of a national Senate, was also, from peculiarities of its origin and constitution, a good deal of an aristocratic club.

During those twenty years there were various leaders of the House—Lord Althorp, Lord John Russell, Sir Robert Peel, and Mr [illegible], but there was only one leader of the club Lord Marcus Hill. Liberal Cabinets arranged a various series of measures; but there was only one administration in the "kitchen"—that of Lord Marcus Hill. And in the long reign of the Whigs, from 1830 to 1841, and from 1846 to 1852, while many men rose and fell in the confidence of the chiefs of the party, to one man they continuously confided a great annual duty, only secondary in importance to the preparation of a Royal speech: Lord Marcus Hill, during all those years, ordered the white-bait dinner, at Greenwich. His position in the world of *gourmets* justified that confidence: and his high character, in this respect, was tested and proved by various incidents. To Lord Marcus Hill the Reform Club was indebted for the fame and the genuine excellence of its *cuisine*. It is a theory, indeed, in that establishment, that he invented, or rather discovered, Soyer; and in the "Regenerator" of that celebrated chef it will be seen that Soyer is represented as holding such a weighty dialogue with Lord Marcus as Horace held with his Mæcenas. But the reference on these matters to Lord Marcus Hill did not proceed from one party alone. He was trusted by all; and to him—more even than to Mr. F. Fresch, Mr. Stafford, or Lord Mulgrave—is the present House of Commons indebted for its "comforts" in its club aspect, more especially for its dining-room, and that *carte*, which more comprehensive than the "votes paper," now contains all the "independent motions" of an assembly certainly disorganised in regard to tastes

It would, however, be offering a very imperfect view of the character and position of this amiable nobleman if it were allowed to be supposed that he gave up entirely to the club what was meant for the House. He was, however, in such a position in regard to the House as to permit him to develop unchecked his kindly clubable tendencies. That his party had a great opinion of his reliability, and capacity as a politician and man of the world, is evidenced in the circumstance that he was the Whig "whip" for many years; and this post he filled with pleasure to himself and satisfaction to the party—into the bargain, making a House-keeping a House, and entering the Minister into the true definition of a "whip's" function), without making one enemy. He was devoted to his party. The son of a Marquis, and bred in the diplomatic service, he loved the Whigs when a young man, at a time when such an adhesion was not only unfashionable, but dangerous to "prospects;" and from his allegiance he never swerved; having the consciousness, when he retired from the arena, where undoubtedly he has been missed, of knowing that during twenty years his vote was given for a consistent series of "reforms," not one of which does the nation now regret. A nobler race few politicians can boast of running; and the real greatness of such a life is not diminished by the modesty of the quiet career and the unobtentatious endurance of a subordinate rôle, in which, whatever fame was to be obtained, was procured, not by bustling appeals to the public, but by unobtrusive efforts (which only the House itself could appreciate) usefully to carry on business the business of the club as well as that of the House

But the same qualities which made Lord Marcus Hill so popular at Westminster provided him a solace for the absence of that earnest attention which the public pays to public men who take care to keep themselves before it—he was a most popular member for Evesham. We have reason to believe that it is no exaggeration to say that Lord Marcus Hill had the affections of the people of Evesham. Early in his political life he had sat for Newry; but of late years—ever since 1837, he has only been known in the House as "the Member for Evesham," and the relations between him and the borough were altogether peculiar—not unprecedented, but unparalleled in our representative generation. To understand this, it should be remembered what was the former reputation of Evesham. Of the worst of it, in 1831, Lord John Russell said that "corruption infested Evesham like a leprosy." It was one of the vilest of the small boroughs up to 1837; when Lord Marcus Hill came and stood, and was beaten by Sir Charles Cockerell and Mr. Peter Borthwick, and was seated on petition; and then becoming such a favourite that ever after, until he chose to resign, he was at the head of the poll, and kept off all bribery. That petition was a very remarkable one. Sir Robert was chairman of the committee—the only election committee he ever presided over; and the present Sir Alexander Cockburn, who had been engaged (then an unknown man) by the shrewd Mr Coppock, who never made a mistake, to lead in the case for the petitioners, gained on that occasion his first reputation; among other things, for a reading (which made a good deal of noise at the time) of a piece of calumny, inscribed by Mr. Borthwick on a snuff box he gave to an elector, viz., "Ex dono amici sed non corrupti" (which Sir Alexander rendered—" A gift of a friend of his who bribed him." Lord Marcus Hill had to fight some contests after 1837; but they were legitimate battles, and, on the whole, Evesham under his influence, redeemed its reputation. He would have been returned at the last election he ever should have stood: but it is believed that his Lordship has family reasons which induce him to relinquish what to one of his genial nature and happy position must have been thoroughly enjoyable—life "about the House."

Lord Marcus Hill, third son of the second Marquis of Downshire, was born in Hanover-square, 1788. In 1837, he married Louisa, daughter of J. Blake, Esq. He was Comptroller of the Household from July, 1846, to July, 1852.

The accompanying Portrait is engraved from a picture painted by Mr. F. A. Say, and was presented to Lady Marcus Hill, by the Liberal constituency of Evesham, on the 21st ult. The Town-hall was appropriately decorated for the occasion, and was speedily filled with the towns people, when Lord Marcus Hill, Lady Hill, and Miss Hill, their eldest daughter, were introduced. The Mayor, H. Workman, Esq., upon whom devolved the duty of the presentation, occupied the chair. The Portrait was placed in an elevated position on an easel. The elegant frame was the gift of Mr. Grenville Berkeley, member for the borough. At the top of the frame was inscribed, "Lord Hill, 1832." At the foot is the following inscription:—

Presented to Lady Marcus Hill by his Lordship's constituents and friends in and about Evesham, upon his retirement from Parliament, after faithfully representing the borough for fifteen years, as a lasting testimony of their feelings of esteem and attachment towards him.

The proceedings commenced by the singing of a glee The chairman then, in an eloquent address, recapitulating the Parliamentary connection of Lord Marcus Hill with Evesham, presented the portrait to Lady Marcus Hill, accompanied by a list of inscriptions.

Lord Hill rose, and was received with many demonstrations of esteem.

You have been pleased (said his Lordship) in that spirit of indulgence which has for a series of years character sed your intercourse with me, to mark your approbation of my public and private character, and to select the channel of one most truly and justly dear to me, deeming that her gratification would be the truest source of satisfaction to myself (Applause). Lady Marcus is, I assure you, most sensible to have conveyed to you the expression of her deepest gratitude for the valued gift this day presented to her—a gift which she prizes more inasmuch as she sees in it an earnest of that regard and esteem which she knows how fondly I have coveted and truly do appreciate. Lady Marcus entreats you to accept the thanks of an overflowing heart (Great cheering). Ladies and gentlemen, here I might have left the matter in reference to a subject most painful to my feelings, which it has pleased the worthy Mayor to touch upon in language most consolatory to my feelings—I mean my late retirement from the representation of this borough. You are all aware that some warnings of deteriorated health rendered it imperative upon me to give up a position so honourable and flattering in my estimation. Few representatives have had, I think, stronger wish, through your partiality, have devolved upon me. It was my duty, and it soon became my delight, to come amongst you periodically, in order to ascertain your wishes, and to cultivate a becoming intercourse with you; and I may say that, being allowed my full and entire liberty of action and action, I never, during the whole period of our connection, incurred any symptom of your displeasure (Cheers). Such a course served to increase our friendly relations; and therefore most painful was it to my feelings to be compelled to be a party to their severance; but the memory of them will ever be dear to my heart. And, though our parliamentary connection is ended, I trust I may be permitted to claim the continuance of your private friendship and regard, and still to frequent occasionally the ties which have been productive of the highest gratification to me (Long continued cheering)

Another glee was sung, and the proceeding terminated

A collation was then served in the Council chamber, the Mayor presiding Several appropriate toasts were drunk. In the evening a Ball was given at the Guildhall, to which only the subscribers to the Testimonial and their friends had the entrée; but there were present upwards of 100 other guests.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

THE EASTERN QUESTION.

The affairs of the East were again the subject of conversation, upon a complaint by the Marquis of Clanricarde of the mode in which the Russians were administering the civil government of the Danubian Principalities. The Russian occupation was either war or piracy. He asserted it was a state of war, that had abolished all treaties as between Russia and Turkey, so far as Turkey was concerned. The Earl of Clarendon replied that he had no information except what he derived from the newspapers of the acts committed by the Russian Government in Moldavia and Wallachia. The Government had received letters from Jassy of the 27th, and from Bucharest of the 28th, which spoke of the presence of the Russian troops being productive of inconvenience; the peasants, it was said, being withdrawn from their agricultural labours, and compelled to do a certain amount of work for them; but there was no mention of any recruits being drawn from the inhabitants of the Principalities. He saw every reason to hope that the negotiations upon the Eastern question were proceeding towards an honourable and peaceful conclusion, and the more so because the question was no longer one simply between Russia and the Porte, or even a question between England and France, closely united in support of the Porte, and Russia. It had now assumed a European aspect, and the Porte and its allies were acting together in order to check proceedings which they deemed inconsistent with the balance of power, and the territorial distribution established in Europe. This was a position of affairs which must be satisfactory to their Lordships and the country, because it was likely to lead to a satisfactory and permanent conclusion. The Earl of Malmesbury said it was impossible to conceive, when two powerful nations like England and France stood forth in defence of such a country as Turkey—if they were perfectly agreed on their line of defence, and on the policy to be pursued in their negotiations but that their united efforts must be crowned with success. Some definite explanation was to be expected from the Government before the prorogation of Parliament, as to the position of the Eastern question. It was particularly desirable that there should be a clear understanding as to the evacuation of the Danubian Principalities by Russia. Lord Clarendon had no hesitation in saying, that it would be considered the immediate and complete evacuation of the Principalities as a *sine qua non* of any agreement with Russia. The House might rely that every information consistent with the public service would be laid before Parliament prior to the close of the session. In reply to Lord Ellenborough, Lord Clarendon stated that the Government had no official information of a demand recently made on the Shah of Persia by the Emperor of Russia.

GOVERNMENT OF INDIA BILL.

The House went into committee on this bill, when its clauses were discussed at considerable length. Several amendments were proposed by the Earl of Ellenborough, the majority of which were rejected. The only important alteration in the bill as it came from the Commons took place on clause 44, providing that the salt monopoly should cease; and that the manufacture and sale of salt in India should be absolutely free, subject only to excise or other duty.

The Earl of Ellenborough moved that the clause be rejected, though he thought that the motion might have been made more properly by one of her Majesty's Ministers, as the clause formed no part of their original proposition. At the same time he was ready to move its rejection, because he believed it would operate most injuriously, and because it constituted a most unwarrantable interference with the financial arrangements of India. This interference had been proposed, not for the advantage of the people of India, but for the benefit of a small number of persons employed in the country in the manufacture of salt; and the whole of the Indian revenue derived from salt would be imperilled if the clause passed into law. The clause established no regulations which would facilitate the collection of the tax; and, in order to raise the duty on salt, it would be necessary, if the clause passed, to employ an army of excisemen in India. If smuggling were practised, as it certainly would be, the price of salt would be enhanced that, after all, the importer would not obtain that advantage which he anticipated. There had been, in preceding years, an increased consumption, and a large reduction in price; it must be remembered that the revenue in India did not rise with the same elasticity as the revenue in this country. While their Lordships were creating what was described as a better government for India, and enlarging the legislative council; while they were give emissaries and ambassadors to and from the Government of India, it was not right to interfere for the first time in a matter strictly of internal regulation; and it was not fitting or seemly, for the purpose of giving a small additional profit to certain traders in England at the expense of India, to impair the revenue of that country. It was better to treat India as a perfectly independent country in matters of finance. In India there were not the means of commuting taxation, as the natives felt the greatest indisposition to pay any new tax; and for these reasons he hoped the clause be expunged

The Earl of Albemarle concurred in what had fallen from the noble Earl as to the impolicy of interference with local taxation; but, at the same time, expressed his disappointment that this hateful monopoly—which afflicted the industry of the people, and caused, from the tax imposed, extreme misery and distress among the people of India was to continue. The noble Earl here referred to certain statistical papers for the purpose of showing how greatly the tax on salt checked the consumption. He still hoped that the Government in India might have instructions from the home Government to alleviate this most distressing and grievous tax.

The motion of the Earl of Ellenborough was then agreed to, and the clause was expunged.

The next and final clause of the bill having been adopted, the House adjourned.

HOUSE OF COMMONS.—Monday.

At the early morning the House, sitting in a Committee of Supply, was occupied with the discussion of the votes for the Civil Service Estimates, the Supplementary Estimate for the Royal Naval Coast Volunteers, the Post-office Packet Service, and other estimates. On the vote of £200,000 for the Kaffir War, Mr. Adderley took occasion to call the attention of the House to the policy of the Duke of Newcastle respecting the frontier arrangements at the Cape of Good Hope. He condemned especially the abandonment of the Orange River Sovereignty, which territory, he considered, furnished a better frontier than the Kei, and its relinquishment would entail the loss of a large revenue, and give rise to future wars, which would now be prosecuted at the expense of this country

Mr. F. Peel observed that her Majesty's Government were of opinion, in concurrence with the last and the preceding Administrations, that it was desirable to contract instead of extending our territory in South Africa; that the acquisition of the Orange River Sovereignty had been the consequence of information which experience had proved to be incorrect; and that, during the time it was in connexion with the Cape, it had been productive of no advantage; but, during the Kaffir War, it had been a constant source of uneasiness. Sir George Clerk, appointed a Special Commissioner to the Cape, had, he said, received instructions, not so much to abandon the Orange River Sovereignty as to withdraw the protection of this country. He justified the measure upon legal grounds, and contended that Natal could not be prejudiced thereby, since it was separated from the Sovereignty by a secure mountain boundary

At the evening sitting Mr. Russell presented, and moved the prorogation of Parliament, to give all the information on the Eastern question which could be furnished consistently with the interests of the public service. He declined (in answer to Mr. Disraeli) to state the nature of the proposals accepted by the Emperor of Russia.

THE NAVAL REVIEW AT SPITHEAD.

Mr. Oliveira asked the meaning of the extensive arrangements were contemplated for the accommodation of members to view the naval evolutions that were to take place at Spithead on Thursday. Perhaps no right hon. Baronet as the head of the Admiralty would give some information on the point, and at the same time state whether any arrangement could be made by which the wives of members could be made participators of the spectacle (A laugh).

Sir J. Graham said, that the hon gentleman's question had assumed a somewhat unparliamentary form (Laughter) but the House would perhaps allow him to give the fullest answer in his power. He had received her Majesty's commands to place at the disposal of each of the Houses of Parliament a ship of war on the occasion; and, in obedience to this command, he had ordered a ship of war of 950 tons, and 280-horse power, to be got ready for the accommodation of members of the Upper House; and for that of the members of the Lower House—their numbers being greater—a ship of 1200 tons and 600-horse power. The evolutions would comprise about thirty ships of war, so that there would be very few ships available for other purposes. The vessel he had ordered for the use of members of that House would accommodate about 200 gentlemen: Mr. Speaker, however, had been so obliging as to consent to receive the names of members who wished to be present; and if by four o'clock to-morrow it should appear that more than 200 names had been inscribed on the list, he would endeavour to make some further arrangement He regretted to add that it would be impossible for him to supply accommodation also for the wives of members. The difficulty of providing the means of conveyance to Portsmouth could be got over by sending members down free (Laughter), and, unless very speedy arrangements were made, that difficulty would become insuperable. He had at present made arrangements for special train to leave London at the early hour of half-past six in the morning, which would reach Portsmouth at half-past nine, and which would accommodate at least 500 or 600 members of the two Houses. He trusted this arrangement would be considered satisfactory.

Mr. Hume said, of course the measure of accommodation would be completed by sending members down free (Laughter).

Sir J. Graham replied: Not by any means (Laughter). Every member going down and returning (for the arrangement had been made for a return) by the train would pay his full fare to and fro (Laughter)

The House then went again into Committee of Supply, when the remaining votes, including the Militia Estimates, were agreed to, after discussion.

On the order for going into Committee of Ways and Means, Mr. E. Ball moved a resolution condemnatory of the duty on malt. He only wished that the farmer might be allowed to prepare his barley, so that he might fairly compete with the foreigner, and brew beer from malt of his own growth. The motion was negatived; and the House then went into a Committee of Ways and Means, when a sum was voted out of the Consolidated Fund and the surplus of Ways and Means.

On the third reading of the Charitable Trusts Bill, Mr. Lucas wished that, either in this bill or in some future measure, provision should be made for placing Roman Catholic trusts upon a more satisfactory basis. Lord J. Russell said, the attention of the Government was turned to the subject, and it was their intention to introduce next session a bill which would, in an unobjectionable manner, include Roman Catholic charities within the purview of this bill. The bill was read a third time and several new clauses were added without opposition.

The Ministers' Money (Ireland) Bill was withdrawn

The Smoke Nuisance Abatement (Metropolis) Bill, which stood for committal, gave rise to considerable debate Mr. Spooner, who moved to defer the committee for three months, insisted that the bill required an impossibility, that the producers of smoke could not consume it. Lord Palmerston remarked that the objection "it could not be done," had been the argument offered against all improvements; but, if Parliament said, "Gentlemen, you must consume your smoke," smoke would be consumed. Upon a division, the amendment was negatived by sixty-six to twelve, and the bill passed through the committee

Mr. Walpole obtained leave to bring in a bill to consolidate and amend the laws relating to bribery, treating, and intimidation at elections

The House adjourned at twenty-five minutes to four o'clock a.m.

HOUSE OF LORDS.—Tuesday.

The Eastern Union Railway Bill was read a second time on the motion of Lord Donoughmore

The Duke of Newcastle moved the second reading of the Landlord and Tenant (Ireland) Bill, the Tenants' Improvement Compensation Bill, and the Leasing Powers (Ireland) Bill. An attempt had been made to persuade the public that these measures involved the spoliation of property, but such a view was entirely mistaken. In point of fact, these bills originated with the late Attorney-General for Ireland (Mr. Napier), who deserved the highest praise for having grappled with a difficulty which had eluded the efforts of several Governments. They had been submitted to the approval of the most distinguished men of the Irish bar, and they had been sanctioned by the experience of practical agriculturists, so that they came before their Lordships with the highest testimonials. The noble Duke called on the House to read these bills a second time, and thereby contribute to the welfare and progress of Ireland. The Marquis of Clanricarde recommended the House to suffer the bills to be read a second time, and then to refer them to a select committee. At this late period of the session, in the absence of some of the most distinguished members of the House if they were called on to pass three most important bills in ten days, which had occupied the attention of the House of Commons for as many months. The Earl of Malmesbury had consulted with Lord Derby on the subject, and the proposal he should make to the House was to refer the Tenants' Compensation Bill but to permit the two other bills to pass through committee. The Earl of Roden thought all the bills, but more especially one of them, so unjust to the holders of property in Ireland, that he wondered how they could ever have passed the House of Commons. He had the House would reject all the bills. The Earl of Wicklow thought it desirable that the Tenants' Compensation Bill should be referred to a select committee. After some observations from Lord St. Leonards, the bills were read a second time on the understanding that they were not to be proceeded with this session; the Earl of Aberdeen pledging himself to bring the matter before the House of Lords early next session, and to refer it to a select committee.

HOUSE OF COMMONS.—Tuesday.

At the early sitting, the South Sea and other Annuities, &c., Bill was read a third time and passed. The object of the bill is to enable promoters of South Sea Stock, having a claim at general courts, to commute, and for other purposes connected with South Sea Stock. The South Sea Company, if authorised to undertake private trusts, may commute for the purpose of forming a guarantee fund. Before the 25th of December next the Treasury may appoint times within which assents of the company to commute shall be signified, and to fix terms of commutation into Three-and-a-Quarter per cent Annuities. There are eight sections in the bill to carry out the intention of the Government with respect to the South Sea Stock

The House then went into committee upon the Transportation Bill, when Lord Palmerston gave an exposition of the views of the Government upon the subject of secondary punishments. Hitherto our colonies had enabled us to make transportation beyond the seas one of our secondary punishments; but this resource having now failed—the feelings of the colonists revolting against being brought into contact with our criminals, and a great event having changed the condition of our Australian colonies—the system must be altered. The first result to which the Government were led was the necessity of ceasing to transport offenders to the colonies, except a small number to Western Australia; and the bill proposed to empower the Courts to alter the sentences. It was proposed that after a period of preliminary imprisonment the offender should be capable of receiving a ticket of leave in this country, liable to be revoked. He thought that, with regard to the great portion of those who were sentenced to transportation, reformation was by no means a hopeless subject, and every effort would be made to accomplish it. When those persons who had conditional tickets-of-leave were to be released, the grave question arose, where were they to go, and how were they to be employed? He had every reason to believe that means would be found of providing all these persons employment upon the public works, apart from the convict's ordinary wages; from which occupation, without a stigma, they might slide into the ordinary avocations of free labour. The charge for providing additional accommodation would be borne by the public; but, as the cost of transporting criminals would be no longer incurred, there would be a very considerable annual saving of expenditure. The whole system must be considered in a greater degree experimental; but he believed that this was the best mode that could be devised to meet the great change to which he had referred. Sir J. Pakington and other hon. members expressed their opinions upon the general question, and the clauses of the bill were then discussed and agreed to.

In the evening, the report of the Committee of Supply was brought up, and, on the vote of £67,000 for the Government prisons in Great Britain and Ireland, Mr. Lucas complained that the different systems of prison discipline, in respect to the religious instruction of the prisoners, prevailed in the prisons of Great Britain and Ireland respectively; that in other prisons, as the convict prisons, there had been a system of perfect religious equality, which did not exist in the English prisons.—Lord Palmerston said that, as far as the Government prisons were concerned, he had taken steps to carry into effect the views expressed by Mr. Lucas—namely, that Roman Catholics and Dissenters, as well as prisoners belonging to the Church of England, should receive religious instruction from clergymen of their own persuasion this being one of the ingredients of the improved system of prison discipline. With regard to county prisons, he was inclined to think that some legislative alterations would be necessary; and, if so, it would be his duty next session to prepare some measure for giving to prisoners in county gaols religious instruction on the same principle as that adopted in prisons

under the immediate control of the Crown. The resolutions were agreed to, as well as those of the Committee of Ways and Means.

On the order for going into committee upon the Metropolitan Sewers Acts Continuance Bill, Lord PALMERSTON moved an instruction to the committee that they have power to make provision in the bill as to the sums borrowed, or to be borrowed, under the acts, stating the sum (£300,000) he intended to propose in committee that the Commissioners should be empowered to raise. Sir B. HALL entered upon a severe criticism of the past conduct of the Commissioners, and the existing state of the metropolitan sewers. In the discussion which ensued, bitter complaints were made of the irresponsibility of the Board—the want of control on the part of the ratepayers—the extravagant outlay upon sewage works, and their imperfection; Mr. PUTO stigmatising these works as a disgrace to the country. Upon a division, Lord Palmerston's motion was carried by seventy one to thirty two, and the House went into committee on the bill; when Lord PALMERSTON gave an assurance that nothing should be done with the money which was not approved by Sir W. Cubitt and Mr. R. Stephenson, and that some general system should be adopted that would relieve the Thames from the ignominious duty it had performed, of being the common sewer of London, instead of its ornament. He thought that while, on the one hand, the ratepayers had reason to complain that they were left without relief, on the other, the commissioners, who were anxious to effect that object, might also complain that they had not funds to execute works which they believed to be absolutely necessary. There were 2000 miles of streets in the metropolis, and only 900 miles of drains.

THE LATE CAB STRIKE.

On the third reading of the Hackney Carriage Duties Bill, various clauses were proposed by Colonel SIBTHORP and other members, and negatived.

Mr F. SCULLY moved a clause the object of which was to prevent the withdrawal of carriages for two days in one week without just cause or previous notice. The clause was as follows:

That the proprietor of every hackney carriage, or metropolitan stage carriage, licensed to ply for hire within the limits of this act, who shall withdraw his carriage from hire for two consecutive days, or for any two days in one week, without just cause, of which the magistrate before whom the complaint is heard shall be the judge, shall be liable to a penalty of a sum not exceeding 20s. in respect of every carriage for each day he shall so withdraw the same; and the license of such proprietor shall be suspended or recalled and taken away at the discretion of the said Commissioners of Police: provided always, that it shall be lawful for such proprietor, upon giving ten days' notice to the Commissioners of Police, to withdraw his carriage from hire.

Mr. FREWEN said, it had been calculated that the loss to the proprietors of cabs from the three days' strike, amounted to £2500. (Sir J. SHELLEY: £3000 a day.) This would be a sufficient caution to them how they struck work again.

Lord D. STUART opposed the clause, which he thought would have a tyrannical effect. It was, besides, an interference with Free-trade.

Sir J. SHELLEY entirely differed from his noble friend. It must be recollected that the House had not only the cab proprietors to protect, but the public out of doors (Hear, hear); and he must say that the cab and omnibus proprietors had shown they had more power than it was thought they possessed, and had exercised that power to the great inconvenience of the public, who could not protect themselves. He thought the proposed clause nothing more than a reasonable one, and should cordially support it.

Mr. W. J. FOX would add, that there was a third class of persons who needed protection, and that was the cab-drivers. When the proprietors took their cabs off the stands they deprived the drivers of their work and wages, and it was within his knowledge that many drivers (who were entirely dependent upon their masters) were very much annoyed as well as injured by the strike which had lately taken place.

Mr. LOWE thought recent events had shown that the proprietors of public carriages possessed a great and important power, with which it was not well to intrust them. A more unwarrantable annoyance to the public than the recent cab-strike could hardly be imagined. On the Monday those who represented the cab proprietors had seen his hon. friend the Secretary to the Treasury, and had obtained from him assurances of concession on two points to which they attached much weight, and both of which had been since carried out. Notwithstanding, however, the assurances these persons obtained, they had chosen not to work, or if they would be carried out, but "struck," and by withdrawing their vehicles produced the greatest inconvenience to the public and much loss to the drivers. All they had got by the strike they had been promised before; and yet, after it was all over, they met together and congratulated each other upon the triumph they had achieved. He knew, also, that it was in the contemplation of the omnibus proprietors, who could not pretend that they had any grievance, and who had the power of regulating their own fares—to strike, he supposed out of mere gaiety of heart (a laugh), for the purpose of assisting the proprietors of cabs. Now, he did not want to take any measure in a retaliatory spirit; but he thought it was only just that the public should be protected from combinations like these, entered into not so much for the purpose of carrying any point, as of showing the power of a proprietors, and of producing public inconvenience. His hon. friend the Secretary to the Treasury approved of the clause proposed by the hon. member, and he therefore hoped the House would agree to it.

The clause was then passed through committee, and was added to the bill.

Sir W. CLAY, in seconding the motion, complained that the East and West India Docks, and the important districts clustered around, were cut off from the circle of four miles which had been adopted, while Hampstead-heath and part of footing-common were embraced within it. In his opinion it would be much more advantageous to have an ellipse than a circle.

Mr. STRAFFORD suggested that there should be two points of departure—Charing-cross for the cabs going west, and St. Paul's for those going east.

Mr. LOWE did not consider it necessary to re-open the question of the two points, which had already been thoroughly discussed. He was quite willing to accept the amendment of the hon. member for Cork.

The clause was then agreed to.

Mr. FREWEN moved to amend clause fourteen, by providing that when a carriage shall be hired or discharged between twelve at night and half-past four in the morning, the hirer shall pay half as much again in addition to the fare directed under the act.

The motion was negatived.

Lord D. STUART moved a series of clauses, giving the power of appeal from the decisions of police magistrates in cases of refusal or revocation of licenses, or of penalty, under the act.

Mr. LOWE suggested various objections to giving an appeal—a question which had been very fully discussed in the committee on the other bill and negatived.

Mr. J. BUTT supported the motion, which, upon a division, was negatived by 41 to 27.

The bill then passed.

Sir J. SHELLEY obtained leave to bring in a bill to establish a Metropolitan Board of Sewers.

The House adjourned at one o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

The Speaker took the chair shortly after twelve o'clock.

Mr. CARDWELL, in answer to a question from Mr. Warner, said he could now say that it was the intention of the Government to bring in a bill next session to amend the present law of partnership, with a view to facilitate the formation of companies or partnerships, with limited liability, without the necessity of a charter or act of incorporation. The subject was under the consideration of a commission to inquire, and until the report of that commission was received the Government could give no pledge with respect to the matter.

Mr F. FEEL, in reply to a question from Colonel Dunne, said that General Cathcart had recommended that two Swiss regiments should be employed to defend the frontiers of the colony of the Cape of Good Hope, but no steps had yet been taken on the subject, and the troops could not be sent out without applying to Parliament for the necessary funds.

The Consolidated Fund Bill was read a second time.

The Friendly Societies Bill, as amended, was considered and agreed to.

The Customs Bill and the Customs Acts Consolidation Bill were read a third time and passed.

The Loan Societies Bill was read a third time and passed; as were also the Stock in Trade Exemption Bill, Registrar of Meetings Bill, Public Works Act Amendment (Ireland) Bill, Ecclesiastical Jurisdiction Bill, the Militia Ballots Suspension and Militia Law Amendment Bill, Militia Pay Bill, the Commons Inclosure (No. 3) Bill.

After some further business, the House adjourned till ten o'clock tomorrow night. Lord PALMERSTON having previously announced that on Friday the House would not meet until four o'clock.

(*Continued on page 119.*)

RUSSIA AND TURKEY.

RANDOM NOTES AND SKETCHES MADE ON THE WAY TO CONSTANTINOPLE, JULY, 1853.

(FOURTH LETTER.)

(From our Special Correspondent.)

CONSTANTINOPLE, July 25.

IN order that we might have a day at Pesth, we determined upon starting from Vienna in the boat which plies daily to the Hungarian capital, on Thursday (14th), being the day before the swift boat started. The hour of departure was six in the morning. We were first embarked on the Danube canal, nearly opposite the Lamb Hotel, in a very small boat, flat-bottomed, and about half the length of a Chelsea steamer, which conveyed us down to the Kaisermühlen, at the end of the Prater, where the larger boat received us. The passengers were very numerous; and amongst them were several officers, with their wives and families, who were proceeding to join their respective regiments, already on the march to the frontiers. The deck being only just large enough to stow away the luggage, and to permit of the operations of the crew, all the passengers were ordered below; where, what with the heat of the early sun-rays and the smell of tobacco-smoke, the atmosphere was almost unbearable. Fortunately we were not kept long in this position. In half an hour we came alongside the larger steamer, in which we were to perform our voyage, and in a quarter of an hour more were fairly under way.

The Danube Steam Company is a monopoly, by virtue of a Government concession, first granted in 1828 to two enterprising Englishmen, named Andrews and Pritchard, and afterwards carried on with a success, which did not attend it at first, under the auspices of Baron Puthon and Count Stephen Széchenyi. The term of the concession has been increased at different intervals, and is now fixed to extend to the year 1890. The company now possess a capital estimated at 10,000,000 florins (about a million sterling), which is every year increasing. They pay a dividend of 12½ per cent annually, besides laying by 13 per cent annually for building more ships. This fleet now numbers eighty-six steamers and 2 [illegible]ons barges, which are used for the conveyance of merchandise, being towed by steamers.

Very soon after leaving Vienna we found that the Danube had overflowed its banks in all directions. The few houses, or hovels, which we saw along the course of the river, were under water; some of them reduced to ruins. Fares and there were extensive fields of stacked hay standing two or three feet deep in water. In short all was desolation—as it were a scene after the great Deluge.

Immediately on embarking, *café au lait*, served in tumblers (1), with small slices of bread to dip in it, was the order of the day; and sufficed to keep off hunger till one o'clock, when dinner was promised. With the exception of the villages of Aspern, Epling, and Eberdorf—historically interesting for having been the scene of some of Napoleon's exploits—there was nothing along the banks to call for particular notice until we arrived at Presburg—a journey of three hours from Vienna. There, about a score of our fellow-passengers left us; but as somewhat more than that number joined company, we did not gain anything by the exchange; in short, throughout the voyage, wherever we stopped, there was a pretty equal balance kept of incomers and outgoers, so that the vessel was inconveniently crowded.

Presburg, the former capital of Hungary, is finely situated on a projecting point of ground. The royal palace in which Maria Theresa, only a hundred and twelve years ago, 1741, made that touching appeal to her subjects which elicited the fervent exclamation, "Moriamur pro *rege* nostro Maria Theresa!" is now in ruins. Its square walls, with four towers at the angles, are all that remain to tell of the loyalty and chivalry of the past.

After quitting Presburg the Danube spreads itself into a lake-like expanse, with arms stretching in all directions. The country on both sides is flat and uninteresting—a good deal covered with trees, which, as far as our eyes could reach, were half submerged in water.

We looked forward with considerable interest to our arrival at Komorn, the famous fortress, where, in 1849 the Hungarians under Klapka made a successful stand against the Austrians, and only surrendered after the treachery of Georgey had left the cause hopeless. The fortress is built on low ground, nearly on a level with the water; but is very extensive, and is so scientifically designed as to be considered impregnable. The town, which lies behind the old fortress, we were told was under water: such the devastation which prevails every where, for the want of the precautions necessary to retain the river within moderate limits.

The next place of importance we touched at was Grau, the seat of an Archbishopric—the cathedral of which, on the brow of a hill, is a conspicuous object for many miles around. It is a modern edifice (very recently completed) of the Italian style of architecture, with a dome supported by Corinthian pillars, a portico of the same order, and statues of Christ and the Apostles on the walls.

From this point the Danube takes a sudden bend, and, leaving its old flat, marshy haunts, runs in a narrower bed between two chains of porphyry mountains. We here come upon the railroad from Vienna to Pesth, which for some distance runs along the bank of the river. The scenery throughout this portion of the *trajet* was very beautiful—quite a relief after the desolate sameness which had prevailed hitherto. Following this picturesque valley, we arrived at the ruins of the ancient castle of Vissegrad, once the favourite seat of the Hungarian Kings, and the scene of many a barbarous incident in feudal history. The solitary tower by the water-side was the prison of the unhappy Salamon, who was deposed and prosecuted by his cousin, Ladislaus, and whose romantic adventures furnish forth many a tome of contemporary archives.

We turned out a larger number than usual of our passengers at Waitzen (another episcopal town), including many officers and their families. We also took in some, who, by their exertions, relieved the tedium of our voyage as it drew to a close. Then the police-officers came on board, and the process of examining passports (which we had shown on entering the boat at Vienna) was gone through, *selon les règles*. The passports were taken from us, as usual, and tickets given for their recovery—the principal gainers by these transactions, by the way, being the *commissionaires* at the hotels, who make a charge of about thirty kreutzers (one shilling) per passport for collecting them.

Buda is the old capital of Hungary, Pesth the modern and rising town; the former stands on the right, the latter on the left bank of the river. They were formerly connected by means of a bridge of boats; which, however, was burned in the course of the Hungarian war (April, 1849). There is now a handsome iron suspension bridge, built by Mr. T. Clark, the engineer of the Hammersmith-bridge, commenced in 1840, and completed in 1849; the inauguration of which (5th January in the last-named year) took place under remarkable and trying circumstances, viz., the retreat of the Hungarian army of Kossuth, when closely pursued by the Austrian forces. For two days the platform was one mass of moving troops—infantry, cavalry, and artillery; so that the powers of the structure were severely tried.

The united towns are generally described as Buda-Pesth by the Hungarians; and, jointly, they suffered severely in the last struggle for national independence (April and May, 1849). The citadel at Buda was occupied by the Croats, under General Hentzi; the heights above by Georgey, with 40,000 men; Pesth being filled with Hungarians. Georgey bombarded the citadel, from the heights of Blockaberg; and Hentzi, in retaliation, bombarded Pesth. This went on for hours together. Terrible havoc was done on both sides. In Buda the Palatine's palaces, and a number of public buildings, were destroyed (the former has since been nearly rebuilt); Pesth was on fire in thirty different places at once, and scarcely a house in the quarter adjoining the river escaped destruction or serious injury. The hotel where we stopped, the "Königinn von England," was burned to the ground; but has since been rebuilt. The theatre and casino were unroofed, and nearly destroyed by fire. In every direction we saw the evidence of the fierce struggle of which this place had been the scene; although the damage has been partially repaired.

An old gentleman, whom we met with in the hotel, gave many particulars of incidents which had passed under his own eyes; and said it was indeed a terrible sight. As our presence appeared to excite considerable curiosity and interest in the strugglers about the hotel, I asked this gentleman whether many travellers, more particularly English, came this way. He shook his head, and replied in the negative; "scarcely any English were now seen here, though formerly they used to come." He added that the Austrian Government did not like them to go so far; that they had no objection to admitting them to Vienna, but that applications for passports to visit Hungary would be met with inquiries as to the object of their journey, and perhaps ultimately with refusal. "They do not like the English to come over here, and then go back and tell all they see and hear; but people passing through as you are, are tolerated." Pursuing our conversation, I asked our friend whether there was any news of the movements or policy of Russia in regard to the Turkish question. He shook his head, smiled, and said, "Here we know nothing; absolutely nothing!" As we were talking, a loud and prolonged shout, mingled with the clang of martial music, was heard. On looking out we found that these sounds proceeded from the Hungarian troops, whom we had passed in the steamers and barges earlier in the day, and who thus saluted the ancient capital of their native land. All the way down the river we heard of extensive movements of troops towards the frontiers, along which it appears that a complete cordon is being established.

The boats employed for the *courses accélérées*, or on the express lines of the Danube Navigation Company are large and handsome, with steam-engines of 150-horse power. They are built after the American fashion, with a spacious deck saloon; the sleeping quarters being behind, in what would be the ordinary cabin. We started from Pesth at ten at night, with the advantage of a few hours of moonlight before us, and with the intention of steaming all night. Suddenly, when all the passengers were in their berths and asleep, a sudden crash was heard, which awoke us all. In an instant, when as yet hardly awake, I saw my fellow-passengers rushing up the companion-ladder, in strange inhabilments, making all sorts of gesticulations, and uttering all sorts of cries. Not considering that there could be anything very serious the matter, I lay where I was, my eyes and ears on the *qui vive*; but I began to alter my opinion, when, in about half a minute afterwards, I saw all the passengers coming down the companion, and begin hastily to dress themselves. I then followed their example, and went on deck, when I found the vessel surrounded on both sides with trees, and her head fairly aground, having cut through the embankment of the river, on which was a road, and her bowsprit overhanging the field beyond. It was now just two o'clock, and there was nothing for it but to remain where we were till the steamers, up and down, arrived, which we expected about ten or eleven o'clock. I was much amused at the phlegmatic coolness with which the affair was treated by those on board—passengers and all. There was no shouting, no grumbling, no manifestation of any kind after the first alarm was over. "Un petit malheur!" said the steward, in reply to inquiries as to what was the matter. The others filed the ship quietly went below to sleep; and I followed their example. At an early hour after dawn a crowd of strange-looking natives from the neighbouring villages came to our assistance, and made a vigorous attempt to dig us out of our difficulty. At about eleven the two steamers appeared, and made an effort to pull us off, but in vain; after breaking a hawser or two, they gave it up as a bad job, and we, with our baggage, were transferred to the *Sophie*, which was going down the river as far as Semlin.

The bank on each side of the river as far as Mohacs (where the steamer stops to take in coal) is one continued flat, for the most part covered with forests, so thick and wild, as almost to be impervious to the foot of man. The water still flows through the woods for miles and miles; and here and there we come upon the trunk of a tree which has been undermined by the influence of the current, and lies prostrate in the flood. The heat is oppressive in the extreme, and in the evening the air is loaded with gnats and musquitoes. The current is here very rapid; and there is little or no traffic upon it, except that of the barges, which are towed up by the Steam Navigation Company, and which convey corn and pigs up the river—the latter in great numbers, and at the rate of ten shillings a-head to Vienna. Another species of barge we also met occasionally, which is worked (now that the tide has covered the towing-paths) in a most rude and singular manner. The crew is numerous, about twenty or thirty strong; and the mode of proceeding is as follows. The anchor being taken out in a boat, is dropped about a quarter of a mile ahead of the barge; and the cable is then hawled in by the men on board, who run up the deck in line, every man on arriving at the end of his journey at the stern, hastening forward to take his part below the last man. The rapidity of these movements is extraordinary; but, nevertheless, I am informed that they sometimes take two months in the voyage from Semlin to Vienna.

Our fellow-passengers from Pesth downwards were in greater variety of nationality than on the earlier part of our journey from Vienna to Pesth. We had Wallachians, Moldavians, Servians, Greeks, and Russians; and there was less formality and reserve than we had observed amongst the Austrians in the neighbourhood of the capital. We soon got into conversation with many of them; and were shaken down upon terms of *bonhomie* before the first day's journey was over. Amongst the passengers was a Wallachian *noble*, returning to his estates at Bucharest. He spoke very complacently of the occupation of the Principality by the Russian troops—a visitation to which they had become accustomed on previous occasions. He stated that in 1828, when the Russian soldiers were there, they behaved very ill, and were the terror of the place; but that on their subsequent visit in 1841 their conduct was very much improved—they were more civilised in their manners, and more regardful of the feelings of the inhabitants. He offered no opinion upon the rights of the matter in a political point of view; and it appeared from his whole discourse that it was very indifferent to him who occupied the place, or under whose rule he was, provided his lands were safe.

As we approach Peterwardein, the aspect on the right bank of the river is slightly diversified by the introduction of a range of low hills, covered with trees and vineyards, and here and there pleasingly dotted with dwellings of a habitable character—the first of the kind we had seen for many hours. Peterwardein is a strong fortress, on a rocky eminence, standing out abruptly into the river, which surrounds it on three sides. It is one of the Free Military Communities, within the frontier intervening between the Austrian and Turkish dominions; and is said to be the spot where Peter the Hermit marshalled the troops engaged in the first Crusade. Opposite, and connected with it by means of a bridge of boats, is the modern town of Neustadt.

After a delay of about an hour at this place, we started on our way, and in six hours arrived at Semlin (Sunday, one p.m.), where the voyage of the *Sophie* terminated. Happily, on arriving here, we received intimation by telegraph that the *Albrecht*, having been unloaded, had been got off the bank upon which the pilot had so ingeniously placed her, and was on her way down the river, to take us on

BELGRADE, FROM SEMLIN.

our way to our destination. Accordingly, at the close of a broiling hot day, unrelieved by a breath of air, the *Albrecht* made her appearance at six o'clock; the captain, officers, steward, and crew lifting their hats to salute us as they came alongside, and looking amazingly happy and self-satisfied, as if they really fancied they had accomplished some very clever feat. Two hours having been occupied in re-packing and removing the baggage, we were again on our way, steaming past Belgrade, the capital of Servia—a Turkish town in architecture, although very little occupied by Turks. The aspect of this fine old town, its minarets glistening in the rays of the sun, was very beautiful. The houses are mostly white; and the atmosphere being clear—as only Oriental skies are—they stood out upon the dark background, composed of the hill side, with all the sharpness of outline of a set-scene in a theatre. The sun had now just set; and for some minutes the whole western horizon was of a deep orange colour, which was reflected with almost unsubdued intensity in the lake-like surface of the river. The edges of the latter being fringed by low trees, a broad band of green ran through the midst of the more glowing hues of the reflected sun-rays; and still, as the latter became fainter and fainter, the darker hues of the former prevailed more and more, till all was silvery coldness, under the influence of the moon, which had now risen in full power.

GUARDHOUSE, GIMVEGO, WALLACHIA.

All the way from Belgrade to Orsova the left bank of the river is dotted at short intervals with the guard-posts of the troops of the military frontiers. And most wretched places they are—wooden hovels perched upon poles, surrounded with water and bulrushes, and in a sad state of decay. The men, whose uniform consists of a sort of *blouse* of sackcloth, are so many Alexander Selkirks, condemned to solitude for certain periods of duty. Occasionally we come across a guard-house, in which a dozen or so appear to be congregated.

After leaving Drenkova we enter a narrow rocky defile, and the current of the river becomes marked with rapids and eddies, which demand skilful steering, and the water is very low and dangerous. Here and there on the right bank are seen the vestiges of the Roman road, or *Via Trajana*, which was for the most part cut out of the base of the rock, and in some places consisted of a wooden shelf, partly supported upon the ledge of the rock, and partly upon wooden supports inserted in sockets—one of the last, and one of the greatest of the works of this class achieved by that great and enterprising people. Along the opposite side is a work, executed under the auspices of Count Széchenyi, which fairly rivals the above in magnitude and utility—a new road, like it, cut in the rock, partly supported by masonry, and running in a line slightly above the level of the stream.

A little below Orsova we come to the frontier of the Turkish province of Wallachia, which occupies the left bank, having Servia still on our right. Here Orsova, the frontier town, is picturesquely situate on the left bank. The position is one which commands the navigation down the river; but it is in turn commanded from the heights above. On the opposite bank is Fort Elizabeth—a fortress of considerable strength.

FORT ELIZABETH, SERVIA. NEW ORSOVA, WALLACHIA.

ON THE DANUBE.

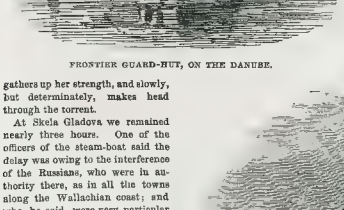
THE IRON GATE, ON THE DANUBE.

Both these places were once military points of importance; but they have of late years been much neglected.

We now came to the "Iron Gate"—a rocky plateau, 1400 yards wide, and 2000 yards long; lying at a short depth beneath the surface; and so styled by the Turks, from the idea that it constitutes an impediment, effectually shutting up the passage of the river. And so, in the days of sailing and towing, it probably did during many months of the year. Now, however, steam applies a key to the difficulty; and, thanks to it, the navigation both up and down is carried on throughout the year. Nevertheless, the appearance of things, under the most favourable circumstances, is, to the inexperienced eye, ominous enough. From a mile distant the whole surface of the narrowed stream is seen to be covered with eddies and broken waves, which boil and interlace, moved by some hidden but potent agency—the wind fitfully rushing up the pass, lashing them into a positive foam. The descent throughout is very precipitous; and, when the water is low, includes two cataracts of eight feet perpendicular fall within a narrow pass between the rocks. A special pilot was engaged at Orsova to steer us through this pass, and he was assisted at the wheel by two men belonging to the crew. In order that he might have a better view of what lay before him, all the passengers sat down; and I watched his eye as he moved the wheel to and fro, and we approached nearer and nearer to the critical point. The changes in our course were frequent and abrupt now we steamed through eddies right on end, as if to run headlong upon the rocky precipice on the left—in another instant we should have been dashed to pieces against it; when suddenly the helm was brought up, and we passed rapidly along the face of the rock, and within a few yards; then, another sudden turn, and the same danger appeared to threaten on the other side, which, by a similar rapid manœuvre we avoided. Our vessel behaved bravely throughout; although, occasionally, a sort of struggle, or internal movement, showed how she was tried with cross currents. Of course, in ascending the rapids, the difficulty of the struggle is still greater. Our captain told me that sometimes the vessel comes to a dead stand-still at the foot of the cataract, as if paralysed by the fierce onslaught of the waters; and then, after a minute or two of apparent prostration gathers up her strength, and slowly, but determinately, makes head through the torrent.

SILESTRIA.—THE TURKISH CAMP ON THE HEIGHT.

THE SULINA MOUTH OF THE DANUBE, FROM THE BLACK SEA.

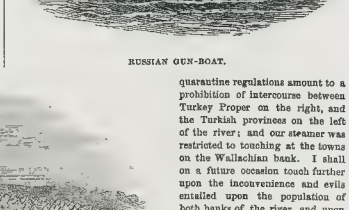


FRONTIER GUARD-HUT, ON THE DANUBE.

At Skela Gladova we remained nearly three hours. One of the officers of the steam-boat said the delay was owing to the interference of the Russians, who were in authority there, as in all the towns along the Wallachian coast; and who, he said, were very particular about the passports. Perhaps in the opinion of these gentlemen we had been guilty of a grave omission—in not procuring a Russian *visa* to our passports; but we certainly did not consider it necessary, our Government having received no intimation of the cession of these territories to the Emperor of Russia. The Russian functionaries appear eventually to have come to the same conclusion; for, after a careful inspection of the passports of all on board—which they had no authority to make—the good ship *Albrecht* was permitted to proceed on her voyage.

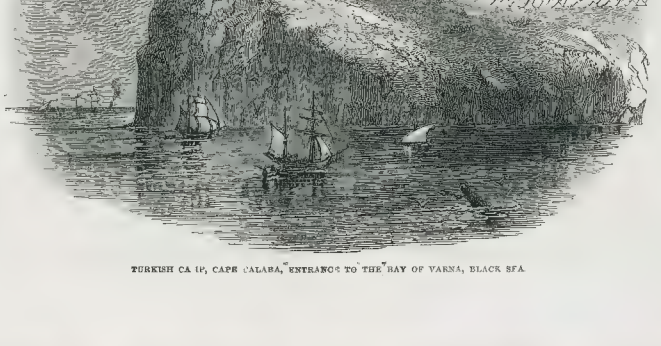
About ten miles below Skela Gladova, the Turkish frontier (that of the province Bulgaria) commences on the right bank; and a little below Kalafat, a miserable village of hovels on the Wallachian coast, but a considerable corn station, we come opposite Widdin, a strong fortress of Upper Bulgaria, and the largest Turkish town on the Danube. It was to this place, as your readers may remember, that Kossuth and his brother refugees from Hungary escaped, after being betrayed by the treachery of Georgey; and the noble conduct of Turkey in affording them hospitality and protection at the risk of a war with her bullying neighbour Russia, will ever fill up a bright page in her history. We could discern the Pacha's palace—a low, long building, with a straggling courtyard—situated near the river. A recent writer, in a work entitled "The Frontier Lands of the Christian and the Turk," which I happened to have brought from England with me, gives an unfavourable opinion of the fortifications of Widdin, which were built three centuries ago. He considers that they "would not prove efficient in modern warfare, as the ramparts are low, the curtains so long, as to be out of all proportion, and the bastions apparently weak." I am not able to form an opinion on the subject myself, nor even to judge of the weight to be attached to that of the writer in question; I merely quote it as I happen to find it. But, whatever may be the efficiency of these fortifications in a theoretic point of view, there can be no question that the Turks are working hard to make the best of them. As we passed we saw a regular encampment of light green tents (the colour generally adopted for this purpose in Turkey), which extended to a considerable distance down the river, and there was a great number of soldiers employed in repairing the fortifications, and in throwing up earthworks in all directions. The cannon were planted; and everything seemed ready for active defence at a moment's notice. In the river was a couple of gun-boats, and another small armed vessel.

Similar military preparations we observed to be going forward at every town and village along the shore. At Rustschuck there was an encampment on the hill covering the town, which, from what we saw of it, to say nothing of what was out of our line of view, must have afforded accommodation for 4000 or 5000 men. At Silestria, a strongly fortified town, an encampment even still larger than the last named. We were only able to judge of the state of affairs on the Turkish bank, by what we could see from the deck of the steamer, as the unjustifiable quarantine regulations amount to a prohibition of intercourse between Turkey Proper on the right, and the Turkish provinces on the left of the river; and our steamer was restricted to touching at the towns on the Wallachian bank. I shall on a future occasion touch further upon the inconvenience and evils entailed upon the population of both banks of the river, and upon the commercial interests of Europe generally, by this extraordinary and unwarrantable assumption of authority on the part of our enlightened ally.



RUSSIAN GUN-BOAT.

Nothing worthy of remark occurred till we arrived at Galatz, at eleven o'clock at night (Tuesday, the 19th inst.), where we were to quit the steamer of the Danube Navigation Company, and tranship ourselves to the *Ferdinando Primo*—a sea-boat belonging to the Austrian Lloyd's Company, and in which we were to prosecute the remainder of our voyage to Constantinople. This town, as well as Ibrail, situate a few miles above, we were told, was entirely in the hands of the Russian "authorities;" and in the river was a Russian steamer and another small vessel



TURKISH CAMP, CAPE CALABA, ENTRANCE TO THE BAY OF VARNA, BLACK SEA.

of war, and several gun-boats. This was an evidence of cool audacity which certainly rather astonished me at first; but the feeling of astonishment suddenly wore off, and gave way to more serious consideration when, on our passage down the river to the Sulina mouth, we found other steamers and numerous other gun-boats—the latter in all numbering, as was said, thirty—and were told that more were coming. At a point a little higher up the river, also, where there is an island, we understood that the Russians had already commenced building a pontoon bridge, and had actually completed the portion of it reaching from the north bank to the island. We could not but feel that although Russia might have no immediate intention of following up her oft-repeated threats, by commencing active operations against the Turkish territories on the south bank of the Danube, the appearance of such hostile armaments and preparations under the very nose of the Turkish troops at present crowding to the frontier, might perhaps provoke attack from the latter, which would lead to serious complications, and perhaps render general hostilities inevitable. If such a calamity should occur, fearful will be the responsibility of the Christian ruler of Russia.

The Sulina channel of the Danube, which commences below Galatz, is very narrow and very winding: it passes the whole way through a flat morass covered with bulrushes, in which pelicans, and other large birds, and frogs, are the only inhabitants, with the exception, at stated intervals, of the unfortunate sentinels in their log-huts, who are continued all the way down to the mouth of the river. The heat which prevails over this miserable swamp is intense, and in the afternoons the atmosphere swarms with musquitoes, and is rife with fever and ague.

As we approached the mouth we had some misgivings as to being able to get out; the last accounts stating the depth of the water at the bar to be nine feet three inches English, whereas we drew nine feet six. We found the passage inside the bar crowded with vessels of various build (the number was said to be 300), with their sails flapping in the air to dry, there having been a heavy rain the previous day. To steer through these craft all closely packed together, and some themselves in motion up the river, was a matter of extreme nicety and difficulty, and only accomplished by dint of the most energetic exertions, accompanied by an unusual quantum of shouting and swearing by our pilot. At length we passed them all, and discovered a wild open seaboard strewed with wrecks, the masts and hulls of which were sticking up out of the mud and sand on each side of our course, and denoted the precise locality of the Sulina mouth. Never had I seen or imagined such a spot before: it looked only like the abode of some malignant genius which one has read of in fable.

Fortunately, the water was perfectly calm; or the captain would not have ventured out. As it was, in order, as it were, to put his best foot foremost, he caused all the heavy goods to be removed to the after-part of the deck; there also the passengers crowded together, watching with keen anxiety the little narrow surface of water which lay between the two buoys, which marked the only practicable passage. In another minute we were alongside of them, the head of the ship had got over the bar; but the middle bumped and scraped, and the hind part bumped, and scraped, and stuck. We were fairly aground, as the rolling of the vessel, even in this apparently calm water, plainly indicated. Great consternation now prevailed amongst the passengers. The captain and pilot looked anxious, and shouted lustily, mixing up abundance of oaths upon the *maladetti Russi*, but still did not give up hope of getting off. Guns, chains, heavy merchandise, and passengers, were now all ordered to the prow of the vessel; and there we were all set to work running in a body from side to side, in order to roll the ship, and by degrees loosen the sand in which the rudder was immoveably stuck. And right willingly they did as they were bid—Turk, Jew, and infidel, all rushing helter-skelter, shouting, and tumbling over one another, from side to side, stopping for a moment between each wild rush—the Turk, to mutter an inaudible prayer—the Greek, to pray with his beads, and to breathe, and exchange glances and a word as to the chances of getting off. At length, after half an hour of this exciting entertainment, a shout of triumph from the captain—"*Salvator!*"—announced that we were afloat; a shout re-echoed on all sides, and then everyone went to his accustomed quarters, and the good steam ship *Ferdinando Primo* sped on her way across the blue waters of the Black Sea. And very lucky it was that we got her off when we did, for in a couple of hours afterwards a gale suddenly sprung up, accompanied by a fearful thunderstorm, which lasted till near sunrise.

Next day (Thursday), at eleven in the forenoon, we arrived at Varna Cape Galata, outside the Gulf, was occupied with a very large camp, and other troops were continually arriving; this being one of the most important ports, commanding the approaches to the Balkan. This place, it will be recollected, stood a long siege by the Russians in 1828-9, and was only at length delivered up by treachery. Its fortifications were afterwards dismantled by virtue of the conditions of the treaty of Adrianople, but they have since been reconstructed, and upon a much larger scale than before. An English gentleman on board, who had been long a resident in Turkey, gave me some curious particulars of the mode in which these works had been constructed. It appears that the Russians, being then on friendly terms with the Porte, very kindly supplied the plans for the fortifications, and they were drawn out upon the principle of extending the lines over a much wider surface than they had previously been, the effect of which was to bring some of the most important points within range of the heights above, which was not the case before. The Turks became aware, when too late, of this mistake; and my informant states that, some time back, when he was at Varna, he met with a French officer, of the engineers, who was surveying the position on behalf of the Turkish Government, and who thought very ill of them for the reasons stated; and, also, for that, owing to the great extent of the lines, it would require not less than 30,000 to 40,000 men to defend them

Twenty-four hours more (in the course of which we tow bed at Bourjas) brought us to the mouth of the Bosphorus; and, in two hours afterwards, having passed through the magnificent double panorama presented on both sides of that unrivalled Strait, we landed at Galata, the Frankish quarter of Constantinople. The particulars of all we saw and have learned since our arrival, will form the subject of future communications.

The Russo-Turkish question is at a stand-still; diplomacy is at work, in the hope of bringing the affair to an amicable adjustment, if possible; but, as yet, without result; and I understand that the English and French Ministers have sent to their respective Governments for further instructions, with the view to arriving at a definitive issue

Meantime, the Ottoman Government is daily weakened and impoverished by her preparations for war, and to a frightful amount. It is said that the cost of the armaments and movements now going forward, is not less than £60,000 a day.

LAUNCH OF THE "JASON."—On Saturday afternoon, a vessel, named the *Jason*, belonging to the General Screw Shipping Company, was launched at Blackwall. At three o'clock the vessel was "christened" in the usual manner by Lady Gambier after which the dogshores were removed, and she glided in magnificent style into the water. The following are the dimensions:—Length between perpendiculars, 281 feet; breadth of tonnage, 43 feet 2 inches; depth in hold, 21 feet 8 inches, keel for tonnage, 255 feet 1 inch Tonnage, 2580. Two other vessels, of a similar kind, belonging to the same company, are nearly completed, and will be launched in the course of a few weeks The *Jason* is designed for the Australian trade.

THE COURT.

Her Majesty the Queen and his Royal Highness Prince Albert, accompanied by the youthful Princes and Princesses of the Royal family, and attended by a numerous suite, left Buckingham Palace at twenty minutes before two o'clock on Tuesday afternoon, for the Nine Elms station of the London and South-Western Railway, whence the illustrious party travelled by a special train to Gosport, *en route* for her Majesty's marine residence in the Isle of Wight. The Hon. Francis Scott, M.P., Chairman; Mr. Godson, the Superintendent; and Mr. L. Crombe, Secretary to the Railway Company, were in attendance upon the Royal party. On arriving at the Clarence Victualling Yard, her Majesty and the Prince Consort, with the Royal Children and the Ladies and Gentlemen of the Household, embarked in the *Fairy* Royal yacht, which conveyed them across the Solent, amid the salutes of the fleet assembled at Spithead.

The chief incident of Court life during the week has been the reception by her Majesty of the Grand Duchess Marie, eldest daughter of the Emperor of Russia, at a Court held on Monday, at Buckingham Palace. Her Imperial Highness came in state to the Palace, from the residence of the Russian Embassy, and was attended by his Excellency Baron Brunnow, Mdlle. Wrewskoff, and Count Wielhorski. At the same Court, Don de Castillo y Lanzas, Envoy Extraordinary and Minister Plenipotentiary from the Mexican Republic had an audience of the Queen, to deliver his credentials. The Hon. Henry Howard had also an audience of her Majesty, to take leave, on his departure for his diplomatic post at the Court of Brazil. The Hon. Charles Murray had also an audience, to kiss hands, on his appointment to be Minister to the Swiss Confederation. Colonel Sabel had an audience of the Queen, on his return from Persia. Dr. John Forbes, Physician to her Majesty's Household, had an audience, when the Queen was pleased to confer the honour of Knighthood. Dr. James L. Bardsley, of Manchester, had an audience of her Majesty, and received the honour of Knighthood. Her Majesty gave audiences to the Earl of Aberdeen and Earl Granville. After the Council, Sir James Graham and the Marquis of Breadalbane had audiences of her Majesty

In the evening, her Majesty gave a dinner party. The company included his Royal Highness the Crown Prince and her Imperial Highness the Crown Princess of Wurtemberg, their Royal Highnesses the Duchess of Cambridge and the Duke of Cambridge, her Royal Highness the Hereditary Grand Duchess of Mecklenburg-Strelitz, the Duke of Newcastle, the Duchess of Sutherland, the Duke and Duchess of Wellington, his Excellency Baron Brunnow, the Marquis and Marchioness of Clanricarde, the Earl of Malmesbury, the Earl of Hardwicke, the Earl of Clarendon Viscount and Viscountess Canning, Viscount and Viscountess Hardinge, Viscount Palmerston, and Viscount Drumlanrig.

On Saturday the Queen and Prince Albert, with their Royal Highnesses the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, left Buckingham Palace, at twenty minutes to ten o'clock, for the camp at Chobham. The Royal party proceeded in four of the Queen's carriages to the Nine Elms station of the South-Western Railway, where a special train was in readiness to convey her Majesty to Staines. Four Royal carriages were in waiting at Staines, and conveyed the Royal party to the Camp, from whence her Majesty returned at half past five o'clock. In the evening the Queen and the Prince honoured the Italian Opera with their presence.

On Thursday the Queen was present at the grand naval review at Spithead.

THE QUEEN'S VISIT TO DUBLIN.

It is stated that the Queen will leave town for Dublin on the 27th inst. Her Majesty will remain in Dublin a week or six days, during which, it is understood, a Drawing-room, or Court Reception, will be held at the Castle (the only one which her Majesty will visit) on the route between Liverpool, traversing the Lancaster and North Western Railway to Preston, and thence by the Lancaster and Carlisle, and Caledonian lines to Edinburgh, *en route* for the Royal residence in the Highlands

THE IMPERIAL RUSSIAN FAMILY.

The Grand Duchess Marie of Russia, with her eldest daughter, the Princess Marie, and attended by a numerous suite, arrived in town, at six o'clock on Saturday evening, from Torquay. Her Imperial Highness drove direct from the Paddington railway station to the hotel where her Imperial sister, the Grand Duchess Olga, is sojourning; and, after a long interview, proceeded to Cheshire house, the residence of the Russian Legation, where her Imperial Highness will again take up her abode during her stay *sojourn* in London. On Sunday morning the Imperial Princesses attended Divine service at the Chapel of the Russian Embassy, in Welbeck street. In the afternoon the Grand Duchesses left town for Windsor, where they visited Frogmore, St. George's Chapel; and afterwards drove to Virginia Water. In the evening the Grand Duchess Marie entertained the Crown Prince and Princess of Wurtemberg at dinner at the Russian Embassy.

On Monday a festival day of the Imperial family—the Grand Duchesses attended a religious service at the Embassy. After the service, the Crown Prince and Princess of Wurtemberg, the latter attended by the Baroness de Brunnow, proceeded to Grosvenor-house, to pay a visit to the Marchioness of Westminster The Crown Prince and Princess afterwards drove through the principal thoroughfares of the West-end, and visited several leading establishments. At a quarter to three o'clock, her Imperial Highness the Grand Duchess Marie, accompanied by his Excellency Baron Brunnow, attended by the ladies and gentlemen of her household, left the residence of the Russian Embassy in two dress carriages, the servants wearing their state liveries, for Buckingham Palace, to have an audience of her Majesty the Queen.

Her Royal Highness the Duchess of Kent, attended by Lady Augusta Bruce, visited his Royal Highness the Crown Prince, and her Imperial Highness the Crown Princess of Wurtemberg, on Saturday.

The Duke of Atholl has returned to Dunkeld House, N.B., from town, *en route* to his Grace's shooting quarters.

The Marquis and Marchioness of Normanby have arrived at the Lake of Como, from Germany.

Viscount and Viscountess Canning contemplate embarking on a cruise in his Lordship's yacht immediately after the prorogation of Parliament

Lord and Lady Brougham have left Grafton-street for Brougham Hall, Westmoreland.

The marriage of Lord Hobart, eldest son of the Earl of Buckinghamshire, with Miss Carr, daughter of Bishop Carr, of Bombay, was celebrated on the 4th instant, at All Souls' Church, Marylebone, in the presence of a large circle of friends

Lady Hermione Graham, wife of Captain Graham, eldest son of Sir James Graham, was safely delivered of a daughter, on Friday last, at the residence of the First Lord of the Admiralty, Whitehall Her Ladyship and the infant are progressing favourably

The Hon. and Rev. Gerald Wellesley, resident domestic chaplain to the Queen, has been suffering for some days from an attack of measles.

THE EMPEROR AND THE POET.—The poet Jasmin dined on Sunday last at St. Cloud. In the evening he was asked by the Emperor and the Empress to read some of his poems. He improvised, as is his wont, in his native Languedoc *patois*. When the poet perceived that his august hearers were in a merry mood, he suddenly asked the Emperor for the unconditional pardon of a fellow-townsman, the ex-printer Rane, a native of Agen. The Emperor paused for a few moments at this all-timed boldness, and then said, "Jasmin, I grant your request, and if M. Baze should ever intrigue against me, I shall hold you and your poetry responsible."

SUBMARINE AND EUROPEAN TELEGRAPH COMPANIES' OPENING TO BIRMINGHAM The above companies' land line to Birmingham having been completed, stations, &c., Cornhill, and No. 104, Newstreet, the company commenced transmitting despatches on Monday last On this occasion there were some considerable reductions in the scale of charges—the former amount of 2s. 6d. being reduced to 1s; the 1s 3d additional charge for each ten words above the minimum of twenty having been changed to a tariff of 6d for each additional ten words or fraction of ten words; and the somewhat startling circumstance, that the great link-lines of Europe are now combined in one unbroken chain of communication from the Continent, through London, and north wards as far as Birmingham. The companies' line to Manchester and Liverpool is to be rapidly proceeded with

LAUNCH OF THE "PENINSULA," IRON SCREW STEAMER.—The first of a new line of screw steamers for the Spanish and Portuguese Screw Steam Shipping Company was launched on Saturday at Greenock. The *Peninsula* is 225 feet in length over all, 190 feet between the perpendiculars, 25 feet breadth of beam, 15 feet in depth of hold; and about 600 tons old measurement; and will be rigged as a three-masted schooner.

CROWN SUITS.—The bill introduced by the Attorney-General, for the amendment of the practice in Crown suits in the Court of Exchequer, and for the payment of costs in proceedings, provides that in all informations, actions, &c., not of a criminal nature, instituted by the Crown against a subject, the Crown shall be entitled to costs in the same way as in like proceedings between subject and subject; and, should judgment be given against the Crown, the costs will be recoverable from the Treasury. The Barons of the Exchequer are also to be empowered to make general rules and orders, to assimilate as much as possible the course of practice and procedure in Crown suits to that between subject and subject

THE THEATRES.

ROYAL ITALIAN OPERA.

Spohr's three-act opera, "Jessonda; or, the Rajah's Wife," was originally produced at Cassel, in Germany, under the composer's direction, in 1823. In June, 1840, it was heard at the Prince's Theatre (St. James's), being executed by a German company—Madame Stockel Heinstetter as the *Jessonda*; Madame Schumann, *Amazili*; Herr Schlesen, *Nadori* and Herr Pocek, *Tristan d'Acunha*. This performance, with the exception of Herr Pocek, was a failure—not only in the principals, but in the choral and orchestral forces. Far different was the rendering of it work last Saturday night, at Covent garden, where, in presence of her Majesty and Prince Albert, and an auditory—amongst whom were the most celebrated professors and amateurs in London—an Italian version, by Maggioni, of the German text, was presented, for the first time. It was generally admitted, by those connoisseurs who were acquainted with Spohr's "Jessonda" on various former occasions, that the present representation, taken in the whole, was the most perfect. Never were the elaborate and difficult instrumental accompaniments played with greater skill and delicacy; and this is of vital importance in such intricate orchestration as that of Spohr. The *mise en scene* was gorgeous, the staging and dancing admirable, under Mr. Hia its careful and tasteful superintendence, and the cast strong, in spite of the illness of Madame Bosio as *Jessonda*. Madame Castellan as *Amazili*, Herr Formes, *Dondon* (the high priest), Lucchesi, *Adorr*, Belletti, *Tristan*, with Signori and Soldi in the secondary parts.

The libretto is decidedly interesting; and still, with all the advantages just enumerated—with the zealous support of the "native talent party"—with the musical pieces, will quickly cease to attract—and with the partial exhibition of sympathy from the general body of executants, vocal and instrumental—Spohr's "Jessonda" is as much a failure as was his "Faust," and will be as much forgotten as Spohr's and Berlioz's "Benvenuto Cellini," with this difference—that the dissolution has not been hastened, as in the last two instances, by a cabal. It may be asked how it is that "Jessonda," which has highly cultivated musicians rave about so rabidly, should have fallen lifeless on the ear of the general public? A brief recapitulation of the leading incidents of the libretto, with the musical pieces, will quickly answer—and with the result. Even at the outset, the characteristic overture—so superbly given by the band under Costa's baton—is a clue to the composer's system. Sombre as the subject is, it is again raised by the masterly pantomimic music accompanying the movements of the Bayaderes, who announce by the tearing at a veil, the extinguishing of torches, &c., the approaching fate of the widow. *Nadori*, the young Brahmin, their arrives as the messenger of death; but struck with the beauty of *Amazili*, he resolves to save *Jessonda*. A tedious terzetto terminates the first act. Save the duo before cited, the curtain dropped without an emotion. Spectacle rises the curtain at the opening of the second act—the warlike games of the troops in the Portuguese camp, to very dull music, precede the lament of the *General Tristan*. This air won an encore, and was most expressively sung by Belletti. The sisters come to the camp, a truce having been agreed to, and twine a wreath in a soothing duettino. *Nadori* here has subsequently a scena, descriptive of his resolve to rescue *Jessonda* for the sake of his lady love, who reciprocates his suit in a solo, sweetly warbled by Lucchesi. The finale of the second act ensues. *Tristan* recognises *Jessonda*, as his affianced, and is about to carry her off, but the High Priest arrives in time to remind her that he has pledged his word to allow the Indian princess to recommence widowhood misfortunes. After a struggle, *Tristan* determines to keep faith with his foes, and yields *Jessonda*. This truly dramatic scene, so suggestive to a composer of dramatic genius as Spohr, is depicted by Spohr in a cumbrous and frigid and monotonous style. He never rises with the situation, and has missed a glorious opportunity for marked contrast between the Indian troops and the Portuguese forces. In the last act, the grand festa and incantation, *Nadori*, but it is all in the same strain just as the grief of *Jessonda*, so is that of *Tristan*. There is no individuality of character under the whole notation In the latter scene where the sacrifice of *Jessonda* is preparing, there is precisely the same mode of treatment, as that adopted in the opening scene. There is no relief no working for a climax: no change to contrast with what has gone before: no power throughout—one admires the vast ability of the musical mechanist; but when *Jessonda* is eventually rescued by *Tristan* owing to *Nadori* having come, instead of to the General Hindoo, with a flag of truce to break the truce, there is no overwhelming excitement at the finale. The Spohrish traits throughout the opera are indeed unmistakable. His melodies bland and flowing, but not original ideas: his modulations. Operatic music has been thus justly described by a writer in noticing Spohr's "Faust" some years since:—"The action of the scene occupies the attention of the audience, and the music carries the feeling shown there deeper into their souls, therefore, it is no more necessary for them to observe and understand the details of a composition than it is for a person who is in a scene drawing to notice all the arrangements of the lines in it; his gratification arises from the effect of the whole—the union of the drawing with the lights and shadows; the instant he gives his attention to the lines the illusion is destroyed, and much of his pleasure vanishes." Whatever may be the ultimate destination of Spohr's lyric productions in this country, it is known that the distinguished composer—for such he unquestionably is has outlived their fame in his own fatherland. Mathematical music will in truth not stir the soul, however the ingenuity of the composer may be admired: the masses must be moved by effect. It was right policy in the directors to try "Jessonda," they are only faithful to the principles on which the Royal Italian Opera was founded, to present the lyric drama of all masters, without distinction of country. It is by detail of various schools that the public taste will be really improved.

ADELPHI.

Cebbie is not only a jest, and a jest-making animal himself, but the cause of much jesting, like Falstaff, in others. At this theatre, they have put him into a play, entitled, "What! no Cab?" the incidents of which occur on the fatal Wednesday, the 29th, during the shower. The subject is an elopement, the lady being compelled to accept the accommodation of a wheelbarrow, for herself and score of parcels. The writer of the piece appears to have been in favour of the strike, and represents the public as the exclusive losers by the transaction. It had been well if he had held the balance more fairly; however, the piece is a lively sketch enough, and not the less amusing for hitting the public rather than a class

---

MR. ALBERT SMITH will, on Monday next, give the 500th representation of his Ascent of Mont Blanc, at the Egyptian-hall, Piccadilly.

HENRY RUSSELL.—This well known and favourite vocalist has, we understand, engaged the Lyceum Theatre for one month We have not heard whether a new or his old entertainment is to be produced; but there is no doubt that, new or old, he will make it popular.

The Emperor of Austria has just made a magnificent donation to the management of the opera at Vienna, viz. 200,000 florins (about £20,720). The receipts of the theatre generally amounting to about 200,000 florins, the lucky *impresario* will have in hand about £31,400—a large sum, but which, considering the absurdly enormous salaries which artistes receive at present, will ere long probably be dispersed all over Europe, borne away by the stars of the operatic firmament.

The new opera, by the Duke Ernest of Saxe-Coburg, named "Toni," has just been put in rehearsal at the Grand Opera at Berlin. The repetitions of the same work are going actively on at the theatres of Hanover and Munich. It is to be played for the first time at Hanover on the 15th inst, and at Munich on the 21st.

FOREIGN WINE IN BOND.—A firm being desirous of blending a parcel of foreign wines in bond for the purpose of being bottled, and then exported to foreign parts, it was found on application being made to the Treasury for authorities for that purpose, that there would be no objection to the desired operation being effected, on condition that the blended article should subsequently be exported as foreign mixed wine.

COALS FOR THE FALKLAND ISLANDS.—The certainty of the Falkland Islands becoming an important depôt for British and American, American and Californian steamers rounding the Horn, have caused great exertions to send out a timely supply of coal a difficult matter, considering the unexampled demand for that article from so many other quarters, and the high rates of freight. There are now loading at Cardiff the *Sea Bird* and the *Chester*, and in London the *Cu sterides*, with coals direct for the Falklands, the necessity of vessels touching at the Brazilian harbours will be obviated, and the risk of yellow fever, the port charges, cost of repairs, provisions, and every item of refit, are infinitely higher in these than at the Falkland Islands.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The committee of the House of Lords has passed the London and North-Western Railway Company's bill for a line from Crewe to Shrewsbury.

Last week a serious accident occurred by the fall of one of the masons from the scaffolding of the clock towerof the New Houses of Parliament, by which the poor fellow had both his legs broken.

Letters from Portugal announce that the maize crop has entirely failed in those parts this year.

Captain Harness, R.E., has been appointed Commissioner of Public Works in Ireland, in the room of Mr. W. T. Mulvany.

The number of applications for patents for new inventions during the present year in France amounts to 3687

O'Donoghue, one of the Irish convicts, has arrived at New York, having escaped from Australia, via California. He has published an account of his escape in the New York papers.

The last accounts from Riga state that the cholera was on the increase there. The total number of cases was 740, and the deaths were 307. At Copenhagen, on the 29th ult., the total number of deaths was 2647.

Dr. Cullen has issued an order for the assemblage of a Provincial Synod at Thurles, on the 1st of Sept. next, and following days.

The Keyham Works, near Plymouth, will be formally opened on the 1st October. The furniture for the different offices is to be supplied from the store in the dockyard.

The Oregon papers contain rumours of the discovery of rich and extensive gold mines on the Sacramian river, some fifty miles from Salem, which are reported to pay from ten dollars to fifty dollars per day to the man.

The Queen has appointed the Earl of Wemyss and March Lord-Lieutenant and Sheriff-principal of the county of Peebles.

The Great Exhibition is making the tour of the world. The Bavarian Government has resolved on the erection of an edifice on the model of the Hyde-park Palace, for the Zollverein Exhibition, at the cost of 300,000 florins

Reports from all parts of Ireland give a most cheerful account of the harvest prospects. In Tipperary and some other counties, some progress has already been made in reaping

A number of cases containing materials for the assay of gold have arrived by a vessel from Holland. These materials are intended to be shipped immediately to Australia, by a vessel about to leave for that all-attractive colony

An epidemic disease, originating from Lombardy, has broken out among the cattle in Sicily. Besides this, the small-pox has made its appearance among sheep. The papers recommend inoculation of the cow-pox as the surest remedy.

The King of Bavaria has conferred the Grand Cross of the Order of the Crown of Bavaria on Baron A. Von Humboldt.

The Lord Bishop of Limerick, the Right Hon. John Hatchell, and Dr Longfield are the new Commissioners of National Education for Ireland.

It is stated that an arrangement has been entered into between Prussia and Russia for a regular service of steamers between Cronstadt and Stettin.

Mr. Edward Watkins Edwards is appointed an official assignee in the Court of Bankruptcy, in the place of his father, who resigns from protracted ill health.

The Exhibition of Industry at Moscow was closed on the 2nd inst. There were 568 exhibitors. The visitors were very numerous; in one day they amounted to 35 000

As Mr. Peacock, the late holder of the champion sculls of the Thames, was not in a condition to row, there was no race on Wednesday for the champion sculls.—Mr James Fayne becoming the holder

Alexandre Dumas, writing to a Paris journal, states that between the 11th December, 1851, and the 11th December, 1852, he wrote as many as forty volumes, which "compose something like 120,000 lines, or 8,000,000 letters Such has been my year's work."

A second report from the Select Committee on Coal Mines, containing the evidence of Mr. Jude, Mr. Henderson, Mr. Swallow, Mr. Gray, Mr. Tetlow, and Mr. Wood, was published on Monday.

The Emperor of France has conferred a pension of 2400 fr. on M. Baucher, the well-known professor of horsemanship, as a recompense for the services rendered by him in the cavalry school at Saumer.

The *Lady Eglinton* screw-steamer, which arrived from Quebec in eleven days, is being fitted with Sir Thomas Mitchell's Boomerang screw propeller, and will start from Liverpool for Quebec on the 18th inst.

Queen Christina of Spain and her suite, arrived at Havre on Saturday week. Her Majesty took up her residence at Frascati's, where apartments had been prepared. In the evening the band of the 29th Regiment gave her a serenade.

On Saturday last, a party of miners belonging to Kilmarnock, left for London, whence they are to sail for Vancouver's Island, their object being to follow the coal trade in that place.

The Countess Blanche Teleky, who was lately condemned by the court-martial of Pesth to ten years' detention in a fortress, arrived a few days since at Vienna, on her way to her place of imprisonment.

A public dinner was given to the Earl of Carlisle by his tenantry, fenars, and others, in the new hall. Grangemouth, on Friday last. Mr. Forbes, of Culcondar, and several other Scotch members of Parliament, were present.

The King of Prussia has graciously granted the great gold medal of science to M Leone Levi, for his work on the Commercial Law of the Nations.

Mr. Frederick Beamish, formerly member for Cork, has come forward in the Liberal interest as candidate for that city.

The first publication of the banns of marriage of the Duke de Brabant with the Archduchess Maria Henrietta took place at Brussels on Sunday. The Burgomaster read it at the principal door of the Hôtel de Ville, where it was afterwards posted up.

Baron Richards has left Ireland for a visit to the Pyrenees. The assizes duties in the Encumbered Estates Court have well-nigh made a wreck of the learned Baron's constitution

On Sunday last, a child, two years and a half old, fell from a fifth floor window on a heap of sand lying in the Rue St. Antoine. It immediately got up and ran away. As a measure of precaution, the child was taken to the hospital to be examined, when it was found that it had received no injury

The recognizances to the election petition against the members lately returned for Liverpool, are declared to be unobjectionable. The petition will not be proceeded with this session

The first ascent of Mont Blanc this season was made on the 21st July, by Mr. Balmond and Mr. Arthur Walsham, of the Royal Artillery. Mr. Saumond made an unsuccessful attempt two years ago.

Quite a sensation was created on Monday at Galignani's reading room in Paris, by the appearance there of Mr. Braham. Instead of an old decrepit man, there was a hearty gentleman, apparently not more than sixty, with a sparkling eye and dark whiskers.

Dr. Tinsley, the English physician in Cuba, has discovered that vaccine virus, after passing through a negro's system, is valueless for the white race.

Four hundred and fifty pound expenses have been granted by the court to the officer who lately captured the absconding bankrupt, Bergus. He had escaped to Australia, but was brought back, together with some considerable property, which has been rendered available to his creditors.

The High Sheriff has fixed Monday next, the 15th inst., at Lichfield, for the nomination for the South Staffordshire election The Hon. E. Littleton will, it is understood, be returned without opposition.

The Minister of the Interior of France has sent new instructions to the Prefects of Departments, ordering that in future no persons shall be allowed to sell almanacks except licensed booksellers

Last week the innumerables of Kingston brought an action against the Duke of Cambridge, for stopping up a road across Coombe Warren, long used not only as a path, but as a road to a farm, and to the warren itself for game purposes The jury found that there was no right of carriage way, but a right of foot-way

The Sacred Congregation of the Index, at Rome, has issued a new list of prohibited books One of the first named is Bunsen's "Hippolytus and his Age, or, the Doctrine of the Church of Rome under Commodus and Alexander Severus."

A man named Calderbank by some accident got into a grave in St. Peter's Churchyard, on Thursday week, at Preston, when the earth fell in, and he was dug out some hours after quite dead

Prince Michael Obrenowitch was married at Vienna, on the 1st inst., to the Countess Julia Hunyady. The bridegroom wore the Servian costume, and a suite of honour enriched with diamonds worth 80,000 florins. The dress of the bride cost 160,000 florins.

On Saturday last the directors of the Citizen Steam-boat Company gave their annual entertainment to the men and boys in their employment, to the number of about 300, in the Company's dry dock at Battersea.

A boat with five young men, while going to the *Archer* war steamer, in the Tay, was upset, and two of them (Dempster and Buchanan) were drowned.

12. P to K 4th (b)	P to K R 4th	37. P to Q B 5th	R takes K P
13. K to Q 2nd	Q B to K Kt 5th	38. R to Q sq	P to K Kt 7th
14. Q to K B sq	B takes P (c)	39. K to Q Kt 4th	K to his B 6th
15. Kt takes K B	K R takes Kt	40. P to Q B 6th	K to his B 6th
16. Q to K B 2nd	R takes R	41. P to Q B 7th	R to K sq
17. R takes R	B takes Kt	42. K to Q B 5th	K to B 7th (i)
18. Q takes B	Q to K Kt 4th	43. R to Q 2nd (ch)	K to Kt 6th
19. K to K B sq	P to Q 4th	44. R to Q sq	P to Q 5th
20. Q to K B 3rd	Q to K 2nd	45. P to Q Kt 4th	K to K R 7th
21. Q to K Kt 4th (d)	Q K to Q Kt sq	46. P to Q Kt 5th	P to Q 6th
22. K to K sq	P to Q K 4th	47. K to Q B 4th	P "Queens"
23. P to Q Kt 3rd	P to K Kt 3rd	48. K takes Q	R takes K
24. K to Q Kt 2nd	K to K Kt 2nd	49. K takes P	
25. P to Q B 3rd	P to K R 4th	And White wins	

(a) This is the simplest and safest way of playing an attacking opening.

(b) White has actually the worst position, and his twelfth move has not been calculated to relieve him from his difficulties.

(c) White now has a positive Rook should have played for something more than this paltry Pawn.

(d) White makes some good moves at this point.

(e) This, like many of Black's previous moves, is far from judicious.

(f) Q to K 3rd was perhaps stronger. The move made is, notwithstanding, quite good enough to save the game.

(g) This is a grave error Black should play K to B 3rd, whereupon White must move R. to K B 7th, or he will lose the game

(h) White, as he turns, plays very weakly here.

(i) Even now, if Black had not made up his mind to win the game, he could draw it without difficulty

THE CHINESE BIBLE IN ENGLISH LETTERS.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Sir,—I observe with much pleasure, in your article on Christianity in China, a specimen of the mode by which the language of the Chinese may be written and printed in English or Roman letters. As this subject has engaged my attention for some years, I take the liberty of sending you a few remarks, which may facilitate the application of the alphabetic system to the whole of the Scriptures in Chinese.

Believing that the ILLUSTRATED LONDON NEWS is as willing as it is able to give currency to any proposal which concerns the happiness of great multitudes of mankind, permit me, briefly and plainly to state the expediency and practicability of publishing a correct edition of the Chinese Bible in Roman letters. This proposal is perhaps entitled to especial attention, when so large a portion of the Chinese population has declared itself desirous of adopting the Bible as its religious code and Christianity instead of Paganism.

The practicability of applying our Roman or English alphabet to the Chinese language is notorious, as it has been largely adopted by the principal grammarians and lexicographers who have discussed the subject; and I particularly appeal to the authority of Dr Marshman, in his incomparable "Clavis Sinica," and to Dr. Morrison, in his Chinese Grammar, Dictionary, and other works

I may state that the late Samuel Kidd, who was the first Professor of Chinese at the University College of London, was so convinced, by his residence in China of the importance and feasibility of the plan proposed, that he authorised me to say before the Bible Society his desire to execute this arduous task himself. And there is great reason to regret that his generous offer was not, at the time, accepted, as his scheme of alphabetic representation was very exact, and might have been applied to the various Chinese dialects with critical precision. In fact, there is not much greater difficulty in representing Chinese by Roman letters than Persian or Sanscrit; for though it may not be universally known) the Chinese possess, and sometimes use, an alphabet very similar to the Sanscrit or Zendic, consisting (according to Marshman) of twenty-four distinct vowels and forty-eight final powers, which enable them to express their colloquial sounds, though very awkwardly. And as our Chinese grammars accurately define these initial and final phonetics by Roman letters, we have merely to insert the requisite intermediate vowels and tone accents to distinguish about 3384 words, which (according to Marshman) form the oral language of the Chinese Empire.

The adoption of the Roman alphabet system to represent sounds is of especial consequence in regard to Chinese, as it would save both natives and foreigners from the grievous trouble of acquiring and retaining the elaborate scheme of picturesque or symbolic characters, which strives to represent sounds, not by words, but by fantastic hieroglyphics No one respects more than myself the ingenuity of the Chinese symbolism, as the nearest approach to a universal character, which Bishop Wilkins and others have endeavoured to realise. But surely its inconvenience is much greater than its utility. The life of man is too short, and should be too earnest to be consumed in ringing innumerable changes on 214 general symbols or formative elements, [illegible] specific symbols or primitive signs, multiplied [illegible] the number of combinatory symbols, according to the Imperial Dictionary of the Chinese.

Such being the case, I plead that an edition of the Bible, or New Testament, should be printed in Chinese by the Bible Society, or some other agency, for the purpose of promoting the spread of Christianity and civilisation in that vast empire, which comprises one third of the human race. Such a work, especially if it contained an interlinear verbal Latin version, would greatly facilitate the acquirement of the Chinese by Europeans, and the acquirement of European languages by the Chinese. It would bridge over the philological gulf which now yawns between the Sinic and other languages of the earth; and, by simplifying the methods of writing and printing, &c., increase literary and commercial correspondence among remote nations.

I must apologise for intruding so far on your attention; but, surely, the application of the European alphabet to Chinese and several other Asiatic languages, may be adopted with advantage. Such a universal medium of international literature should go hand in hand with time-hallowed systems of symbolism, and serve to elucidate and improve, rather than to mutilate or destroy them

The present crisis of Eastern politics seems to afford a providential opportunity, as propitious as it is unexpected, for extending Christianity in China and Thibet, an opportunity which Britain may turn to the most salutary account, by acting as a Christian mediator rather than as a hostile partizan, and insisting on conditions of a beneficial and philanthropic order, if she be called on by the contending factions to interfere in their disputes. Let us indulge the pleasing hope that if we so act, the conversion of China to Christianity—the grandest act which missionary heroism can accomplish—is not far distant. Perhaps the consummation so devoutly to be wished may be the fulfilment of these words of Isaiah, respecting the final triumphs of the church, which have so long perplexed the critics, "Behold, these shall come from afar, and these from the north and the west, and these from the lands of *Sinim*."

I remain, sir, your obedient servant,

Clifton. FRANCIS BARHAM.

JUBILEE OF THE BRITISH AND FOREIGN BIBLE SOCIETY THE CARNARVON AUXILIARY

SOME time since the Auxiliary Bible Societies in Northern Wales having determined to commemorate the Jubilee of their parent institution by a public meeting, to be held within the precincts of the Castle, in Carnarvon. Wednesday (last week), was the day fixed by the Local Committee for the interesting observance; for which purpose the area of the Castle, near the Eagle Tower, and its entrance by the postern gate, were fitted up by Mr. Lloyd, architect, in a mode similar to that adopted at the Temperance Festival, in 1851. The services of some of the principal local choristers were retained. The day was sunny, and at an early hour the attendance gave promise of a strong meeting. The number present at one time could scarcely be less than 7000, and was seldom under 5000.

Amongst those gentlemen who sat on the platform were the Rev. T. Thomas, M.A., Vicar of Carnarvon; Rev. H. Stowell, Hon. Canon of Chester; Rev. Thomas Phillips, Deputation from the Parent Society; Rev. W. Jones, Vicar of Nevin; Rev. H. G. Edwards, Curate of Carnarvon; Rev. D. L. Williams, ditto ditto; Rev. E. O. Hughes, Rector of Llandysilio; Rev. M. Hughes, St. Ann's, Liverpool; Rev. W. Davies, Liverpool; Rev. T. Aubrey, Wesleyan Minister, Bangor; Rev. J. Philips, Calvinistic Minister, Bangor; Rev. W. Ambrose, Independent Minister, Port Madoc; Rev. I. B. Herbert, Llanddwin. Rev. E. Owen, Rev. J. Morgan, Rev. J. Davies, Rev. Robert Jones, Rev. W. Griffith, Holyhead; Major O. E. Nanney, R. W. Hughes, Esq., Mayor of Carnarvon. A great number of the most influential families were present in the contiguous gallery—to the right of the chairman.

Shortly after ten o'clock, on the motion of the Rev. D. Roberts, Independent Minister, Penrhyn, the Rev. T. Thomas, M.A., Vicar of the parish, was called upon to take the chair in the absence of W. B. Hughes, Esq., member for the borough, who was appointed to preside, and who shortly afterwards arrived. A hymn was then sung in Welsh.

The Rev. Chairman, having read an impressive and appropriate portion of the Sacred Volume, addressed the meeting in terms declaratory of the purpose for which he sat as temporary occupant of the chair. In conclusion he stated that the Hon. Colonel Douglas Pennant could not attend the meeting; but his heart was with them, and he had sent a cheque of £20 for their acceptance (Cheers)

Mr. W. Bulkeley Hughes, M.P., now arrived, and having briefly addressed the auditory, the Report, in English and Welsh, was read by the local secretary, Mr. Thomas The sum collected within the district during the year was £330 13s 5d., showing an excess over the receipts of the preceding year of £21 8s. 11d.

Mr. Thomas Turner moved the adoption of the Report; and the resolution was seconded by the Rev. W. Jones, of Nevin, in an eloquent address.

A hymn was then sung by the leaders of the several local choirs.

The Rev. Thomas Phillips, Deputation, moved

That this meeting welcome the Society's year of jubilee, hailing it as a fitting occasion for commemorating the Divine goodness, so abundantly vouchsafed to the society, in its origin, early history, and subsequent progress, for bearing a renewed public testimony to the Divine character and claims of the Bible, and to the right of every individual of the human family to possess and read the same; and for promoting, by new and vigorous efforts, the widest possible circulation of the Scriptures both at home and abroad.

The rev. gentleman then addressed the assembly, and in the course of his speech stated "that it was the desire of the Committee of the Parent Society to give this year to the Protestant population bereft in the form of a jubilee gift, a cheap, in fact a shilling duoglot Testament—one by which they could at a glance read the Word either in Welsh or in English (Cheers). Whatever the price might in future be, it would for that year be one shilling only, so as to bring it within the reach of servants, schools, cottagers, and the very poor, as a remembrancer of the great year of Jubilee." In conclusion, the rev. gentleman drew an impressive picture of the Jubilee. "What," he asked, "did he see around him within the Castle walls? A sea of sympathising faces. What had he just seen beyond those walls? The streets deserted, the shops closed all business, so far as possible, suspended; and all in honour to the great cause of Bible distribution and grateful jubilee Carnarvon ever stood high in his estimation, but never higher than now. Thanks to the tradesmen who signed that requisition; and thanks to the Mayor, who so considerately concurred with its recommendatory suggestion. They had given honour where honour was due. They had postponed ordinary business in order to join in the jubilee of souls, thankful for the distribution of the bread of life amongst the souls of the hungry and spiritually destitute; and he rejoiced to see them thus engaged within those proud and gigantic turrets which once rung with the clang of arms and the noise of revelry; but which now echoed to the hymn of praise, the song of triumph, in loud heart-stirring, soul stirring strains of jubilee to the God of the Bible, in grateful recognition of his goodness and mercy in allowing them the privilege of aiding in His own mighty work" (Deafening cheers).

The Rev. William Davies, of Liverpool, seconded the resolution, in Welsh. He referred to the relative connexion in which the Bible Society and the Principality stood. It might be said that Wales did not contribute owed its origin, and, after its foundation, it was indebted to this country for more efficient support, according to the number of inhabitants, than was afforded by any other portion of the world. Take, for instance, the year 1851, when the metropolis of England, whose population is more than double that of the Principality, contributed the sum of £4000. Yorkshire, the West Riding of which alone possesses a larger number of inhabitants than the whole of Wales, gave £2000. But poor Wales! how much did she at the same time subscribe to the funds? Why, no less than £3500 (Great cheering). In return for these efforts, the society had done much for Wales Look at the multiplication of the Sacred Volume, its circulation throughout the length and breadth of the land, effects which have followed in the footsteps of the society. A memorable year for Wales was that in which Dr. Morgan pre-ented his translation of the Bible. But, from that time to the year 1804, when the Bible Society was established, a period of nearly 200 years, notwithstanding the strenuous and praiseworthy efforts of the Society for Promoting Christian Knowledge, the circulation of the Scriptures did not exceed 250,000, including every edition printed. But in the forty-nine years, since the establishment of the Bible Society, no fewer than 80,000 Bibles and 500,000 Testaments had been circulated in Wales. They owed a great debt of gratitude as a nation to the Bible Society for its instrumentality in preserving the Welsh language from oblivion or corruption. Upon this point the rev. gentleman enlarged, giving expression to his warmest feelings for his country, its people, and its language; and concluded by some observations on the influence of the Scriptures over the morals of the people.

The resolution having been carried, the following hymn was sung:—

Ddylynwyr Crist! deffrowch, deffrowch!
I nafion yr Ebeugyl dowch;
Rhy'wch, rhy'wch o'ch da, a chodwch gri—
"O daeth, O daeth y Jubili."

The meeting then adjourned to two o'clock.

At two o'clock in the afternoon, the Rev. T. Thomas, M.A., Vicar of

CELEBRATION OF THE 77TH BIRTHDAY OF THE RIGHT HON. LORD KENYON, AT HANNER, FLINTSHIRE.

Carnarvon, re-opened the proceedings by directing the choirs to sing a hymn appropriate to the occasion, and by reading a portion of the Sacred Volume.

The Chairman, Mr. Bulkeley Hughes, M.P., having resumed his seat, came forward and called upon the Rev. Owen Jones, of Manchester; who moved a resolution in approbation of the Jubilee measures and plans.

The Rev. Hugh Stowell, who was received with loud cheers, seconded the resolution in an eloquent address, characterising this magnificent meeting as worthy the first place in the annals of the British and Foreign Bible Society. "It should never be forgotten," said the rev. speaker, "that Wales was the mother of the Bible Society, and that Charles of Bala, under God, was its earthly parent (cheers). There is not a gem in the diadem of the Principality that shines with a radiance and a lustre like this. If I were asked what is the Prince of Wales, the Prince Society of the Principality, I should say, the British and Foreign Bible Society, in the cause of which you have mustered in such mighty strength to-day." The resolution having been passed unanimously, the Rev. Thomas Phillips addressed the meeting alternately in Welsh and English. A hymn was then sung; and, after passing another resolution, the meeting adjourned.

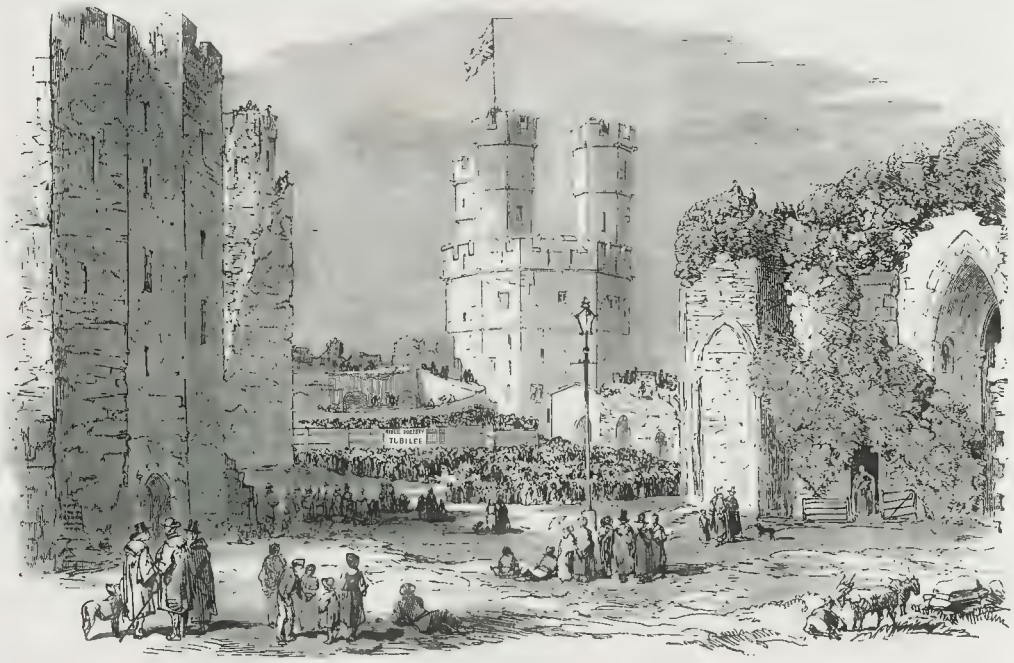
At six in the evening, the business of the meeting was resumed; and was closed with votes of thanks to the officers of the Auxiliary Society.

The proceedings were resumed on Thursday, when the children of all the local Sunday Schools were present.

CELEBRATION OF THE BIRTHDAY OF LORD KENYON.

THE picturesque village of Hanmer, in Flintshire, was on the 22nd ult. a scene of great festivity, in celebration of the anniversary of the birthday of the Right Hon. Lord Kenyon, who on that day attained his seventy-seventh year.

At an early hour the village was enlivened by the booming of cannon and ringing of bells, which were continued at intervals throughout the day. The morning was very unfavourable, the rain pouring in torrents until two o'clock; the clouds then began to disperse, and the sun broke out with cheering splendour, gladdening the hearts of all who had assembled together to do honour to a nobleman whose virtues they admired and fully appreciated—not from the value of his worldly possessions, his local influence, or his nobility, which he has always adorned; but for his pure Christian principles, his extensive benevolence, and his extreme kindness to all classes, particularly the poor of the neighbourhood, whose wants he always liberally relieved. His Lordship's old age and increasing infirmities having compelled him to withdraw from active life, his neighbours have for the last four years shown their sympathy and attachment to his Lordship by



JUBILEE OF THE CARNARVON AUXILIARY BIBLE SOCIETY.—HELD IN CARNARVON CASTLE.

this public celebration of his birthday.

A liberal subscription enabled a committee of management to purchase a fine fat beast and a large quantity of bread, which they distributed to the poor and deserving of the neighbourhood; together with a fat sheep, kindly presented by the Messrs. Lees, of Redbrook.

At three o'clock, a procession formed in the village to Gredington, the country seat of his Lordship The cortége consisted of flags and banners: Burlton's brass band in a carriage, drawn by four horses; the fat ox in a waggon, tastefully decorated; a carriage containing the bread; a pony carriage, in which was the fat sheep; followed by several hundred of the working-classes. The fat ox and sheep had for supporters gaily-dressed butchers, armed with huge carving-knives, which excited much merriment.

On arriving at Gredington, the procession halted, and was received by the Hon Mr. and Mrs. Kenyon, and part of their young family, to whom a congratulatory address was delivered, which the hon. gentleman replied to, thanking the people for such an ardent outpouring of respect and sympathy for his honoured parent; after which the air was rent with continued and deafening cheers. Order being restored, the procession moved in the same manner to the village, where the beef, mutton, and bread were distributed to the populace in an enclosure adjoining the church; during which the band mounted a stage, and commenced playing some excellent music; and dancing commenced in good earnest, and was continued until half-past nine o'clock, when the National Anthem was played, succeeded by a universal burst of cheers for his Lordship, which terminated the rejoicings of the day.

The scene our Artist has selected will show the interesting operation of cutting up the meat, and the lively engagements of the assembled joyous party.

On the same day, at one o'clock, the Hon. Captain Best, R.N., his Lordship's son-in-law, regaled twenty poor aged women with his annual dinner of roast beef and plum-pudding, and ale.

On the day previous, the Hon Mr. and Mrs. Kenyon regaled upwards of 150 boys and girls, his Lordship's scholars, with tea, buns, and other provisions, in his Lordship's School-room at Penley, at which the Hon. Mrs. and Miss Kenyon presided, assisted by the ladies of the neighbourhood.

BUBALE ANTELOPE, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

ADDITIONS TO THE MENAGERIE OF THE ZOOLOGICAL SOCIETY.

THE BUBALE ANTELOPE.

A few years since the Zoological Society had scarcely a single species of antelope in their possession. At the present moment great advances have been made towards supplying this deficiency; and the great family of antelopes is represented not by single specimens, but by herds of the Eland, Leucoryx, Nylghau, and Gazelle, backed by fine examples of the Addax, Sing-Sing, Kob, Bontebok, Springbok, Dulkerbok, Isabelline Antelope, Harnessed Antelope, Four-horned Antelope, and Saisin. The Hartebeest was lost to this list recently, but the Society has already been fortunate enough to replace that form by another and still rarer, although closely allied, species, the Bubale Antelope, or Bekr el-vash, of Northern Africa. The singularly fine condition of this animal, as well as the peculiar character of its expression, has induced us to select it for illustration, and it would be difficult in the whole of this vast group of Ruminants to find a subject of more striking significance.

The antelopes of Asia are comparatively few in number; the antelopes of America do not exceed them in number; and in Europe we have only the chamois.

In Africa, however, the antelopes are the great characteristic feature of the wilderness; and every book of travel contains more or less frequent allusion to the vast herds which pour out periodically from the central regions towards the south, in numbers which are altogether unapproached by mammalian life in any other part of the globe.

The distribution of the antelopes in Africa appears to be influenced by zones of latitude. The Bubale, for instance, appears to descend but little southward of Morocco; the Addax and Leucoryx go further; they are followed by the Sing-sing, the Kob, and the Harnessed Antelope, with many others, which we receive only from the western coast. Here the Eland of the south has its analogue in the *Sing-i-janga* (Boselaphus Derbyanus), of which the only specimens yet known were obtained by the late Earl of Derby from the Gambia. From the parallel of 10° N. the species of the south begin to make their appearance, and gradually increase in number and variety until they culminate in the plains where Sir C. Harris and Gordon Cumming have recorded their massacres.

The most recent addition to the southern species now in possession of the Society is the Spring-bok, which has been presented to them by Captain Lakeman, of the Cape Mounted Rifles. The extreme interest attached to every new form which is thus procured will, it is hoped, induce many other officers to co-operate with the Society, as Captain Lakeman has done; while the successful manner in which the Elands are breeding awards every possible ground for hoping that all the other species may, as opportunity offers, be treated with equally good results.

FLAMINGOES.

The single specimen of this singular bird which the Society previously possessed (and which, as well as the present, they owe to the care of the Hon. C. A. Murray), gave but a feeble idea of the habits of the genus. The group recently received is composed of no less than nine individuals, in the most charming plumage. They are placed in an enclosure of some size, backed by a dense mass of evergreen, which gives full effect to their gorgeous livery of rose-colour and white; and exhibits every gesture by which their strange conformation is characterised, in the most perfect and satisfactory manner. Although hitherto so rare in the menageries of Europe, on account of the difficulty of capturing and preserving them, Flamingoes abound in Egypt in vast numbers, especially in the neighbourhood of Damietta. At certain periods of the year they appear to migrate into Arabia; and then they are seen winging their orderly flight across the waters of the Red Sea in huge divisions, which sometimes extend far beyond a mile in length. The collection of Egyptian birds at the Gardens contains, among other species of interest, two of the rarest of the occasional visitants to Britain—the Buff-backed Heron, and the Ruddy Sheldrake.

FLAMINGOES, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

Literature.

THE POETICAL WORKS OF ALEXANDER POPE. Edited by ROBERT CARRUTHERS. Illustrated by Portraits and Original Designs. In four volumes. Vol. I. MEMOIR AND CORRESPONDENCE OF POPE. Ingram, Cooke, and Co.

Great as is the name of Johnson, and respectable as is that of Warton, we cordially sad to the full agree with the producer of the present work, that both a new biography of Pope and a new edition of his writings were cryingly needed. Mr. Carruthers has not only proved most undeniably the existence of the want, but has completely supplied it. And he has supplied it in an admirable form, containing every merit that belongs to a solid historical memoir, along with the elements requisite to give pleasantness and popularity to an illustrated work intended for everybody's hand. When, after a long interval, public opinion is observed to waver, and in many respects to change, about a conspicuous personage, whose life and character have been already portrayed, and whose writings have been examined in various collated or compared copies: then, whether first or second impressions be correct, it is evident that those who formerly treated the subject have not discharged their office successfully, however high the authority of their name and fame; for there is at once either a necessity to confute them or a necessity to support them—to rectify what they have stated erroneously, or to corroborate what they have stated inadequately. There may be error—there must be insufficiency. That much is clear and incontestable, *primâ facie*. But this sort of general argument is not requisite to justify that clearly, vigorously, and agreeably-written memoir of Pope, which is the first part of Mr. Carruthers's work on this illustrious man, and which Messrs. Ingram and Cooke have now published so beautifully, with all the perfection attainable in type and paper, and all the charms of really first rate illustrations; summoning Pope from the shadows of his peaceful grave, to stand before posterity as he stood before his contemporaries in the most critical moments and in cresting conjunctures of his actual career. The general argument, we say, which we have stated, is not necessary to vindicate Mr. Carruthers's labour from the accusation of being supererogatory; it carries the distinct, detailed, and categorical proofs of its own indispensable character in its own pages. Omissions in the life of Pope, omissions in Pope's own notes to his poetry, omissions of enlightening contemporary comments, with some gross misstatements of actual occurrences, some misrepresentations of his motives, some instances of imperfect collation of his successive emendations, or retouches, purporting to give t e best, where all are now shown not to have been even compared, are far from being the only blemishes which vitiate former biographies and former editions, disqualifying and "exheredating" the authority of even Johnson and Warton. What will our readers think if we add to all this several enormous instances of mistaken identity in the case of persons with whom Pope's destiny was the most intimately blended, and his intercourse the closest? This is actually demonstrated to have occurred: among other examples, in the case of the family of the lady whose spies rained the chiefest influence on his fate, who was all through life the object of his principal attachment, and after death his munificently-remembered legatee.

But, independently of the matter added, and the matter corrected, Mr. Carruthers may also claim, for the manner and execution of his inchoate publication, the most severe comparison with the style of his famous predecessors. Altogether, we may safely declare that the public are great gainers by this perfect, painstaking, and beautiful edition. It was long the fashion to decry one of the truest poets, one of the justest thinkers, one of the most energetic, self-depending, indefatigable mental workers, one of the brightest intellgences of whom the literary annals of England can boast; and that poet, that critic, that ever active worker was Alexander Pope. In great part he was self-taught; and surely, in great part, heaven taught. That test, which the Earl of Carlisle—following Charles Butler, without acknowledging who gave him the hint, and, doubtless, without remembering the source from which it was derived—recommends people to apply in order to ascertain the genuineness or spuriousness of what passes for literary gold, that test is extraordinarily successful in the instance of Pope. No poet, except Shakspeare, has said so many things which have passed into the proverbial texts, allusions, and references of conversation. His counterfeiter can find nothing to mend in a great many of the thoughts and words of Pope, *and nothing to substitute for them*. After the rubbing, the rough friction, of more than a century, Pope's sparkling ideas have the glitter upon them still. They are not plated, they are of the true metal, and of its purest parts. And it is not merely the habit and the ability to think:—a much rarer faculty than people imagine—which particularly shines in Pope; but that magical glamour of art, which is known to so few. Art is patience: Buffon said that genius was. There is profound meaning in that true remark; and, while the superficial cry out for a distinction between art and nature—between genius and art—we know what the relation is in which they stand. It is the same in all things; in matters of business, as well as in those literary seed-plots out of which, consciously and unconsciously) all great exploits germinate, and all great changes spring. The "fine frenzy" of which Shakspeare speaks is found in action no less than in composition. Why are people, in the first instance, surprised at every noble or eminent achievement? Because they would have pronounced it a frenzy; and because they still can hardly think it anything else, in spite of that success unattainable otherwise, and attained thus. The passage of the Douro, and the victory of the bridge of Lodi, were as much the fruit of fine frenzies as that divine soliloquy on Sleep which Shakspeare puts into the mouth of *Henry IV.*, and Peterborough's conquest of Valencia is not less a piece of poetry than Campbell's "Ye Mariners of England." Thus again, *les extrêmes se touchent*; the profoundest calculation returns to the first wild, adventurous, felicitous idea; and the elaborate poetry of Pope is but the expression, in an appropriate guise (not *always* easily got, at first) of the spirit which animates what seems to be the irrepressible verse of Byron. Contempt is a feeling which we never encourage: it is often false in its foundations—it is often affected in its objects. No critic ever really felt it for Pope. But, in spite of our best exertions to repress the sentiment, we cannot help feeling it for Pope's critics. There is abundant evidence to show how Dryden, according to every likelihood, would have admired his great successor—in many respects certainly inferior to him, but in some qualities greatly and undeniably superior. If we then pass to the noble name which comes next (or at least to the greatest which comes next), we find that Byron was equally capable of appreciating Pope. It is curious that it was for the profit of one of the most devoted and enthusiastic admirers of Pope that Pope was so long sought to be depreciated; and it is also curious that he, who so truly admired and so deeply appreciated Pope, should have in general invoked a Muse far more lax than his, and pursued a path much more devious and erratic. In his "English Bards and Scotch Reviewers" Byron, indeed, gave the surest proof of his faith in the genius of the poet whom some of Byron's admirers affect to traverse.

The publication which has suggested these observations is one of those for which it is scarcely necessary to bespeak attention; it will secure that: nor would it be easy to exaggerate its merits. A perfect edition of Pope's works was much needed, and here we shall have more: we obtain in the same work a life of the poet, a conspectus of his career, an appreciating record of what he did and of what he was, and a proof of the mistaken opinion which many persons have formed of his mind. Quintilian said that whoever admired Cicero might rest assured that he was making progress in all polite learning, and especially in eloquence: *qui Cicero valde placebit, ille se proficisse sciat.* Indeed the past tense here might be taken to signify that, before he could admire Cicero, he must already have reached a stage of considerable advancement. We are tempted to say nearly the same thing of the admirers of Pope, and indubitably those whom this great poet and true artist does not please may well doubt of their own proficiency. One very common idea respecting Pope is, that he was a mild spirit; that he had little or no inspiration, no *afflatus*, but that his circumspection and pains, in whatever he composed, were infinite. From the very beginning, Pope manifested the "divine fury" of his vocation. He was evidently called to be a bard. So far from being cold, he was always impassioned. Something to which he listened, which nobody else could hear, whispered to him even in his boyhood. He walked the streets "like a thing possessed." He stole into Will's Coffee-house, became Dry en was there; and the child Eliseus wanted to see the mantle fall flowing over the shoulders of Elias. Even Wych-rley was not beneath his notice, or beyond his young enthusiasm: for Wycherley (though he soon undeceived, by his manifest mediocrity, the misplaced admiration of the real poet) had trodden the awful shades, *virum horrenda*. Such was the "sacred rage" of one whose muse has been pronounced frigid by many teachers of the vulgar.

Pope's life could not but be interesting. He was one of those who rendered their era remarkable in the literary history of England. Addison, Steele, Locke, Bolingbroke, Shaftesbury, Swift, and many others almost vindicate to themselves the dignity of making their age Augustan. In France there was equal brilliancy. Pope was one year older than Montesquieu, and six years older than Voltaire, who survived him, however, about thirty years. In Germany, literature had not yet opened its modern career; though, before Pope died, some of its pioneers were at work.

Rossoe, Bowles, and Warton, have merited highly of the literary world by their editions of Pope; but, for the public at large, it might have been almost as well had those editions never seen the light. The present work, besides the charm of so many admirable illustrations, occupies, as it proposes and professes to occupy, "a middle place between those expensive annotated editions, and the ord nary reprints in which no attempt is made to illustrate the text, and from which most of the author's own notes are excluded." We cordially recommend the work to our readers—certain that they will be grateful to us if we induce them to peruse it. Of course, Pope's poetry will long outlive the active career. Still there is much to interest men in the manner of Pope's life, his quarrels, friendships, and affections. His deformity had no little influence on his fate, and a very great influence on his verses. Had he been merely presentable in person, his satire would probably have been less keen, and all his studies and labours less assiduous. He might have been a happier man; but probably he would not have been so eminent a writer. He often extorts our wonder, because he was repelled from the hopes and objects of ordinary society—because, in fact, he suffered. This is not an unusual case. Lord Bacon wrote an essay on the influence which personal defects exert over the mind, habits, and ambition of those who labour under them. In Pope's verses there is immense energy; and it is of that sort which nothing but long and patient study can impart, and then only where there is true genius. The effects produced, and sometimes by two or three words, resemble sleight of hand. Great labour has gone to them. For one curiously felicitous line many hundreds have been blotted, and now, as the ultimate result that it is impossible to hope for better. Pope's verses, in a vast number of instances, are the very master pieces of the language. It was a sort of premonition which made him so eager to see Dryden and the others who were destined to occupy the remembrance of his countrymen for, assuredly, he himself will never be forgotten, nor will what he has contributed to the literature of England be suffered "willingly to die." He will ever be a lesson to the youthful student: while, the more accomplished a man is, the more he will delight in his productions. Foreigners will study him as an English classic, and his own countrymen will be proud of his fame that only consolation which he had in his lifetime to compensate for the despite which nature did him in disfiguring his person and destroying his health.

Editor, publishers, and time have at last combined to give the world all that these three agents can evermore be expected to give in elucidation of a subject worthy of their best and their ripest exertions.

LIFE OF BENJAMIN ROBERT HAYDON, HISTORICAL PAINTER; from his Autobiography and Journals. Edited and Compiled by TOM TAYLOR, of the Inner Temple, Esq., late Fellow of Trinity College, Cambridge, &c. Three volumes. London: Longman and Co.

It is commonly taken for granted that you cannot do a man greater justice, where he has differences with others, than to listen to his own statement of his case. This may be true in some specific dispute or variance—and then, not unless the individual possess the art of adequately treating facts in by far the most delicate manner, that is impossible to be prejudicial; but, assuredly, it is seldom or never good for anybody to have to plead the general record of his life. We do not quite agree with Mr. Taylor, where he says, "*No man, who has left an autobiography, has ever reason to regret the publication of his own opinion.*"—we cannot, we say, entirely admit the truth of this observation. It is evident that an autobiography can never be more than a greater or lesser part of a life; the end of it cannot be recorded by the man himself. Forgiving, therefore, in any autobiographic specimen, that incompleteness which is of its essence, we find more than one instance in which portions of a career have been so recounted by the hero of it, that no historian could have done as much for his fame as he himself effected. Is not Cæsar a veritable hero of the greatest magnitude in his own account of the long series of conflicts, administrative cares, military triumphs, and civil improvements, which constituted his life, and filled his career in Gaul, Belgium, and the Rhenish provinces? When Hirtius comes with his supplement which he ingratiatingly continue the suspended autobiography, is it a gain—is it not a loss for the fame of the principal actor? "The Retreat of the Ten Thousand" is unquestionably another autobiography, so far as it extends; and in that work is Xenophon no hero? To take a far humbler example, Silvio Pellico, in his "Imprisonments," has not succeeded so very badly in putting the reader entirely on his side, though he had to give an account of himself. And, if we select a case more parallel than any of these to that of Benjamin Robert Haydon, we find that another artist—Benvenuto Cellini—wrote his own history; and that in that book he stands before posterity in the most life-like and self-evincing truth—the impression being those of a giant; the colours at once natural, striking, and inefaceable. But Haydon, on the other hand, gains nothing by having told his own tale: the impression is unpleasing; the reader is irritated by what ever fails to irritate him—the double consciousness that he is not deceived, and that the writer imagines that he is, or imagined that he would be. It is quite true that no autobiographer "ever made himself out a hero," *who was not a hero*. In this, which is, we suppose, what Mr. Taylor means, though it is not what he says, we concur, and we will add that no autobiographer "ever made himself out" greater or better than he was; and whoever has painted himself even other than he was, has generally made himself lower, weaker, and worse. We speak not, of course, of acts which may be suppressed or invented—giving us not a biography, but a series of lies—but we speak of attempts to colour the character and disguise the general bent of thought, of sentiment, of opinion. This can never be done: and if it ever could, it never will. Total nudity adorns the minds no more than the bodies of human beings on earth. We believe that Rousseau was not so degraded as he stands in his own self picture; nor do we think that any one of poor Haydon's sympathies—his ephemeral haunters—the Royal Academicians, could have treated his memory less advantageously than it is affected by the publication of this not uninteresting diary.

He was born in 1786, and received in his boyhood a very meagre education. His family, which was ancient and respectable, was from Devon. Of the mother of his father and the father of his mother he records two particulars:—The lady being once alone, an escaped American prisoner came into her house, and appealed to her protection. Her pursuit was over. This Rahab treated "the spy" unlike the manner in which the first Rahab treated the Israelite spies: "She told him," says Haydon, "that she hated all Americans,' and turned the poor fellow out into the street." The particular evidence which he gives of his mother, a clergyman, who met a singular end: he was preaching one day, when the sounding-board fell on his head, and killed him in the pulpit.

Haydon's boyhood was in no sense remarkable, if we may pass over the fact that he was the most self-willed and passionate of children, and that the best way of pacifying him was to show him prints. At the age of eighteen, against the will, the tears, and the supplications of both his parents, braving what was almost the malediction of his father, and withstanding his mother's declaration that such a step would break her heart, he left the family roof-tree and a thriving business, to which he had been bound apprentice, and rushed to London, full of the resolution, to make his fortune not only as a great painter, but as the founder of he glory of his country in "high art." After more than forty years' of fierce struggling, in which seasonal triumphs were blended more frequently with terrible reverses, he at length turned his back on the field, and ended, by suicide, an experiment which had been to him full of splendid dreams and intox cating hopes in its c mmencement, of cruel difficulties and unavailing labours in its prosecution, and of despair and madness in its ultimate issue. We will not here pretend to adjudicate upon his merits as a painter; doubtless, in some respects, they were very, very high; but there is a mark in Haydon's mind that it was—to borrow a metaphor from the field—of but half-bred genius: that mark is to be flurried while in study and operation. He was maddened both by any artistic improvement or discovery, an by any bold venture. Those things tranquillise, in an artistic sense, the intense spirit which is to be victorious; its fretfulness is not then; its very eagerness is full of calm

This book, though all under the shadow of its awful conclusion, excites incessant interest. Haydon knew everybody, he had no mean sense of humour, though his want of judgment and taste often make him spoil an excellent remark by dwelling on the same idea with fatiguing persistency; he tells a story, and sketches the main lines of a character with great skill, and his many anecdotes are innumerable. Such is the nature of the diary, chequered by sarcasms, repinings, and prayers. He tells us repeatedly that he himself was a most religious man, and his journal contains a great many supplications to the Supreme Being, couched in terms which show that the petitioner had very peculiar views on the subject. Those "ways" which we are told are "unsearchable"—and which, indeed, more reason would, without any revelation, conceive to be beyond the reach of any minute or unbroken human investigation—those "ways" Haydon imagines that he perfectly understands, intuitively accompanies or follows, and not infrequently even anticipates. He is tempted to pawn another man's books: he resists the temptation; money comes to him the same day. Why? "He is a believer; *and he knows why*." No doubt, some time or other, in some way or other, all acts will be rewarded with their real dues. That is the general fact, the knowledge of which all men may possess; but its application to every special and minute case is the usurpation of a knowledge which no man can claim without inspiration. The whole life of Haydon betrays one constant persuasion that he was thus privileged. Occasionally he prays with a sort of crazy adroitness, as though he had thought of a way of "managing" (no other word would be so exact)—of managing the Sovereign Disposer of events. He offers a motive, which must prevail.—"Let me finish these pictures, for they will redound to the glory of Him who made me, and gave me my talents." The reader will find many such passages toward the close of the journal in the third volume, where poor Haydon's final struggles are related and portrayed. After this, let not Mr. Tom Taylor take advantage of Haydon's peculiar manner of praying, to sneer at the practice itself. He may mean that this manner is not peculiar; wherever it be found, we agree with him that it promises little advantage.

When Haydon arrived in London, he soon made himself one of the artist world: and many amusing passages occur about Northcote, Opie, Fuseli, and a thousand others. He was asked to breakfast by Wilkie, and found him seated stark-naked on the side of his bed, drawing himself in a looking-glass. "It's best optal practice," said the Scotchman, without desisting. Haydon's "first dinner in high life" shows the man, and the stuff of which he was made. It was at Sir George Beaumont's. Next comes his acquaintance with Lord Mulgrave and others. Then the picture of "Dentatus" is exhibited; and presently, if Haydon's first letter at Sir G. Beaumont's indicated one part of his character, the subsequent quarrel with the same Sir George indicated another: "I was proud," says Haydon, "of a quarrel with a man of rank, *which would help to bring me into notice*." Sir George was a discerning patron, Haydon an exalted mind. "However vicious I am," says Haydon, "I never soothe my mind with plausible pretences." What is that very remark?

It is a curious circumstance that Fauntleroy, who was afterwards hanged, should have advanced money to West, which money enabled West to lend Haydon the sum of fifteen pounds, when, apparently, Haydon otherwise would have starved

We must not attempt to go through the vast forest of stories which this work contains. One more amusing and characteristic anecdote of Wilkie, and we will conclude, with a strong recommendation to the public to read the book itself.

One day at Paris, Haydon and Wilkie were looking down the Louvre which was filled with people of all nations, for it was the memorable year 1814. Haydon asked Wilkie supposing he did not know any nation present, what would be his impression from the look of the English? Wilkie, after a careful pause of contemplation, in which he studied the English, who were mingled with Russians and French rabble, "Dear, dear they just look as if they had a balance at their bankers."

A careful account of innumerable personal passages, with notices of many remarkable people and events, brings this autobiography at length to the dreadful "God Forgive Me," which preceded the end of poor Benjamin Robert Haydon. The work is rich in its information, and has every thing in its final issue to interest. All of those amusing ingredients which would befit a story long intended, in the hope of its writer, to terminate differently.

THE HUNTER IN THE PRAIRIES SOLITARY RAMBLES, &c. By JOHN PALLISER, Esq. With Illustrations. Murray.

The first keeper of the pantry to the human race was the hunter; the next, the shepherd; the third, a purveyor of larger resources and more varied genius, was the farmer. Hunting developed the warlike, and pastoral life encouraged the pacific tendencies of men; agriculture gave rest by no means, and sowed not only seeds for a harvest, but the seeds of nations. Each of these three great parent-pursuits acted upon the mind, stimulated the growth of its faculties, and enlarged the scope of its empire. Hunting made people quick of hand and eye, ready and sudden in resource, cool in difficulty, calm in danger, patient in fatigue, stubborn in want, soldiers of nature. Pastoral quietude still characterises, and will, to the end of time, the distinctive class, whose delight is in field sports. Their principal intellectual profit is skill. Their profession created various trades, such as the cordwainer's, the saddler's, the armourer's, the curer's—but no science. They, at most, prepared materials for the inquiries of botany, mineralogy, geology, and chemistry. But, as soon as the hunter's skill fell under rules and was reduced to method, there arose, in the absence of any strict science, a great art of which he could boast, an art sufficiently pliable and transitive in its nature, and found to be as available where the objects of carnage were fellow-men, as where they were the beasts of the field or the birds of the mountain. In reading Mr Palliser's book, we can understand the manner which Xenophon lays on the value of the chase in military education. The collector and guardian of the flocks, on the opposite hand, was perhaps the first man of science; and his science was the noblest of all that are called physical. The heavens were his only book, the earth was his tribe—the great, illumined, ever-open family volume—which he had to peruse and to interpret for himself from the lonely hill-top. In this volume he learned to read, in this he learned to think. Sheltered in pastoral seclusion, with some rock for his observatory on occasion, a stationary, peaceful, and contented man he ascertained facts which were precious to the restless wanderer, which enabled the earliest mariners to venture over the sea with impunity, which taught them where they were amid new and strange scenes, and which rendered the whole earth but as a homestead with many rooms—an abode with many mansions. What pastoral life did for the science of astronomy and navigation, for the science of chemistry, for that of hydrostatics, for that of dynamics in general—handing contributed the height of social civilisation is evidently that which is beyond even the least imperfect of the three states we have mentioned, and which is indicated by the prevalence of accomplished, extensive, and refining manufactures. Whatever may happen in individual cases, it seems, unfortunately, to be the history of communities, that merit precedes, while corruption and degeneracy follow, the acquisition of the prizes of the earth. The earliest states of society, though both barbarous and marked by shocking outbreaks of crime, are full of energy, simplicity, valour, sentiment and nobleness; but vice and wide spread vice comes later. Thus, the wild runs in manners, from corruption, back again to ruin. And so, "we ripe and ripe, and then we rot and rot."

Mr. Palliser belongs to a class who form a link between the present and the past. As in the most distant generation, a family likeness is often seen reproducing the glance and expression of a remote ancestor, and some old portrait seems "to have stepped down from its frame," so in this refined and scientific age, the spirit of the Anglo-Saxon and Anglo-Norman hunter, a repressed but inextinguishable flame, bursts through whatever outlet our artificial organisation leaves vacant, and reveals the kinship and origin of the *audax Japeti genus*. This nation shows even in its pastimes, that it has some time still to live before it shall live out the free, fearless and venturesome character which it has borne from a time whereof neither the memory of man nor that of history "runneth to the contrary." We have no wolves left among us; but so long as there is a country where the wild beast ranges, English Palliers may be met with, the knights errant of the chase. The refinement of the brain has here brought no Byzantine degeneracy. Foremost in the useful sciences, familiar with the fine arts, enjoying power, and wealth, and luxury, and fame, this people can yet criticise the Indian of the Backwoods in venatory matters, and can handle the rifle better than many a wild ranger whose livelihood it is.

Such a sportsman is our friend, the author of these "Rambles and Adventures." The field which our islands afforded was too small for him, without at least one grand experimental variation to be remembered during a life. He wanted to travel back to the times when men hunted, not exactly, indeed, still for food, but for their preservation from being turned into food themselves; and, in truth, by a voyage to the "far west," and then a pedestrian excursion of many hundred marches and many thousand miles, he virtually recalled some bygone centuries, and placed them between himself and the present condition of the European world. He has felt hunger and thirst, and slept in snow. He has sought the grizzly bear in his own haunts, and has encountered him fairly, to try which of the two should eat the other. He has shot a vast number of animals with which the majority of us are very unfamiliar; and birds, with the splendid plumage of which we enrich cabinet and museum. He has encountered adventures which would justify a larger volume; and on one occasion, with chest and stomach protected by nothing better than the stock of his rifle, he sustained, in his single person, a grand charge from the crashing and massive forehead of a buffalo-bull. We must frankly acknowledge that it is not those only who experience these adventures, or who would even wish to confront them, who feel an interest in the narrative of the particulars. As a coward often delights in the story of a battle, so the sedentary reader is perchance not less charmed with the hilarious and exciting reminiscences of a genuine sportsman than sportsmen themselves. In addition, too, to the multiplicity of the incidents and the general and varied richness of the subject of his book, we can honestly applaud the directness and simplicity of the style in which Mr. Palliser has written it. He has much to tell, and he tells it in a truly agreeable, unaffected mode. No one who peruses his work will speak of it differently.

Fine Arts.

THE ART-UNION EXHIBITION.

The Art-Union of London opened on Monday last to its subscribers and the public, its customary annual exhibition of pictures, selected by its prizeholders from the London exhibitions of the present season. The pictures thus exhibited are 173 in number, of which 140 are painted in oil colours and 33 in water colours. They occupy three rooms, and there is no one work but what is seen to the best advantage. Each picture is hung on a level with the eye, and whatever the merits or defects of the prizes may be, there they are unconcealed before the spectator

On the whole, we consider the selection good, and in arriving at such a decision we have taken into consideration the difficulties against which the Council and the prizeholders have to contend in making their selections. We are not to look upon these prizes as even average examples of the same picked the eye to the walls of the six exhibitions from which they have been selected. The choice pictures of each year's exhibition in London are either commissions given by patrons and collectors, before a canvas is touched, or even a sketch made; or pictures bought by patrons and collectors off the easels of their respective artists, while in an unfinished state, or before their exhibition to the public. Such being the case, it is clear that the prizeholders —though their money is as good as that of either professed patrons or recognised collectors—do not enter into the field of selection with the same advantages as their most successful competitors; yet it is wonderful to see what good things escape even the careful eyes of patrons and dealers accustomed to go the round of the artists' studios. And this Exhibition we consider as an excellent reply to an argument too frequently used to the disparagement of the Art-Union, that its prizes are only undersized fish, that have been allowed to slip through the meshes of the collector's net; for here, certainly, are some choice works of art, that will hereafter realise larger sums than their prizeholders have given for them. Such we conceive, will be the case with Mr. Linnell's exquisite little landscape, "Shepherds" (No. 139), selected with great good taste from the Royal Academy Exhibition, at the price of £60, by Messrs. Thomson and Sons

The principal money-prize, £200, was gained by the Hon. F. Lygon, and has been laid out with an additional expenditure from his own pocket of £50, in the purchase of Mr. E. Lear's large picture of "The City of Syracuse, from the ancient quarries where the Athenians were imprisoned, B.C. 413." This is a picture of much merit, and, perhaps, the chief prize, under all circumstances, could not have been better laid out.

The next great prize was gained by Mr. B. Haynes, who has selected, with great good taste, Mr. F. R. Lee's very charming view, "Looking up Loch Leven, Towards Tainuit, Argyleshire." Mr. Lee is too cold at times to our liking, but he has an eye so sensibly alive to the Beauties of English and Scottish scenery, that we must pardon his occasional coldness of manner for the other excellences which he spreads over his pictures with a liberal and a skilful hand. A second prize of the same amount (£150) was obtained by Mr. H. Wilson, and has been the means of securing to him one of the few large figure compositions in the collection, viz., Mr. Hurlstone's "First appearance of Columbus in Spain," a leading attraction of the Exhibition in Suffolk-street. The next prizes of moment in this lottery of art are the *five* £100 prizes, three of which have been expended in oil pictures, and two on works in water colours: Miss Sunc selecting "A View in Wales" (45), by Mr. John Bell; Mr. Long, "A View of Mont Orgueil Castle, Jersey, from the Sea" (58), by Mr. J. Wilson, jun.; the Rev. H. Allon, "A View in North Wales—Morning" (61), by Mr. Sidney R. Percy; Mr. W. A. Richmond, "Mr. Henry, Warren's Walk to Emmaus" (161); and Mr. W. Yarrell, a very pleasing and accurate "View on the Thames between Reading and Sonning" (152), by Mr. Aaron Penley. For the acquisitions obtained by prizeholders of smaller sums we must refer our readers to the catalogue itself. Landscapes, we may observe, prevail throughout the Exhibition—it is in landscape painting that our English school of art may be said particularly to excel.

The visitor to this Exhibition—half an hour may be very well spent there by all who are interested in the progress of art in England—should by no means omit to make a three minutes' inspection of the engravings now in progress for the Society. The leading attraction, and the work of the greatest promise, is Mr. J. T. Willmore's clever line engraving from the view of "Tilbury Fort -Wind against Tide"—one of those picturesque and accurate representations of river life and land scenery which no one can rend r with a more exquisite pencil than its painter, Mr. Clarkson Stanfield. A proof impression would be an acquisition to the portfolio of the collector. Will all the impressions turn out alike? Great care should be taken in working so delicate a plate, for both painter and engraver suffer alike by indifferent impressions.

THE NEW CAB LAWS AND REGULATIONS.—1853.*

THE BADGE.

Every cabman, during employment, must wear conspicuously upon his breast a badge, and allow the number to be taken when required.

THE TICKET OF THE NUMBER OF THE CAB, ETC

On no account should the fare neglect to take the ticket, which the cabman is bound to deliver, specifying the number of the cab, &c.

THE HIRING.

A cab is to be considered as plying for hire, whether on the stand or in the streets; and the driver is compellable to drive any person, unless he is air ady hired, the proof of which lies with the cabman. The driver must state at the time of hiring, if he desires to be driven by time; but the driver cannot be compelled to drive by time after eight o'clock in the evening, or before six o'clock in the morning.

THE JOURNEY.

The hirer may require to be driven to any distance within six miles from the place of hiring, or for any time not exceeding one hour. The cabman is bound to take the number of persons marked on his cab, and to carry a reasonable quantity of luggage. If hired by time, the driver can be compelled to go at a speed of four miles an hour, and, if hired by distance, he must drive not less than six miles an hour, or less if required

THE FARE BY DISTANCE.—NOT EXCEEDING FOUR MILES FROM TEMPLE BAR.

For two passengers the fare is 6d. per mile, and any portion of a mile is charged 6d.; for more than two persons, 6d. (not 6d. per mile) can be demanded for each extra person, in addition to the whole fare that would be paid for two persons. Two children under ten count as one person.

BACK FARE FOR A DISTANCE EXCEEDING FOUR MILES FROM TEMPLE BAR.

The cab being actually discharged beyond the four-mile circle from Temple-bar, back fare can be demanded, at the rate of 6d. for every mile or portion of a mile that exceeds the four-mile circle, the distance to be estimated from the nearest point of the circle; but no addition to the sixpenny mile fare can be demanded for any distance, unless the cab is discharged beyond the circle; and only 6d. extra (not 6d. per mile) can be demanded for each person exceeding two persons

EXTRA FOR WAITING. FIFTEEN MINUTES.

The cabman can only demand 6d. in addition to his fare for each complete fifteen minutes that has elapsed in waiting, for less than fifteen minutes nothing can be demanded; and in the case of a number of stoppages, the whole time occupied must be calculated for as the rate of 6d for every complete fifteen minutes The driver is compellable to wait less than fifteen minutes without any charge whatever.

FARE BY TIME

For two persons the fare is 2s. per hour, and 6d. for every fifteen minutes or portion of fifteen minutes after the first hour, for more than two persons 6d. for each extra person can be demanded, in addition to the whole fare that would be paid by two persons.

LUGGAGE.

For two passengers a reasonable quantity of luggage can be taken without additional charge to the fare. When more than two persons are carried inside, 2d. per package is to be paid, in addition to the fare, for every package carried outside the cab.

SETTLEMENT OF DISPUTES.

In the case of disputes about fares, the Table of Distances, signed by the Commissioners, and which every cabman is bound to have, will be conclusive evidence if a dispute cannot be settled by these authorities, the course will be to drive to the nearest police court. Application for a summons must be made with n seven days of the offence.

PROPERTY LEFT IN CABS

Any property left in a cab must be taken within twenty four hours to the nearest police station, where the owner can receive it on payment of a reasonable sum.

LOSS OF LUGGAGE.

If any luggage is lost through the carelessness of the driver, the owner may sue the proprietor of the cab in the County Court or the Superior Courts

CAUTION.—The number on the ticket should be compared with the number on the cab, not the number on the badge; and in every case the delivery of the ticket should be requested, as it is an important document in the case of lost luggage, disputes, or misbehaviour.

* From the New Distance Map of London, published by W. H. Smith and Son

RABBITS IN PARIS.—Under the head of "Rabbits in Paris" we extract the following, which is somewhat amusing. A gentleman relating incidents of his travels while in Paris, says:—"I entered a restaurant on the other side of the Seine, and ordered a rabbit. I was confident as the first cucumber, even as early peas—for I should not have done than. The rabbit came, and I offered it to *Monsieur* to smell. 'Fresh,' man opposite, whose eyes were fixed upon my plate, but he bowed a negative. The bow puzzled me. It was too much. 'Monsieur has not been long in Paris?' 'No, I have just arrived.' 'Monsieur is going to eat that?' 'Yes; may I offer you a slice?' 'Monsieur will allow me to make a small observation?' inquired the Frenchman, with a frightful grimace 'Certainly,' I replied, becoming alarmed. 'Monsieur,' that rabbit *once mewed*,' he replied, with the utmost gravity."

THE WEATHER AND THE CROPS IN CANADA.—The weather for the past week has been excessively hot and sultry. Farmers have now completed the sowing of their turnips, which, in many places, have been greatly injured by the late severe hail storm. The crops generally throughout the country have a fine appearance. Late planted potatoes have failed in several places Haymaking has commenced in several parts, and the crop is abundant.—*Quebec Morning Chronicle*, July 23.

PURE.—In visiting an old blind woman the other day, I was struck with what to me was a peculiar use of the word *pure*. Having inquired after the dame's health, and been assured that she was much much better I begged her not to rise from the bed on which she was sitting, whereupon she said, "Thank you, sir; I feel quite *pure* this morning" OXONIENSIS. *From Notes and Queries*.

GIGANTIC CHIMNEY.—At the Heaton Mersey Cotton Mills and Bleach Works, near Manchester, a chimney, commenced on the 7th December, 1852, was completed on the 30th ult. The following are its dimensions, which have rarely been exceeded:—Height, 270 feet; diameter of outside base, 26 feet; diameter of inside case, 16 feet; diameter of summit, about 8 feet 4 inches; and of aperture for smoke, 7 feet The structure contains 507,000 bricks, and stands upon a red sandstone foundation, with a table of brickwork 6 feet thick for a base. The chimney was designed by Mr. Charles Lee, of Manchester, and built by Mr John Walton, builder, of Bleachley. The chimney serves for a great number of furnaces, at which there is a weekly consumption of 190 tons of coals It is furnished with a lightning conductor on an improved principle.

ANOTHER EXPEDITION TO EXPLORE THE NIGER.—It is in contemplation to fit out another Admiralty expedition to explore the source of the Niger, with the view of promoting civilisation in Africa, and opening up new sources of commerce. It is held that the present is a fitting opportunity for another expedition to the Niger, inasmuch as the mortality on the coast of Africa has of late very much decreased.

RAILWAY TRAFFIC.—The traffic returns on railways in the United Kingdom, published for the week ending July 30, amounted to £373,863, and for the corresponding week of last year to £394,021; showing an increase of £20,842. The gross receipts for the eight railways having their termini in the metropolis amounted to £176,776, and for the corresponding week of last year to £154 358; showing an increase of £22 28. The receipts on the other railways in the United Kingdom amounted to £197,142, and for the corresponding period of 1852 to £169,823; showing an increase of £27,319; which, added to the increase on the metropolitan lines, makes the total increase £49,842, over the corresponding week of 1852. The total increase from the 2nd of January to the 30th of July over the corresponding period of 1852 amounted to £1,056,163, or 12 52 per cent.

DEPARTURE FOR AUSTRALIA.—On Saturday the Royal Australian Mail Steam-packet Company's screw steam-ship *Sydney* took her departure, and proceeded down the river for Australia. In wending her course through the Galleons Reach, above Woolwich, she caught the ground. Fortunately, however, the tide was flowing, and she came off unhurt. She brought up at Gravesend to receive the mails, and at daybreak on Sunday morning sailed direct for her destination (Sydney and Adelaide), without calling in at any port down Channel. She had a number of passengers and a full cargo of good-

INCREASE OF TRADE.—The Board of Trade returns, just issued, are marked by a progressive increase in the value of all our manufactures; the shipments of silks, woollens, and linens, have been very large. Hardwares and cutlery, glass, leather, machinery, and all these show a great increase. Cotton and woollen articles are in good as usual. The imports of tea have been very large, but the increase is attributed to the reduced duty, which has caused an increase of 1,535,535 lb. in the month over the same month last year. Coffee and cocoa are also beginning to show an increase. The consumption of sugar continues steadily on the rise. The imports of wheat in the past six months are more than one million quarters in excess of the same period last year. There has been an increase of 100,000 gallons in the month's consumption of wines.

NEW MOTH.—At a recent meeting of the Entomological society, Mr. Westwood exhibited the cocoons of a new moth from Tropical Africa, which he thought might be brought into use as a new material for textile fabrics.

ROUTE OF THE AUSTRALIAN DIRECT STEAM NAVIGATION COMPANY.

On the next page is an accurate chart of the route proposed to be taken by the Australian Direct Steam Navigation Company—a company which has just received a Royal charter of incorporation. Our object in giving this map is to afford as wide a circulation as possible to a Company who objects, to use the emphatic words of the President of the Board of Trade, are so "unexceptionable in principle" that it must be impossible to could refuse the application for a charter, and which we consider ourselves one of the most efficient and magnificent projects yet brought before the public with a view to connect the mother country with her rising colonies in Australia. The repeated failures via Singapore and the Cape of Good Hope, extending the duration of the voyage to double that anticipated by Government, and the annoyance and disarrangement of business caused by these frequent suspensions of postal communication, renders this Company's scheme a boon, not only to the merchant, but to all who have friends or relations in the Australian lands. The more we reflect on the astonishing discovery of gold and its results, the more we feel convinced that both the Government and the merchants of England should come forward with a liberal hand to support an enterprise of such vast importance as this to the nation at large. Few undertakings we believe will be found more lucrative to the shareholders, as few are so truly national; and, as our object has been to make ourselves conversant with facts, we shall, as succinctly as possible, analyse the comparative advantages of this route as regards ease, comfort, and rapidity of communication, and also the probabilities of its returning a handsome dividend to the shareholders. And in the observations we make we shall confine ourselves as much as possible to *facts*, the correctness of which can easily be tested by our readers.

The chart divides the route into four stages. The first from Milford Haven to Navy Bay, on the Atlantic side of the Isthmus of Panama—the distance to be run is 4552 nautical miles; the second, the passage across the Isthmus, by rail, to the town of Panama, on the Pacific side—a distance of only 46 miles; the third, the distance to Obsolete, one of the finest and most densely-populated islands in those seas, distant 4488 miles; and lastly to Sydney or Melbourne (alternately)—a further stage of about 3264 nautical miles; making a gross total from England to Australia of 12,487 nautical miles. The entire route—favoured by the smoothest seas, with moderate winds, a pleasant temperature, and the absence of adverse currents presents, without question, the most unobjectionable navigation in the world.

The very designation of this Company, the Australian "Direct," marks in an emphatic manner the nature of the seas to be passed over; for no adverse weather has to be encountered in the entire route, of sufficient duration and strength to impede the velocity of paddle wheel vessels of 3000 tons burthen—the size of the vessels proposed to be used by this Company (with proportionate horse-power), or to cause their diversion from their track

Although it is not intended to lay aside steaming for the entire voyage, to secure rapidity of communication and punctuality of arrival at the several stations, yet, as the Direct Australian Line is especially favoured by the winds for more than three-fourths of the voyage, all the steamers constructed for this Company will be efficiently masted; and from this arrangement an enormous saving of fuel is anticipated, as the steamers will, whilst running with a fair wind, use but two of their four boilers, and yet obtain the same maximum speed as a steamer unaided by canvas could from the use of four boilers and a double consumption of fuel; thus, steaming and sailing through these favourable latitudes, will save fuel and effect a great economy in that most expensive part of the engine-room equipments—the boilers. Another still more important object will be obtained from a due economy in the expenditure of the fuel; for every ton carried unnecessarily displaces cargo, for the rapid transit of which across these seas the merchant is content to pay a comparatively high rate of freight

One other important feature of the intentions of the directors of this Steam Company ought not to be passed over, as it is very important, where large numbers of passengers are proposed to be conveyed in a vessel, and this the paddle-wheel mode of progression enables them to offer, viz., an unlimited supply of fresh water; for each paddle-wheel will be fitted with two condensers inside the paddle-boxes for turning salt water into fresh; the condensation of the steam being effected by placing two flat pieces to form a quarter of an inch or so apart, and exposing a large cooling surface. The steam is conveyed by one pipe from the steam chest to these condensers, and another carries the steam so condensed into tanks. The simple revolution of the paddle-wheels throwing the cool water against these condensers will enable more than six tons a day to be obtained from the two paddle-boxes of vessels of the size contemplated, viz. of 3000 tons burthen; and this, too, without any appreciable increase in the expenditure of fuel.

The prospectus states that which all the world knows to be true, "that the produce of gold from the colony of Victoria alone is over £18,000,000 annually; with every prospect of a continuous increase, exclusive of the produce of New South Wales and Tasmania, forms a large addition to this vast amount" It will, therefore, remain for us simply to call attention to the dividends which the British and American steamers running on the Isthmus of Panama, upon the south and north-west coasts of Panama, are obtaining—and which lines must be feeders of this *great trunk line*—to prove how remunerative the project is likely to be.

The (British) Pacific Steam Navigation Company, now long established, and which company run their boats bi-monthly from Valparaiso to Panama, have given twelve per cent to their shareholders; and last month paid £1 15s. on every £50 share, and a bonus of £10 14s on every £50 share. The profits realised by the American proprietors on their lines from California to Panama are exceedingly large It is notorious that, by that line, Messrs. Howland and Aspinwall, in the short time which has elapsed since the discovery of the golden region of California, have cleared immense fortunes; and by the same means, and in the same trade, Mr. Vanderbilt has been enabled to visit Europe in a steam-yacht of greater tonnage and more superb appointment than the steam-yacht of any European Sovereign. We, therefore, see no reason to doubt the immense success of the Australian Direct Company, having golden colonies for its destination, and golden lands on either hand as its tributaries.

COMMENCEMENT OF THE PORTSMOUTH RAILWAY

A DIRECT railway communication has long been felt to be a desirable addition to the links in our iron roads, that already connect the metropolis with the south coast. The original conception of this project, as well as its energetic prosecution through Parliament, has been mainly due to the landowners in the district; and the Government, feeling the vital importance of multiplying the facilities of communication with Fort-mouth, gave it their countenance and support; and the bill received the Royal assent a few weeks ago. Though the railway will, in fact, be a direct line to Portsmouth, yet it is not intended to have an independent station at either of its two termini; but it will run from the South-Western branch at Godalming to Havant, for the Brighton and Portsmouth Railway. To Mr. Bonham Carter, M.P. for Winchester, who has spiritedly sided the measure, was the graceful compliment paid of having the work begun upon his lands at Buriton, near Petersfield, and that the first turf should be cut by his hands on Saturday last.

About three o'clock in the afternoon, a large party, conveyed from London by a special train to Farnham, and from thence by other conveyances to Buriton, about two miles south-west of Petersfield, met Mr. Carter, Mr. Mowatt, the Chairman of the Directors, and a number of other friends from Portsmouth and the neighbourhood, at Buriton, where preparations were made for the ceremonial. There were present on the occasion Mr. Lowe, M.P., Mr. Hastlam, M.P., Sir William Jolliffe, M.P., Admiral Sir Charles Napier, Captain Warren, of the South-Eastern Railway, Mr. Crombie, Secretary of the South-Eastern Railway, Mr. Lofft, and a large party of gentlemen.

Buriton Manor, now converted into a farm-house, is classic ground, having been the patrimony and for many years the residence, of the historian Gibbon, where he spent many years of preparation and study for his great historical work. It is delightfully situated at the bottom of the northern slope of the South Down Hills, whose chalky downs are here covered with thick deep verdure, and stately trees, which clothe the steep banks up to the very summit. Gibbon describes the Manor-house and the surrounding scenery:—

An old mansion in a state of decay had been converted [illegible] the fashion and convenience of a modern house, and strangers found nothing to see, the inhabitants had nothing to desire. It is spacious, but chosen, at the end of the village and the bottom of the hill, but the aspect of the adjacent grounds was various and cheerful. The downs commanded a noble prospect, and the long-hanging woods in sight or the immediate neighbourhood was rare and rude.

It was in the very heart of the scenery thus commemorated from the face of the bank immediately in sight of the house—that the first turf was to be cut. To this spot the company walked in procession from

THE DIRECT ROUTE TO AUSTRALIA.

the house, preceded by the Royal Marines' band from Portsmouth. The hill itself was covered with some thousands of persons, assembled from all parts of the country. When the procession came up, the various members in it had taken their places, and silence had been obtained through Mr. Harker, Mr. Mowatt, the Chairman, addressed them on the advantages of railways, and of the projected line.

Mr. Errington, the engineer, also addressed the meeting, and said that the line would require 100 bridges, and that between 2000 and 3000 workmen would be employed on the work for two years.

Mr. Errington then handed a handsome silver spade, having the arms of the Company engraved on it, with the date of the commencement of the undertaking, to Mr. Bonham Carter, who, casting off his coat in true workmanlike style, manfully wielded both spade and pick-axe, and speedily filled a handsome mahogany barrow with the turf, intermixed with bouquets of flowers, which were flung in by the ladies, and then wheeled it along some planking, and tipped it over into the bottom amid the cheers of the spectators. He then addressed the audience in his working costume; and after some graceful remarks on the pain which it gave him to be instrumental in breaking up and injuring the scene of soft and sylvan beauty which spread around, he added that he was sure the regret would be but for a short time, while the utility and the convenience would be permanent. It would benefit the district through which it passed; it would facilitate the intercourse between the coast and the metropolis; and from the interest the Government had manifested in the undertaking, he believed it would strengthen and multiply the defences of the country. For these reasons he had himself done what he could to forward the interests of the line, and he now wished it and its Directors every success.

The ceremony of the day was now concluded, the company filed off

COMMENCEMENT OF THE PORTSMOUTH DIRECT RAILWAY, AT BURITON MANOR.

the ground, and left the spot to the operations of the workmen, who, setting to their work with a will, had, in a very short space of time, opened a deep wide cutting in the breast of the hill. While they were plying spade and mattock, the Chairman and Directors, attended by the invited guests, proceeded to a marquee which had been pitched at a short distance in the valley, where an excellent collation had been provided by Mr. Crafts, of Petersfield. Mr. Mowatt presided. After the usual loyal and patriotic toasts, and after drinking to the success of the undertaking which had that day so auspiciously commenced, the party broke up and returned to town by the South-Western Railway.

PROVINCIAL INTELLIGENCE.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—At the last monthly council held at the society's house, on Wednesday, Mr. Faulks, of Crosby, near Liverpool, and Mr. James Bell, of York-place, Edinburgh, favoured the council with interesting statements connected with the important discovery of extensive deposits of sea-birds, on islands and caves along the eastern coast of Africa. They also forwarded to the council a collection of samples, showing the varying nature of the deposits. Among these was a deposit containing 80 per cent. of phosphate of lime (without carbonate), and a crystallised substance containing 70 per cent. of nitrate of soda, "found in small lakes, upwards of a yard and a half in diameter, in caverns, and in valleys, and surrounding these small lakes, as crystallised incrustations, to an almost inconceivable amount." These gentlemen remarked: "The immense amount of deposit of guano cannot be calculated; it is found in extensive caverns as deep as could be pierced with two boarding pikes, lashed together, about twelve feet. It is also found completely covering the side of the island less exposed to rains. The discoverer's words are, 'There is enough to supply Great Britain for twenty years;' and he is an old and respectable commander and part owner, whose experience in the guano trade is of long standing." The council ordered their best thanks to Messrs. Faulks and Bell for the communication.

ROYAL AGRICULTURAL SOCIETY'S DINNER AT GLOUCESTER.—We have received from the proprietor of the King's Head Hotel, Gloucester, a copy of a letter addressed to him by the Secretary of the Royal Agricultural Society, expressing the satisfaction of the Council at the manner in which the contract for the Pavilion dinner was carried out.

FARMING IN DEVONSHIRE.—An extraordinary fact was communicated at a meeting held at Exeter last week, on the occasion of presenting Mr. Gould, steward to Lord Fortescue, with a testimonial on his retirement from the farming business. Mr. Gould stated that he had caused to be pulled down on the estate which he farmed no less than 160 acres of hedges—about seven miles—by which he gained thirteen acres of land.

DUBLIN INDUSTRIAL EXHIBITION.—Monday last was by far the most successful day since the opening, there being no less than 11,410 persons present, and the receipts exceeded the average by more than 25 per cent. The majority of the persons present were mechanics and excursionists, all of whom appeared to enjoy the treat with great delight.

CORK ELECTION.—A meeting of the electors was held on Friday in the Chamber of Commerce when resolutions to support Mr. Beamish, were adopted, and nearly £400 subscribed for his return.

NEW CHURCH AT BROCKLEY-HILL PARK, FOREST-HILL.—The Conservative Land Society has reserved a portion of land, on the summit of the Brockley-hill Park estate, near the Crystal Palace, for the site of a new church. Subscriptions for the endowment have been already promised by many shareholders. The proposed church will be surrounded by an ornamental garden, with walks, shrubberies, &c., for the special use of the allottees, on the terrace, which commands one of the finest views in Kent.

CHIPPENHAM CHAPEL BAZAAR.—On Tuesday the building committee of the new Wesleyan Chapel at Chippenham, held a bazaar in the new Town-hall. The number and variety of articles exceeded anything of the kind hitherto seen in the town. There was a large influx of visitors, and the proceeds of the day were most satisfactory. The new Chapel, which is one of the greatest ornaments of the town, is now verging towards completion by the architect, Mr. Reed.

BALLOON DESCENTS.—In consequence of the numerous descents of balloons during the past season in the parishes of East Ham, Plaistow, Stratford, &c., the farmers and landowners have agreed to several resolutions, in which they complain of the damage done to their standing crops and hedges by the assemblage of many hundreds of spectators. To put a stop to this destruction, they have unanimously resolved to adopt legal proceedings in any future case of a descent in their neighbourhood, prosecuting the aeronauts for a trespass.

EDINBURGH CABS.—The cabmen of Edinburgh are imitating the example of their brethren, with reference to an adjustment of the scale of wages. They have just put forth a placard headed "Cabmen's Movement," setting forth their state, and a remedy for their grievances. Their tone is very timid, and their proposals reasonable. They wish to have their wages raised 3s. per week: one class who are getting only 10s. asking 13s., and another class who get 12s. asking 15s.

SHOCKING ACCIDENT.—On Monday evening, when the *Dryad* steam-boat was berthed at Hawthorne-ville-pier, it was found that a coil of the mooring-rope had got round a young woman's leg above the ankle, and before she could be extricated, her leg was broken, and the foot nearly severed from it. The sufferer was immediately taken to Dr. Ridge's surgery, Gravesend, when it was found necessary to amputate the shattered limb. The patient, although some unfavourable symptoms at first exhibited themselves, is now doing well.

THE ATTACK BY DYERS NEAR MANCHESTER.—At the New Bailey on Friday week, three men—two named Hill, and one Coyle—were brought up, charged with having committed a brutal attack upon Mr Crompton, the proprietor of dye-works at Pendleton. The defendants formed part of a picquet of dyers, who are now on strike, stationed to prevent persons from entering Mr. Crompton's employ, or to drive away those who had done so. On Tuesday night a number of them entered the works, beat the men, and so seriously ill-used Mr. Crompton that he has been confined to his house ever since. The men were remanded.

THE DISPUTE OF THE TYNE AND WEAR.—On Saturday last a meeting of the pitmen was held on the Black Fell, about five miles from Newcastle-upon-Tyne. The handbill announced that the time was now come for the coal-miners "to seek that proper remuneration for their labour of which they had long been deprived." Some 1500 persons obeyed the summons, most of whom were from collieries south of the Tyne. All the speakers were working pitmen, and they addressed the meeting in an intelligent manner, pointing out the necessity of a more perfect agreement among themselves if they hoped to secure better terms from their employers.

THE CAPITAL CONVICTS.—The sentence of death passed upon Caroline Sherwood, at the last Sussex assizes, for the murder of her child, has been commuted to transportation for life. A similar commutation has taken place in the case of Elizabeth Harrison, convicted at the recent assizes at Rodmin of drowning a child intrusted to her by its mother. Ann Marshall, who, with three other persons, was convicted at the last High Court of Justiciary at Edinburgh of throwing a man out of a window, whereby he was killed on the spot, has also been reprieved by her Majesty; but the law has been left to take its course upon her accomplices, Hans Smith and Macfarlane, and Helen Blackwood.

ATTEMPT AT MURDER.—NARROW ESCAPE.—As the Rev. Mr. Turpin, Vicar of Clara, King's County, Ireland, was entering his study with a lighted candle the other night, a bullet glanced at his accustomed seat, and entered the shutters. The Vicar's predecessor was fired at twelve years ago. Mr Turpin is of a gentle and unoffending disposition; and had but recently been appointed to Clara.

TESTIMONIAL.—A handsome silver centre ornament, made by Dodd, of Cornhill, has just been presented to W. H. Hawkins, Esq., by a few friends and inhabitants of Reepney, in testimony of their respect for Mr. Hawkins, as a magistrate of the county, endeared to them by his active benevolence, especially by his unceasing attention to the schools of Trinity district, to which he has been a liberal contributor, as well as to the church of that neighbourhood.

"CRUSAN" GOLD MEDAL.—A handsome medal, of pure Victoria gold, has been presented by the mercantile community of Melbourne to Captain Down, commander of the *Chusan*, on the occasion of the first arrival of that vessel, the first ocean steamer from England to Australia, and the establishment by the Peninsular and Oriental Company of the Australian Overland Mail.

THE SMOKE NUISANCE IN THE METROPOLIS.—Lord Palmerston's bill on the smoke nuisance has been printed. From the 1st of August, 1854, furnaces in the metropolis are to consume their own smoke. Steam vessels on the Thames between London-bridge and Richmond-bridge, from the same day, are to consume their own smoke. No person is to be liable to any penalty in respect of the use of any furnace or steam engine where coke or other fuel not emitting smoke is only used therein. Constables may be empowered to enter and inspect furnaces and steam-engines.

THE ROYAL COLLEGE OF PHYSICIANS.—The new charter of the Royal College of Physicians, which has already been in draft before the medical profession, is not expected to receive the sanction of the Legislature during the present session of Parliament. Lord Palmerston having, it is understood, expressed himself favourable to further deliberation on this matter.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

At last the eternal *question d'Orient* comes to a solution, to the immense relief of all parties and all classes, though the mode of its termination is by no means according to the ideas many entertain of the dignity and position of England and France, *vis-à-vis* to Russia. Be that as it may it is a source of public uneasiness and public *ennui* the less; and the immense rise of the Funds proves no small consolation to many of these even who considered that the national dignity is compromised on the occasion. *Embrassons nous, et qu'il n'en soit plus question* is the order of the day—so turn we to other themes better suited to a professor of light literature and small talk.

A report, which we really cannot credit, but which is, nevertheless, strongly asserted in some quarters, states that the *scare* is to take place this month—that all the preparations are being secretly conducted for it—that the carriages, dresses, &c., are in progress, and that even the splendours of the Fête of the 15th are to be utilised for the occasion—that the ceremony is to be performed at Notre Dame, which is to be richly decorated, though less magnificently than for the marriage—and that a Cardinal is to take the part which it was expected the Pope was to hold. Immense works are being carried on night and day at the Chapel of the Tuileries; but whether these really have any connection with the solemnity in question, or only form one of the grounds for the report, we pretend not to aver.

The preparations for the Fête are being carried on with the utmost vigour and activity, under the superintendence of M. Visconti, who, notwithstanding his ceaseless labours at the Louvre, beside the many others his position calls upon him to attend to, pursues the occupation with indefatigable energy. The *fête de jour* is to take place simultaneously at the Champs Elysées, the Champ de Mars, and the Faubourg St. Antoine and Bercy. Along the Champs Elysée are to be disposed, at certain distances, military and other bands, and temporary shops, decorated in the Moorish style. In the Champ de Mars, at three o'clock, the artistes of the Hippodrome are to give a representation of the Field of the Cloth of Gold; followed by the taking of Laghouat, executed by the troupe of the Cirque Impérial; and at five o'clock, a balloon ascension by M. Godard. In the east of the city, pantomimes gratuitous representations, at nearly all the theatres, games, &c., will take place; and races regattas, and *joutes d'eau* will be held on the Seine and the Bassin de Bercy. The *fête de nuit* will commence by a concert in the Gardens of the Tuileries; and a magnificent illumination will be displayed in the Jardins des Tuileries, the Place de la Concorde, the Champs Elysées, &c.; and the whole will finish by splendid fireworks at the Place de la Barrière du Trône, the Bassin de Bercy, and the Esplanade of the Invalides. It is reported that there is an idea of a *bal monstre* on this occasion, in the Park of St. Cloud, to which ten thousand persons are to be invited. Louis Napoleon, it is said, is highly favourable to the proposition, which is strongly opposed by his friends, as presenting an occasion of danger.

A statement, which we have reason to consider as well founded, avers that a well-known physician, appointed Inspector-General of Prisons, and who has lately made the tour of several, has been called to St. Cloud to give a detailed and private account to the *Chef de l'Etat* in person of the conduct and expressions of the political *détenus*—MM. Barbès and Blanqui among others. Our informant states that the result of the interview will probably be the signing of from twenty to five-and-twenty pardons, or commutations of punishment.

A grand dinner is to be given by the Prince Napoleon to the artists *décorés* and *couronnés*, on the occasion of the late Exhibition of Pictures. The interest the Prince continues to display towards art and literature, daily increases the respect and popularity he has acquired among the thinking classes of society.

A letter from Turkey, from the Princess Belgiojoso, has excited much interest in society here, as detailing an account of an attempt to assassinate her, by a servant whom she had discharged, and in which she most narrowly escaped with her life.

The Trianon, which is now being furnished and arranged, is for the exclusive use of the Empress, and will remain wholly closed to the official world.

The Queen Marie Christine has engaged apartments at the Hôtel Frascati, at Havre, where she intends passing, with her children, the bathing season. The labours for the complete restoration of the Tuileries are going on without intermission, in order to be completed for the entrance of their Majesties, who propose dining thereon the day of the Fête.

A plan is proposed to convert the Château of St. Germain into a military museum, and to transport the penitentiary, which it now lodges, elsewhere. This arrangement cannot fail to be popular; such a use being certainly more adapted to the dignity and historical *souvenirs* of a Royal château, besides adding a new attraction to one of the most agreeable summer residences in the vicinity of Paris.

Alboni has, it appears, on her marriage with Comte Pepoli, announced her intention of quitting the stage. It is said that the mortification occasioned by the indifference manifested towards her in America, has much to do with this determination.

There is an interregnum, which threatens to be of some continuance, of the Italian Opera here. The resignation of the late director, M. Corti, sent in a short time since, has been accepted without hesitation. The failure of this *impresario* excites infinitely less interest and sympathy than those of Ronconi and Lumley, whose non-success was owing principally to accidental circumstances—chiefly the actual dearth of real talent; and whose skill, experience, and fair dealing were universally admitted. The Théâtre Français has added to its list of young, pretty, and sprightly actresses a new name—that of Mdlle. Valerie, who made her *début* a short time since at the Odéon; and whose youth, beauty, grace, and talent bid fair to place her high in public favour. The decoration of the Grand Opéra is just completed, with unusual taste, richness, and solidity. Instead of the painted arabesques and imitation reliefs, all the ornaments are really carved, moulded, and richly gilt. The front gallery being done away with, the boxes on the grand tier are enlarged, and small *salons* added behind them, lighted with handsome lamps let into the wall; while throughout the house carpeting has been done to add to its comfort, elegance, and effect. Various works are in preparation for the ensuing season, both in the musical and dancing departments. Rossati is to appear in a ballet, entitled "Les Aveliaues;" and it is hoped that Carlotta Grisi will give a certain number of representations. At the Porte St. Martin the English pantomime "Harlequin and Rudibras" has a tolerable success, while the Cirque Impérial draws largely with its new piece "Le Consulat et l'Empire," which is got up with an effect of reality truly marvellous.

M. Morin, a professor of philosophy, who resigned his seat rather than take the oath of fidelity to Louis Napoleon, was arrested on Saturday, and is confined in the prison of Mazas.

The Emperor is about to visit the Camp at Helfaut. The municipal authorities of Lille and other places through which he will have to pass, have already taken measures for his reception. At Lille they are on an extensive scale. His Majesty is to enter the town on horseback, is to be received by the authorities, and is to be conducted with great pomp to the Prefecture. Two triumphal arches are to be erected in the line of procession; and all the houses are to be decorated. It is not known whether the Empress will accompany his Majesty.

The Bourse opened heavily on Wednesday, the speculators for a rise not being satisfied with the explanations given by Lord Clarendon in the House of Lords on Monday. It was reported shortly afterwards that a telegraphic despatch had been received from Constantinople announcing that the Divan had accepted the note prepared at Vienna. The Three per Cents—which opened at 70f. 70c., and had fallen to 70f. 60c.—rose to 80f. 10c. They closed at 80f. for the end of the month.

Prince Jerome Napoleon continues to keep up his relations with his old Republican friends. He habitually holds his political soirées at the house of Mdlle. Rachel, where MM. Proudhon, Bixio, Ducoux, Emile de Girardin, &c., continually meet in conclave. The Emperor is much displeased, or at least affects displeasure, at the notoriety of these *réunions*. He lately forbade Prince Louis Napoleon to receive Emile de Girardin at the Palais Royal, and received for answer from his cousin, that he would rather quit the Palais Royal himself than renounce his friend.

The *Moniteur* publishes a decree conferring the Grand Cross of the Legion of Honour on M. Drouyn de Lhuys, "for the eminent services rendered by him in the direction of diplomatic affairs." This recompense may be regarded as a proof of the approbation his policy has met with from the Emperor. By some it is considered as an indication of the conclusion of the crisis, and that the Minister of Foreign Affairs receives a reward as a General does at the close of a successful campaign. M. Drouyn de Lhuys gives a full dress diplomatic dinner on Monday next.

ITALY.

"An Italian," in the *Times*, states that only 3,700 francs out of the 400,000 francs voted by the Piedmontese Government for the relief of the Lombard exiles, stricken by the Austrian sequestration, have been applied for. The other exiles say, "that so long as they have a sou, or arms to work for their bread, they will no further burthen their Piedmontese brethren, who have already made too heavy sacrifices for their fellow-sufferers."

The Congregation of the Index, by decree of the 25th of July, has prohibited five new works, at the head of which list stands "Hippolytus and his Age; or, the Practice and Doctrine of the Church of Rome under Commodus and Alexander Severus, &c.;" by Christian Charles Josias Bunsen.

SPAIN.

The Spanish railway question has at length been solved. M. Salamance's party has carried the day. The Cabinet retains office, but without the obstinate Moyano, Minister of Public Works, who is dismissed. M. Collantes is appointed in his place. It was expected that the confirmation of the concession of the Northern Railway would shortly appear in the *Gazette*. The crops throughout the country have been most abundant, and the harvest has been saved with excellent weather. Queen Amelia (Louis Philippe's widow) is expected at Seville before the end of the month. A new communication is being opened between the apartments to be occupied by the ex-Queen of the French and the chapel of the Palace of Seville, to facilitate the performance of her religious duties.

DENMARK.

In a Council held on the 1st inst., the King of Denmark signed the act according to which Prince Christiern of Glucksburg will ascend the Danish throne, should the male descendants of Frederick III. become extinct. Prince Christiern assumes the title of Prince of Denmark.

A letter from Copenhagen of July 31 says:—"The cholera seems to have diminished here somewhat in intensity, as there are only 237 new cases, and 115 deaths. Up to the present time the forty-fifth part of the population has been carried off by the malady. The number of children made orphans by the cholera is so great, that some of the large rooms at the hotel of the police have been turned into an asylum for them." Later accounts represent the cholera as still on the decrease, the new cases not exceeding 150 per day.

PROBABLE SOLUTION OF THE EASTERN QUESTION.

At length we have reason to hope that peace will be preserved. Telegraphic despatches, received almost simultaneously by the French and English Governments, have communicated the welcome intelligence that the Czar has acceded to the Austrian proposition, and consents to receive at St. Petersburg an Ambassador from the Sublime Porte, if the Austrian project is adopted by the Porte without hesitation. A comparison of dates has caused some wonder at the suddenness of the decision, and at the rapidity with which it has been communicated; but private expresses from various points confirm the news, and establish the truth of the statement of the *Times*, that, although, at the time when the last-arrived Cabinet courier from St. Petersburg left that capital, the latest Austrian propositions had not reached the hands of the Imperial Government, yet it had been officially intimated to the British Minister, that the Emperor intended to accept the terms proposed by the Conference at Vienna.

Subsequent despatches, while confirming the tenor of this intelligence, meant on the omission of any engagement for the immediate evacuation of the Danubian Principalities inasmuch, however, as Lord Clarendon has stated in the House of Lords that the immediate restoration of the invaded territories is an indispensable condition of peace, it is enough for the present to know that Russia yields to the united representations of Europe. The reason why the note of the powers does not directly refer to the evacuation of the Principalities, is stated to be that the circular of Count Nesselrode had already given distinct assurances that they were to be held as a "material guarantee" only till satisfaction was given; and that, if the Emperor of Russia, it is argued, is satisfied with the arrangement proposed to him, there would be no necessity for a continued occupation, and any supposition to the contrary would be entirely superfluous. It is not considered probable that the Russians will receive the order to retire until the Turkish Ambassador arrives at St. Petersburg. No doubt the Czar would like to negotiate with his troops still in the Danubian Provinces, but advices from Constantinople state that the Porte will steadily refuse to resume diplomatic negotiations with the Court of St. Petersburg until the last Russian soldier shall have withdrawn behind the Pruth. Unless the evacuation of the Principalities be complete and immediate, the Sultan will not only refuse to send an Ambassador to Petersburg, but will consider himself bound to demand that the allied fleets shall enter the Dardanelles; and there is no reason to suppose that the English and French Governments will have any objection to their doing so. The sanity sought to be established by Count Nesselrode between the occupation of the Principalities and the presence of the fleet in Besika Bay seems to justify the condition which it is said the Governments of England and France will make—namely, that the Russian troops shall be called upon to retire a day or two before the French and English fleets quit Besika Bay. Besika Bay is a port free and open to the fleets of any nation that can find room in it; and even the Baltic fleet does not, if the Emperor Nicholas thinks proper, try the experiment of a peaceful anchorage there. It is clear that the evacuation of the Provinces is the great consideration at this moment with the Divan, and without that it will not accept nor listen to any compromise. The present political situation of Turkey is indeed so critical that if the Porte should yield upon this point, nothing is more probable than a revolution which might cost the Sultan his throne and life. The following telegraphic despatch, dated Constantinople, the 1st inst., has been received:—

A manifesto to the nation has just appeared. It was announced that the Divan had drawn up an ultimatum addressed to Russia. It was also said what was the Vienna project which had been accepted by the Porte. The Russian Consul at Adrianople had received counter-orders, and was also to be recalled. Nothing was yet known at Constantinople of the acceptance of the Czar. The state of the finances was exhausted—the rise on wheat, did not consider it necessary to observe such a neutrality. A German Kalisch correspondent of the *Lloyd*, who writes that the military preparations in Central Russia are on a very extensive scale, is of opinion that no more than 100,000 Russians are in the Principalities. When the whole of General Liders' corps (the 5th) has crossed the Pruth they will amount to 120,000, not including the Cossacks. In a letter of a later date (the 4th), the same writer asserts that not more than 80,000 men have crossed the Pruth. Although the army has with it a vast quantity of materials for the construction of bridges, no preparations have until now been made to throw one across the Danube. The cholera is committing terrible ravages at Bordyozew, Ostran, and Dubno, in Russia. The Austrian authorities have established a quarantine of twenty days for all cattle coming from Wallachia, the murrain having again broken out there.

Prince Gortschakoff, the Russian Commander-in-Chief, has addressed a letter to Redschid Pacha, urging the necessity of strict military disci-

The Congregation of the Index, by decree of the 25th of July, has prohibited five new works, at the head of which list stands "Hippolytus and his Age; or, the Practice and Doctrine of the Church of Rome under Commodus and Alexander Severus, &c.;" by Christian Charles Josias Bunsen.

SPAIN.

The Spanish railway question has at length been solved. M. Salamanca's party has carried the day. PROBABLE SOLUTION OF THE EASTERN QUESTION.

At length we have reason to hope that peace will be preserved. Telegraphic despatches, received almost simultaneously by the French and English Governments, have communicated the welcome intelligence that the Czar has acceded to the Austrian proposition, and consents to receive at St Petersburg an Ambassador from the Sublime Porte, if the Austrian project is adopted by the Porte without hesitation. A comparison of dates has caused some wonder at the suddenness of the decision, and at the rapidity with which it has been communicated; but private expresses from various points confirm the news, and establish the truth of the statement of the *Times*, that, although, at the time when the last-arrived Cabinet courier from St. Petersburg left that capital, the latest Austrian propositions had not reached the hands of the Imperial Government, yet it had been officially intimated to the British Minister, that the Emperor intended to accept the terms proposed by the Conference at Vienna.

Subsequent despatches, while confirming the tenor of this intelligence, ment on the omission of any engagement for the immediate evacuation of the Danubian Principalities. Inasmuch, however, as Lord Clarendon has stated in the House of Lords that the immediate restoration of the invaded territories is an indispensable condition of peace, it is enough for the present to know that Russia yields to the united representations of Europe. The reason why the note of the powers does not directly refer to the evacuation of the Principalities, is stated to be that the circular of Count Nesselrode had already given distinct assurances that they were to be held as a "material guarantee" only till that section was given; and that, if the Emperor of Russia, it is argued, is satisfied with the arrangement proposed to him, there would be no necessity for a continued occupation, and any supposition to the contrary would be entirely superfluous. It is not considered probable that the Russians will receive the order to retire until the Turkish Ambassador arrives at St. Petersburg. No doubt the Czar would like to negotiate with his troops still in the Danubian Provinces, but advices from Constantinople state that the Porte will steadily refuse to resume diplomatic negotiations with the Court of St. Petersburg until the last Russian soldier shall have withdrawn behind the Pruth. Unless the evacuation of the Principalities be complete and immediate, the Sultan will not only refuse to send an Ambassador to Petersburg, but will consider himself bound to demand that the allied fleets shall enter the Dardanelles; and there is no reason to suppose that the English and French Governments will have any objection to this demand. The party sought to be established by Count Nesselrode between the occupation of the Principalities and the passage of the fleets in Beshika Bay seems to justify the condition which it is said the Governments of England and France will make—namely, that the Russian troops shall be called upon to retire a day or two before the French and English fleets quit Beshika Bay in order that the latter may find room in it; and even the Baltic fleet may, if the Emperor Nicholas thinks proper, try the experiment of a peaceful anchorage in those waters. It is clear that the evacuation of the Provinces will be the precursor of the peace mission with the Divan, and without that it will not accept nor listen to any compromise or arrangement. The political situation of Turkey is indeed so critical that if the Porte should yield upon this point, nothing is more probable than a revolution which might cost the Sultan his throne and life. The following telegraphic despatch, date d Constantinople, the 1st inst. has been received:—

A manifesto to the nation has just appeared. It was announced that the Divan had drawn up an ultimatum addressed to Russia. It was also said what was the Vienna project which had been accepted by the Porte. The Russian Consul at Adrianople had been recalled; other Consuls were also to be recalled. Nothing was yet known at Constantinople of the acceptance of the Czar. The state of the finances was exhausted—the rise on gold was one per cent. The Porte was very well disposed to accept a mediation. The *Pirkedenil* had gone aground on the coast, but has been got off.

From the invaded Principalities, we learn that Prince Gortschakoff has not only prohibited the payment of the tribute to the Porte, but has also sequestered it. Prince Ghika, the Hospodar of Moldavia, communicated to the Porte his sorrow at being obliged to break off all communication, at the command of Russia; but Stirbey, the Wallachian Hospodar, did not consider it necessary to observe such a formality. A German Jewish correspondent of the *Lloyd*, who writes that the military preparations in Central Russia are on a very extensive scale, is of opinion that no more than 100,000 Russians are in the Principalities. When the whole of General Luders troops (8th) have crossed the Pruth they will amount to 120,000, not including the Cossacks. In a letter of a later date (the 4th), the same writer asserts that not more than 80,000 men have crossed the Pruth. Although the army has with it a vast quantity of pontoons for the construction of bridges, no preparations have until now been made to throw one across the Danube. The cholera is committing terrible ravages at Berdyanow, Ouzan, and Dubno, in Russia. The Austrian authorities have established a quarantine of twenty days for all cattle coming from Wallachia, the murrain having again broken out there.

Prince Gortschakoff, the Russian Commander-in-Chief, has addressed a letter to Redschid Pasha, urging the necessity of strict military discipline on all sides, and the danger of the slightest collision between the Russian and Turkish forces. The Russian troops, via Skulanie, reached that town in the utmost misery and exhaustion. They thronged in overwhelming numbers to private dwellings in search of food and shelter, having been exposed during the day's march to a scorching sun, and drenched with rain, which, towards evening, poured in torrents.

According to advices from Rustchuk, large quantities of military stores are conveyed in English and Austrian (Danubian Company) bottoms to the Turkish fortresses, on the right bank of the Danube. Omer Pacha, who appears to be an unscrupulous financier, has bought up, it is said in, at Rustchuk, large quantities of wheat and barley, with Lord Stratford de Redcliffe's letter. The steamers of the Austrian Lloyd convey the troops on credit, and provisions are procured for them on the same easy terms. The last advices from Varna state that 32,000 men have already entered that city, in which Christians and Turks work peaceably together in the formation of entrenchments. Mention is again made of the prevalence of epidemic fever and dysentery among the Russians.

A writer from the Lower Danube says that the Sulina mouth has only 4½ feet of water; and, as none of the vessels can now get out to sea, the cargoes are transported in lighters to other ships in the Black Sea. "By means of lighters alone can the communication between the mighty Danube and the Euxine now be effected." A view of the Sulina mouth of the Danube, and the vessels detained there, will be found in Page 109 of our present Number.)

A letter from the frontiers of Moldavia, dated the 25th July, states that the Russian troops had not then hermetically closed the line of the Danube which they had occupied, notwithstanding the first instructions given by Prince Gortschakoff. This fact was considered to be favourable to the preservation of peace.

We learn, by way of Trebizonde, that the war still continues in Circassia. The Circassians have attacked the fortress of Toprakaie, and carried the place, in spite of the determined resistance of the garrison. Owing to this defeat Prince Menschikoff has proclaimed a state of blockade on the coasts of Circassia, from Anapa to Sankorum Kale.

PERSIA.

Letters from Tabriz state that Mr. Thompson, the British Minister in Persia, has obtained a complete victory over Prince Doulgorouki, the Russian Minister. Mr. Thompson convinced the Shah of the necessity of placing his army on an effective footing, so that, in case of a war between Russia and the Porte he might emancipate himself at length from the Czar's influence, and perhaps recover possession of the two Persian provinces of Erivan and Nassiven, by expelling the Cossacks from the important position of Asterabad, which, in the hands of Great Britain, would paralyse the action of Russia in the Caspian Sea, and would be of the greatest service to Persia herself.

AMERICA.

Politics are at a stand-still. The new Ministers for England, Mexico, and Spain have not yet set out on their respective missions, at which some dissatisfaction is expressed. Mr. Buchanan's instructions will enable him to arrange every difficulty with England on amicable terms. Mr Gadsden, it is said, also has a similarly cheering prospect in Mexico. But with regard to Mr. Soulé's alleged commission to purchase Cuba from Spain, difficulty is seen even in the way of making the proposition. Indeed, there are doubts as to his reception at Madrid, in consequence of his filibuster speeches in Congress.

A sudden excitement and enthusiasm at New York have been most laudably called into action in favour of two new and noble parks; for which, by the way, the Legislature of the State has passed bills. Having regard to the odours, vapours, disease, and mortality of this city, it will readily be admitted that New York is terribly in want of some spacious ground or grounds wherein the citizens, their wives, and children may inhale health and enjoy leisure and recreation. There is now a fair prospect of such *desiderata*. The common councils have already examined about 700 acres, almost a mile and a half above the Crystal Palace; and the territory is so well wooded, that it could soon be converted into an American Bois de Boulogne. Then there is an estate about as far up, or near the East River, of about 150 acres, which, there is some idea of devoting to a similar purpose. At present, bes des the Battery, Park, and Washington Parade-ground, there are but a few squares affording shade and verdure, and all surrounded by bricks and mortar. *A propos* of the present small Park, it contains a beautiful fountain; but people complain that they visit New York month after month and year after year, and yet never see the cooling *jets-d'eau* of Croton water springing from it. Several citizens, however, declared that it has played, can play, and ought to be made to play. In these days of myrtle and crystal palaces, there is some chance for the establishment of parks and a reform in the sleeping fountains.

A large meeting had been held in Newfoundland, at which it was resolved that unfettered commercial relations with the United States were necessary for the continued success of the province.

From New Mexico the accounts state that General Friar had withdrawn his troops from the Mesilla Valley, under an order from the Mexican Minister of War. The most cordial understanding prevailed between the military officers of both Governments. The yellow fever was prevailing at New Orleans

INDIA, AUSTRALIA, AND CHINA.

The following telegraphic despatch has been received by Submarine Telegraph, from Trieste:—

The steamer *Calcutta* arrived on the 10th of August at ten a.m., with the following despatch, dated Alexandria, August 5:—

"The Calcutta mail of the 2nd of July has arrived, with the China mail of the 23rd of June, and intelligence from Burmah to the 22nd of June; Sydney, to the 31st of May; Bombay, to the 2nd of July.

"The King of Ava has become more submissive. He has issued orders that the British troops are not to be molested, and that Monday and Tuesday are to remain in our possession. He has released all the prisoners but will not yet sign a treaty.

"Tenasserim was dull. Exchange on London, 2s. 1d. to 2s. 1½d.

"The Imperialists army in China was preparing to retake Nanay, but without much chance of success. The rebel army was in motion with four days' march from Nankin. Canton has not yet been attacked. Business was very dull, and money very scarce.

The Arabian steamer *Feze Kerem*, on her passage from Aden to Bombay, with the Bombay portion of the Indian mail, which left London on the 4th of June, foundered at sea, 20 miles from Aden. The mails consisting of 68 boxes, were lost; and 178 out of 190 Arabs and Lascars who were on board, and Mr Rank, in charge of the mails, perished.

The Legislative Council of New South Wales has appointed a committee of ten to prepare the new Constitution. The produce of the Victoria gold fields is increasing. There is great destitution among the newly-arrived emigrants at Melbourne, and prices were extravagantly high. The American steamer *Monumental City* was wrecked on the 16th of May, on her passage from Port Phillip to Sydney, and thirty-five persons perished. Price of gold at Sydney, 72s. per ounce.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Hon. and Rev. F. N. Cleveland, to an honorary canonry in Durham Cathedral; the Rev. E. K. Elliott, to the rectory of Broadwater, near Worthing; the Rev J. Rowlands, to the rectory of Grimstone, Norfolk; the Rev. J. Nunn, B.A., to the rectory of Tannington, Suffolk; the Rev. A. Hamilton, to the rectory of Charlcombe; the Rev. P. S. Newell to the rectory of East Lydford, Somerset; the Rev. S. Newall to the vicarage of Chilton-upon-Hine; the Rev. W. Brownover annexed, near Rugby; the Rev. H. Gipps to the vicarage of Horncastle, Lincolnshire; the Rev. F. Gipps to the vicarage of Corbridge; the Ven. J. Sandford to the vicarage of Grimley, with Hallow annexed, Worcester, the Rev. C. M. Roberts to the incumbency of the Church of the Holy Trinity, Westerham; the Rev. G. J. Gell, to the incumbency of Oakley; the Rev. W. P. Trevelyan to the incumbency of Broomfield, near Taunton; the Rev. T. Wodehouse to the incumbency of St. Edmund at Yobster.

NEW CHURCH AT OLDHAM, LANCASHIRE.—The foundation stone of a church, to be dedicated to St. Thomas, was laid by the Bishop of Manchester on Thursday, in Werneth, a district of the large and populous manufacturing town of Oldham, Lancashire.

THE CAMP AT CHOBHAM.

SATURDAY.

This day the Queen and Prince Albert, accompanied by the Princess of Wales and Prince Alfred, again attended the Camp at Chobham. The visitors were extremely numerous. There were also several members of the aristocracy, and among them a great many female equestrians. The object of the Lieutenant-General commanding was to give the Sovereign some idea of the manner in which the troops would act in battle. For this purpose a redoubt had been thrown up by the Sappers on the top of one of the numerous elevated positions near the centre of the Common, and directly facing the position selected for the Royal party. After various manœuvres bringing the attack and defence to the required spot chosen for the explosion, and where an electric battery had been prepared, and wires laid down to them, from some cause, the apparatus failed; and after a delay of half an hour, the explosion was effected by the fuse process. After that *contretemps*, the operations of the day gave place to a magnificent spectacle, viz., the marching of the whole division past the Sovereign; who, for the more perfect display of this portion of the day's proceedings, re-entered the Royal carriages, and drove some distance from her marquee to a plain of level ground admirably adapted for the purpose.

MONDAY.

By way of amends for the accident of Saturday, there was an unusually brilliant sham battle at the Camp this day. Some 5000 or 6000 visitors happened, more by good luck than good guidance, to be present on this occasion, and appeared to watch with a great deal of interest and relish the manœuvres of the troops. The whole current of the sham battle well repaid the great expense from her private purse. The Duke of Cambridge had the sole command of the troops during the day.

TUESDAY, WEDNESDAY, AND THURSDAY.

As the days of the Camp are approaching a close, its popularity seems to increase. On Monday the numbers were something considerable; on Tuesday, though nothing massive, they were greater still; while on Wednesday, there was not only a concourse of general visitors, but the Camp was further honoured by the presence of their Royal Highnesses the Duchess of Kent and the Princess Mary of Cambridge.

No evolutions of any kind took place at the Camp on Thursday, as an immense number of the officers had obtained leave of absence to witness the review of the fleet at Spithead.

It is said the Camp will finally break up on the 18th, and the troops depart on the 19th and 20th.

CALENDAR FOR THE WEEK.

SUNDAY, Aug. 14.—10th Sunday after Trinity. Printing invented, 1457.
MONDAY, 15.—Napoleon Bonaparte born, 1769.
TUESDAY, 16. Andrew Marvel died, 1678.

PERMANENT ENLARGEMENT
OF THE
ILLUSTRATED LONDON NEWS.

ON SATURDAY, AUGUST 13th, 1853, commenced the PERMANENT ENLARGEMENT of the ILLUSTRATED LONDON NEWS, by the addition of a SHEET OF EIGHT PAGES. The ILLUSTRATED LONDON NEWS will henceforth consist of SEVENTY TWO COLUMNS of LETTERPRESS. Price SIXPENCE.

*** By the above addition of eight pages, space will be ensured for more fully recording the progress of Literature, Popular Science, and the Fine Arts, than has hitherto been accomplished within the original limits of the Journal. By this extension, also, the great events of the day will be more prominently detailed: and the Journal will, altogether, be rendered complete as an Illustrated Picture of the age we live in.

ADVERTISERS are informed that the SCALE OF PRICES IS REDUCED; and that sufficient space is reserved to secure the insertion of all Advertisements that may be sent. No Advertisements can be received after Seven o'clock on Thursday evenings.

Office, 198, Strand. August, 1853.

A GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
TO BE PUBLISHED
ON SATURDAY NEXT, AUGUST 20TH,
WILL CONTAIN
A SERIES OF VIEWS AND SKETCHES
OF THE
GREAT NAVAL REVIEW
BY HER MAJESTY
OF THE
BRITISH FLEET AT SPITHEAD.

Also, Scenes from the Napoleon Fêtes at Paris, on the 15th instant; Sketches in Russia, Turkey, and the Danubian Principalities; and a variety of other Engravings.

PRICE OF THE DOUBLE NUMBER ONE SHILLING, WITH SUPPLEMENT GRATIS

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 13, 1853.

CHOBHAM has had its field-days and its glories. In a time when rumours of war compelled most people to bethink themselves of the capabilities of the great English nation to defend itself against all possible aggression, and to hold its own, in defiance of the world, a military display of our skill and our resources was as profitable as it was agreeable. But, as often before remarked, the right arm of British power is not the army, but the navy. We are proud of our military achievements, and especially of those which had their climax under Wellington; but we are still prouder of our naval glories. The old Scandinavian blood predominates in the veins of the people. Englishmen are the real Sea-kings; and are more inclined to sing "Britannia rules the waves," or

> Hearts of oak are our ships,
> Jolly tars are our men,

than to chant of the "British Grenadiers," of the pluck and metal of the soldier, or the splendour of his feats of arms. After the military display of Chobham, we might have expected, as a natural consequence, the grander display of Spithead. Such a spectacle as was witnessed in the British Channel on Thursday last is rarely offered to the people of this country, and is not as yet possible among any other. No man living can claim to have witnessed a scene of more magnificence in itself, or calculated to excite such emotions of complacent self-reliance, and of patriotism in its most striking and least offensive form. In the presence of the greatest sovereign in the world—of the Parliamentary representatives of the only European nation that has the happiness to enjoy liberties that Time has been impotent to impair, but powerful to strengthen—and of a countless multitude of applauding people, the British fleet went through its varied evolutions. The result—speaking of the occurrence as of a mere spectacle—proved that our fleet is fully equal to everything that could have been expected of it. All the circumstances of the review were significant, not only to the people of these islands, but to the nations of Europe. The display was, in every sense, well-timed; and, certainly, the circumstance that was not the least significant of many was, that among the most honoured and illustrious of the guests, and spectators of the review, were the members of the Imperial family of Russia. Whatever reports those distinguished personages may transmit to their own country as to the reception they have met with, and the sights they have seen in England, they will assuredly not forget to mention, that England is still the greatest naval power in the world; and that there is no danger, in this generation at least, of any deficiency of means, of skill, or of heroism, not only for maintaining, but for surpassing, the maritime glories of her bygone history. The acceptance by the Russian Emperor of the terms, proposed to him by the representatives of the allied Powers at Vienna, has happily deprived the review of some portion of its minatory character. Sufficient of it remains, however, to prove to all our allies—not excluding Russia—that, whatever Great Britain undertakes to do in defence of her own rights, or of the general commonwealth of Europe, she is in a position to perform. Forty years of peace that might naturally have been expected to engross the minds of the people with trade and commerce and material interests of every kind—have not been sufficient to enervate the national character. Our military and our naval efficiency at the present moment, and our our still greater efficiency in case of need, are by this time as well known to every nation on the Continent as they are to ourselves. If, in former years, our Admiralty slumbered at its post, and laid itself open to some just reproaches of neglect or robbery, recent events have satisfactorily proved that it was slumber and inadvertence only, and not effeteness, that caused it to err. We now see that, in the hour of need, it is fully equal to the

No. 639.—VOL. XXIII.] SATURDAY, AUGUST 20, 1853. [TWO NUMBERS, WITH SUPPLEMENT, 1s.

THE WORKING CLASSES AND THEIR STRIKES.

The extraordinary prosperity of the country—caused, in the first instance, by the beneficial operation of Free-trade, and, in the second, by the influx of gold from California and Australia—has not been checked in any considerable degree by the numerous strikes of the working classes. There has been a risk of evil consequences, but none of magnitude has occurred. But even in these cases the mischief has affected the employed in a far greater degree than the employers. Such has always been the result of strikes, and such it will always be. There never was a strike that did not injure the working men who resorted to such an extremity. They have, no doubt, a legal, a moral, and a natural right to combine to raise the price of the commodity in which they deal—their labour; but all experience has shown that the exercise of the right is more prejudicial to themselves than to others. In striking, they wage a war against their own interests, and destroy that capital which is the only fund out of which they can be remunerated.

The recent strikes which have occurred in all parts of the country are resolvable into three distinct classes: the first comprises unskilled labourers; the second, skilled workmen or artificers; and the third, the privileged or salaried servants of the people. In the case of the first-mentioned, strikes are peculiarly unfortunate, for there is always in this country a large reserve of mere brute labour, which can, at short notice, be rendered available to replace any loss of hands. Thus, labourers at the Docks, when they combine to leave their employment, and to insist upon higher wages than they have been accustomed to receive, may have all possible justice in their claim, as well as in their manner of urging it, and yet be inevitably defeated, after a short struggle. But their defeat arises, not from any tyranny or injustice on the part of those who employ them, but from the inexorable laws of nature and society. It is their own fellows who render the strike an act of unavailing self-sacrifice. It is the superabundance of the commonest kind of labour—that which is unskilled, and differs but in degree from the labour of horses and oxen—that immediately rushes into the place which the malcontents have left vacant, that makes such strikes short-lived, and that should teach the working classes the folly of depriving themselves of their bread. Strikes of this kind cause but temporary inconvenience to the employer, but are always productive of deep suffering, if not of pauperism and crime, to the employed.

In the case of skilled labourers and artizans, strikes are far more injurious to the masters than in the former, while they are, at the same time, equally injurious to the men. Among labourers of this class, who have recently struck, may be mentioned the various handicraftsmen employed in the trades of building in London and other large towns; the carpet-weavers of Kidderminster; the pattern-drawers and the print-cutters of Paisley; the dyers, dressers, and finishers of Manchester; the pitmen of the English coal districts; the iron-workers in some parts of Wales and Staffordshire; the smiths in Devonport Dockyard; and various other artificers more or less skilled. In these places and trades the men have made demands both reasonable and unreasonable. The joiners of Leeds struck work to obtain an additional hour's leisure on Saturday, with a slight increase of wages. Their request was acceded to. The probability is that the employers will be no losers by the first concession, and that the workmen will make full amends for the one hour of leisure on Saturday by their zeal and attention during the remainder of the week. We are not aware of the reasons which induced the masters to yield on the point of wages; but, if they have submitted to coercion, they will in due time find means to restore things to their former condition; and the men will be none the better for any sacrifices they may have made. The Paisley men have attempted a piece of tyranny—the limitation of the number of apprentices that masters shall be allowed to take—and will doubtless fail in their object. The pitmen of the Wear and Tyne are both right and wrong in the demands which they have made; right in insisting that the inspection of collieries shall be real and effective, but wrong in expecting that their wages must of necessity rise because their food has become dearer. In the neighbourhood of Dowlais, the demands of the men for extra wages, on account of the increased price of bread and animal food, have led to the temporary extinction of upwards of a dozen blast furnaces. In these last, and many other instances which might be cited, the working men are so entirely wrong, that their success will be impossible, except upon the supposition that their masters will consent to ruin themselves by paying more for labour than labour is worth. Experience ought to have proved, if not to unskilled, at least to skilled labourers, that the price of wages and the price of food have no necessary connection with each other. If skilled or unskilled labour be scarce, it must of necessity be dear, whatever the price of bread or meat may happen to be. *Vice versâ*, if bread and meat, or any other commodity, be scarce in consequence of an insufficient supply, or from an increased consumption, on the part of hundreds of thousands or of a million of people, who, in times less prosperous, had not enough of these necessaries, the price of food must rise, whatever may be the wages of labour.

No doubt the working classes expect, and ought to partake of, the prosperity caused by Free-trade and the influx of gold. That they do partake in it, and far more largely than any other class, is apparent on every side we turn. It is not so much the steady working man, skilled in his business, and in the receipt of good wages, who profits by these favourable circumstances, though it

FETE OF THE EMPEROR, AT PARIS.—"THE FIELD OF THE CLOTH OF GOLD," IN THE CHAMP DE MARS.—(SEE PAGE 130.)

may happen that such a man may get constant work and good wages where formerly he was employed for only one half or two-thirds of his time. Those who receive the benefit most largely are the men who in this country once exhibited the saddest spectacle under heaven, that of strong men able and willing to work, but finding none to employ them. Men, who in times of less general prosperity and less active trade, had irregular, have been enabled to procure regular employment; and those who had nothing to do, have found a demand for their services, because more houses and ships are built, because more iron and coal are consumed, because more cloth is made, and because more luxuries of every kind are in requisition. To demand higher wages, therefore, merely because food is dearer, is inconsequential and unjust. As a general rule, the employers of labour will never accede to such demands. If, in any particular instance, they accede to them, it is from local and exceptional causes; and such an arrangement can be but temporary. The natural laws which regulate such matters are as steady as the tides; and the working classes, as a body, can no more resist them than they can resist the law of gravitation. In urging such claims they often commit incalculable evil. In some cases, they force a staple manufacture into a new district, and ruin an ancient town; in others, they run the risk of exiling the employer and his capital to another country, where he can have a fairer chance of success. In the unfortunate dispute among the tailors, some years ago, the strike led to the employment of women and children, at wages far lower than those of men, and to the permanent diminution of the reward of labour in that particular department of industry. In other, and not rare cases, strikes have led to the invention of machinery to supersede manual labour altogether. We do not believe that there is a single case upon record in which a protracted strike among skilled labourers led to any other result than injury to themselves and their families.

The third class of strikes to which we have alluded has its examples in those of the cab-drivers of London and Edinburgh, and of the police force in some of the principal cities and towns in the kingdom. Strikes of this kind are very different from those of labourers and artificers. Ordinary working men have a right to strike if they please. If they think they can better their condition by refusing to work until they can obtain higher wages, it is their privilege to so. Their labour and their time are their own. They are under no obligation to hire out either the one or the other; and, although their conduct may be prompted by ignorance, or even by rapacity, they are guilty of no breach of faith, and of no legal offence, in endeavouring to make the best bargain they can. But the case of cabmen and policemen is widely different. The cabman is a public servant: he and his fellows are allowed a certain privilege and monopoly: and any extraneous interloper into their business, not duly licensed to compete with them, is liable to fine and imprisonment. In striking work, as the London cabmen did a few weeks ago, the privilege and the monopoly were virtually forfeited, by a scandalous breach of an implied, if not expressed, contract. Were people as free to establish cabs and hackney-carriages, and to ply them in the streets for hire, as they are to establish tailors' or bakers' shops, cabmen might strike as legally as tailors or bakers can now do; but as long as the system of licensing protects cabmen from unlicensed competition, their simultaneous cessation of work without fair and reasonable notice, is as reprehensible and illegal as a strike among domestic servants would be. Servants are bound to give a month's notice if they desire to discontinue their service; and the same rule in equity, if not in law, holds good with all public servants, cabmen and omnibus drivers included. A strike among policemen is still more serious. The law foresaw this danger as regards the military and naval service of the country. If soldiers refused to march till they received an augmentation of pay, or if the crew of a man-of-war refused to navigate the vessel till their demands, right or wrong, were complied with, the peril would be too imminent to be endured. Hence the law decreed that a strike among soldiers or sailors was a mutiny; an offence which, in time of war, is the most serious which it is possible to commit, and which in time of peace is punished in as severe a manner as the state of public opinion will admit. Policemen are but soldiers of a different class, and a strike among them is quite as reprehensible, if not quite as dangerous, as one among the military. We do not intend to assert that the ordinary laws of demand and supply which regulate the wages of labour among handicraftsmen do not apply to policemen, or that it is unreasonable in these civic soldiers to demand an increase of wages at a time when there is a general increase in the price of articles of consumption. Their demands, if respectfully urged, would meet with proper attention; but, if accompanied by threats, they are removed from the legal to the illegal category. In such a case the policeman forgets his true position, exposes society to a real peril, and forces the Legislature to make laws that shall meet the unforeseen emergency. Whatever may be the result of the various strikes that are now agitating the country, it is certain that strikes among cabmen, and especially among policemen, will, in future times, be considered as things apart, and treated accordingly.

HOW WARS ARE GOT UP IN AFRICA.

To the Editor of the ILLUSTRATED LONDON NEWS.

Sir,—As Mr. Cobden has shown us in what manner wars are got up in India, might he not also usefully turn his attention to the manner in which they are got up in Africa; and to the execution of the negro chiefs, of which an account was given in one of your recent Numbers, with an Engraving? Such cases as these; and the Lagos business, where we had killed or wounded near a hundred of our own people, surely require investigation. Yours, &c., NIGER.

VEGETABLE DIET.—At the sixth annual banquet of the Vegetarian Society, recently held in the Town-hall, Salford, the chairman observed, "It was notorious, that the hard work of the world was done upon a vegetable diet; the strongest men upon earth were men who subsisted, not on the products of the animal kingdom, but upon fruits and corn. The porter of Smyrna, who carried six or eight hundred weight on his head or shoulders, might be cited as an instance of this. The Vegetarian Society had now more than 800 members, many of whom had carried on the practice for many years; he (the chairman) could point out, among the persons around him, eight individuals who had an aggregate of 320 years' experience of vegetable diet; or an average of 41 years' abstinence from flesh, fish, and fowl."

The captain of the *Sydney Griffiths*, from Launceston, reports having seen a comet, bearing south-west, on the 1st of May last, when in lat. 52 S., long. 130 W.

THE OVERLAND MAIL.

By the arrival of the Indian Mail we are in possession of intelligence from India, Australia, and China. The dates of departure were—Bombay, the 2nd July; Calcutta, 2nd July; Alexandria, 5th August; Hong-Kong, 23rd June.

At Burmah matters remain in nearly the same state as at the date of the last advices, and anything like a treaty between the Court of Ava and ourselves appears to be as far off as ever. Nothing is known regarding the intentions of the King of Ava. The Burmese appear still to expect us to advance on their capital, and as yet confine themselves to defensive measures. From the decks of the steamers new stockades are seen rising between Prome and Meeaday.

It is reported that Meeah Toon is concentrating and collecting the Burmese army somewhere between Ava and Amerapoora; but so little note seems to be taken by the Supreme Government, that it is the Governor-General's intention to break up the field force at Rangoon and throughout the Burmese provinces, and to garrison the posts, and legislate for the country from our hands, as if the country had been ours for the last ten years. The three general officers now in Pegu are to be, as a matter of course, withdrawn, and the whole province is to be divided into two divisional commands, one of these to be held by the Madras, and the other by Bengal troops. The army of the former presidency is to provide troops to hold the southern and western districts, from Moulmein up the Sitang river to Tonghoo; and the corps from the latter presidency will have to garrison the northern and north-west provinces from Meeaday down to Prome and Rangoon. Whether the treaty is or is not signed by the Burmese Commissioners will signify little or nothing. The provinces demanded from the Court of Ava by the Governor-General are now in our possession; and, though the Burmese may, and no doubt will, annoy our outposts, it is doubtful whether they will do more than make a few incursions into the territory within the limits of our boundary. For the next couple of years, therefore, a series of Lorder forays may be looked for such as to this hour are of more than monthly occurrence upon our north-west frontier; but beyond these there is nothing to fear from the remnants of the Burmese army.

A famine appears to be impending in Burmah. Owing to the disturbed state of the lower provinces scarcely any seed was sown last season; and at present rice bears a famine price even at Rangoon and Pegu, and Government is urged to lose no time in importing it in large quantities from Calcutta.

PROGRESS OF THE CHINESE REBELLION.

The China mail which arrived at Bombay on the 24th of June brought no news from Shanghai, owing to the north China mails having been lost at sea on the 2nd of May on board the *Lorraine*.

The progress of the Chinese rebels, or rather of the "patriot army," as it is now called by our eastern informants, continues as wonderful as ever. With only a few days' notice, they appeared one morning at Amoy, and by mid-day had the whole of the city in their possession. As Amoy is 700 miles in the rear of the main army at Nankin, the mere fact of several thousand men suddenly making their appearance at the former place in well-equipped boats, with arms, provisions, a perfect plan of operations, and the certainty that the inhabitants would be on their side, shows that the movement is literally popular and universal. The people of Amoy, including the wharf Coolies, and other classes employed at the port, hailed the insurgents as deliverers, and immediately rose on the Tartar authorities, and destroyed the Custom-house and other public buildings, taking special precautions to endanger the houses and property of the English and other foreigners. Both by water and by land the Mandarins made a weak pretence of opposition, firing from the war junks as such a distance that they could do no possible harm, and defending the citadel with so little zeal that no men killed or hurt by accidental explosions were all the casualties of the day. In return for their forbearance, the Imperialists were allowed to escape, and, unless they are of the proscribed race, are probably by this time in the ranks of the "patriot army." The very day after the capture of Amoy the shops were opened, business was resumed, foreigners were unmolested, and, indeed, more at liberty than before. It was plain that the inhabitants had been fully prepared for their visitors, and only waited their arrival to throw off a painful yoke. Under the unpromising name of "the Small Knife Society" most of them had long been enrolled against the Tartar dynasty, which it now appears was so serious that any man might safely be a member of some treasonable association with the thinnest possible veil of secrecy over it.

The Hong Kong papers contain some further particulars regarding Sir G. Bonham's trip up the Yang-tse-Kiang. It appears that the unsuccessful attempt of the *Susquehanna* to get up the river to the entrance of the Imperialists at Nankin was thought at Shanghai to have irritated the insurgents greatly against the foreign community in general, and it was, therefore, deemed advisable to despatch the interpreter to the British Consulate to the rebel head-quarters to explain that the English were neutral. On arriving at Nankin Sir G. Bonham at first intended to meet the rebel leaders in person; but, considering that such an interview might be regarded as unjustifiable in the friendly state of our relations with the reigning Emperor, he eventually only sent the Consulate interpreter and some of the officers of the *Hermes* on shore. One of the latter, who is said to be unlikely to form an erroneous estimate, mentions that the insurgent army encamped at Nankin numbers 80,000 men, well equipped, and, from what was seen of them, in a state of proper discipline—officers paying nightly visits to out-lying packets, and observing all the formulæ of regularly-drilled troops.

The capture of Amoy (one of the five ports, and situate about 450 miles north of Canton and 700 south of Shanghai) on the 18th of May, is one of the first operations of the insurgents which they have effected under the eyes of Europeans. The following details will be read with interest—

AMOY, May 19.

"For several days past business has been completely at an end.

"On the 11th inst., the authorities notified the English Consul of the near approach of some 3500 rebels, who on that day had invested Hai Teng, a walled town, about twelve miles up the Chang-Chow river, and beheaded the chief mandarin of the place. On the 15th the opposing ships were, at the request of the English Consul, moved into the inner harbour to be in readiness to protect more effectually the residents, some of whom sent their valuables on board.

"Till half-past four a.m. of the 18th all remained quiet, but about that time large numbers of boats of all descriptions and sizes, bearing red flags and filled with men, commenced approaching each extremity of the town. The Chinese Admiral got his fleet under way, and kept up an ineffective fire on the boats; but, whether owing to the want of wind or inclination, the junks kept a good distance off, so the landing of the rebels was almost unopposed. The first boats could scarcely have reached the shore, when it became evident that nearly all the wharf coolies, boatmen, policemen, and dregs of Amoy belonged to the rebel army, and only waited the arrival of the leader to appear as such. The public offices in the suburbs were immediately broken open and sacked; one or two of them were burnt; but the dangerous way of destroying them was not employed, save in the outskirts. The destruction of the Custom-house, from its proximity to the foreign hongs, was a scene of interest to the inhabitants of the latter; and the systematic manner in which the Custom-house and the residence of its chiefs were sacked, without the slightest injury being offered to any of the neighbouring houses, attracted much notice; the work being performed by men apparently of the lowest order, armed with knives, spears, and matchlocks, and whose appearance would justify the belief that they were an infuriated mob let loose for the purpose of destroying the town; yet they carefully avoided any injury to private houses, showing that some most efficient system of control was up by the society. The Tartar-last did not arrive, and though the city continued to hold out, the natives never seemed to doubt its submission to the rebels. It appears, besides, many members of the society were introduced into the city by which the garrison had nearly all joined the society, and only waited a favourable occasion to open the gates and admit the rebel force. A slack delivery fire was kept up till about noon, when it became quiet. Probably fatigue and hunger dictated the propriety of a short truce. An hour or two later the garrison opened the gates and allowed the rebels to enter unmolested, joining with them, so that the Mandarins were left helpless; but no desire to capture them seems to have existed, for, while the four gates were thrown open, only by three did the rebels enter, the fourth being left purposely to facilitate the escape of any who wished—a privilege they all availed themselves of. About this time the Admiral, with most of his junks, retreated round the island to sea, and has not returned. Several of the junks he left behind have been burnt. The rebels from the main land continued to pour in in large numbers, while thousands of the inhabitants joined their bands, all armed, and every party carrying a flag. Shortly after it was known that the rebels were in possession of the citadel a party of foreigners proceeded thither to see how matters were being conducted. After being admitted into the city, they were allowed to visit the different public buildings without the slightest molestation; and while in the city, the chief of the rebel force promised them to send a guard to protect the foreign hongs against plunder, which it was feared they would be made exposed to at night. The streets, both in and outside the walls, are literally crowded with rebels, but no sign whatever appears of injury to a single private house. A large body of rebels patrolled the streets last night, and to-day everything appears quiet; most of the shops in the neighbourhood are open, and confidence appears returning among the natives; while the foreigners are at a loss to account for the quiet and orderly manner in which the rebels conduct themselves. What arrangements the insurgents are about to make for the government of the place we do not know; they say they will offer the governorship to the late Taow tai, who, as we before stated, is very much liked; but it is not at all likely he will accept it. To-day many of the rebels are being marked; it is said, for Tung-wa. The ejection of the Tartar authorities from the place has been effected with very little fighting; we do not suppose the deaths amount to ten, and the few wounded we have seen appear to have suffered more from the explosion of gunpowder. We hope the order and quiet which at present prevail will continue, and that business will soon be practicable; until, however, the character of those to be intrusted with the government of the place be known, no opinion can be formed as to the security of property there.

The following is from another account:—

"The citadel was taken at two p.m., and order immediately restored. The shops are expected to be opened to-morrow. The British merchants went through the city afterwards, and were well received by the rebel chiefs, who sent a guard of 150 men to protect the foreign factories, and another guard to the British Consulate. Had the insurgents behaved as European troops generally do after the capture of a town by storm, the lives and property of the European community would have been seriously endangered, especially as there was not a single vessel of war on the spot—an omission on the part of the naval commander-in-chief which is severely commented upon. It is also observed that the European communities at two other of the five ports, viz. Ning po and Tah-chow-foo, are similarly unprotected.

It is expected that Canton will be next attacked. Reports are current that, within a day's march of the city, large bodies of rebels are ready for attack at a given signal; and it is greatly to be regretted that we have not such a steamer as the *Phlegethon* or *Nemesis* moored off the factories.

A letter from Hong-Hong, dated June 23, supersedes the following particulars relative to the state of affairs in China:—

Canton remains quiet; but an uneasy feeling exists, and petty robberies are being committed in the suburbs. More than once a threatened attack on the city has been rumoured to take place, but nothing of consequence has occurred. Precautions are taken to prevent an outbreak.

From Shanghai we have dates to the 9th inst., by the French war steamer *Cassini*; and from Chung-Kiang-foo we have advices to the 30th ult. An attack had been made on that fort by the Imperial fleet, but all attempts to dislodge the insurgents were, from their favourable position, unsuccessful; and it is reported dissatisfaction existed among the foreigners in the mind of the Tartar, that the fleet was likely to return to Shanghai. At Nankin the insurgents continued to fortify that place, and other cities they hold near it, and the impression was they would make no forward movement until the cold weather set in. Nothing has been mentioned of the movements of the grand Imperial army around Nankin.

Our dates from Amoy are to the 18th inst. The rebels were fortifying the place against a threatened attack of the Imperialists. The forced contributions levied on the inhabitants caused great discontent, and many were shipping off their valuables, and setting the rebels at defiance. Great distress prevailed among the lower orders, and it would be a relief to have the old Government back.

Foo-chow foo remained quiet on the 12th inst. Much excitement existed, as the rebels were reported close at hand. The Tartar troops were practising daily. The rebellion had broken out at Shang-foo, some distance in the interior. We learn that all the pirates hunted over to the Mandarins by her Majesty's steamer *Dætter* had been beheaded.

His Imperial Majesty the Emperor of China is actually in possession of a fleet, manned by Englishmen, consisting of six ships of war, mounting 98 guns. We give the list, and our readers will be astonished and gratified on reading it, to find how fast Chinese prejudices are making way before the advancement of the age. Here are Chinese ships with English names and English commanders. This fleet—we doubt not, although commanded, manned, and armed—is about to proceed to the attack of China-keang. Will the rebels have been lending themselves, as well as their ships—which would not astonish us—there is a possibility of the city once more reverting to the Tartar; but if it be only the Chinese "braves" who are to do this, it is not likely that anything beyond the expenditure of powder and ball will take place. We learn that a marine and eight of the crew of her Majesty's steamer *Salamander* have deserted, and are supposed to have taken service in his Imperial Majesty's fleet. The *Sir Herbert Compton*, the *Elizu*, and two lorchas, lying off Sampshae, belonging to the imperial fleet, have been ordered by Captain Fishbourne, of the *Hermes*, not to quit their anchorage until these men have been brought back. Captain Fishbourn is likely to find that high pay and booty, or what in the East is called "loot," may have the effect of inducing further desertions.

The orderly behaviour of the captors of Amoy immediately after the storming of the city, and the docility of the rebels to the Europeans both on that occasion and also at Nankin, have justified the expectations now generally entertained, that the establishment of the Ming dynasty will terminate the vexatious restrictions to foreign trade and intercourse that have hitherto prevailed.

The United States squadron for Japan were at Loochoo. The United States steam-frigate *Powhattan* had arrived at Singapore. As soon as she joined the squadron Commodore Perry will proceed on his mission to Japan—the result of which will be looked forward to with great interest, not only by the United States, but by all British subjects in India and China.

INDIA.

Letters from Hyderabad (Deccan) state that districts to the value of fifty-two lacs of rupees (£520,000) have been already given up to our Government, according to the terms of the treaty.

The position of the Bombay Government and the Sudder Court continues to occupy the attention of the Bombay press. It is generally believed that a commission has been ordered by the home Government either to inquire into the charges made some months ago against the sudder judges, or to investigate the "Great Surat case," which is being agitated more vigorously than ever. The natives throughout Western India continue to petition the Government to restore the two disgraced judges to the Sudder bench. They (the native community) declare that no British subject has ever enjoyed the confidence of all classes of natives in the same manner that Messrs. Le Geyt and Grant have done. Mr. Luard is still endeavouring to compel Government to a public inquiry into the conduct of Messrs. Bell, Simson, and Remington, in their several capacities as commissioners. Mr. Simson of the most corrupt practices, and charges Mr. Remington (the Commissioner who acquitted Ardasser, and now one of the new Sudder judges) with deliberate perjury, and being unfit for the society of gentlemen. Mr. Luard has temporarily withdrawn these charges on account of the serious illness of Mr. Simson, but he declares that on his recovery they will be resumed. Mr. Remington has taken no notice of these attacks, but Mr. Simson's attorney has called on the papers in which the letters have appeared for the writer's name.

Mr. Luard, who makes these charges under an assumed name, in the local papers, replies, that he will come forward and justify the libels in his own name as soon as Mr. Simson is sufficiently recovered to stand a cross-examination in a witness-box. The papers that were formerly most violent against Mr. Luard (though they still strongly condemn the course he has taken to bring about an inquiry) admit that it would certainly appear that a widow had been deprived of her inheritance contrary to explicit law, and is still kept out of it, because Government and the Court of Directors are unwilling that their administration of justice and highest officials should incur the scandal that would be occasioned by a public investigation of the case.

The native community of Bombay have presented a petition to the Bombay Government, praying that the deposed Sudder judges (Le Geyt and Grant) should be restored to their former position. If the Governor in Council will not comply with the petitioners' request, they pray that the document may be forwarded to England, where they are certain their prayer would be complied with by the Court of Directors. It is a mistake, which many of the English papers fall into, to think that the natives of India mistrust the home Government more than the Indian. On the contrary, they always think that by an appeal to England justice is certain to be obtained. One of the richest and most respectable native gentlemen in Bombay remarked lately, "If we had had a wise Government in this presidency during the last five years, there would have been no agitation whatever against the hon. company."

AUSTRALIA.

By the Indian mail correspondence and journals from Sydney to the 30th of May have been received. The Legislative Council of New South Wales has taken the first step towards carrying into effect the

change in the constitution of the colony conceded by the late Government. In the sitting of the 20th, Mr. Wentworth moved the appointment of a committee to draw up what is called "the new constitution." The chief point discussed in this preliminary debate was the future organisation of an Upper Chamber, the establishment of which is the condition attached to the other concessions of the home Government. The committee will, it is pretty certain, adopt Mr. Wentworth's view of the question, and recommend that the new Upper Chamber be composed of nominees of the Crown. It is the readiest mode of meeting the difficulty; but that it will be popular out of doors is more than doubtful. The nominee system is disliked in any form; hitherto, every failure in colonial legislation has been ascribed to the influence of the nominee members of the Council, as at present constituted; and it is the general impression that the new Upper Chamber will be little more than the nominee section of the Council sitting separately, instead of forming an integral part of it. On the other hand, it is argued the Crown is not limited in its selection to its present nominees; and that if the new appointments are made for life, as in Canada, some of the body might derive from that security a degree of independence that would render them fair arbitrators between the Crown and the elected representatives.

The question excites no general interest, the public mind is wholly absorbed by business, and the task of constitution-making falls in a very unfavourable time. Nothing less solid than gold, and the large traffic it has created, command any attention

The bill amending the Gold Regulations Act has been introduced and printed: it removes many of the grievances that have been so much complained of; but, if the reports from the gold-fields can be relied on, is still not considered satisfactory by the diggers. The new bill will allow persons to "prospect" or try the ground without licenses in places that have not been proclaimed as gold-fields. The prohibition of the issue of licenses to runaway servants and apprentices is repealed, merely because it is impossible to carry it out with effect; but a conviction of having absconded from hired service cancels a license if it has been obtained. Servants, persons in Government employ, and clergymen are not to pay license fees for residing on the fields, and foreigners are to be dealt with precisely as British subjects. With these amended regulations, if a few dazzling nuggets are turned up during the winter, the Sydney diggings may again be tenanted. Without some greater "finds" than have lately been made, much effect cannot be expected of them

The committee of the Australian Anti-Convict League has decided on dissolving that body so soon as the Ministerial declaration of the abolition of transportation to any of the present Australian colonies shall have been legally carried into effect by an order in Council or an act of Parliament. It is proposed to celebrate the dissolution of the League by the grandest banquet that has ever been given in the colony.

The accounts from the gold-fields are almost limited to the returns of the quantities of bullion brought down by the escorts, and the preparations made by the diggers for the winter; many will quit the grounds to return in the spring; the more steady and determined will camp out and work on; bark huts and log houses were being built, and in many places the diggings present a more settled appearance. The roads, difficult in summer, were becoming worse, and the carriage of goods was again rising. At Castlemain (Victoria) there had been a disturbance, caused by the over-zeal of the police in repressing illicit grog selling; they pulled down and demolished a store in the night without warrant or authority, leaving the inmates, lodgers, and others exposed to the weather. So summary a proceeding on suspicion was considered too bad, and the diggers were thrown into an anti-police agitation. Indignation meetings were held, and placards posted on the gum-trees, inviting the spirit of Hampden against official tyranny. By the last report it was supposed the local commissioner would allay the storm by paying for the damage done. Half the business of the police appears to be in hunting out these contraband establishments. Considering the enormous number of public-houses permitted in the towns, a freer dispensation of licenses at the diggings might be made without detriment to morality, and would render the illicit sale of spirits less profitable.

The regularity with which large quantities of gold are brought down to Melbourne proves, however, that the diggers do not allow their labour to be interrupted by such incidents. The produce of the Victoria gold-fields continues rather to increase than diminish. The richest of the alluvial workings are evidently at Mount Alexander. As the total yield in Victoria continues so great, no change in the gold regulations of New South Wales will bring the gold-seekers back to the northern fields. It is quite possible the Sydney diggings may be no less rich than those of the south; nothing is more capricious than the manner in which gold is distributed. But, to become popular, they must furnish some counter-temptation to announcements like the following, taken from the last *Geelong Advertiser*:—

Mr. Hammond, the first discoverer of gold in Victoria, has just brought into Geelong a splendid specimen found in White Horse Gully, Ballarat, of the estimated weight of 40 ounces. It was found at 54 feet depth, in a seam of quartz running horizontally between two walls of slate, in the Canadian Gully. The colour, shape, and fragmentary appearance of the quartz are the counterpart in every respect of those found at the Canadian Gully. White Horse Gully is close to Linde's home station, and on the Ballarat side of the dividing range.

Some of the miners now use gunpowder to loosen a bed of conglomerate from five to ten feet thick, which has to be cut through in the works on White Hill and Ballarat. The "cradle," the first and simplest contrivance for washing the stuff, is being superseded by machines that wash greater quantities more thoroughly; the "long tom" is an enlarged cradle, and the "sluice" is a still more effective arrangement for parties sufficient in number to work it. The whole process is gradually becoming one that requires a certain degree of skill and that of a kind which must be acquired on the spot; even in discovering the most likely places for claims, geological knowledge is often baffled where a sort of local instinct succeeds. It is the recommendation of one of the scientific authorities of the colony that persons who have read up their geology for the article "gold," with a view to the diggings, had better, on arriving there, "lay all their science on the shelf as soon as possible."

The following return gives the quantity of gold delivered from the Victoria fields at Melbourne, by the Government and private escorts, in the first four months of the present year:—

	Ounces
January	185,915
February	172,329
March	169,654
April	161,431
Total	689,329

In the corresponding months of 1852, the produce of the same fields was as follows:—

	Ounces
January	64,851
February	57,193
March	51,365
April	67,656
Total	240,365

The increase is 449,066 ounces above the produce of the same period last year, or 187 per cent. But it should be remembered the fields are now more extensive, and worked by a greater number of persons. There is no indication that the yield is falling off. Another return gives the quantity brought down in the last two months from the several diggings; from which it appears that from April 2 to May 15 there arrived by Government escort 206,823 ounces of gold, and by private escort 48,320 ounces; making a total brought down by escorts of 243,552 ounces. To this must be added 20,121 ounces brought down during the last week, completing the returns to the 24th of May; making the whole amount for April and May 265,673 ounces. The weight of gold shipped to London from Victoria in the present year already amounts to 37 tons 11 cwt. 1 qr. 0 lb., value, at £3 1s. per oz., £3,382,953 15s. sterling.

The *Times* correspondent at Sydney says:—Rents continue to rise in Sydney, to the dismay of all who have only fixed incomes and no lease. Provisions, though far below Melbourne prices, run high, and the large importations do not appear to bring them down, as the purchases for the Melbourne market were extensive. The great mass of immigration goes to Port Phillip; but the real nature of the work required for successful gold-seeking is becoming more known in the colony, and those who cannot undergo severe toil are compelled to find other employments. Wages had probably reached their highest rate. This cannot be predicted of house rents, as there is comparatively little building going on. Capital makes a quicker return in other investments, and skilled labour cannot be procured in sufficient quantity to construct rapidly. Some few stores and offices are being pushed on to completion, but few dwelling houses are in course of erection. To those not actually making money, life is a struggle with expensive discomfort; many persons who were independent of trade are leaving the colony altogether and returning to England; professional men, Government officials, and others are driven from the city, finding it impossible to pay the rents demanded, and are compelled to find residences in the country. Those who are employed at fixed salaries, or who hold Government situations, are the most ill-used, as they can neither quit them nor, like professional men, increase their income by higher charges. This unfortunate class is fast sinking into debt, and the Government has been compelled by the hardship of their case to propose a general increase in the scale of all official salaries. The measure is now before the Council, and, when voted, will probably be made retrospective, the increase commencing from the 1st of January last. But in all these respects Sydney offers a faint picture of the state of things at Melbourne; there rents are called for more heavily than would not be demanded for mansions in Europe; and the rapid increase of the population is beginning to be regarded with something like fear. So great is the suffering of the lower orders, and when land there destitute that the residents, though till now very indifferent, have at last made an attempt to relieve it, by preparing some place of temporary shelter for the new comers. There is some difficulty in comprehending how positive destitution can exist where every kind of labour is well paid; but a large proportion of the immigrants are neither labourers, nor mechanics, nor domestic servants; the digging-failing, they soon spend all they have, and fall into a most miserable condition, at last they are compelled to become labourers on the road or anything; but the struggle with pride is often long and painful. One of the Melbourne journals has published a solemn exhortation to this generally useless class, imploring them to descend cheerfully and "like Christians" to the menial occupations for which there is a field; at the same time lecturing employers on the folly of entertaining a prejudice against taking gentlemen and ladies for household servants an additional difficulty with which the educated destitute have to contend. There is, it seems, something embarrassing to a master in having a graduate of Cambridge to black his boots or groom his horse; and even if a gentleman offered to undertake those duties, he would be rejected for one who could not be accused of mathematics or manners. Yet, if the advice of the writer above cited could be followed, it would be a benefit on both sides: that it should be so earnestly given is one of the indications of the abnormal state of society.

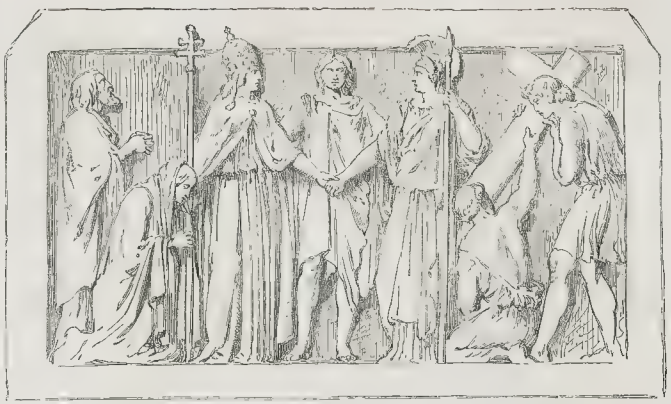
The following extracts from a letter, written by an intelligent working printer who emigrated to Australia, will be read with interest. This letter is dated "Melbourne, Victoria, Feb. 7, 1853." After stating that he is employed at a newspaper office in Melbourne, at an average rate of wages amounting to £6 per week, he says—

"Here are swarms of compositors out of employment, or mending the roads. We thought our four months' voyage would prepare us to stand anything; but the ship was a paradise compared to the Australian city: one day it is a dirty hole, and the next a mud-hole. In wet weather sometimes I wear boots which cover my thighs, and then cannot keep myself out of the mud. In dry weather the hot wind completely scorches your face, like standing in a furnace, accompanied with dust, so thick, that it resembles the tin mist for I ever saw in London. Men and women alike are compelled to wear veils. As to comfort of any sort, every destitution in the colony ought to have the word erased. The musquitoes are awfully tormenting the faces, hands, and arms of myself and wife are completely covered with the wounds inflicted by these insects; and the flies actually settle on your meat while on the fork on the road to your mouth. Fleas are of an elephantine size, and seem to grow in the soil. Melbourne is not a manufacturing place, and everything is imported here: ready-made slops, carts, drays, brushes, houses—in fact, everything either comes from England, Van Diemen's Land, Sydney, or America. Yesterday met with your late neighbour, Mr. P——, and he described Melbourne very inconsolately, namely, that coming from England to Melbourne was like coming and I think it equals going to the Tower of London to see the wax-work." A man in England with 30s. a week is better off than a digger here at £5 a week. For instance, I have seen half-a-crown refused for a cabbage, 2s. 6d. for a four pound loaf; 10s. per pound for green peas in season per peck, and they all look worm eaten. Meat the cheapest thing in the colony - 6d. per pound, is over-driven, half-fed, half-grown, flabby stuff. Beer, 2s. per quart; potatoes, 6d. per pound. No veal to be had but that which is killed on the day it is calved, as it does not pay for rearing: milk being 1s. 6d. per quart. English gin 7s. per bottle, usual size. Rent is very high. I have paid £2 per week for a little back room, and only left it because the rent was raised to £3 per week. There are thousands living in canvas tents. There is a town on the south side of the Yarra Yarra composed entirely of canvas tents; and even when the rain comes they wish to get into house. I expect the rent will be doubled

"There is no such thing as having a friend to smoke a cigar with, for every one is afraid to go home after dark. Just imagine me leaving the office at two or three o'clock in the morning, having to travel to Gardenwood, two miles from Melbourne, and every five minutes surrounded by a pack of dogs, or stumbling over the cows and bullocks. Just imagine me with my pockets full of brick nuts, a stick in one hand, and a brick in the other, travelling through the bush, expecting—as every day occurrence—to be shot at and robbed. If they shoot me they'll be considerably taken in, for I leave my watch at home, and never carry much money. I said *home*—I misapplied the word; for it is only used by everybody when speaking of England; and thousands of poor souls are the day's end they had never left it—more so than I; for at least two thirds of the newcomers left good situations in England to better themselves here such as shopkeepers, government clerks, and members without trades. Pity the Diggings, but are not fit for those hardships; come back to Melbourne, go as waiters, cooks, labourers; work on the wharf, mend the roads, be the police, or die, for there is no posthouse here

SCULPTURE OF THE TOMB OF NAPOLEON.

BAS RELIEF.—ESTABLISHMENT OF ADMINISTRATIVE CENTRALISATION.



BAS RELIEF.—THE CONCORDAT.

COLOSSAL FIGURE, BY PRADIER.

his exploits in Italy, and his dangers at Waterloo, and who went even to St Helena to alleviate the misfortunes of his master by a self-devotion which could hardly be equalled in the heroic ages, and Duroc, whom the Emperor loved like a brother—who was the companion of all his battles, from 1797 to 1813, until he fell in Silesia, with the glory of a soldier and the devotion of a friend.

This vestibule passed, the spectator finds himself in the crypt (*vide Illustration*), which is of a circular form. Its depth below the pavement is about six yards, and it has altogether a diameter of about twenty-three yards. The centre of the crypt, which is left open, and is bounded by the balustrade above described, occupies above fifteen yards. The remainder of the crypt included in the above diameter is under the floor, and forms a gallery. The floor is supported by twelve square columns or pilasters, of white Carrara marble, each of which is faced by a colossal figure, holding in its hand the emblems of the Emperor's principal victories. These twelve colossal Caryatides excite the admiration of every spectator—the figure in each case being sculptured out of the single block of marble which forms the column. They are the last great works of Pradier, who died before the inauguration of the Tomb. The figures all have their eyes turned towards the sarcophagus, which is now being raised in the centre of the crypt. We present our readers with sketches of three of these figures.

The sarcophagus is composed of an ancient red granite, from Finland, harder and of a finer grain than that of Egypt, a material admirably calculated to defy the destructive ravages of time, and which was discovered by M. Montferrand, architect of the Czar, who has used of the same granite several columns in the church of St Isaac, at St Petersburg. This precious and beautiful material has been hitherto unknown to us, and the idea of thus applying it belongs to M. Visconti. The sarcophagus is four yards long by two in breadth, and is more than four yards in height. It is formed of four blocks, and placed upon a platform of green granite, from the Vosges. The outer coffin, which has received the cedar and leaden coffins brought from St Helena, is composed of a substance called *algita* from Corsica—the same material employed in the base of the Column in the Place Vendôme.

To saw and polish the sarcophagus of red granite, the powerful assistance of a steam engine was necessary. A rich mosaic pavement surrounds the sarcophagus, presenting a laurel crown, in the style of those of ancient Rome. Rays emanate from this crown, which surrounds the Monument. In this beautiful mosaic pavement, in gilt letters, are the names of the Emperor's principal victories—Rivoli, the Pyramids, Marengo, Austerlitz, Jena, Friedland, Wagram and Moskowa. The external portion of the crypt is lighted by twelve bronze lamps, modelled from the terra cotta lamps found at Pompeii, and which will only be lighted on solemn days—such as the birth and death of the Emperor. Upon the walls of this circular gallery are placed ten grand bas-reliefs in white marble, designed by M. Simart, and executed by MM. Chambaud, Petit, Oudiné, Lanno, &c. They represent the following subjects allegorically treated:—The institution of civil order, the institution of the Legion of Honour, the *concordat* with Rome, the administration, the Council of State, the Code, the University, the Comptes, the encouragements given to Commerce and Industry, and the public works. The continuation of these bas-reliefs is twice interrupted by the door of the vestibule and by that of a subterraneous chamber—a kind of sanctuary, in black marble, of gloomy and severe aspect, in which are placed different relics of interest—to wit, the sword which the Emperor wore at Austerlitz, the decorations which glittered upon his breast on great occasions, the crown of gold voted by the city of Cherbourg, and sixty flags won by French valour. These flags formerly ornamented the Senate. They were consigned by M. Sémonville upon the entrance of the Allies. The relics are laid upon a cushion placed upon a bronze coffer; the flags ornament the walls, their diverse hues, belonging to almost every European nation, consecrated by the blood of their defenders and begrimed by the smoke and dust of battle, standing out boldly from the black marble. At the further end will be erected a grand statue of Napoleon in Imperial costume, and sculptured in the quarry by M. Simart. A lamp suspended from the sepulchral vault, and always lighted, will present a dim obscurity in this chamber, which will only be seen through the grating of the door. The aspect of this Monument has, it may well be imagined, a grandeur, a severe magnificence, and a religious character which explains the preference given to the plans of Visconti, the successful competitor.

The Court Vauban, which fronts the principal entrance of the church, is, so to speak, its vestibule: it should, therefore, announce the Monument which the spectator is about to see. M. Visconti conceived the idea of decorating it with the statues of twelve Marshals created by the Emperor when he revived the monarchical dignity. Seats placed below the pedestals of these statues will form the *enceinte* of this Court. In the centre, upon a rich pedestal, will be erected a statue of Napoleon in military costume, as he appeared upon the field of battle.

When Louis Philippe first conceived the idea which his Ministers adopted, and which the country received with enthusiasm, to take advantage of the relations then existing between France and England, and to claim the body of the Emperor, he was animated by one of those noble and patriotic instincts which ought alone to actuate the policy of sovereigns. The King, who had personally discussed the matter of the restitution of the Emperor's remains in a familiar conversation with Queen Victoria, during her visit to the Château d'Eu, before opening the negotiations between the two Governments, desired that a considerable sum should be appropriated for the construction of this Tomb, and made a demand upon the Chambers of 4,000,000 francs. Later a sum of 6,000,000 francs was necessary. When finished, the Imperial Tomb will become one of the greatest attractions in the city of Paris.

For the greater part of the foregoing particulars we are indebted to a communication by M. Jules Lecomte, in the columns of *L'Indépendance Belge*. We have been favoured by receiving the following account of the bas reliefs from M. Simart, the eminent sculptor, to whom the execution of these bas reliefs has been entrusted by the French Government.

In the first bas-relief, the Imperial Genius, with the Victor's rod—the symbol of executive power—holds in one hand the law of the 28th *Pluviose*, constituting an administrative centralization—with the other he seizes the helm of affairs, which is placed upon the

TOMB OF NAPOLEON.—THE SARCOPHAGUS, IN THE CRYPT.

[illegible] to unite the exertions of the [illegible] struggles under the powerful [illegible] which France was [illegible] which are at the side of the [illegible] and Democracy [illegible] the great results which must be [illegible] by the unity of power in the Administration.

At the base of the throne the following inscription appears: "I have shown that even in the midst of war I did not neglect that which concerned the institutions and the good order of France."

The subject of the second bas-relief is the "Concordat." The Genius of Napoleon reconciles Catholic Rome with France. The cross is again elevated, and religion and morals can anew exert their beneficent action. The faithful can now render public homage to the object of their religious worship. The old man, raising his eyes to heaven, offers his grateful acknowledgments to the sacred emblem of the religion of his fathers. The young girl throws herself upon her knees, and finds support in [illegible] with the young man raises with sacred ardour the Christian emblem of hope and regeneration. At the foot of the bas-relief [illegible] "The Gallican Church revived by Intelligence and Concord."

[illegible] PASSAGE TO THE CRYPT.

THE FÊTE OF THE EMPEROR.

(See Illustration on page 133.)

ALTHOUGH every year makes a fresh demand on the talents of the decorative artists of Paris, so fruitful is their imagination, and so pure their taste, that always something beautiful is offered to the public admiration, and in most cases differing essentially from anything invented for preceding solemnities. The present occasion furnishes an additional proof of the vast superiority of French decorative talent, the ornamentation for the Fête Napoleon being distinguished alike for novelty and for good taste.

The Fête commenced at six on Monday morning by a salvo of 101 guns fired from the Invalides. Even at that hour a number of promenaders were already enjoying the cool air in the Champs Elysées, where thousands of workmen had been busy from the first light of dawn in putting up lamps and completing the various preparations. The weather was propitious, rain having fallen in the night and laid the dust. The ground selected for the principal decorations comprised the garden of the Tuileries, the Place de la Concorde, and the Champs Elysées, up to the Arc de Triomphe de l'Etoile. On the whole of this vast space, lofty frameworks of timber were erected to imitate the arches and colonnade of a Moorish building. On each terrace of the Tuileries gardens, near the grand entrances from the Place, stood a long range of lofty arcades of open wood work, supported on wide pilasters, traced out with slight rods of wood, and ornamented with a variety of curious medallions, unlike any architectural decoration of the present day, and forming a kind of architectural fret-work, producing a most happy effect. At immense trium phal arch, of the same description of work, stood in front of the main entrance into the garden, and from its centre was suspended a huge Imperial crown, with wreaths of laurel connecting it to tracery above. Every part of these erections was covered over with coloured lamps. All round the Place de la Concorde were similar constructions, all gaily painted in a uniform manner, so as to produce a kind of quaint harmony of colouring.

Up the Champs Elysées to the Rond-Point was to be seen on each side a long extending range of similar arcades, supported on pilasters of the description already mentioned. There were not less than 284 of these arcades—the whole line cut into parts by twenty-six lofty portiques, placed at equal distances. The arabesques, formed by the slight wooden rods, were hung round in every direction with coloured lamps; and from the centre of each arcade was suspended a lustre for 100 lights. Over the fountains at the Rond-Point immense celestial spheres, bearing an enormous eagle wi h outspread wings; the whole ornamented with coloured lamps. From the Rond Point to the Triumphal Arch were 360 lofty poles, placed at equal distances, and connected below by a triple garland of coloured lamps, and above by a broad cornice, on which also lamps were placed. This same ornamentation was adopted in the garden of the Tuileries, with this difference, that the lamps were there of white glass, so long in the distance like strings of huge pearls. Sixty immense chandeliers were suspended from gaily-coloured cords running across the main avenue of the Champs Elysées; and the Triumphal Arch at the end bore a vast star of the Legion of Honour, to be lit up at night with gas. The side passages up the Champs Elysées were also crowned with lines of coloured lanterns, suspending immense lustres of cut glass. Half-way up on the left, near the Palais de l'Industrie, was erected a circular building, in which, in the afternoon, a military band played symphonies and marches; and on each side near the Rond-Point were placed two other bands. The three buildings were formed of arcades of gilt rods to match the constructions around, and from the centre of each arcade hung a chandelier of coloured lamps. A profusion of flowers were placed on pedestals, and the general effect of these constructions was exceedingly happy.

One peculiarity of the ornamentation or this Fête was the comparative absence of tricoloured flags. Since 1848 they have always been the groundwork of the decorations of every public ceremony; but on the present occasion, except some small banderoles which floated from the poles erected in the Tuileries gardens to receive the ends of the festoons of lamps, and some full-dress ornamenting a handsome orchestra erected beneath the grand triumphal arch, scarcely one was to be found. The letter "N." was to be seen in various places on the triumphal arch in the Place de la Concorde, as well as on shields suspended from the poles connecting the festoons of lamps; and that letter, with the legend, "Au Rond-Point, alone intimated in whose honour the Fête was celebrated.

But the Fête was not merely in honour of the Emperor; it was also, to a certain extent, a religious one, since the Fête Napoleon and that of the Assumption fell on the same day. In the various churches of Paris the image of the Virgin was dressed out with great splendour, and a grand service was celebrated in her honour

About one o'clock the crowd became very dense in the garden of the Tuileries and in the Champs Elysées; yet, at that hour, the boat-races near the Pont d'Iena, attracted thousands of persons. Further on, the Champ de Mars was thronged with a vast multitude, waiting to witness the performances of the aëronauts of the morning, which formed a representation of "The Field of the Cloth of Gold," and a grand equestrian spectacle. M. Godard was also to ascend in his balloon; and the performers of the Imperial Cirque were to represent the capture of Lagbouat. In addition, about the same hour, vast crowds were collected at the eastern end of Paris to witness pantomimic performances on the Place Valhubert, and at the Barrière du Trône; whilst thousands of others had filled the Théâtre Français, the Opéra Comique, Palais Royal, Gymnase, Porte St. Martin, Variétés, Vaudeville, and other principal theatres, to enjoy the gratuitous performances. At Bercy there were boat-races, which could boast of fully as many spectators as were collected at those near the Pont d'Iena.

A little after o'clock, the river between the Pont des Invalides and the Pont d'Iéna presented a very animated scene; a vast number of the gayest of the Parisian *canots* having assembled for sailing and rowing matches, which were to succeed.

The aquatic sports were still at their height, when part of the spectators moved toward the Pont d'Iéna, to gain the Champ de Mars. A large enclosed circle for horse-riding had been formed at one side, whilst at the other was erected a theatre for a miscellaneous performance, of which the principal part was the taking of Lagbouat by the French troops.

The *divertissement* in the Champ de Mars was of great attraction, and every part of the ground from which a view could be obtained, was crowded to excess.

The cavalcade of "The Field of the Cloth of Gold" was a brilliant performance, and the cortége, composed of eighty-seven personages, costumed in the style of Francis I., with queens, queens' maids, heralds, squires, pages, valets, ensign-bearers, &c., presented a picturesque *coup d'œil*. But this gaudy sight was surpassed by the "passage of arms," in which eight English knights and eight French ones, armed *cap-à-pie*, and mounted on steeds caparisoned in leathern mail, met in the ground for an hour against each other. (*See Illustration* on front page)

The spectacle was a representation of the assault and capture of Laghouat; and the architect displayed great skill in constructing a very good resemblance of that place, the capture of which reflected high credit on the French army in Algeria. The mimic fort was attacked in due form by a body of about 600 men, Chasseurs de Vincenne, Zouaves, Spahis, &c. The Arabs a most determined resistance, and hurled away from their battlements with great energy; but all their valour was of no avail against the energy and superior discipline of their assailants; and the tricoloured flag of the victors at length floated triumphantly from the walls. In addition to this performance, M. Buleisy rolled his ball, while standing on it, up a spiral inclined plane; Madame Sequi, now seventy-six, danced like a young girl of eighteen; and M. Godard made a balloon ascension

At four o'clock the Emperor and the Empress left the Tuileries in an open carriage, and visited the principal points of the public rejoicing. They proceeded to the Champ de Mars by the Quays and the Pont d'Iéna, and were received everywhere on their passage with loud cries of "Vive l'Empereur!" "Vive l'Impératrice!" Their Majesties afterwards drove round by the Barrière d'Etoile, and returned to the Palace by the Champs Elysées and the Garden of the Tuileries

By the time all these performances had terminated, evening had come on; but the crowds on the main points of attraction—the Place de la Concorde and the Champs Elysées—remained without any perceptible diminution. At about half-past six, a salvo of 101 guns from the Invalides announced that the Day Fête was over, and immediately the Parisian that the preparations for the illuminations were about to commence. Many persons availed themselves of this pause to proceed home to dinner; and when they were able to return to the Fête, the change which had taken place was one of the most striking description—the whole of the garden of the Tuileries, the Place de la Concorde, and the Champs Elysées, being lit up in the most magnificent manner. It is impossible to convey even a faint idea of the effect produced by the illumination of the arcades already described. Nothing like it has ever been seen in Paris before. The variously-coloured lamps sparkled like emeralds, topazes, rubies, &c. The grand façade on the terraces of the garden of the Tuileries presented a dazzling blaze. The Place de la Concorde was also of the greatest beauty, whilst the grand avenue of the Champs Elysées seemed like an interminable ball-room lit up with magnificent lustres. The side alleys were also brilliantly lit up; and, in addition to the coloured lamps, had a vast number of lanterns of various shapes. The sphere at the Rond-Point was covered with blue lights to represent the firmament, and the eagle above was one blaze of white light. It may give some idea of the extraordinary flood of light which met the eye, when it is explained that on the Triumphal Arch there were upwards of 8000 lights; thence to the Rond-Point, 82,000; on the globe and eagle, 6000; on the arcades in the Champs Elysées and the Place de la Concorde, 204,760; on the porticoes, 30 000; on the grand lustres, 70,000; on the triumphal arch near the garden of the Tuileries, 80,000; on the garden, 100,000; in all, not far from 600,000. This, too, is irrespective of the vast number of lamps, lamps, and lanterns in the side alleys and on the arcades which surrounded the Rond-Point, as well as the long range of colonnade from the Rond-Point to the Triumphal Arch of the Barrière de l'Etoile. Perhaps it would not be too much to calculate the whole number of lights put up for this grand illumination at very little short of three-fourths of a million So admirable were the arrangements that the whole was lit up in a little more than an hour.

Just as the spectators had had time to admire this beautiful scene, the hour for the fireworks had arrived. The living stream then directed its course towards that part of the Champs Elysées which commanded a view of the fireworks. At length the signal blue light was seen, and was responded to by a flight of rockets, which mounted in the air and burst in a shower of brilliant stars of every hue; and these were again followed by flights of Roman candles and variously coloured fires of all kinds. Next followed the pieces. The first represented the united spheres of the Emperor and Empress, surrounded by a brilliant halo of stars of all colours. The second was an allegorical mosaic of novel effect, and divided into two tableaux—the first representing a triumphal portico, in the centre of which and on the upper part were the letters "N" and "N.E." unified, and the second, a complete cascade of fire The last, and the master-piece of the night, was of unusual size, the façade being upwards of 300 feet in length, and about 100 feet in height. It was in the shape of a half circle, and was intended to represent the Temple of Immortality, having on each side a lofty portico, surmounted by trophies, with the Imperial initials crowned and surrounded by garlands. Fountains of fire spouted forth from the interior of the porticoes; the columns which formed the hemicycle of the temple were surmounted by trophies and eagles, and in the centre was represented the apotheosis of Napoleon the Great in the Imperial costume, holding in his right hand a sceptre, and with his left resting on the emblem of his sway; his feet reposed on a globe covered by the wings of an eagle holding in its claws a scroll, on which was inscribed "15 Août." The figure of Napoleon was about sixty feet in height, and the spread of the wings of the eagle about fifty feet. This was certainly a *chef d'œuvre* of pyrotechnic skill, and, as well as the rest of the display, reflects the highest credit on M. Ruggieri, the architect and director. Between each of the above pieces, hundreds of rockets and Roman candles were let off, filling the air with countless myriads of stars of the most brilliant and varied colours.

Immediately after the grand piece had terminated its ephemeral existence, a fire-balloon was let off, bearing on eagle surmounted by a crown, and holding in its claws a gigantic letter "N." The balloon ascended majestically, sending out from time to time showers of coloured balls of fire. Next followed the grand bouquet. No sooner had it disappeared than the whole dome of the Invalides burst out into a blaze of fire of a deep red colour, from Bengal lights placed round it. The effect produced was most brilliant and varied colours.

The public offices generally were illuminated. The dome of the Pantheon, the cornice of the Legislative Chamber, and the Arc de Triomphe, were lighted with gas. The Hôtel de Ville, which was handsomely dressed out with flags, and illuminated with gas, was also lit up. The column in the Place Vendôme was illuminated at the top and bottom with lamps, but the effect was not very striking. In the afternoon a number of old soldiers paid a visit to this spot, and deposited crowns of flowers on the pedestal of the column. The railings were dressed with bouquets and wreaths of laurel, and the general effect was pleasing. Along the Boulevards and the principal leading streets the illuminations were pretty general, but they looked insignificant after the fairy-like scene in the Champs Elysées. Taking this Fête, in its ensemble, it may be affirmed that it was one of the most beautiful ever seen in Paris; and it is most satisfactory to be able to state that everything passed off without an accident

It is only justice to add that the programme of this Fête was dictated to M. Visconti by the Emperor himself; and that the execution of the various parts was not inferior to the invention which had originated them.

The whole cost of the Fête was 700,000 francs, of which 80,000 francs were distributed in alms. The expense is to be equally divided between the city of Paris and the State.

ALLEGED CHRISTIANITY OF THE CHINESE INSURGENTS.

We make the following highly-interesting extract from a communication written by an officer on board her Majesty's ship *Hermes*, the vessel which carried Sir G. Bonham on his visit to the Chinese insurgents at Nankin:—

The insurgents let us know immediately that they professed Christianity—Protestant Christianity—and I believe sincerely, and many of them intelligently so; nor can there be a doubt of their Protestantism, for their expression is characteristic; they always said as also the Imperialists in speaking of them that they were worshippers of Jesu, in contradistinction to those of Confucius or Tien-chu

They circulate tracts, not copied from missionary tracts, but drawn from the Scriptures by themselves, and written in a far superior style of humour than that, perhaps, possible to foreigners

They are iconoclasts, and destroy every vestige of idol worship.

They accept the Ten Commandments, translated by themselves, to which they have added a commandment. On the occasion of my giving the New Testament the first time, there was no one present who could interpret; but the chief opened it, and, after reading two or three passages, showed by his manner that he understood every word he read, and it is, and, on the interpreter returning to my cabin, I told him he was to present it to his Prince. He rose and made several bows, and otherwise expressed his thanks for the present.

They are very severe for any infraction of morals, and separate the sexes, to prevent improprieties of any kind. They hold an open court, conferring Hitgana: so in the old Chinese courts, when they feared always have recourse to torture They style the army the "Holy Army," and the name of Nankin they have changed into that of the "Holy City." They style each other "brother," and they invariably called us "foreign brethren."

Code with an interpreter about twelve miles, and must have passed 20,000 people carrying rice, furniture, &c.; and the interpreter assured me that he only heard one expression that could offend the nicest ear, whereas one can hardly move in the Chinese towns without hearing it, and, I am told the very children use the grossest expressions in their ordinary play.

It was obvious to the commonest observer that they were practically a different race They had Gutzlaff's edition of Genesis, and the person they spoke most of was Dr. Lobenon. This, we supposed, was either Dr. Bolton, or Cruden, or Dr. Lobscheid, also missionaries. The first belongs to the London mission, the other to the Rhenish mission Perhaps the latter is the more probable, as he was attached to the same society as Gutzlaff, and is said to have linnerated in Quangsi, where the movement took its rise.

On inquiring of an Imperialist belonging to the gunboats above Nankin the cause of the outbreak, he said that a number of them were in the habit of meeting in Quangsi for the worship of Jesu, and that the mandarins prohibited them, stating that they allowed no societies for the propagation of depraved doctrine; and, as they persisted in meeting, they had some of them beheaded. The remainder took up arms in their own defence, commencing with 200. They now state they have a million adherents I have no doubt they have several hundred thousand at Nankin, Chin-kiang-foo, Yang-chow, and Hwa-Chow.

The officer in question is evidently disposed to put the most favourable construction on the faith of the insurgents, and it is impossible to doubt. After perusing his letter, that the rigorous despotism and the idolatrous superstition which for centuries have cramped and insulated an empire computed to contain a third of the human race have come to an end. There is no change which in magnitude and suddenness can at all compare with this; for it appears that 340,000,000 human beings are yielding, if they have not already yielded, with a rapidity even greater than that we read of in the annals of ancient or mediæval conversion. The army which has almost accomplished the destruction of the Manchoo rulers of China is described as possessing all the coolness and confidence of men certain of the justice and success of their cause. Occupying Nankin, and apparently unimpressed by an Imperial host rich in money, mandarins, ships, and pompous ordinances, they nevertheless go on quietly and uninterruptedly collecting immense supplies of rice from the surrounding country, appropriating the Imperial tribute, repairing the fortifications, manufacturing guns, and preparing for a march to Pekin as soon as it shall suit their convenience. They entertain no doubt of their strength, of their Divine mission, of the weakness of the opposing dynasty and armies, of the sympathy of the masses of Chinese, and of the utter worthlessness of the whole existing system. Its condemnation they place in its degrading superstition and its vices, and have by this time the palpable fact to rely upon, that, except in the case of one strongly fortified city, they have never met with any resistance worth speaking of. With such an enemy so near the seat of Tartar rule, and the geographical key of the empire, we may, before very long, expect to hear that the whole empire of China has received its idols and embraced Christianity, whatever that may mean in the present instance

From all accounts, or rather from every possible surmise, it was but a very small spark which has made this vast conflagration. Whether the Prince of Universal Peace, as he is called, has sometimes his grand schemes as a pupil of the Rev Mr. Roberts, an American missionary at Canton; whether he derived his faith from some tradition of the Scriptures long cherished in the remote province of Quangsi; or whether the insurrection took its rise from the intrigues of the mandarins, or the disappointment of a candidate for literary honours, is not known But some additional light has been thrown upon the creed of the insurgents by some Parliamentary papers recently laid upon the table of the House of Commons by the Foreign Office. The following communication from the Rev. Dr. Medhurst, contains the most valuable and authentic exposition yet published of the character of the Christianity professed by the Chinese rebels. Dr. Medhurst is one of the highest authorities on the subject, and we need, therefore, make no apology for the length of our quotation :—

"The Book of Religious Precepts" is decidedly the best production issued by the insurgents. The reasoning is correct, the prayers are good, the crimes enjoined (with the exception of the offences) are unobjectionable; the Ten Commandments agree in spirit with those delivered by Moses, and the hymns are passable. The statements of the doctrines of human depravity, redemption by the blood of Jesus, and renewal of the heart by the influence of the Holy Spirit, are sufficient to direct any honest inquirer in the way to heaven. If this were the only pamphlet issued by the insurgents, or if they were all like this, we should sincerely rejoice in the movement, and wish it success

The Ode for Youth gives some admirable lessons regarding the honour due to God, who is the creator and father of all. It sets forth in very clear terms the coming of Jesus into the world for the salvation of men by the shedding of the blood on the cross; and then goes on to detail the duties which are required of us as parents and children, brothers and sisters, husbands and wives, relatives and friends; concluding with instructions as to the management of the heart and external senses. Altogether this is an excellent book, and there is not a word in it which a Christian missionary might not adopt, and circulate as a tract for the benefit of the Chinese.

The Celestial Dynasties Class, begins well. It details the creation of the world, and the history of the Israelites, their deliverance from Egypt, the passage of the Red Sea, and the giving of the Law on Mount Sinai. It then speaks of the mission of God's Son, Jesus, into the world. His sufferings, death, resurrection, and ascension, with his command to preach the Gospel in all the world, through believing which men are to go to heaven. The writer then says that the Chinese, in early ages, worshipped one God, but were deluded afterwards by superstition; on which account God is said to have sent down the spirit of Jesus into the person who is also called Heaven's Son into the world to study the Chinese classics; after which he took him up to heaven, and gave him instruction on Celestial matters; He also gave him a sword and a sword, as a commission to destroy his enemies. After having slain many, he was again taken up to heaven, where he says that he saw the mother and the wife of Jesus, whom he calls his Elder Brother. Having received fresh instructions and encouragements, he came down the third time to consolidate his Government.

All these assumptions are of journeys to heaven and heavenly interference by God, and pretender into this world, are the basis of the suspicion that the Chief of the insurrection has arrogated to himself a direct connection with the Deity, in order to overawe his followers, and make them submit to his will.

The Book of Celestial Decrees purports to be a collection of communications from God, our Heavenly Father, and Jesus, our elder brother, which it is said have several times been sent down from heaven into the world to declare the Divine will to man. In last our Heavenly Father is said to have told the multitude that he had appointed the Chief of the insurrection to be their Celestial Sovereign, commanding them to be obedient to his commands, and aid him in attaining the Empire. The same year Jesus is said to have told them to fight in order to subdue the country, telling them that he would aid them in battle but to have declared that if they disobey the commands of their superiors, or retreated in battle, he would put them to death. He is also said to have forbidden them secreting any of the booty, and to have ordered them to give up everything to the general treasury. On a subsequent occasion the Father is said to have reproved them for disobedience to orders, and for want of courage, telling them that to consider whose race they were going, and in whose work they were engaged, as an inducement to them to go forth to battle and kill their enemies, adding, that if a man wishes to become a hero he must not love at his ease, for the more exertion the greater will be their honour, and much more to the same effect, all very unlike what might be expected to come from our Heavenly Father, and very different from anything we have read in Luke

Last pamphlet consists with a number of proclamations from the Imperial Court to the people, by Heaven's command, to expel the rebels, and to raise a loyal militia, with numerous quotations from the Confucian classics, to which each of these proclamations is appended. The whole is evidently written by the Imperialists, and is a good specimen of the mandarin style, which is never to retire. He then gives various details respecting the manifestation of the Holy Spirit, urging the people to fight vigorously, and promising rewards according to their merit, including the highest dignity in the present world, and glory in the next. The Chief appends a summary of doctrine, in which he declares that the Divine attributes, and disclaims for himself, or others, those titles which he thinks are due to God alone He particularly insists on obedience to the Tenth Commandment, all breaches of which are to be visited by death, without mercy This last proclamation regards his harem, and forbids any one to mention the name of any of its inmates, or even to look at them. Whoever dares to disobey shall be beheaded; and whoever reports anything that is said outside into the harem, both the carrier and the person who said it are to be beheaded.

This latter document indicates that the Chief is bent on attaining empire, and while claiming every indulgence for himself, is resolved to punish severely all those who interfere with his plans.

The Revelations of the Heavenly Father during His Descent on Earth details the examination and detection of a traitor on whom they were about to confer an appointment, when the Father is said to have come down from Heaven in person, on purpose to arraign and cross quest on the delinquent; and, having brought his treason to light, to have returned to heaven. On considering this as a display of the Deity of the Father's power, the leader called upon his followers to kneel down with him, and acknowledge the Celestial favour, after which he directed his Ministers to record the declared will of God, on the occasion of his descending upon earth. The result is the pamphlet before us. There is no word of their having seen any form; but the idea of the Father's presence seems to have been conveyed upon the minds of the bystanders, when the Father is said to have addressed the leader of the insurrection, saying, "I am going to take the matter in hand to-day; any other person would find it a hard task." He is further said to have commanded the leader to go forth and fight, and to have interrogated him in a variety of ways; in consequence of which the man confessed his guilt, and was put to death. In the course of the examination, the Father is said to have told him that he was "a beast," and to have reproved him; to which he replied, "The Great God—the Heavenly Father." Also, if he knew who was the sun? to which he answered, "The sun is my superior—the Celestial Father—the true lord of the nations of the earth" "Over what breadth," it was then asked, "does this sun shine?" to which the answer was given, "He illumines the entire world." These words must be under stood, however, with some limitations, as the Chinese are in the habit of considering the territory subject to their own Emperor as the whole world.

After the examination was concluded, and the Father had returned to heaven, the whole group rejoiced together at the goodness of God, and proceeded to kill pigs and oxen, and offer them up in thanks, giving to the Father of all, for his power and goodness in confounding the falsehood and deceit of their enemies, and for His gracious care of His own children. It is evident from this that the insurgents are neither Jews nor Mohammedans, or they would not offer unclean animals to God.

The anthropomorphism displayed in the above pamphlet is very striking. The Deity is brought down from a state of distant superiority, and is represented as familiar with mortals, in a degree which to us appears somewhat revolting. His cross-questioning the culprit, in order to find out the truth, and his scolding several of the officers for their neglect, to whom he ordered 100 blows each to be given, are rather undignified representations of the conduct of the Supreme; leaving the impression on

our minds that not only is the whole scene got up for the purpose of over awing the multitude, but that the individual who conceived it is himself possessed of a vulgar mind. The language in which the pamphlet is drawn up is also excessively colloquial, and in some instances provincial.

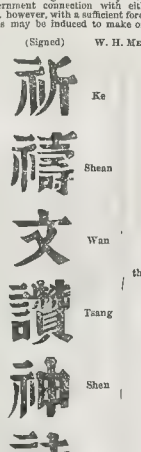
Throughout the given a general view of the above five pamphlets, we leave the reader to form his own opinion. To ourselves it appears exceedingly difficult to arrive at a definite conclusion. There are some things good, very good, in the productions before us, leading us to infer that the authors were divinely taught, and to cherish the hope that not a few will, through the medium of these truths, find the road to heaven. There are, however, some things of which we most highly disapprove—not the least of which are the pretensions to new and immediate communications from the Deity—some of which afford representations of the Divine Being far different from what we have been accustomed to in the Christian Scriptures, and made to serve the ends of personal aggrandisement and ambition.

The only way to account for the difference, is the supposition that two minds, or different sets of men, have been at work. the one animated by a sincere and humble desire to serve God and to seek His favour through the merits of the only Saviour, and the other desirous of imposing on the credulity of the unthinking many, with the view of elevating themselves to supreme power. Which preponderates, or whether both are largely mixed in the overall, it is impossible, without long and intimate personal intercourse with the people themselves, to say. One thing is clear, that a consider able knowledge of Christianity exists among the insurgents; and, could wise instructors effect a residence among them, the good might be fostered and the evil repressed. Should the insurrection succeed, we may at least expect a perfect toleration for Christian missionaries; and it is not unlikely that the party, when predominant, will cherish a favourable disposition towards foreigners, as holding in general the same doctrines with themselves. They would doubtless admit of commercial intercourse, but we may gather, both from their books and their conduct, that opium would be strictly prohibited—not as now, in name only, but in reality

The advantages to be anticipated from the success of the insurgents are, the opening of the country to religious and commercial enterprise, and the introduction of scientific improvements, which will benefit both the giver and the receiver. It would be sad to see Christian nations engaged in putting down the movement, as the insurgents possess an energy, and a readiness to improvement and general reform in what relates to their calendar which the Imperialists never have exhibited, and never can be expected to display. Questionable though it be, the form of Christianity which the insurgents profess is far better than the corrupt idolatry hitherto practised by the Chinese; and it is possible that the European nations, if engaged on the opposite side, would be going to war with some people in some respects better than themselves. Should the Imperialists, assisted by foreigners, prevail over the insurgents (of which there seems little probability), they will become much more obnoxious and insolent than before. They will remember our neutrality, our intercourse with the insurgents, and, above all, the apparent similarity between our religion and theirs, with the fact that the insurgents have divided their religion from foreigners. Chinese diplomatists, at some future day, may wield these arguments to our prejudice, and their statesmen be led to interdict, more strictly than ever, the introduction of those doctrines which, in their estimation, have caused their Government so much trouble. Be this as it may, matters have proceeded too far already for Europeans to be able to clear themselves, in the eyes of the Chinese, of all connexion, or at least sympathy with the insurgents; and the only policy that appears at present advisable, is to keep ourselves from being involved any further in the quarrel, and to avoid all Government communication with either party. Foreigners should be prepared, however, with a sufficient force to resist any attack which the insurgents may be induced to make on them to their own destruction.

(Signed) W. H. MEDHURST

We have been favoured with a copy of an English Book of Common Morning) Prayer, printed in Chinese characters, and circulated among the Chinese by Mr William Bramston This little work has been translated into Chinese by the Rev. Dr. Morrison. We engrave, for the satisfaction of our readers' curiosity, the title-page of the work before us. Considering the extent of our commercial relations with China, no less than the religious sympathy which appears to exist between the new sect and the Christian missionaries in that country, no time ought to be lost in increasing the facilities for acquiring a knowledge of the Chinese language in this country. The Government, the heads of universities and collegiate bodies and the religious and mercantile public, are all interested in this subject: and the best Chinese scholars ought to be invited to lend their co-operation. A grant of public money for the establishment of Chinese professorships and scholarships would probably give an impulse to the study of the Chinese language and literature. China presents a wide field for missionary enterprise; but the difficulties in the way of acquiring a knowledge of the language offer obstacles which seem to require special provision, in order that they may be successfully overcome.



GREAT FIRE AT DOVER.

This seaport town has been the scene of a great conflagrat on, which broke out on Sunday night, on the premises of Messrs. Walker and Co., oil and colour merchants and seed crushers, situate under Dover Cliffe, somewhat more than a quarter of a mile from the Dover terminus. The fire was not extinguished till late on Monday evening. The loss, will, it is supposed, be between £40,000 and £50,000. The premises covered an area of ground exceeding three-quarters of an acre. The buildings were filled with seeds of various kinds, at nearly this season of the year, it is exceedingly questionable whether the salvage will amount to £3000. The machinery used on the premises was also of great value, and was worked by steam-power, there being two engines in the place of from 25 to 30-horse power each; but the whole of it has been reduced to a mashapen mass by the fury of the fire. One very fortunate circumstance was, that when the fire was first seen by the authorities of the town, finding that the tide was fast ebbing, at once closed the gates of the bason, and kept plenty of water therein to supply the engines. Had it not been for this precaution, the loss of property would have been far more extensive than it is

Mr. Braidwood went down from London by a special train with two engines of the fire brigade. The soldiers in the town worked very meritoriously to extinguish the flame. While the firemen were actively engaged, and also police, under Superintendent Smith (the South Eastern Railway) Company, was busily engaged directing the movements of the railway engines, when, all of a sudden, a report like three cannons fired all to a crack, as the chiefs call it, or Lowden and Mr Rich, the chief clerk at the head station of the Railway, but hardly before the time to run away, when a portion of the cliff fell, with a noise resembling the discharge of a park of artillery, burying under it the house of one of the engines, and, it is feared, several persons who were standing near it. Three or four persons who lived in Lincoln-street and Snargate-street, and one near the Theatre Royal, have not been heard of since Monday morning, although they were all seen near the spot a few minutes before the alarm was sounded. The amount of chalk from the cliff that fell was nearly fifty feet high, forty feet wide, and something like sixty four feet deep, and it is estin ated at 2000 tons weight. The force of the accident was the immediate cause of the fire.

The soldiers, in their anxiety to prevent the fire from spreading, pulled down several small buildings, which was exceedingly fortunate, for had not this been done, the flames would inevitably have reached south. Even with this precaution, the materials of the buildings thus razed became ignited.

The town of Dover will suffer materially by the disaster, as the mill destroyed was employed to furnish one portion of the inhabitants with their weekly supply of water for house-hold pur poses.

Two engines and ten men were left to be ready in case of being called for. The insurance offices interested in the loss are the Atlas, the Alliance, the Norwich Union, the Globe, and the West of England. The whole of the men employed at the mills must of necessity be thrown out of employment for a considerable time, as it will take several months to rebuild the extensive range of premises.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—SATURDAY, AUGUST 13.

Several bills were forwarded a stage.

In committee on the Passengers' Act Amendment Bill, Mr. F. PEEL stated that his object was to correct some anomalies in the existing system, and to facilitate the emigration of labourers from China to the West Indies, giving the Government a control over the transport of Chinese from other than British ports in China.

The CHANCELLOR of the EXCHEQUER moved for leave to bring in a bill to supply an omission in an act of this session respecting the redemption of the land-tax, and to enact that the power of redemption should be limited to persons having an interest in the land, and that, when effected, the tax should merge absolutely, and cease to exist.

Leave was given, and the bill passed through all its stages.

The House adjourned at a half-past one o'clock.

HOUSE OF LORDS.—MONDAY.

The Royal assent was given by commission to the following bills:—Public houses (Scotland), Parish Vestries (No. 2), Highway Rates, Elections, Entries of Seamen, Lunacy Regulation, Encumbered Estates (Ireland) Act Continuance, Newspaper Stamp Duties, Crime and Outrage (Ireland), Registrar of Meetings, Municipal Corporation Act Amendment, Sheriff's Courts (Scotland), Oaths in Chancery, Naval Coast Volunteers, Land-tax Redemption, Consolidated Annuities (Ireland), Turnpike Acts Continuance (Ireland), Poor Relief Act Continuance, and several railway and private bills.

The Pilotage Bill and the Universities (Scotland) Bill went through committee. Several other bills were forwarded a stage.

HOUSE OF COMMONS.—MONDAY.

New writs were ordered for the boroughs of Stamford and Dungarvan, in the room of Mr. Herries and Mr. Maguire, who had accepted the Chiltern Hundreds.

Mr. T. HANKEY took the oaths and his seat for Peterborough.

GOVERNMENT OF INDIA BILL.

On the consideration of the Lords' amendments to this bill, the House agreed to various amendments in the clauses up to 43. On the motion that the Lords' amendment, leaving out clause 44 (relating to the salt duty) should be agreed to, Sir J. FITZGERALD expressed his strong conviction, from personal experience in India, of the necessity which existed for the removal of the salt duty; and, if the clause were to be omitted, he desired some security at least that the native purchaser should have salt free from adulteration.

Mr. Cobden complained of the injustice and cruelty of enhancing the price of salt, which was a necessary of life, to men receiving very trifling wages, and recommended a great reduction of the duty. Sir C. Wood said he had never justified the maintenance of a high duty upon this article, and he was ready to concur in a reduction of the duty, which the Indian Government were prepared to make as soon as the state of the revenue warranted the sacrifice. He had only contended that it was contrary to all sound principles for that Government to take upon itself to interfere with the financial arrangements of India; and the vote to which that House had come upon this question was not for a reduction of the duty upon salt, but that the present mode of levying it was objectionable, and that an Excise duty was preferable. The amendment of their Lordships was agreed to, and the clause is therefore omitted.

Mr. SOTHERON obtained leave to bring in a bill to regulate Friendly Societies, which he proposed, he said, to circulate as widely as possible, with the view of legislating upon the subject permanently next session.

Mr. KENNAIRD called the attention of the House to the amended criminal code of Malta, which, he said, had given just offence to the Protestant inhabitants of that island. He moved a resolution condemnatory of the annexed code. A debate followed, in which Lord J. RUSSELL observed, that as Malta, when it came into possession of the Crown Catholic country, and as we had promised that the religion of the Maltese should be maintained and respected, punishment must be awarded against those who openly insulted that religion. Believing that the code required further consideration, he promised that the whole matter should be reconsidered, with a view to ensure every respect to the Roman Catholic religion in Malta, and, at the same time, full civil and religious liberty to all her Majesty's subjects. Mr KINNAIRD thereupon withdrew his motion.

The House adjourned shortly after six o'clock.

HOUSE OF LORDS.—TUESDAY.

The Universities (Scotland) Bill was read a third time; the Smoke Nuisance Abatement Bill passed through committee, and was reported, and several other bills were also forwarded a stage.

HOUSE OF COMMONS.—TUESDAY.

THE EASTERN QUESTION.

Lord J. RUSSELL made his promised statement upon the subject of the dispute between Russia and Turkey. As his Lordship merely glanced at incidents generally known to the House and the public, it will be unnecessary to follow him through an outline of transactions already sufficiently well known. He regretted the precipitate withdrawal of Prince Menschikoff from Constantinople. It was considered by both England and France that, looking at the interests at stake, it was desirable that the Turkish Government should forego its right to regard the occupation of the Danubian Principalities as a *casus belli*, and that it should not decline to enter into further negotiations, of which the Ambassadors of the two Powers endeavoured to gather up the threads. When the Russian Government had occupied the Principalities Austria changed her views, and with reference to the treaty of 1841 deemed it necessary that there should be a Conference of the Powers; and the Austrian Minister for Foreign Affairs having adopted a proposition of the French Government as the groundwork of a proposal to Russia, the note containing it was finally arranged and settled to the satisfaction of the four powers on the 31st of July. To this note the Emperor of Russia had given his adhesion. Supposing the matter of this note to be fully arranged, there would still remain the evacuation of the Principalities; and it was quite evident that no settlement could be satisfactory that did not include their immediate evacuation, which, according to the information of Prince Gortschakoff, was to follow the satisfaction obtained from Turkey. He must ask too permission of the House to say nothing more upon this head, and request that the mode of obtaining the end in view might be left in the hands of the Executive Government. He thought there was now a fair prospect that, without involving Europe in hostilities, the independence and integrity of Turkey—which he had always said was a main object of her Majesty's Government—would be secured. That object was one which required the very attention of the Government, and it could only be secured by the union of England and France, and a constant and friendly communication between them.

Mr. LAYARD considered that there had been a want of that energy and decision in these transactions which would have been missed into our proceedings by Lord PALMERSTON. He dwelt in much detail upon the indications of design and artifice on the part of Russia in her conduct towards Servia, Wallachia, and Moldavia, and denounced the proceedings of her Ambassador at Constantinople. He deprecated the attempt to erect an independent Greek empire in Turkey, which, divided as Turkey was into antagonistical portions, would be broken up, like the Byzantine Empire, by similar causes. The very moment that Constantinople passed from the hands of the Turks, British India would be in jeopardy.

Lord J. RUSSELL said that if this dispute could be settled upon the basis that would have been considered a *casus belli*, she would not have dared to cross the Pruth. Russia had now gained what she wanted; she had shown that she could enter Moldavia and Wallachia whenever she pleased with impunity, whereas those Principalities ought to be made, with Bessarabia, a barrier between her and Turkey. He believed that, without having fired a single shot, Russia had gained advantages which would have repaid a fierce campaign, while we had lowered ourselves in the eyes of all nations. The note prepared by Austria had been signed at by Russia; if Turkey refused the terms, we must now join Russia against her; and if Turkey, under this terrible pressure, did accept them, we sanctioned the interference of Russia on behalf of 12,000,000 Greeks, not Greks by nation only, but by religion. Had the cases been reversed, and Turkey had invaded the Principalities, she would have been required not merely to evacuate them, but to pay all expenses and in addition an ample apology; and nothing less would satisfy the ends of justice.

Sir J. PAKINGTON rejoiced that the Government had determined to regard the evacuation of the Principalities as a *sine qua non*, and lamented that that should still remain an unsettled point. In making their evacuation an indispensable condition, the Government would be supported, not only by that House, but by the country. All desired peace—but no longer than it could be had with a due regard to the interests and the honour of this country, and the balance of power in Europe.

Lord D. STUART censured with asperity the proceedings of Russia. If, he observed, we had had a Foreign Minister who was not a Minister of Russia or of Austria, but of England, none of these deplorable events would have occurred which had endangered the peace of the world.

Mr. MUNTZ was of opinion that if we had had a different Government a Russian army would never have marched into the Turkish territory.

Mr. CORNEWALL said, everybody seemed to agree that the conduct of Russia had been treacherous and violent, and to rejoice that the occurrence had brought about a sincere alliance between England and France. The opinions expressed by Lord J. Russell were those of the people of England, for he believed even Birmingham would rather support his pacific policy than precipitate the country into a war. Still there was a feeling of uneasiness in this country respecting Turkey; but there was at the same time a growing conviction in men's minds that the integrity and independence of the Turkish Empire, as a maxim of policy, had become an empty phrase and nothing more. The Turks in Europe were intruders—their home was Asia; and the progress of events had demonstrated that a Mahomedan Power could not be maintained in Europe. The independence of a country that could not maintain itself could not be upheld; and a fact had now become prominent, that for every Turk in European Turkey there were three Christians. And what was the feeling of the Christian population of Turkey towards their rulers? He believed that, in the interior, it was not favourable; and if he were a rayah subject of the Porte, he should say "Give me my Christian Government rather than a Mahomedan." This feeling of the Christian part of the population in Turkey would become an important part of the subject, and we should have to address our minds to the question hereafter what we were going to do with Turkey, for we must not think that we could keep Turkey as it is. Mr. Cobden contended that the importance of the trade with Turkey had been overrated He maintained that all our commerce in the Black Sea was owing to Russian encroachments there. What could a country like Turkey, without roads, contribute to the commerce of the world? The balance of power might be all very well, but he protested against its being argued that we were bound, in the interest of England, to maintain Turkey. A good deal was said about the Russian power; but how absurd to talk of a Russian army invading England! Why, she could not send over her three hundred miles of frontier without a loan. If England engaged in war, it would be attended with consequences which the present generation had not reflected upon, or they would not talk so glibly about war. The Government, he thought, had done wisely, for themselves as well as the country, in disregarding the taunts of thoughtless men and reckless cry for war; and he did not blame them for adhering to the traditional policy of maintaining the integrity of Turkey.

Lord PALMERSTON said that Mr. Cobden had begun by talking of maintaining the independence of Turkey, and ended with endeavouring to show that Turkey was not worth defending. If he had stood there as an avowed advocate of Russia, he could not have dared to pursue a course more calculated to assist her views. Did not the hon. gentleman know that the commercial system of Russia was eminently restrictive and prohibitory, while that of Turkey was the most liberal of any country with which we had commercial relations? The resources of Turkey, which were constantly improving, tended to make her commerce every year more valuable to this country. Mr. Cobden regarded Turkey as a rotten fabric, and thought it was high time to consider what we should do with the country when we got rid of the Mahomedans. But Le Grand Palmerston) did not agree that the Turkish empire was in a state of decay; he held its maintenance to be not only desirable, but worth contending for. Turkey, so far from having gone back in the last thirty years, had made more improvements in social and moral customs and in religious tolerance than any other country. So far from going along with Mr. Cobden, he was convinced that, if we only kept out of Turkey those who wished to get into it, there were, as far as the seeds of internal dissolution were concerned, many countries in Europe which would not bear a very favourable comparison with it. He trusted Mr. Cobden's speech would not mislead any one beyond the limits of this country; that his language would not excite abroad feelings likely to mar the efforts of her Majesty's Government; and that the great preponderance of a proper feeling upon this subject in that House would prove to the world what were the real sentiments of the British Parliament and the British nation.—Adjourned to Friday.

HOUSE OF LORDS.—THURSDAY.

Their Lordships met at five o'clock.

The following bills were read a third time and passed, viz.:—The Burials (beyond the Metropolis) Bill; the Consolidation Fund Appropriation Bill; the Militia Ballots Suspension and Militia Law Amendment Bill; the Land Tax Commissioners Bill; the Defacing the Coin Bill; the Linen, &c, Manufacture (Ireland) Bill; the Pilotage Bill; the Smoke Nuisance Abatement (Metropolis) Bill; the Stock in Trade Exemption Bill; and the Customs Tariff Act Bill. The other bills upon the paper were advanced a stage.—Adjourned.

THE SMYTH FORGERIES CASE.

In our last Number we gave an account of this extraordinary trial and its result. To continue the subject, we may further state that on Thursday the prisoner, "Smyth," was brought before the Rev. Dr. Jenne, a magistrate of Gloucester, on the charge of forging and uttering certain documents; and was fully committed for trial From the evidence of the witnesses then examined, it appears that his real name is Provis, and that he had been convicted and imprisoned for horse-stealing. His father recognised him; and also an old pupil, who identified the prisoner as his schoolmaster, at Bath, in 1814. The seal-engravers, Moring and Cocks, proved that the seals applied to the documents had been ordered of them. It happens, too, that one of the seals was engraved by a process which has only been invented within these few years.

At the close of the proceedings, the prisoner (for whom no counsel nor attorney appeared), after receiving the usual caution from Dr. Jenne, said that, being unprotected by legal advice, he did not feel himself justified in entering into any explanation respecting any of the circumstances which had been deposed to, except that he considered that the proofs in support of the illegality of the documents had not been, in the present instance, proved by any evidence; nor the facts of the drawing, signing, or sealing by him of the deeds, or of his possession of them, except of the document marked "B" (the deed of 1822); and, considering the evidence given before the Judge of the genuineness of the signatures not being overpowered by the testimony of the witnesses examined before the magistrate, he left the matter to the magistrate's determination. He declared himself not guilty of the charge; and, if he was committed on the charge of absolute and positive forgery, he should consider himself unjustly committed.

With reference to the trial itself, we may state that at the time when the counsel for the plaintiff threw up their briefs, there remained upwards of fifty witnesses to be examined on his behalf; while as many as sixty were present on the part of the defendant. It would have been proved by Mr Herapath, the analytical chemist, that the deeds were incontestably forgeries, the will and seals being of modern date. It was also proved that the seals applied to the documents had been ordered of them. It happens, too, that one of the seals was engraved by a process which has only been invented within these few years.

At the close of the proceedings, the prisoner (for whom no counsel nor attorney appeared), after receiving the usual caution from Dr. Jenne, said that, being unprotected by legal advice, he did not feel himself justified in entering into any explanation respecting any of the circumstances which had been deposed to, except that he considered that the proofs in support of the illegality of the documents had not been, in the present instance, proved by any evidence; nor the facts of the drawing, signing, or sealing by him of the deeds, or of his possession of them, except of the document marked "B" (the deed of 1822); and, considering the evidence given before the Judge of the genuineness of the signatures not being overpowered by the testimony of the witnesses examined before the magistrate, he left the matter to the magistrate's determination. He declared himself not guilty of the charge; and, if he was committed on the charge of absolute and positive forgery, he should consider himself unjustly committed.

With reference to the trial itself, we may state that at the time when the counsel for the plaintiff threw up their briefs, there remained upwards of fifty witnesses to be examined on his behalf; while as many as sixty were present on the part of the defendant. It would have been proved by Mr Herapath, the analytical chemist, that the deeds were incontestably forgeries, the will and seals being of modern date. It was also proved that the seals applied to the documents had been ordered of them. It happens, too, that one of the seals was engraved by a process which has only been invented within these few years.

Mr. Hunt, solicitor to the corporation of the diocese, Dr. Monk, ascertained that Dr. Verner Love was alleged to have married Sir Hugh in Ireland, did not take out a license or publish banns before the marriage took place. It has been ascertained, likewise, that on the day on which the marriage took place, it would have been impossible for Dr. Love to have married Sir Hugh and Lady Smyth at Ashton Court. Probably, much of his information as to the earlier branches of the Smyth family was derived from this source. Several men bers of the bath fire brigade were present to state that they had never heard of such a person as the prisoner in connexion with their house, and the governor of Ilchester gaol was also present.

The result of the trial has produced quite a consternation amongst the tradesmen of Clifton, who had, at the time of gaining his many favours warmly espoused "Sir Richard's" cause, and acted him to a large extent with goods and money. It is understood, also, that several gentlemen of the place have given information to the police that they have claims upon Dendeen to secure them the modest sum of £1,000 each, and £2,000 per annum for each!

FETE OF THE EMPEROR.—ILLUMINATION AND BALLOON ASCENT IN THE CHAMPS ELYSÉES.

Fine Arts.

THE NATIONAL GALLERY.

CLEANING THE PICTURES.—THE NEW GALLERY.

One of the most important committees ever nominated by the Senate of this country on the subject of the Fine Arts, has just completed its Report to the House of Commons. The Committee was appointed in March last, to inquire into the management of the National Gallery; and to consider in what mode the collective monuments of Antiquity and Fine Art possessed by the nation may be most securely preserved, judiciously augmented, and advantageously exhibited to the public. The Committee consisted of Colonel Mure (chairman), favourably known by his recent work on the literature of Ancient Greece; four Lords—Lord Seymour (an active nobleman in all committees), Lord Brooke (now Earl of Warwick), Lord William Graham, and Lord Elcho (Mr. Charteris); one Baronet—Sir William Molesworth (there by his office connected with Works and Buildings); and eleven Esquires—Mr. Labouchere (distinguished by his taste and liberality as a collector), Mr. Baring Wall (equally and longer distinguished in the same way), Mr. Monckton Milnes (the poet), Mr. Stirling (author of the "Annals of the Artists of Spain"), Mr. Ewart (justly celebrated for his activity in all matters connected with the arts), Mr. Raikes Currie, Mr. Marshall, Mr. Vernon, Mr. Goulburn, Mr. Hardinge, and Mr. Hamilton. This Committee, though nominated so recently as March last, has sat thirty-five times between the 18th of April and the 3rd of August; has examined very many and important witnesses; has conducted inquiries of its own; and has agreed to a Report which will carry with it the general concurrence of every unprejudiced person.

This Committee, it will be remembered, arose out of the numerous complaints made in the newspapers, and in petitions to the House, of the injury done by cleaning in 1846, during the Keepership of Sir Charles Eastlake: and in 1852, during the Keepership of Mr. Uwins. Sir Charles Eastlake was, in 1847, put on his public trial before the Trustees of the Gallery, for his labours in the autumn of 1846; and the judgment given by them, and in print, too, was, "that the report is entirely satisfactory, and justifies the confidence which the Trustees have reposed in Mr. Eastlake's judgment in respect of the treatment of the pictures in the National Gallery." This decision met with some dissentients; among whom, the loudest were Mr. Morris Moore, and his friend and fellow-labourer Mr. William Coningham—gentlemen whose zeal in the cause they consider so just, has been made patent to the world by the large type and position given to their complaints in the columns of a daily journal:—

The points on which the Committee in conducting this inquiry chiefly directed its attention were—

1. The constitution and general management of the Gallery.
2. The management of the Gallery as specially connected with picture cleaning.
3. The changes and improvements to which the system may require to be subjected.
4. The site, present or future, of the Gallery, and the expediency of combining the National Groups of Monumental Antiquity and Fine Art in one building, or group of buildings, and under a single system of management.

To enable them to arrive at sound conclusions on these four great points of inquiry, the Committee examined all classes of witnesses. They heard at length the complaints of Mr. Morris Moore and Mr. Wm. Coningham: they heard two of the most active trustees of the Gallery, Mr. William Russell, the Accountant-General of the Court of Chancery, and Lord Monteagle, the Comptroller-General of the Exchequer. They examined the ex-keeper, Sir Charles Eastlake, and the present keeper, Mr. Uwins. They examined the actual cleaner, Mr. Seguier, and his rival cleaner in reputation, Mr. Farrer. Other witnesses came before them. The Royal Academy were represented by Sir Edwin Landseer, Sir Richard Westmacott, Mr. Stanfield, Mr. Roberts, and Mr. Hart; painters without the pale of the Academy, by Mr. Herbert, Mr. Lucas, and Mr. Fergo; connoisseurs, by Mr. Devonport Bromley and Mr. Richard Ford; and architects and builders, by Mr. Pennethorne and Mr. Thomas Cubitt Nor was this all. Mr. Faraday undertook an inquiry for them as to the effects of alcohol, and furnished the Committee with the results of his experiments. The evidence is not yet in print. It was, as might be expected, to a great length; but it is easy to see, from the language of the Report, in what direction the principal evidence preponderated.

If we follow the committee through its own four heads of inquiry, we find that the Trustees, as a body, are insufficient for the purposes for which they are required; that while Mr. Seguier and Sir Charles Eastlake were keepers, the responsibility of cleaning the pictures was almost entirely in their hands; but that since Mr. Uwins's appointment, the Trustees have assumed the entire responsibility of the cleaning; that the additions to the collection have not been made on any definite principle; and that many opportunities have been lost for effecting valuable additions to our limited stock of pictures illustrative of the history of art. Thus much we gather out of Inquiry 1. Inquiry 2 is devoted to the Picture Cleaning that has prevailed in the Gallery; and here the Committee had to sift the most conflicting evidence, of which the Report supplies admirable instances, in the opinion advanced before them by Mr. Morris Moore and Mr. Thomas Uwins. Here is Mr. Moore's opinion:—

In regard to the effect produced by the late cleaning, Mr. Moore, who had found fault with the picture cleaning in 1846, is even severer than the master-veherment in his complaints. He states that the original painting has been in many cases entirely rubbed out, and that in one case, Hogarth's, it has been actually wiped away and obliterated by the process of the cleaner. Other pictures, he says, have been flayed, scrubbed, and irretrievably ruined, that wherever before they were in fine condition they are now offensive to the sight, and deprived not only of artistic beauty, but of commercial value. A further effect, that this evidence given by almost every witness is worthless, and that Sir C. Eastlake and Mr. Uwins are alone responsible for the lamentable proceedings at the National Gallery.

Mr. Uwins, with equal confidence, pronounces a directly opposite opinion. He has characterised the evidence of Mr Morris Moore as displaying a mass of ignorance and want of intelligence. He declares that one picture, so far from being brilliant before it was cleaned, was dark, dingy, and abominable in his sight; whereas now it is exactly what the master intended, all harmony and sweetness, a school of art in itself.

Sir Charles Eastlake (the ex-Keeper), who, however, did not, we are told, "state his views very definitely," is of opinion that, in the cleaning of 1853, the instructions of the Trustees had been *overpassed*; which he afterwards interpreted by saying, that too much of the old varnish had been removed But this is only a sample of the differences of opinion against which the Committee have had to contend. Mr. Uwins, the Keeper, and Mr. Seguier actually differ in describing what was done to the pictures cleaned in the autumn of last year.

They differ (the Report observes) as to the processes to which these pictures have been subjected. For example, Mr Seguier states, that, after washing off certain upper coats of oil or dirt with soap and water, he partially removed the lower sounder coat of varnish from seven of the pictures by the process of friction or dry rubbing Mr Uwins, on the other hand, maintains that this process of friction, which he condemns as dangerous, was never employed by Mr. Seguier in his presence, and that he was daily present in the Gallery during the whole of the operation.

On the weight of evidence and the preponderance of testimony, the Committee has come to the following—as it appears to us sensible conclusion:—

The weight of evidence varies considerably in respect of the effects produced upon each of the nine pictures which have been lately subjected to process of cleaning. In some instances the witnesses are of opinion that the operation was not required; in other cases they state that it has been either too severely or unequally performed Even in those cases where there appears the strongest body of adverse evidence, testimony has been borne by experienced artists and amateurs to the difficulty of distinguishing in regard to a picture previously obscured by coats of dirt, or discoloured varnish, how far the blemishes observable on the removal of such coats are to be ascribed to the cleaner last employed, or how far they may have been caused by others through whose hands the picture may have passed at various periods of its transmission from the easel of the master to the walls of the Gallery.

Another mode in which various witnesses would explain or palliate defects that have been apparent since the last cleaning has been a reference to the well-known fact that repairs or repaints are liable to be brought away by applications which would not affect the original surface of an old seasoned picture; and therefore, that had such repairs been removed or disturbed in the last cleaning, the result might be a want of harmony, the usual remedy for which, a fresh restoration, or re-toning, is not, as has been already stated, allowed in any instance to have been consorted to by the Gallery cleaner.

Others again maintain that pictures newly-cleaned, no matter how skilfully and carefully, invariably appear at first crude and inharmonious, more especially when contrasted with other pictures that have not recently undergone the process of cleaning, and that time and exposure will restore their tone and harmony.

The preponderance of testimony is to the effect that the appearance of the pictures has for the present been rendered less agreeable by the operation of cleaning: in some of them, in regard to their general aspect, by the removal of the mellow tone which they previously exhibited; in others, from special injuries which have become apparent, and which in a former state of the pictures were not perceptible.

Picture-cleaning is properly divided by the Committee into "Picture-cleaning in its familiar sense," and "occasional cleaning."

Picture-cleaning proper (or improper, as Messrs. Moore and Coningham would call it) "denotes the removal, by mechanical or chemical processes, in whole or in part, of the old varnishes, or other incrustations, by which a painting may be covered, but by which it is usually also in some measure protected from injury" This process usually necessitates the re-varnishing of the picture. "The mechanical means generally employed" are stated to consist in rubbing with the finger the surface of the varnish, when in a perfectly dry state, so as to bring the varnish off in a fine white powder; and also in the use of sharp steel instruments, without which, in some cases, dirt and incrustations of various kinds cannot, it is said, be safely or effectively removed. The chemical processes consist in the application of solvents to the surface of a picture, by which the old varnishes are removed."

The observations of the Committee on this important process are concise and sound.

One great danger of friction is said to arise from the inequalities of the surface of the picture, or of the canvas on which it is painted, the effect of which necessarily is, that the higher or more prominent portions run the risk of being rubbed away, while the parts adjoining remain comparatively untouched On the other hand, friction is stated to possess this advantage, that where a picture is painted on a smooth substance, such as wood or metal, a portion of the varnish can be rubbed off, while a thin coat may still remain as a protection to the surface paint.

Steel instruments appear to be used by many picture-cleaners, especially in Italy; but your Committee have received no evidence to show that they have been employed in the National Gallery.

So, likewise, with reference to solvents. Some witnesses, picture-cleaners, artists, and amateurs, have given it as their opinion that the safest way of cleaning a picture is by means of solvents; but it has been held by others that solvents might not only destroy the varnish, but bite through the paint to the ground of the canvas

Of the various solvents employed in picture-cleaning, soap and water, and spirits of wine, appear to be most in use in the National Gallery.

Soap would seem to be chiefly used for the removal of dirt or oil from the surface of a varnished picture, it requires, however, like other solvents, to be employed with extreme caution, as its alkaline qualities are calculated, in the event of its being incautiously applied, to produce the most injurious effects upon the texture and colour of a picture

With regard to spirits of wine, it has been stated to your Committee that a seasoned oil painting is not susceptible of injury from its application; and that, consequently, there can be no risk in using it in a pure state for the purpose of removing dirt or varnish from a picture of the above description.

The Committee very properly endeavoured to ascertain from Mr. Uwins the system which had been pursued in regard to the cleaning of pictures during the period of his keepership. The result is curious:—

It appears from his evidence, that he strongly recommended to the trustees the cleaning of "the Consecration of St. Nicholas," a picture by Paul Vermeer; but, with this single exception, he never spoke to the Trustees on the subject of picture-cleaning, nor was he ever consulted by them. He considered it to be only his duty to attend to the directions of the Trustees, and not to offer any suggestions, either as to the pictures which in his opinion required cleaning, nor as to the process to be adopted. The statement of Mr. Uwins, however, has been met by the evidence of several Trustees, to the effect that Mr. Uwins was habitually present in his official capacity at the meetings of the Board; and that it has always been understood, that, in regard to pictures, it was peculiarly his province to give his opinion, even when not formally consulted, especially on matters of a technical description Your Committee do not feel competent to decide as to such evidence points of difference between the Trustees and their chief officer.

From the experiments undertaken by Mr. Faraday, at the request of the Committee, in order to test the value of these conflicting opinions as to the effects of alcohol, it appears—

That a vehicle of pure oil is, in fact, little, if at all, affected by an application of spirits of wine The same experiments, however, have shown that a slight addition of resin, or of resinous substances, to the vehicle of oil painting; and while this fact sufficiently explains the contradictory evidences as to the effect of alcohol upon pictures, it forcibly proves the danger which is to be apprehended from the incautious application of chemical solvents to the works of the ancient masters.

There are other points of dispute, thus:—

When a picture has passed through the above-stated mechanical or chemical processes, it will require, according to the evidence of some witnesses, a certain time to be given to it, without which it will appear crude, harsh, and altogether unlike. How this tone can be attained, is again a matter of dispute, some persons consider that fresh colour, or a thin wash of coloured varnish, should be applied; others assert that time will restore the mellowness which cleaning has removed: artists even recommend that a picture should be exposed, so that the sun may gather a certain veil of dirt, which, it is said, will be favourable to its effect. These opinions are contradicted by other witnesses, who affirm that the tone of a picture, when once broken, can never be restored, and that picture-cleaners destroy the works of art which they pretend to improve. This practice of toning does not, however, appear to have been resorted to in the National Gallery.

Another point brought before the Committee was the necessity of re-lining pictures. Here, again, the doctors disagree:—

It is maintained by witnesses of high professional reputation, that in many cases a picture cannot be safely cleaned and restored until it has been re-lined

This operation consists in the removal of the damaged canvas or other material on which the picture is painted, and the substitution of a fresh canvas

It is obviously a work of difficulty, involving, there'ore, considerable risk; but evidence has been given that it can be executed in a thoroughly skilful and satisfactory manner; and one witness has stated that in his opinion the process of lining has never been so well understood as it is in the present day.

We now approach the precautions for the future embodied in the Report. Here they are:—

That no picture-cleaner shall be employed in the Gallery who declines to give a full and distinct explanation of the mode in which, and the materials with which, he proposes to operate on the pictures submitted to him for treatment.

That no picture shall hereafter be cleaned, lined, or otherwise repaired without a previous written report from the Director of the Gallery to the Trustees.

That the Trustees shall, if they see fit, appoint a Commission, consisting of not less than three experienced persons, including one practical chemist, by whom the picture shall be carefully examined.

That the Commission shall draw up a report, stating whether it is desirable that the picture should be cleaned or repaired; and, if so, as to the mode and extent in which the operation should be performed.

That the recommendation of the Committee of 1850, as to the permanent protection of the backs of the pictures, shall, with all convenience speed, but with the necessary precaution, be carried into effect; and that, until the whole collection shall be so protected, the back of each picture shall, at least once a year, be relieved of the dust or impurities which it may have contracted.

That no varnish should be used in the Gallery without the sanction of the Director, who shall be responsible for the mode of its composition and the quality of its materials.

The conclusions and recommendations of the Committee are twelve in number. The information in brackets we gather from other portions of the Report:—

1. That a system of management by a Board of Trustees should be continued
2. That no person should in future, in virtue of any office, become a Trustee of the National Gallery.
3. That the Trustees be appointed by the Treasury.
4. That it is expedient that the number of Trustees be diminished as vacancies occur
5. That the office of Keeper of the Gallery should be abolished.
6. That a salaried Director (with a salary of not less than £1000 a year) should be appointed by the Treasury for a definite time [at least five years]: at the expiration of which he may be re-appointed. [The present salary of the Keeper is only £200 a year.]
7. That every recommendation for the purchase of a picture should originate with the Director, and be made in writing to the Trustees.
8. That a fixed sum should be annually proposed to Parliament for the purchase of pictures, and placed at the disposal of the Trustees.
9. That the site of the present National Gallery is not well adapted for the construction of a new Gallery.
10. That the estate at Kensington Gore, purchased by the Royal Commissioners of the Exhibition of 1851, and by them offered to the nation, presents many of the advantages recommended by the witnesses before your Committee. The position which has been suggested at the extremity of Kensington Gardens would afford a better guarantee for the future protection of the works of art there collected from the evils incident to a crowded neighbourhood, and would improve the opportunity of erecting an edifice worthy of the purpose; but your Committee are fully aware that the acquisition of such a site is attended with difficulties they see no adequate means of removing; and, in consequence, they are prepared to recommend the acceptance of the offer of the Commissioners.
11. That the question of combining the various artistic and archæological collections in the British Museum with the National Gallery be referred to a Royal Commission.

It is time no time should be lost in obtaining the decision upon the above question, in order that the new National Gallery should be commenced with all convenient speed.

The Committee were unanimous, all but one, for the removal of the National Gallery from its present site. The dissentient was Mr. Baring Wall; but his reasons for adhering to Trafalgar-square are not given.

In concluding our notice of this Report, we cannot help expressing the difference of opinion which we entertain from the second recommendation of the Committee, that in future "the Keeper of the Gallery be appointed by the Treasury." The Prime Minister is now the universal dispenser of patronage in this country: he is presumed to know everything, and to know everything better than anybody else. Now, the numerous and increasing avocations of a Prime Minister will not enable him to pay sufficient attention to other pursuits than those particular Cabinet Councils in which he is immediately engaged. Mr. Disraeli was obliged to neglect his literary calling when Chancellor of the Exchequer, and it is impossible that Lord Aberdeen, or Lord John Russell, or Lord Derby, or Mr Cobden, can be "up" in financial and Fine Art matters; to say nothing of the church and lay patronage which the Prime Minister has to distribute with advantage to the public, and satisfaction to his own conscience, in the midst of heated debates, crabbed interviews with deputations, and the discussion of measures applicable alike to Russia and Turkey.

LITERARY MISCELLANIES.—No. IV.

A FRIEND OF TALLEYRAND.

It is singular that among the numerous reminiscences of the modern French Machiavel with which the press was inundated for months after his death, and many of which were puerile as well as apocryphal, so little should have been said of his *protégé* and consident, M. de Montrond; who, nevertheless, well deserved mention, were it only as a type of that class of individuals who, born with all the elements of personal distinction, are content, from some deficiency in their moral organisation, to live on the distinction of others. Such persons are, in this day, becoming rare; universal progression has induced a more exacting temper of mind among all ranks; and men who might, half a century ago, have been content to profit by the energies of others, and to reap that which they had been too indolent to sow, are now each anxious to put his own hand to the sickle, in order to appropriate the whole harvest. Doubtlessly, in some points of view, society at large must be a gainer by this general spirit of speculation; but the psychologist loses, meanwhile, an interesting, and by no means unprofitable study; while there can be little hesitation in affirming that the parasite was to his patron as great a luxury as a Massic-and-Lesbian banquet to a *bon-vivant*, or a shower of bouquets to a *prima-donna*.

How much, then, must this luxury have been enhanced to the ex-Bishop of Autun, when, in the person of M. de Montrond, he possessed not only a partisan, but also a *spiritual* and careless companion, who suffered his own witticisms to be attributed to his illustrious friend, without one effort to reclaim their paternity; whose political principles were so flexible that he passed from the interests of the Monarchy to those of the Directory, thence to those of the Empire, and subsequently to those of Restoration, with a composure equal to that of a great model, without one comment calculated to ruffle his equanimity, and who, finally, exerted, without any apparent effort, the extraordinary art of fixing upon himself all the blame of his patron's faults and mistakes, and of leaving to him all the credit of his own successful suggestions.

Such an individual was M. de Montrond; and nature had admirably fitted him for the part which he was destined to play in the great drama of society. Young, handsome, and high bred, full of a certain talent which at once captivated those with whom he was brought into contact, M. de Montrond first made his appearance in the fashionable circles of Paris a short time previous to the Revolution of '89, and became at once the idol of the gay and luxurious. His style of living was equally elegant and profuse: although the most eminent of his associates never succeeded in discovering the source from whence he derived his revenues. At that period the Court of France was too frivolous to waste time in solving such a problem, and too much absorbed in pet inconvenient questions; and thus the young *élégant* lived on, scattering his louis d'ors as though they grew up beside his path, and winning golden opinions from those who profited by his profusion. It is related that M. de Montrond was amiable, witty, and facetious—that he rode the finest horses—gave the most exquisite dinners—and indulged in all possible extravagances that fashion either approved, prescribed, or tolerated. Every one, therefore, besides could demand more: and it was only just that he should become the fashion. If there were no laurels to be gained in such a career, none could deny that de Montrond wore his roses gracefully. He was the most winning of guests—the most agreeable of companions—and one possessed in a more exalted degree the art of pleasing. Nature, as we have already stated, had done much for him, and education had completed the work. It had been the aim and end of his ambition to be distinguished as one of the most accomplished gentlemen of his time—and he succeeded to perfection. He was quoted and copied by the men—idolized and caressed by the women. At once modest and self-possessed, he ruffled no dignity, combated no prejudices, exacted no deference. The incense burnt upon his altar never incommoded the idol: on the day that he ever all-in-all, and the morrow a perspective unsaddened by a single doubt or a single anxiety. A brilliant sparkle upon the tide of life, he glided onward—bright, rapid, and attractive—as though the fouler objects that met the surface were never destined to come in contact with his own effulgence.

M. de Montrond, thus constituted, could not long remain unnoticed by so shrewd and far-sighted an observer as the Prince Benevento, who, accordingly, did not fail to make his acquaintance Dazzled by the brilliant intellect, and fascinated still more by the graceful bearing of the young stranger, he invited him to his house, and they soon became fast friends: the age and rank of the Prince giving to their intimacy the character of protection which was not without its value to both parties. Ere long the man of fashion was the inseparable companion of the man of expediency; and, whatever may have been the spell exercised by de Montrond over the spirit of his self-constituted patron, it is but just to the latter to record the fact, that amid all the mutations of his career, that spell was never broken. Talleyrand violated treaties, forswore pledges, forsook old masters to consort with their enemies, played with the fortunes of a great nation as lightly as boys blow bubbles, but never for an instant did he abandon the interests of the favourite to whom he had promised his protection and support. He burst like an athlete the strong cords of political and social duties; but the fragile thread by which he had bound himself to de Montrond remained unsevered to the last. He betrayed Kings, and trifled with the great ones of the earth; but he was true to the brilliant follower who had won alike his admiration and his regard. And on his side, de Montrond responded to this trust and this affection. He was acute enough to feel that he could win no worthier patron than the political Atlas, who bore, at times, the whole burthen of European

interests upon his single shoulders. The school was a subtle one: the master all-sufficient; and de Montrond was an apt scholar. Nor was it long ere he, too, learned to look, on all public measures only with an eye to their bearing upon himself, and on those upon whom he depended.

For awhile the young diplomatist remained a mere obscure pawn upon the great political chess-board where Talleyrand checkmated Kinge. But when the ex-Bishop of Autun had secured the confidence of the Republic, and became its Ambassador to England, he introduced his young friend at the Court of St. James's not in an official character, it is true, but secretly employed in the negotiation which was then pending between the two Governments. Nor was the perspicuity of the great statesman at fault when he measured the capabilities of the *pseudo* man of fashion; for, throughout the whole of the transaction, De Montrond, novice as he had so lately been in State affairs, displayed an intelligence, an aptitude, and a craft, which would have done credit to a man of twice his years. Talleyrand watched him narrowly, and with every succeeding day saw reason to place greater confidence alike in his talent and in his attachment.

Nothing, could excite the ambition of de Montrond; he cared neither for rank nor place; and, at each succeeding offer of the one or the other, he constantly replied by indicating some individual whom he knew to be a candidate for its advantages.

"Life is so short, and so *triste*," he would say, "that high-sounding titles and empty dignities only make it briefer and gloomier." But when, instead of place, he was offered pension; when, instead of gaud he was offered gold, then, indeed M. de Montrond listened with a willing ear. He loved gold—not for its own sake, he loved it as a means, not as an end. He could conceive no greater luxury than waste, and, like the relatives of Mazarin, who, just as he had breathed his last, amused themselves by flinging his hoarded riches out of the windows by handfuls, believing them to be exhaustless; so de Montrond no sooner profited by the indulgence of the Minister (who, anxious to serve him in his own way, included him in all his most promising speculations; and even, as it was confidently asserted, gave him from time to time such secret information as rendered his transactions at the Bourse anything but ventures), than he scattered his ill-gotten gains right and left; feeling that, thanks to his powerful patron, he was independent of income, patrimony, or landed estates. Careless of the future, the present was all to him; and he existed amid the splendours of a Prince, and the luxurious personal indulgences of a man of the world. The elegance of his dress, the sumptuousness of his equipages, and the elaborate magnificence of his residence, were the admiration of all Paris; while he never wasted a thought upon the possible precariousness of his position, or made one attempt to secure to himself a provision for his age. So great was his improvidence that this spoilt child of fortune was sometimes not worth five sous in the world; and the opulent man of a few months back was occasionally so overwhelmed by debt, and harrassed by duns, that he had recourse to the most extraordinary expedients. But these reverses never affected either his habits or his unalterable good humour. Where he could render assistance, he was heart and soul in the attempt; but every endeavour was vain to induce him to resent an injury. "I have not courage to hate any one," he was accustomed to say, "not even those to whom I am under an obligation."

"I cannot imagine," said a Princess of the Imperial family to him, upon one occasion, "what can attach you so strongly to M. de Talleyrand?"

"Why should you be surprised, Madame?" was the retort of the elegant courtier; "who could help loving him? He is so vicious." Nor was the minister less accustomed than himself to indulge his wit at the expense of his friend. M. de Montrond was proverbially unscrupulous at the card-table—a little foible which did not fail to involve him from time to time in certain dilemmas, from which he did not always extricate himself without difficulty. One day he complained to his patron, that, after a mistake of this nature, his adversary had threatened to throw him out of the window.

"Montrond," said the Prince gravely, "I had already advised you never to play except on the ground floor."

Such was the chosen friend and M. de Talleyrand. Neither time nor reverses could sever his mature for an hour; and throughout sixty long and eventful years, he pursued the same extraordinary career: light-hearted, frivolous, dissipated in the widest extent of the word, a gambler, and a dandist, his equanimity was never shaken; and he was truly a philosopher, if philosophy can be admitted to be compatible with the indulgence of every species of vice and self indulgence.

Never was de Montrond known to shed a tear save on one occasion, and that was when he wept over the dead body of his patron; and this merit must at least be conceded to him, that, unlike others who had partaken of the munificence of the deceased Minister, and stained his fame even, he did not seek to profit by that patron's decease to betray his trust, and to earn a few dishonourable pounds by revealing his secrets, garbling his opinions, and exposing his failings. As a Minister the world had a right to judge his memory; but, as a man, surely his private and unofficial services have been well, one and all, to imitate the honest discretion of M. de Montrond, and not to have bartered their knowledge of their former benefactor for the stipulated "thirty pieces of silver."

The subject of our Sketch followed his illustrious patron to the grave in October, 1843.

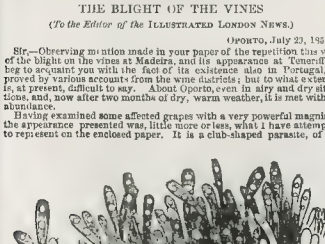
THE BLIGHT OF THE VINES

(To the Editor of the ILLUSTRATED LONDON NEWS.)

OPORTO, July 23, 1853

SIR,—Observing mention made in your paper of the repetition this year of the blight on the vines at Madeira, and its appearance at Teneriffe, I beg to acquaint you with the fact of its existence also in Portugal, as proved by various accounts from the wine districts; but to what extent it is, at present, difficult to say. About Oporto, even in airy and dry situations, and, now after two months of dry, warm weather, it is met with in abundance.

Having examined some affected grapes with a very powerful magnifier, the appearance presented was, little more or less, what I have attempted to represent on the enclosed paper. It is a club-shaped parasite, of the



fungus kind, I should fancy, by its strong mushroomy but disagreeable smell, growing luxuriantly on the grape, each plant or branch being interlaced by several transparent lobes. To detach them from the grape some comparative force is necessary, although to the naked eye their appearance is only that of flour or white dust.

I think there is no doubt the disease here is identical with that in the Islands. It is not, I am told, an entirely new thing, it having before been observed, but not, apparently, to the extent of this year, nor to excite fears as to its effect on the succeeding vintage as now.

I beg to remain, sir, your obedient servant,

I. W. FOWLER

P.S.—I have omitted to say the effect produced on the affected grapes is first a shrinking and withering, then a drying and cracking, protrusion of the seeds, and death. The round, hard plumpness leaves the grape when once it is covered with the blight.

BRADSHAW'S RAILWAY GUIDE FOR AUGUST contains an improvement which merits notice. In the Time Table department a new arrangement assists the traveller to connect the different junctions with the main lines and their branches. This is effected by the numbers introduced into the station columns of the pages, and which numbers refer to various connections with other lines, pointing out continuous routes. Thus, at page 87, we refer the travel er to three folio numbers, which on being turned to, give him immediately the direct route from four places to Preston—i.e. from London, Birmingham, Liverpool, and Manchester, and so on through the entire branches.

TO CORRESPONDENTS.

*** Our Chess column is unavoidably deferred.

G. D. G.—See Akerman's "Works on Greek and Roman Coins," published by J. R. Smith, Soho-square.

S. H. Pimlico.—The seat of the Earl of Essex, near Watford, Herts, is named Cashiobury, from its being in Cashio hundred; but, some antiquaries, adopting Camden's location of the Cash in the hundred, call the seat Cassiobury. Mr. Britton has adopted this opinion in his folio "Account."

NAUTILUS, Portsmouth; and E. D., Manchester. Declined.

ZENO.—A satisfactory "Book on Dancing" is published by Mitchell, Red-Lion court, Fleet-street. Blasis has written the "History of Dancing," and Archdeacon Nares, when young, wrote a small work on the "Pantomime."

DELTA.—A statuette is a small statue

DRUS, Oxford.—The style and description are correct.

BRITON, Hastings; Sussex; and FITZ, Sidmouth.—Chobham, Surrey, is pronounced Tchobham. There is also in the same county, Cobham, near Watton-on-Thames. In Domesday Book, Chobham is called Cebeham

H. L., Berwick.—The learned Dr. Arbuthnot, a writer of sound English, employs "spoonfuls."

A CONSTANT SUBSCRIBER.—The charge for an advertisement in the ILLUSTRATED LONDON NEWS, when ascertained, can be remitted in postage stamps.

PYTHIA.—The number of votes recorded in favour of Louis Napoleon's election as President of the French, in December, 1851, was 7,439,216, negative votes, 640,737: total re. istered, 8,116,778

HOTTENTOT.—In Sardanapalus, the accent is on the penult, or last syllable but one.

S. C. I., Wellingborough, will, perhaps, favour us by sending an original sketch.

FLORA.—The "Arabian Nights" (tales) are, in part, from an Indian source. (See "Arabia," "Penny Cyclopædia.")

J. J. B.—See the "Secretary's Assistant," published by Whittaker and Co., and the "Letter-Writer" of recent date

M. A. F.—Apply respecting the impressions to Mr. Webster, coin-dealer, 17, Great Russell-street, Covent-garden.

MINERVA.—See Delamotte's work on Photography, recently published.

B. C., Sheffield.—See the "Handbook of Games," published by H. Bohn.

ELIZOTH H., Holt, had better enquire a stonemason.

A. L.—Apply for Daguerreotype Apparatus to Horne, Thornethwaite, and Co., Newgate-street

FABIUS.—See Weale's Shilling "Red Book on Hydraulics"

M. L., Grantham, should address her application to the reverend gentleman, Wendesworth Common.

ALEXANDER, Liverpool.—Fleming and Tibbings's French Dictionary.

FLEDA.—There is a Wood-Engraving Class in the Government School of Design, at Marlborough house

O. H. and M. W.—See the "Practical Instructions in Wood Engraving," in No. 134 of the ILLUSTRATED LONDON NEWS

J. W., Gibraltar.—Address Patrick Park, Esq., sculptor, Manchester.

A CONSTANT READER, Blackpool.—The Assyrian inscriptions have not been published by the trustees of the British Museum. Apply to the Royal Asiatic Society, New Burlington-street

P. R.—Inclosed; but the Cologne Relic is not to our taste

WHO WHO THOROUGHLY UNDERSTANDS NEWSPAPERS favour us with his name and address

W. L., Paisley.—Consult Bartsch's "Catalogue of Rembrandt's Works."

Your question, however, cannot be answered by even the most knowing in such matters unless they had seen your prints.

A SUBSCRIBER, Norwich. A person left as executor to a will of his nearest relative may decline to act after seeing the tenor of the will, if even he has, prior to the will being drawn up, given permission to have his name inserted in the will as executor.

A SUBSCRIBER, Clapham Common.—A knot, in seamen's language, is a division of the log-line, serving to measure the rate of the vessel's motion; and the number of knots which run off the reel in half a minute shows the number of miles the vessel sails in an hour.

H. M. K.—The Prime Minister and the Chancellor of the Exchequer receive salaries of equal amount—£5000 a year

C. A. S.—The population of the *city* of New York was, at the date of the last census, in 1850, 515,394 souls. The *state* of New York contained a population of upwards of 3,000,000.

AN ANTIQUARIAN.—We have already illustrated the principal antiquities of Colchester.

E. L. T. Declined.

H. M. G., Oxford.—The sketch sent is from a Tetradrachm of Athens, worth about 7-

P. C. C.—We cannot advise you.

C. C., Peterborough.—There is no provision in the act of 1844, alluded to by our Correspondent, for abolishing country bank notes.

NEMO.—"Hunt's Manual of Photography" contains the most practical information. "Thornthwaite's Guide" is a lower-priced book, and valuable within certain limits.

EDWARD A. COPLAND.—Twenty grains of oxide of silver, dissolved by means of sixty grains of the cyanide of potassium in an ounce of water, will answer well. The stereoscopic pictures may be, and are, taken on both glass and paper.

STARLIGHT, Kingston.—It is impossible to give you any account of your coins, from the rudeness of the drawings.

R. K., Rendal.—A French counter struck at Nuremburg, neither interesting nor valuable

CAROLUS, London.—Yours is a copper coin of Justinus II., A.D. 565 (578), and of no value

M. B.—Thomas Wentworth, Lord Raby, created Earl of Strafford, in 1711, died in 1739. It is so stated by Burke in the "Extinct Peerage." It was the Hon. Thomas Wilson Wentworth (nephew and heir of William, Earl of Strafford), who died in 1711.

A. B., Shropshire.—*Arms* of Edgerley: "Arg. on a chev., between three coquefoils gu., as many beazants."

J. J. B.—Liveries are regulated by the arms. The principal fixture is the leading colour—the first charge, the other. In the BAZON "Or on a chev., between three falcons arg., as many pellets." The liveries should be "red" (any shade will do) and "white."

S. D.—Viscount Villiers has, we believe, three sons and two daughters

CLERICUS.—A man is not allowed to marry his aunt, either of the whole or of the half blood

SCRUTATOR.—The names of the Elwes family depend altogether on the wording of the Royal licence, a reference to which will at once set the point at rest. It is possible that General Timms was authorised to adopt the additional surnames of Hervey Elwes, and his descendants to use simply those names.

A CONSTANT READER inquires "Whether the money advanced by the Treasury towards the drainage in Ireland is expended? and, if so, whether there is a probability of a renewal of any further grant."

MERIDUS.—The Heralds' College does not sanction a prescriptive right to arms. None but grantees, or those whose ensigns were registered as "the Visitations," are acknowledged by them—a limit opposed, in our opinion, to the original laws of heraldry. The right, admitted at the Visitations, was merely prescriptive; and our oldest families can show no other. The bearings of Dowell, as recorded in the work referred to by our Correspondent, may be traced on ancient seals, monuments, carvings, and plate, and are surely the rightful insignia of the Dowells of the present day.

A SUBSCRIBER FROM THE COMMENCEMENT.—You are entitled to *impale* your wife's arms with your own: that is, to place your arms on the right side, your wife's on the left. If, however, the lady be an heiress, her shield is borne, not by impalement, but on an escutcheon or pretence

CATHOLICUS.—See a "Handbook of Records," recently published, and to be had of any law bookseller

IGNORAMUS; M. P.; and a SUBSCRIBER. The use of a cockade seems to us to be confined to military or naval, or to those holding in some way military or naval rank: for instance, Deputy-Lieutenants are entitled to it; a Justice of the Peace has, *ipso facto*, no claim

D. G.—I. Nudy can confer on her descendants the right to quarter her arms, unless she be an heiress in the heraldic meaning of the term, which is "a lady who has no brother, or whose brothers have died without issue." The inheritance of property does not, in any way, affect the question. 2. The Baronet's daughter would, even after her marriage, retain her rank, and take precedence

CUBBO.—William IV. was King of Hanover.

A CONSTANT READER.—Mrs. Pendrell and her son Richard (so locally distinguished in the escape of Charles II., resided at Hobbs. Grange, a small farm house in Shropshire, a half west of Boscobel. There were four other sons, and a daughter, the wife of Francis Yates, of Langley-lane. Descendants of the Pendrell Pendrells continue to receive the annuities granted for their services to the King. John Gilford, Esq., of Chilhugton, is now sole trustee

A NINE YEARS' SUBSCRIBER.—The address of Mr. Todd Pratt is 5, Bolton street, Piccadilly

E. L. T.—By using the harness with the crest on it, you will render yourself liable to the tax on armorial bearings.

COCKADE.—A retired officer of the army may fairly continue the use of the cockade.

GILES.—There are several Cambridgeshire families of Chapman, to which arms are recorded; but we do not identify any with Hertfordshire *Arms of Legge*: "Az. a buck's head cabossed arg. *Crest*: Out of a ducal coronet or, a plume of five ostrich feathers; three arg., two az."

AN OLD SUBSCRIBER is anxious to ascertain the date of the death, and the arms, of the Rev. John Smith, Vicar of Border (Kent), living in 1765, whose son Edward was Vicar of Milstead, Kent; as well as the maiden name of his wife Jane, who, as a widow, was living at Sittingbourne in 1777 and 1782

TITLES.—What is the name of the family whose arms are quartered in 1st, 4th, etc. It is impossible to decide without knowing it

THE CAMP AT CHOBHAM.

SATURDAY.

The proceedings at the Camp partook more of the character of a grand drill or parade day than of the usual field movements, there being no enemy and no definite plan of attack. Many of the evolutions of the troops were well conceived and brilliantly executed, and considerable improvement was visible in the firing of the rear ranks in file firing. The forces were under the command of Lord Seaton.

MONDAY.

There was a numerous attendance at the Camp to-day; but by no means so large as anticipated. A great many people who arrived at the Camp at about eleven were considerably more disappointed than pleased to find that the troops had all marched off across the Common two hours before, and were then in full engagement at Bagshot—nearly five miles distant from the Camp. A far more brilliant field-day was anticipated than really took place. The sham battle was long—fatiguing to all concerned in it—and was fought over a large space of ground. It was, in fact, but a long brigade field-day, and at no time represented the doubtful and gallantly-contested struggles which used to take place at Chobham

TUESDAY

Was an unpropitious day, and little or nothing was done

WEDNESDAY (THIS MORNING).

On Wednesday there was a brilliant field-day and sham-fight. The Duke of Cambridge afterwards assembled the officers of the cavalry, and thanked them for their conduct, and also the men under their orders. Thursday was devoted to sports in the Camp; and, on

FRIDAY AND SATURDAY,

The different corps left the "Field of Chobham," for their various destinations

The illustration upon the preceding page—from a drawing by Mr. Parrott—represents a scene of "Repose" in the Camp, in which the privates of the 42nd are cleaning their arms and accoutrements; the piper is discoursing his stirring strains, and the smoke denotes the domestic arrangements in progress.

SUITING THE AIR.—At the dinner at Sydney given lately, in celebration of the gold discovery—after the toast "The Army and Navy," ans., "The British Grenadiers" and "Rule Britannia"—the Colonial Secretary proposed "The Bench and the Bar," or "Balance a Straw." Mr. Justice Therry returned thanks on behalf of the bench, and was followed by the Solicitor-General, who acknowledged the toast on behalf of the bar. He said he noticed that to the last toast there were two airs. Now why should not the bench and the bar each have a separate air? The air for the bench was "Balance a straw;" he would suggest that the air for the bar should be "Splitting a hair."

FRENCH FISHERMEN ON THE SCOTCH COAST.—A remonstrance has been sent from Dunbar to the Treasury, stating that from seventy to 100 large French luggers were fishing every night amidst our boats, and that, from the rapidity with which they drive, they were enabled to have and dispose of the gear of our men. Lord Elcho and the booth Lord of the Treasury laid the matter before Sir James Graham, who instantly ordered another steamer north to protect the fisheries. It is stated that the Frenchmen have taken almost entire possession of the Northumberland coast; but her Majesty's steam-vessel *Tartarus* went south on Thursday morning, and, it is to be hoped, will put matters to rights

FETE TO MESSRS. WHATMAN AND LEE, AT VINTERS PARK, NEAR MAIDSTONE.

On Wednesday, last week, the return of Messrs. Whatman and Lee, the members for the borough of Maidstone, was commemorated by the electors and all ranks of the Liberal party, upon a most extensive scale, which the newspapers of the district recorded at the time. The scene of the Fête was the beautiful Park of Vinters, where a vast booth was erected to seat 4160 persons. It was 360 feet in length, and 96 feet in width. It covered no less than half an acre, 27 poles, and 30 yards of ground; and was fitted up with 73 tables, the aggregate length of which was 5 furlongs 19 poles, or upwards of half a mile; and the seats for the company measured 1 mile 2 furlongs 3 poles in length. To cover this large area, with the sides and ends, 38,266 superficial feet of canvas were required.

Within the booth, one table 295 feet long was raised nearly 12 inches above the level of the other tables; and a platform 16 feet square was erected for the better accommodation of Julien's band. The calculation for accommodating the vast number expected to be seated within the booth allowed 7 feet 4 inches for each person, which proved to be ample. The roof was constructed in one span, and had a light and pleasing effect. The total weight of the materials used in the booth was about 50 tons

Long lines of crockery, flanked by apparently interminable platoons of knives and forks, glittered over half an acre of table cloth, with a profusion of fine joints of meat, of bread-cakes, round and batter, watercresses, &c. The poles by which the tent was supported, and the sides of the marquee, were tastefully decorated with evergreens; while from the canvas roof above depended a multitude of small, handsome banners, bearing the arms of England, with sundry other shields and devices The Park with the fine mansion of Mr. Whatman, and the gardens, were thrown open to the public on the occasion

The sports, which formed no small part of the day's pleasures, consisted of cricket-playing, quoiting, dancing on the green sward, the old English game of "kissing in the ring," and archery.

The number of persons of all ages assembled by four o'clock could not have been less than fourteen or fifteen thousand, and a majority of them congregated in the vicinity of the marquee at the time fixed for tea. At half-past four the entrances to the tent were thrown open, when upwards of four thousand guests seated themselves. Among those near the seat of C. Elis, Esq., the Chairman of the "monster meeting," were James Whatman, Esq., and W. Lee, Esq., the members for Maidstone, and the especial guests of the occasion; Mrs. Whatman, Mr. and Mrs. Baldwin, of Stoddenhill, the Rev. R. Cobb, C. Swaisland, Esq., of Crayford, C. W. Swaisland, Esq., Captain Baker, A. Anderson, Esq., of Horemonden, A. Smith, Esq., and a number of ladies and gentlemen from various parts of the county, as well as from the immediate vicinity of Maidstone. The arrangements for providing the tea were admirably carried out. The after grace having been pronounced, and silence called, the Chairman called upon the company to drink the health of the Queen three times three, with three hearty rounds of Kentish cheers, which were accordingly given, and the National Anthem was played by the band

The Chairman then in an eloquent speech, proposed the toast of the day, observing, "We are met together to celebrate the triumph of Liberal principles in the borough of Maidstone, in the return of Mr. Whatman and Mr. Lee to the House of Commons (Loud cheers). I rejoice exceedingly at the gain thus obtained in the Liberal majority of the House; but, with every respect for the gentlemen on my right and left (Messrs. Whatman and Lee), I venture to say that I rejoice more at the principle we have achieved—viz., that we have carried those gentlemen to Parliament by pure and righteous means (Continued cheering). This borough has certainly returned members to the House of Commons for three centuries at least. In what manner our forefathers for the first two centuries exhausted their trust history does not inform us; but we have the fact from our fathers and from our own observation, that for the last century bribery and corruption have prevailed in this borough to an enormous extent, and let me be distinctly understood as not saying to our shame, although those wicked means have been resorted to both by Tories and Whigs (Hear, hear). But the question has arisen within these last few years as to whether it did not become our bounden duty to put an end, if possible, to these pernicious practices. The worthy Chairman then recapitulated the history of the election contests in Maidstone since the year 1835, and minutely detailed the eventful return of Mr. Whatman and Mr. Lee in the general election of 1852, and proposed the health of those gentlemen, which was drunk with enthusiasm."

Mr. Whatman, on rising, was received with loud applause. After thanking the company, and congratulating them upon the great triumph they had achieved in carrying out those great principles which they so nobly adopted last year; Mr. Whatman referred to the proceedings of the present session of Parliament, commencing with the passing of the Succession-duty Bill, which imposes a tax on a party exempt from it on the change of a legacy duty before, but to a very small extent; and, on the other hand, it relieves a much greater proportion of property which was before taxed. Mr. Whatman then referred to the continuation of the Income-tax, the very small number of petitions presented against which proved that the country was almost unanimously in favour of it. The benefits expected from the Trusts Bill were then glanced at; and Mr. Whatman concluded by expressing his delight in seeing the care of canvas and three-quarters of a mile of tables so well filled.

Mr. Lee was also vehement in cheering the sailing, and, in thanking the

THE CAMP AT CHOBHAM.—REPOSE.—(SEE PRECEDING PAGE.)

company, stated that during the session he had seldom been absent from the House of Commons when a division of importance had taken place. Mr. Locke then referred to his support of the Chancellor of the Exchequer, adding that he (Mr. Lee) hoped next session to see a Reform Bill brought forward which will greatly extend the elective franchise among the people.

The Chairman then read a letter from Mr. Thomas Law Hodges, regretting his absence from the fête, on account of an accident; and this veteran Reformer's health was then drunk with hearty cheers. Mr. W. W. T. Baldwin returned thanks.

The Chairman then proposed "Mrs. Whatman, and the Ladies," amidst loud cheers.

Mr. Whatman returned thanks; and, in conclusion, proposed the "Health of their respected Chairman, Mr. Ellis;" who thanked the company.

The worthy Chairman then dismissed the assemblage to the entertainments in the Park, where a shout of voices announced the ascent of a balloon from one of the eminences. Two bands were in attendance, in addition to that of M. Jullien; frequent discharges of cannon pealed forth *feux-de-joie* in honour of the gathering, and the gratification was heightened by the sight of thousands of happy faces, including those of a large number of children. Before dusk, it was estimated that not less than 20,000 persons were present. Towards sunset, the vast assemblage gathered round the entrance to the grounds, where there was a brilliant display of fireworks, preceded by the ascent of a large fire balloon.

"It is satisfactory to state" (says the *South-Eastern Gazette*,) "that, large as was the number of persons admitted to partake in this celebration, and embracing as the assemblage did many of the humblest as well as of the most affluent classes of society, the conduct of every person present was marked by propriety and decorum. There was no drunkenness, no brawling, no destruction of property, arising from either wantonness or thoughtlessness. The Park, the shrubberies, and the beautiful gardens adjoining the mansion of Vinters, were subsequently thrown open to some 20,000 persons; yet not the smallest mischief was perpetrated. The holiday was worthy of the cause whose triumph it commemorated, and those who took part in it proved that they were worthy of all the festivities provided for them."

FETE IN VINTERS PARK, TO CELEBRATE THE RETURN OF [illegible]S. WHATMAN [illegible]ER FOR MAIDSTONE.

CHAPEL AT CARISBROOKE CASTLE, ISLE OF WIGHT.

NOOKS AND CORNERS OF OLD ENGLAND.

CHAPEL IN CARISBROOKE CASTLE, ISLE OF WIGHT.

THIS picturesque Chapel, which has been very recently denuded of its roof and windows, was erected in 1738, during the Governorship of Lord Lymington, on or near the site of a very ancient church or chapel, dedicated, like most other religious buildings in fortified places, to St. Nicholas. No trace of the original building remains, nor is any view of it extant from which its exact character may be known. It was most probably of Norman architecture, the Chapel having been granted to the Abbot of Quarr in the reign of Henry II. From a MS. in the British Museum, entitled "Church Notes in the Isle of Wight," written in 1719, we learn that there were "no monuments or inscriptions in it." This Chapel is accounted to be the parish church of St. Nicholas, a parish formed of several farms in various parts of the island, lying at considerable distances from each other; also of part of the town of Newport, known as Castlehold, which is charged with an annual payment of 13s. 4d. to the Vicar of the Chapel. For a considerable period anterior to 1790, the inhabitants of Newport selected the Castle Chapel as a favourite place for their weddings, passing the nuptial day with their friends within the Castle walls; but, upon the appointment of Lord Bolton, then the Honourable T. Orde, to the Governorship, the practice was discontinued. Unfortunately, the register of these marriages has been lost for many years, and great has been the inconvenience which has arisen in consequence.

The Rev. W. Sewell is now the Chaplain of the Castle; but Divine service has not been performed within the Chapel for many years, and the bare and roofless state of its walls, render it wholly useless for its sacred purposes in future. Besides the payment from Castle-hold, there are the rents of glebe lands to some amount, payable to the Vicar, but which are transferred by him to the Incumbent of the District Church of St. John, in Newport.

DEAL NEW PAROCHIAL SCHOOLS.

IT is gratifying to have to record another instance of those noble efforts which are happily being made throughout the country in the cause of education. The new Parochial Schools of the town of Deal, were opened on Monday, the 15th ultimo. The foundation-stone of the building was laid by the rector, on the 2nd of September last; and the Schools are now completed, and in full operation, under the superintendence of a master, mistress, and infant-mistress. There are two residences for the teachers, and each school-room has a play-ground attached. The building presents a handsome appearance in the approach from Sandwich to Deal. It was designed by Mr. Paynter, of Westminster; and its cost (including the site, which amounted to £300) has been defrayed by grants from the Committee of Council, the National Society, and the Diocesan Board; besides large contributions from private individuals.

DEAL NEW PAROCHIAL SCHOOLS.

The Schools will accommodate about 300 children; and it is hoped that those for whose benefit they were intended, will avail themselves of the privilege of the instruction hereby so generously afforded. On the joyful occasion of the opening, the Boys' School-room was tastefully decorated with flowers, and entirely filled with the clergy and gentry of the neighbourhood and their families; and also the parents of the children whose names had been enrolled.

The Upper Deal Choir, accompanied by Mr. Harrison on the harmonium, assisted. The meeting commenced by singing the Hundredth Psalm. An appropriate prayer was then offered up, and an anthem sung; after which an address was delivered by the Rector, the Rev. A. H. Duthie. The parents were also addressed by the Rev. M. E. Benson, of St. Andrew's, Deal, and the Rev. John Barton, Rector of Eastchurch, who had the evening before preached a most excellent discourse at the parish church in aid of the funds; the Rev. J. F. Baynham having pleaded the same cause at St. Andrew's in the morning. The several collections amounted to £79 9s.

ST. PANCRAS ALMSHOUSES, KENTISH-TOWN.—(SEE NEXT PAGE.)

DESTRUCTION BY FIRE OF MESSRS KIRKMAN'S PIANOFORTE MANUFACTORY.

WE regret to have to record the almost total destruction by fire, on the morning of Wednesday week, of the extensive pianoforte manufactory of Messrs. Kirkman and Son, situated in Dufour's-place, Broad-street, Golden square; together with nine houses and a chapel: the firm of Messrs. Kirkman is one of the oldest in the trade, having been originally harpsichord makers and is coeval with the first introduction of that instrument into this country; and from that time to the present has taken a leading part with other eminent firms in the manufacture and improvement of pianofortes. The works just destroyed had been in the occupation of the firm for upwards of a century. An immense number of pianofortes of every description, finished, or in progress, together with a quantity of rare and costly woods, very difficult to replace, have been totally destroyed; but, what is more to be regretted, is the destruction of some musical relics and curiosities connected with the progress of the art; and a number of models showing the various progressive improvements of the pianoforte from its first invention. Among these was a curious clarichord—once belonging to the great Handel and from which the idea of making the square pianoforte was originally taken. Here, also, was the harp used by the Court bard of Charles II., the head beautifully carved by Grinding Gibbons; a small japanned harpsichord, by Andreas Ruckers, of Antwerp, made in the year 1654—the sounding-board and inside of the top beautifully and elaborately painted with flowers and Cupids, and once used by his Majesty George III. Another of the lost relics was the celebrated harpsichord formerly the property of Joah Bates, who for many years conducted the Antient Concerts; together with a large harpsichord, fitted with curious German pedals, made for Mr. Greatorex, who succeeded Mr. Bates as director of the Antient Concerts. Among the manufactured stock saved is Messrs. Kirkman's Miniature Grand Pianoforte (the smallest to be played upon, ever made) which excited such general interest at the Great Exhibition of 1851.

DESTRUCTION BY FIRE OF KIRKMAN'S PIANOFORTE MANUFACTORY, DUFOUR'S-PLACE, BROAD-STREET, GOLDEN SQUARE.

The building in which the fire commenced, formed a four-storied range of workshops, store-rooms, veneer houses, &c.; adjoining which, on one side, were several houses in Dufour's-place; and the baths and wash-houses of St. James's parish were immediately facing the ill-fated property. The houses in Broad-street nearly touched the factory, whilst those in Poland-street extended in the rear. No time was, therefore, lost, in sending for the engines and fire-escapes, but before sufficient time had elapsed for any assistance to arrive, the flames shot forth from the centre of the building, with dense and suffocating smoke.

The engines of the London Fire Brigade, from King-street, Golden-square, Wells-street, Chandos-street, and other stations, arrived on the spot in a very brief period; but such was the inflammable character of the stock in trade, that, by that period three sides of the immense factory presented one immense sheet of flame, which threw up such a lurid glare, that the reflection could be seen so far distant as Harrow-on-the-Hill. Several other engines, including that of the West of England Office, and four or five of the London establishment, also reached the scene of conflagration in rapid succession; bringing with them strong bodies of firemen, and Messrs. Braidwood, the superintendent, Staples, the foreman of the C district, and Comerton, the superintendent of the West of England firemen. Two or three of the Royal Society's fire-escapes also attended very promptly, and, although they were not required for saving life, were of great assistance to the firemen in enabling them to ascend, by which means the men were enabled to protect many of the contiguous houses, by throwing torrents of water upon them.

In the quadrangle of Messrs. Kirkman's premises stood a number of piles of timber, which towered high above the factory and house-tops in Poland-street. A number of the firemen mounted one of the lofty walls, and whilst engaged in discharging water upon the piles of timber, another wall and part of the roof fell, and threw three of the men, to the ground, and at the same a portion of the *débris* struck them so violently as to cause the necessity of their removal to their homes. The other firemen, however, went to work with still greater vigour; in spite of which the work of devastation continued; and the wind being rather strong, the flames were drifted into the premises of Mr.

Sibley, silversmith, No. 10, in the same place; and also into those of Mr. Michael Geary, tailor, No. 9, in the same thoroughfare. The fire at that time assumed a most fearful aspect; for three parts of the factory of Messrs. Kirkman, and the other houses in Dufour's place, were blazing with the greatest impetuosity. The whole force from the engines was therefore brought to bear upon the property then in flames; but suddenly the fire crossed to the eastward, and ignited in succession the premises of Mr. John Cook, builder, No. 60, in Poland-street; those of Mrs. Lewis (private), No. 58, in the same street; and a Baptist Chapel at the rear. From the chapel the fire extended to the workshops and stock of timber behind, belonging to Mr. George Leslie, carpenter, No. 58, in Poland-street. All hands were at this juncture brought to bear upon this property; nevertheless, the flames could not be restrained until the premises of Mr. Arthur Abbott, which were let out to a great number of inhabitants, became ignited; and from thence the work of devastation reached to the premises of Mr. J. Lloyd, tailor, No. 56, in Poland-street.

Hour after hour passed away before the flames could be assuaged; and even as late as eight o'clock at night there remained a considerable body of fire beneath the surface of the ruins, although all danger of any further extension of mischief was over.

An inquiry was made with a view of learning how the disaster commenced, but nothing satisfactory could be gleaned beyond the fact, that the whole of the men left off work at a quarter past eight the previous evening, when everything appeared perfectly safe and free from fire. Messrs. Kirkman are partially insured.

We are happy to learn, for the sake of the numerous hands thus suddenly thrown out of employment, that this sad accident will cause but a temporary interruption to Messrs. Kirkman's business.

ST. PANCRAS ALMSHOUSES.

These Almshouses which have been in part completed for the large and populous parish of St. Pancras, are situated immediately behind the Governesses' Benevolent Asylum, in Grafton-place, Kentish Town; and have a clear southern aspect for the whole length of the houses about 400 feet. There are eighteen houses, besides the centre building, which contains the board-room, secretary's office, &c., as well as apartments for two married couples, who will be entrusted with the general superintendence of the whole. The eighteen houses will consist of six for unmarried females, six for unmarried men, and six for married persons. Each house for the unmarried will contain four persons—the apartments for whom are distinct: each will be fitted up in a comple'e manner, with living room, bed closet, a properly-ventilated safe, coal closet, and sink constantly supplied with water, as well as provision for taking away all refuse water.

The houses for married persons are each to contain four couples; and except that an additional amount of room is provided, are similar in plan to the houses for the unmarried, and are fitted up in a like manner. The total accommodation will be for 100 inmates.

At the back of the centre building a washhouse and laundry is provided for the use of the whole of the inmates, to be fitted up with coppers, wash-tubs, supplied with hot and cold water, drying closets and other conveniences. There will also be in this part a bath-room for males, and one for females, to be supplied with hot and cold water.

The portion of the building which has been erected consists of the centre and two houses on each side, containing apartments for twenty-four single persons and two married couples. The houses externally have a picturesque and ornamental character, and are in the simple old English style. The walls are of red brick and stone, relieved occasionally by diamond-work in grey bricks. The builders are Messrs Hopkins and Roberts, of Islington; and the architect, Mr. James K. Colling.

To render candidates eligible for these Almshouses, the requisites are, that they shall have paid poor-rates in the parish for not less than ten years, shall have borne a good character, never received parochial relief, be upwards of sixty years of age, and in indigent circumstances.

At the first annual meeting of the subscribers and friends to the establishment and endowment of these Almshouses, the report was read, stating the site to have cost £1000. The contract for the portion built was £2250; increased, by the cost of drainage and other items, to £2500. The entire building, when completed, will cost about £7000, including the price of the land. After paying for the site, not more than £600 remained wherewith but to commence the undertaking, that funds were obtained on the personal security of an individual member of the committee, and the contract was signed.

The first annual election of inmates took place on the 14th ult.

FRIGHTFUL ACCIDENT AT THE CRYSTAL PALACE.

On Monday last, shortly after two o'clock, a most dreadful accident took place in the north end of the great or middle transept of the building. As may be known, it is of great height, the scaffolding or platform used in fixing the beams of the roof being some 170 feet from the ground. It was constructed of wood and iron, and was so arranged as to admit of the workmen pushing it forward as the work proceeded. At the time in question, a number of men were engaged shifting this moveable portion when the entire mass of machinery gave way, and fell nearly the whole height of the building, with a most tremendous crash. Where the accident was approached, it was found that ten of the men had been killed. Several of the others were discovered to be living, but in such a condition as to scarcely leave a hope for their recovery. One of the directors, Mr. F. Fuller, and Mr. Belshaw, the superintendent of the building, happened to be near the transept at the moment of the accident, however, so the utmost haste was made to render assistance to the unfortunate men who had been buried beneath the wreck of the scaffolding. The sufferers were quickly got out. Mr. Chamberlain, a surgeon, of Wolverhampton, was then visiting the grounds at the time, and, hearing of the terrible event, at once volunteered his services. Examining the character of their injuries, he directed their immediate removal to one of the London hospitals; and the arrangements being carried down to the train, they were conveyed to London-bridge, and thence to Guy's Hospital, where every attention was afforded them. Two of them, however, unhappily died soon after their admission to the hospital. On a further search being made beneath the woodwork, two horses were found, quite dead. They were attached to a cart, which was used in conveying material from one part of the building to the other, and the scaffolding falling upon them, killed them on the spot. The driver, however, escaped.

As to the immediate cause of the frame-work and machinery collapsing, which was the occasion of the accident, no positive information can be obtained; but the general belief is that it arose from the enormous span of the arch, and the timber framework failing to bear up for the span; so that on being put in motion to receive the third rib, the strain was so heavy as to cause the key to shift, and the whole to collapse and fall, with the unfortunate men employed, to the floor of the building. It is proper to state that the frame-work and machinery were wholly disconnected with the two ribs which have been so securely placed, and not the slightest strain upon them or injury to the building has taken place; and such is the confidence of all employed in the building of that fact, that every workman was at his post at the usual hour on the following morning.

Sir Joseph Paxton and Sir Charles Fox have made very minute inquiries of the duties of the falling apparatus, with a view of ascertaining anything that might throw a light upon the probable cause; but nothing decisive was arrived at. The galleries and staging had been constructed under the direction of Mr. Grutt, and the whole had been admirably employed in forming the transept of the Hyde-park Exhibition. Sir C. Fox remarked that the only opinion he at present could give as to the cause of the late accident was, that the workmen had left out some important part in the trusses they put up. The centre transept is intended to be no less than 208 feet in height (108 feet higher than the transept of the Exhibition in Hyde-park), and 200 feet in breadth.

An inquest was opened on Wednesday, on the remains of the ten men who were placed out of the wreck, dead, and were deposited in one of the outhouses of the Palace. The following are their names:—Wm. Forman, James Waller, George Topham, George Feilding, George Copping, Wm. James, Wm. Middleton, Wm. Smith, John Neale, and Charles Hardy. The names of those dead at Guy's Hospital are Henry Hensley and John Harris. Respecting the condition of the injured survivors lying in Guy's Hospital, the report of the medical officer states that, with the exception of the man Perry, all were progressing favourably. The amount of the damage occasioned by the accident is computed at £6000.

Self-acting Boat-plug.—A very simple plug for boats, of a self-acting nature, has been invented by Captain C. G. Robinson, R.N. This plug is wood, of a conical shape, with a broad base, ensuring its perpendicular flotation, entering the boat from the outside, with a pin through the head of the cone to prevent its falling through when hoisted out of the water, at which time the plug falls, enabling the water to escape, if any in the boat, and closing of its own accord on again being lowered, there becoming a perpetual plug, as it never need be removed.

OBITUARY OF EMINENT PERSONS.

HENRY RICHARD GREVILLE, EARL BROOKE AND EARL OF WARWICK, K.T.

This nobleman, whose correct designation was Earl Brooke, preferred to be known by the title of his second and junior earldom—that of Warwick—a dignity hereditarily connected with the name of the English annals, and held, at successive periods, by the Newburghs, the Plessets, the Beauchamps, the renowned Nevills, the illustrious Plantagenets the Dudleys and the Riches. There is not, perhaps, in the whole range of the Peerage a coronet with so brilliant a halo around it as that of Warwick. The last of the Beauchamps, in whom it vested, was Henry de Beauchamp, sixth Earl, created in 1444, Duke of Warwick, and advanced to a Dukedom in the same year. His Grace's sister and heir, the Lady Anne Beauchamp, married Richard Nevill, Earl of Salisbury, afterwards Earl of Warwick—

> The setter up and plucker down of kings.

The Grevilles derive their descent from the old Earls of Warwick, through the marriage of Sir Fulke Greville with Elizabeth Willoughby, the greatest heiress then in England, whose mother, Elizabeth, was one of the daughters and coheirs of the Lord Beauchamp, of Powyke. The venerable and highly-esteemed Peer, whose death occurred on the 10th instant, after a protracted illness, as Warwick Castle, was born 29th March, 1779, the eldest son of George, 2d Earl (of the house of Greville), by Henrietta, his second wife, daughter of Richard Verney, Esq. He married, 9th Oct., 1806, Sarah, relict of John George, 6th Lord Monson, and daughter of John, 2nd Earl of Mexborough, by whom (who died 30th Jan., 1853) he has left an only child, George-Guy Lord Brooke, now 4th Earl Brooke and Earl of Warwick, who was born 28th March, 1818, and married 18th Feb 1852, Anne, eldest daughter of the Earl of Wemyss, by whom he has a son and heir, born in 1853.

By the death of Lord Warwick, and the consequent elevation of his son to the Upper House, a vacancy occurs in the representation of South Warwickshire. The late Earl was a knight of the Thistle, Lord Lieutenant of Warwickshire, and Colonel of the county militia. His seat of Warwick Castle is one of the most magnificent feudal residences in the kingdom. During the last year it has added to its adornments the splendid Rendlworth Buffet, which attracted so much admiration at the Crystal Palace. It was presented to the present Earl upon his marriage, by his county friends, to be preserved as an heir-loom.

LIEUTENANT-COLONEL PETER HAWKER.

This distinguished officer and *litterateur* died on the 7th inst., at Dorsetplace, in his 67th year. His ancestors have, without missing one generation, served in the British army since the reign of Elizabeth. His great-grandfather, Colonel Peter Hawker, was appointed Governor of Portsmouth in 1717, and his father, Colonel Peter Ryves Hawker, commanded the 1st Regiment of Horse (now Life) Guards. Colonel Hawker was born in London on December 24, 1786, and received his education at Eton. He entered the army, as Cornet in the 1st Royal Dragoons in 1803, became Lieutenant in 1802, and was reduced to half-pay by the Peace of Amiens. He then exchanged into the 14th Light Dragoons; got his troop in 1804; and with this regiment served in Portugal and Spain, for which he received the Peninsular medal; but, in consequence of his wounds, he was unable to continue on service. On his recovery, in 1816, he was appointed Major of the North Hants Militia; and, in 1823, was made Lieut.-Colonel by the Duke of Wellington. He married, first, in 1811, Julia, only daughter of the late Major Hooker Bartlett, by whom he has a son, Captain Hawker (late 7th Highlanders), and two daughters. In 1844, he married, secondly, Helen, widow of Captain John Symonds, R.N., and daughter of Major Chattarton.

Colonel Hawker was for many years an ingenious contributor to the public press, upon various subjects, more especially upon guns and shooting, of which he evinced sound practical knowledge. He was also the inventor of hand-moulds, to facilitate playing upon keyed instruments; an invention recommended by Clementi, John Cramer, Kalkbrenner, and Moscheles. His famous volume of "Instructions to Young Sportsmen" has reached a fourth edition. In 1851 he invented a double gun, with self-adjusting primers, the result of 40 years' experience; and the Great Exhibition Jurors awarded to the Colonel the prize medal for his improvements and perfection in punt guns, upon which occasion the Colonel's portrait was engraved in the ILLUSTRATED LONDON NEWS (No. 526). The late Colonel's family was Longparish-house, Hants, of which county he was a Deputy-Lieutenant.

T. G. BUCKNALL ESTCOURT, ESQ.

Thomas Grimston Bucknall Estcourt, Esq. of Estcourt, in the county of Gloucester, was the eldest son of Thomas Estcourt, Esq., by his wife the Hon. Jane Grimston, eldest daughter of the second Viscount Grimston. He was born the 3rd of August, 1775, and succeeded his father in the representation of the family and the possession of the estate on the 2nd December, 1818.

Mr. Thomas Grimston Bucknall Estcourt was a Barrister, a D.C.L. of Corpus Christi College, Oxford, and a F.A.S. He was also a Magistrate, and Deputy-Lieutenant for the counties of Gloucester and Wilts. He formerly sat as Chairman of the Wilts Quarter Sessions. He represented in Parliament, from January 1806 to February 1818, the borough of Devizes, and, since that, the University of Oxford. His politics he was a Conservative. Mr. Estcourt married, the 12th May, 1808, Eleanor, second daughter of James Sutton, Esq., of New Park, Wilts, by whom he has had issue, six sons and three daughters. He assumed the name of Bucknall in compliance with the will of his uncle, William Bucknall, Esq., of Oxley, Herts. Mr. Estcourt died at his seat of Estcourt, in Gloucestershire, on the 30th ult. He is succeeded in his inheritance by his eldest son, Thomas Henry Sutton Sotheron, Esq., M.P. for North Wilts, who married Lucy Sarah, only child and heiress of Admiral Sotheron, and assumed, in 1839, the arms and surname of Sotheron only.

The family of Estcourt now Sotheron possesses considerable landed property and influence in the counties of Gloucester and Wilts.

RICHARD JOHN THOMPSON, ESQ., OF KIRBY-HALL, YORKSHIRE.

This venerable gentleman, who died at Kirby-hall, on the 3rd inst., aged eighty-three, was a considerable landed proprietor, and the representative of the Kirby branch of the eminent Yorkshire family of Thompson, from which also spring the Thompsons of Escrick-park, represented by Lord Wenlock, and the Thompsons of Sheriff Hutton-park.

Mr. Thompson, of Kirby, was formerly a Captain in the Fourth Dragoons, and subsequently Major in the Yorkshire Hussar Yeomanry. He married, in 1802, Elizabeth, daughter of John Turton, Esq., of Sigglesthall, county Stafford, and had by her issue one son and two daughters. Of the former, the eldest, Harry Stephen Thompson, Esq., now of Kirby hall, is married to Elizabeth, daughter of Sir John Croft, Bart., of Cowling-hall, D.C.L., F.R.S., &c., and has four sons and two daughters.

Liberal Charitable Bequests.—The following sums, amounting to £35,600, are left to the under-mentioned institutions by the late J. R. Burnell, Esq., of the Close, Salisbury, who died possessed of personal property estimated at £130,000:—To the Ragged School Union, £5000; Samaritan Fund, St. Bartholomew's Hospital, £4000; Artists' Benevolent Institution, £2000; St. Luke's Lunatic Asylum, £3000; Asylum for Idiots (Poultry), £2000; Stock Exchange Fund for the Relief of Poor Members, £2000; School for the Indigent Blind, £2000; Blind Asylum, £2000; Deaf and Dumb Asylum, Liverpool, £2000; Infant Orphan Asylum, Clapton, £2000. Friends' Provident Society, Exeter-hall, £1000; City of London Truss Society, £1000; Royal London Ophthalmic Hospital, Moorfields, £1000; Consumption Hospital, Orphan Working School, Haverstock-hill, £1000; London City Mission, Red Lion-square, £1000.

Wills.—The will of the late Duchess Dowager of Bedford has been proved by the executors, the Earl of Fortescue, the Hon. and Rev. Lord Wriothesley Russell, the son, and Edward Ellice, jun., Esq., the personal estate being sworn under £30,000. There are numerous specific bequests and family relics amongst such legatees as Lord John Russell. The pecuniary legacies amount to about £1300, and are chiefly confined to her attendants. The jewels are left to two of her daughters. The estates, with the furniture, pictures, &c., are directed to be sold, and the proceeds divided equally amongst her sons and daughters, who are the residuary legatees. The will was made in 1849.—The will of the Right Hon. Henry Conway Baron Dacre, who died on the 2nd of June last, was proved in London on the 20th of July by the sons, Lord Dacre and the Hon Henry Bouverie William Brand, the executors. His Lordship has bequeathed all his disposable interest in the estates of the late Lord Hampden to his youngest son Henry, and also appointed him residuary legatee; making bequests to each of his daughters; and to the youngest, who recently married, £5000 each. The personalty was sworn under £45,000, dated in September, 1851, five months after the execution of his will, made her a provision, by way of an annuity, of £300 a year. The personalty was valued at £30,000.

The New Act. or Savings Banks Annuities.—The new act just passed is to grant additional facilities in relation to the purchase of Government Annuities, through the medium of savings banks, and to make other provisions in respect thereof. Some portions of the acts are to be repealed on the 10th of October; and from that day the National Debt Commissioners may receive money from depositors, &c. for the purchase of Government Annuities, on single or joint continuance of two lives, to any amount not less than £4, nor more than £30, for the benefit of any one person, and to receive payment for immediate Life Annuities in one sum, or for Deferred Life Annuities, either in one sum or in annual sums, payable for fixed periods. No such annuities are to be granted to or for the benefit of any person under the age of ten years.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Hon. Frederick Bruce, now *Chargé d'Affaires*, and Consul-General at Uruguay (Monte Video), has been appointed her Majesty's Agent and Consul-General in Egypt.

Twenty-eight Methodist Ministers, of Acton, in Cheshire, keeping 909 cows, have signed a declaration that they do not, in future intend to make cheese on the Lord's Day.

The Swiss Federal Council has rejected the proposition tending to ask the Sardinian Government to receive into the Piedmontese convents the Capuchins expelled from Ticino.

The British ship *England*, from Tralee, Ireland, with a cargo of salt, and sixty-six emigrants, had been on shore off Nantucket, but was afterwards got off, and taken into port without loss of life.

A fire broke out on Friday night week, in the village of Asnières, near Bourges, which destroyed 126 houses. All the crops which had been gathered in within the last few days were burnt.

Mr. J. G. Lockhart, the son-in-law and biographer of Sir Walter Scott, and the editor of the *Quarterly Review*, has been compelled by indisposition to cease from all literary labour. He is about to go to Italy.

The yellow fever at New Orleans (July 28th) is represented as worse than ever it has been before, and is confined principally to the poorer classes. There were ninety-five deaths at the Charity Hospital during one week.

Viscount Strathallan is a candidate for the vacancy in the representation of the Peerage of Scotland caused by the demise of the Earl of Rosslyn.

The death of Dr. Bankier, the officer in charge of the naval medical establishment at Kong-Kong, is very much regretted. He has been upwards of ten years in China.

The accounts of the fishery received at St. John's, Newfoundland, from the outports, are very contradictory. Fish that were taken were of very superior quality.

St. George's Hospital has been lately subjected to thorough extensive renovation, and now presents a particularly clean and conspicuous appearance at Hyde Park-corner.

St. John's (New Brunswick) papers of July 30, state that fires were raging in the woods near Shediac, and had already destroyed much valuable timber.

Very unfavourable accounts of the partridges have been received from Northamptonshire. Numerous pairs of birds are seen without young ones, and it is thought that the rains of July have destroyed whole coveys.

An Arab ship called the *Nassree*, from Jedda to Bombay, with some 400 pilgrims returning from Mecca to various parts of India, was wrecked on the 22nd June. Only 100 succeeded in reaching the shore, the others were all lost.

The contract for the supply of 25,000 lb. of tea, for the use of her Majesty's navy, has again been taken by Messrs. Steticker and Co., of Lombard-street.

The differences between the colliers of Kingswood, near Bristol, and their employers, have been amicably arranged. The men have resumed their labours, and all will go on as usual.

Lord Brougham is convalescent at Brougham Hall, where his Lordship intends to remain until early in October, and then depart for his chateau in the south of France.

Some days ago a young boy, near Fethard, having been entrusted with a gun to shoot crows, accidently shot a servant girl, and became so overcome with grief that he died the same evening.

In Saxony, all persons arriving by railroad with arms of any kind are to deposit them at the first station; to be returned to the owners on quitting the Saxon territory.

The *Harbinger*, which arrived at Melbourne in April, took out despatches from the home Government, empowering the Australian colonies to establish local Parliaments, to consist of an Upper and a Lower Chamber.

A fire broke out at Foucherans (Jura) on the 10th inst., and destroyed twenty-seven houses. The loss is estimated at 150,000f.

New writs have been ordered for Stamford and Dungarvan, in the room of the Right Hon. Thomas Milner Gibson and Mr. Maguire, who have accepted the Chiltern Hundreds; and for Clitheroe, in the room of Mr. Aspinall, whose election was declared void.

The *Marco Polo* effected a great feat the *Antelope* steamer on the voyage to Port Phillip, making the run in seventy-five days. The *Kent* had sailed thence, with 26,268 ounces of gold, for London; and the *Rewoon*, from Geelong, with 10,385 ounces. The *Marco Polo* will also bring a large gold freight.

The slight improvement in the health of M. Arago, the French astronomer, has not, unfortunately, continued; a change having taken place for the worse.

The Wesleyan Conference has for some years had to report an annual decrease in their ranks: the numbers of the society have fallen off to the extent of more than 1000 members during the past year.

The Countess Rzevuski, lady of the Emperor of Russia's Minister of Police, and suite, have arrived in Paris, from the baths of Dieppe.

A shock of earthquake was felt at Soleure, in Switzerland, on the 11th. No person was injured; but some chimneys were thrown down, and several walls were split.

The British Association for the Advancement of Science intends commencing its sittings for the present year at Hull, upon Hull, on Wednesday, the 7th of September.

John Dimes died lately, at Cires (N.B.), at the advanced age of 102.

Messrs. de Rothschild, bankers of the General Water Company, have just deposited at the Caisse des Dépôts et Consignations, 500,000f., the cautionary money for the concession for supplying Lyons with water. The same company has made a tender for the supply of Paris.

In the night of the 2nd the lightning struck a house in the village of Romalo, in the Tyrol, and the fire spread so rapidly that, out of fifty-nine houses which composed the village, only two were saved. Four persons lost their lives.

Her Majesty's steam-vessels now employed in the Mediterranean to convey the mails between Malta and the Ionian Islands, it is said, are to be withdrawn, and the work performed by a foreign steam company.

The Emperor Napoleon has directed new orders to be issued by the Derby Admiralty, have reported that they do not consider his restoration a judicious proceeding.

The *Eden* left Southampton on Wednesday afternoon for Australia, with 320 emigrants on board. The *Epaminondas* will also sail in a few days with about 340 passengers; and the *Herefordshire* is preparing to sail with a large number of navvies.

The Ladies' Anti-Slavery Committee of Oberlin, Ohio, have published a cordial reply to the Stafford-house address to the women of America.

Mr. Francis Whishaw has invented and patented a new lock, applicable for banking purposes, by the employment of electro-magnetism; the lock is opened by breaking a magnetic current.

The *Magdeburg Gazette* says that Hartung, condemned to death, has petitioned the King of Prussia to postpone his sentence until he could finish an opera in hand.

Manchester with a population of 400,000, has three newspapers; Liverpool, with 307,000, eleven; Glasgow, with 300,000, sixteen: Dublin, with 250,000, no less that twenty-two.

The Corporation of Montreal has passed a law prohibiting intramural interment in the city, except those of Roman Catholic priests and nuns in Roman Catholic churches.

The new railway to Perismouth will be a direct one. It commences at Godalming, and ends at Havant. It will require 100 bridges, and 2000 or 3000 workmen will be employed on it for two years.

The inquest on the three unfortunate men run down by the *Indian* steamer at the back of the Isle of Wight, on the 6th inst., has ended in a verdict of "Manslaughter" against Captain Corke; but bail has been accepted.

Mrs. Paley, wife of the Rev. R. C. Paley, died at Lagos, on her passage to England, on board the *Faith*. Her husband died at Abbeokuta, near Lagos, in April: he was the son of Archdeacon Paley.

Literature.

HISTORY OF THE CAPTIVITY OF NAPOLEON AT ST. HELENA. From the Letters and Journals of the late Sir Hudson Lowe, and Official Documents not before made Public. By William Forsyth, M.A., Three Volumes. London: John Murray.

The captivity at St. Helena is one of the most interesting episodes in the history of the nineteenth century. Every generous sentiment, all the finer feelings of our nature, prompt us to sympathise with the fallen conqueror. We measure his misfortunes by the height from which he was precipitated. Every capital of the European continent had received him as victor. By his arms he had dethroned and created monarchs; but it was his destiny to find a prison and a grave on the barren rock which he had specially instructed his admirals to seize in the palmy days of his power. A cynical philosophy has said, "*Exprende Annibalem*," and then scornfully asked, "*Quot libras in duce summo, invenies?*" as though the ashes of the dead gave the dimensions of the living. In the order of nature, the death of Kings and serfs is no doubt the same; in the order of politics, the difference is immense; for, though the bodies of both moulder to decay, the spirit of illustrious men survives the tomb, and influences, and sometimes determines, the fate of distant generations. The life of a single individual, pre-eminent among his fellows, as an Alexander or a Cæsar, a Columbus or a Washington, a Harmsden or a Watt, expands into the historical panorama of an epoch. Of such colossal proportions was Napoleon Bonaparte, and the magic of his name has placed a sceptre in the hands of his once-exiled and imprisoned nephew. The story of his triumphs has been recorded in every language; that of his captivity, which is the fitting complement to his wonderful career, has only been narrated with authentic fulness in the volumes now before us. The materials have been collected, as we learn, through the preface, "from a vast number of original despatches of Earl Bathurst, who was Colonial Secretary while Napoleon was at St. Helena, and the originals or copies of every important document connected with the subject. Thirty folio volumes are filled with copies of correspondence and other writings, carefully made under the direction of Sir Hudson Lowe, who seems to have treasured a memorial of almost every incident, however trivial, connected with that important period of his life. In addition to these, there are several large boxes which contain manuscripts, chiefly copies relating to the same events, all of which have been diligently examined for the purpose of the present work. Two sets of copies of O'Meara's letters to Mr. Finlaison, so frequently quoted in the narrative, were placed in my hands; but I wish distinctly to state that I have not seen the originals. One of these sets was made officially at the time when letters were communicated through the Admiralty to the Cabinet, as will be explained in the course of the narrative, and their correctness cannot for a moment be doubted." On so important a subject we have deemed it proper to specify the nature and quality of the materials on which the vindication of Sir Hudson Lowe and of the British Government is founded. Both have been severely condemned by public opinion; but we feel confident that that judgment will be reversed by the labours of Mr. Forsyth. It must always be borne in mind that the Governor of St. Helena was an executive officer, sworn to carry out the instructions transmitted to him by the home authorities; that he did not constitute Napoleon a prisoner, nor prescribe the terms of his treatment during his captivity. In the responsible position in which he was placed, he was of course entrusted with some discretionary power; and unless it can be shown that he abused that discretion, he is not to be blamed for the faithful and inflexible discharge of his general orders. Before we examine the facts of the "Captivity," it is necessary to sketch the military career of Sir Hudson Lowe, before he was committed to his custody; as such an inquiry will enable us to appreciate the motives which induced the British Government to select him for the important office of Governor of St. Helena.

Sir Hudson Lowe was born in the town of Galway, on the 28th July, 1769. At the early age of twelve he was appointed to an Ensigncy in the East Devon Militia, and actually passed a review in military uniform at that juvenile period of his life. In 1787 he obtained the King's commission as Ensign in the 50th Regiment, then stationed at Gibraltar. There he performed garrison duty for four years, obtained his Lieutenancy, and then travelled in France and Italy, where he acquired a proficiency in the languages of those countries. On rejoining his regiment, he accompanied it to Ajaccio, in Corsica, and when that island was evacuated by the British troops, he proceeded to Porto Ferrajo, in Elba; thus visiting the birth-place of Napoleon and the scene of his first exile. His regiment was then ordered to Lisbon, and he remained two years in Portugal. A great number of emigrants from Corsica there sought refuge, and Captain Lowe embodied them in a corps called the Corsican Rangers. He received the command, with the temporary rank of Major; and was present at the battle of Alexandria, where he saved the life of Sir Sidney Smith. In the various operations which took place in Egypt, he was so highly distinguished, that General Moore, the future hero of Corunna, said to him, "Lowe, when you're at the outposts, I always feel sure of a good night's rest." Sir Robert Wilson also bore strong testimony to the high merits of the Corsican Rangers and their gallant commander. This regiment was disbanded at the peace of Amiens; and Major Lowe was appointed to the 7th or Royal Fusiliers. He was next sent by Government on a secret mission to Portugal, to report on the military condition and resources of several of its principal districts; and raised a second corps of Corsican Rangers, of which he was appointed Lieut.-Colonel, in 1803. With them he served in Italy and Sicily, and in the expedition under Brigadier General Oswald, which expelled the French from the Ionian Islands; and was made civil and military Governor of Cephalonia and Ithaca, administering their affairs during two years, with admirable temper, firmness, and judgment. In 1812 he obtained the rank of full Colonel. "I was then," he says, "in my twenty-fourth year of service, and had never been absent a single day from my public duty since the commencement of the war in 1793. I had been in England only once during that time, and then only for a period of six months, during the peace of Amiens."

In 1813 Colonel Lowe was raised to a high position, combining both military and diplomatic duties, by Earl Bathurst, then Secretary of State for the War Department. He was ordered to the North of Europe, to inspect the Russo-German Legion, raised by the authority of the Emperor Alexander, and which it was intended to place under the command of Bernadotte. Colonel Lowe joined the head-quarters of the Russian Emperor at Kalisch, in Poland; inspected the corps, scattered over five hundred miles; witnessed the battle of Bautzen; and there, for the first time, saw his future prisoner at the head of a devoted army. His next service was to inspect 20,000 men in the north of Germany, who were in British pay. This duty performed, he was attached to the allied Russian and Prussian army, commanded by General Blucher, and, with him, was engaged in every action from the battle of Leipsic until the surrender of Paris; and he was the first English officer who conveyed that important intelligence to London. The Prince Regent conferred upon him the honour of knighthood; he received the Prussian Order of Military Merit, and the Russian Order of St. George, and obtained the rank of Major-General in the British army. But Government allowed him only a short repose: he was soon again called into active service, and appointed Quarter-Master General to the British troops in the Low Countries, commanded by the Prince of Orange, in which capacity he inspected all the fortresses along the Belgic frontier. In this duty he gave an instance of his foresight. "Among other plans which he proposed, he suggested the construction of a work at Mount St. John (close to Waterloo), the being the commanding point at the junction of the two principal *chaussées* leading direct from the French frontier on the side of Charleroi and Namur to Brussels, and the line of direction in which an enemy must move if Belgium were invaded."

On the escape of Napoleon from Elba, Sir Hudson Lowe was placed under the orders of the Duke of Wellington; but left his Grace, in the beginning of June, to take the command of the British troops at Genoa, who were intended to act with the Austro-Sardinian army and the squadron under Admiral Lord Exmouth in the south of France. During this long and arduous career he won the esteem and confidence of Marshal Blucher, Gen. Gneisenau, the chief of Blucher's staff, of the Emperor Alexander, and, indeed of all the leading men with whom he came into communication, both British and foreign. Such were the antecedents of the future Governor of St. Helena.

We must now revert back to the circumstances under which Napoleon was received on board the *Bellerophon* by Captain Maitland. The fugitive Emperor affirmed, and always affirmed, that he had never surrendered himself as a prisoner of war; that he was the guest of England claiming hospitality; that he relied on the generosity and honour of the Prince Regent; and that his personal liberty was sacred. The case was without a precedent, and it was in vain to search for any rule of guidance in any of the most accredited works on the Law of Nations. Mr. Forsyth states that Sir William Grant, Sir William Scott, Lord Ellenborough, and Lord Eldon were consulted, and gave conflicting opinions. That of Lord Eldon was, "that the case was not provided for by anything to be found in Grotius or Vattel; but that the law of self preservation would justify the keeping of Napoleon under restraint in some distant region, where he should be treated with all indulgence compatible with a due regard for the peace of mankind." On this advice the British Government acted, and her allies approved of its determination. Napoleon put on record a solemn protest, but it was disregarded; and from that moment he conceived the bitterest hatred against England, which would have extended to any nation or military functionary selected to superintend his imprisonment. Mr. Forsyth quotes suppressed passages from the journal of Count Las Cases to this effect:—"The details of St. Helena are of little consequence; to be there at all is the essential point." Again: "We had nothing left us but moral weapons; that to make the most effective use of these, it was necessary to reduce to a *system* our demeanour, our words, our sentiments—even our *privations*; that a large population in Europe would take a lively interest in our behalf; that the Opposition in England would not fail to attack the Ministry on the violence of their conduct toward us." Count Montholon was even more candid and explicit. He was visited at his château of Tremigny, near Arpajon, in France, by Lieut.-Colonel Jackson, after their return to Europe, and said to the British officer: "*Mon cher ami*, an angel from heaven could not have pleased us as governor of St. Helena." This is the true point of view from which the controversy about the governor and the captive must be surveyed.

Sir Hudson Lowe only had five personal interviews with Napoleon. The first was courteous on both sides; at the second Napoleon protested against his deportation in these terms: "The allies have made a convention declaring me their prisoner: what do they mean? They have not authority to do so (*ni en droit ni en fait*). I wish you to write to your Government and acquaint it. I shall protest against it. I gave myself up to England, and to no other power. It is an act of the British Parliament alone which can warrant the proceedings against me. I have been treated in a cruel manner. I misunder-stood the character of the English people. I should have surrendered myself to the Emperor of Russia, who was my friend, or to the Emperor of Austria, who was related to me. There is courage in putting a man to death; but it is an act of cowardice to let him languish, and to poison him in so horrid an island and in so detestable a climate." There were three principal reconcilements imposed at the necessity of General Bonaparte showing himself twice a day, morning and evening; or giving, by some other means, certain indications of his presence in the house. 2nd. The prohibition of communication with merchants, shopkeepers, and tradesmen, except through the medium of a third person. 3rd. The prevention of any stranger seeing him except with the Governor's permission. Authority. These precautions were necessary to prevent his escape, and no doubt they chafed him; but to confine him as a prisoner, and treat him as a free man, would have been absurd. Sir Hudson Lowe had invited Napoleon to dinner to meet the Countess of Loudon, who was on her way to England from India. The invitation was refused. Shortly after this the materials for building a new house arrived from London, and Sir Hudson waited on Napoleon to ask how he would wish to have it constructed. when the following scene occurred:—"I cannot understand," said Bonaparte, without making the least reference to the house and the new furniture, "the conduct of your Government towards me. Do they want to kill me? Are you come here to be my executioner—my gaoler? Posterity will judge of the way in which I have been treated; the sufferings I experience will recoil upon your nation. No, sir, I will never allow any one to enter the interior of my house, to penetrate into my bed-chamber, as you have ordered to be done. When I heard of your having come to this island, I thought that, as an officer of the army, I should find you possessed of polite manners than the Admiral (Sir George Cockburn), who, as a naval officer, might have had a rougher bearing. I have no fault to find with his heart. But how do you treat me? It is an insult to invite me to dinner, and call me General Bonaparte. I am the Emperor Napoleon. Are you come here to be my executioner—my gaoler." Such was the cool and insolent style with which Napoleon treated Sir Hudson Lowe, who bore this coarseness with dignified calmness. Nothing galled Bonaparte so much as the refusal of his Imperial title, and he pretended to charge himself as being answerable for the Governor, whereas he only obeyed his orders, for England had never acknowledged the captive as Emperor, even when he had a million of soldiers at his command. In point of fact, as Sir Walter Scott has well remarked, "If Napoleon at St. Helena was Emperor of France, what was Louis XVIII. at he Tuileries?"

At the fifth and last interview, which took place on the 18th August, 1816, Sir Pulteney Malcolm, who had succeeded Sir George Cockburn as Admiral on the station, was present. Sir Hudson Lowe was explaining to Napoleon the insolence of Count Bertrand, who aped the rudeness of his master. For a considerable time Napoleon was silent, and addressing himself to the Admiral, he said, "Count Bertrand is a man who has commanded armies, and he treats him as if he were a corporal; he is a man well known throughout Europe, and he (the Governor) had no right to insult him. He did perfectly right in speaking about the prohibition against sending letters, and he was wrong in engaging in a discussion on that subject. He (Sir Hudson Lowe) treats us all as if we were deserters from the Royal Corsican, or some Italian regiment; he has insulted Marshal Bertrand, and he deserved what the Marshal said to him." Sir Hudson Lowe replied that it was Bertrand who had insulted him, and added "I am a subject of a free government. Every kind of despotism and tyranny I hold in abhorrence, and I will repel every accusation of my conduct in this respect as a calumny against him, whom it is impossible to attack with the arms of truth." The insolence of Bonaparte became grosser and grosser, but the samples we have given must suffice in our limited space. He wished to put the Governor into a passion, in the hope that in his excitement he might do or say something discreditable to his position; but Sir Hudson was imperturbable, and the rage of Bonaparte was more fiercely inflamed by this guarded coolness.

Napoleon complained that £8000 a year was insufficient for his table, and the Governor raised it to £12,000. Even this did not suffice: and Napoleon sold some of his plate, pretending he could not get sufficient food. This was notoriously done to excite a false sympathy for an imaginary grievance. He then murmured at the restraint on his walks and rides, though he was allowed four miles in his private domain at Longwood; and out of it twelve miles—in the last case being attended by a British officer. He was furious when an iron railing was put up to prevent cattle trespassing on the plantations. It was clear that the object was to shut him up in a cage. In short, his fertile genius was constantly inventing grievances; and when these are traced to their true origin, they all resolve themselves into two facts first, his captivity; secondly, the refusal of the Imperial title.

We have read Mr Forsyth's book with minute care, and confess that, when we commenced it, our feeling was, that the justification would not be complete; but we are satisfied that Sir Hudson Lowe discharged his ungracious and highly responsible office with delicacy, feeling, and honour to his captive. At page 229 of the third volume there is a remarkable and gratifying statement:—"Napoleon, on his death-bed, earnestly requested Count Bertrand to use every means in his power, consistent with his honour, to effect a reconciliation with Sir Hudson Lowe, saying that he hoped he would succeed, as he himself alone had been the cause of the differences between them. This was, at all events, stated by Madame Bertrand to Admiral Lambert; and she added, that her husband was very desirous to fulfil Napoleon's dying wish. When this was made known to the Governor, he instantly determined to bury the past: conduct of Bertrand in oblivion, and gladly accepted the proffered reconciliation. Both the French Count and the Plantation House met together on the 19th (May, 1821), and were there courteously received by the Governor."

These volumes will be found a complete refutation of the slanderous charge of O'Meara, Warden, and Antomarchi; and a clear view of the technical objection raised against Sir Hudson Lowe, when he prosecuted O'Meara in the Court of King's Bench. True, he was neglected by the British Government, when his arduous duty was finished, but while it was being performed, he received the special thanks of George IV., and it was nobly vindicated in the House of Lords by the Duke of Wellington. To each of Mr. Forsyth's volumes copious appendices are added containing copies of all the original documents. He has discharged his difficult labour with diligence and fidelity, and has not only vindicated the fame of a high-minded and cruelly persecuted officer, but has effaced a foul stain which foreign hatred has too long fixed on the honour of the British Government.

LIFE IN SWEDEN; WITH EXCURSIONS IN NORWAY AND DENMARK. By SELINA BUNBURY. Hurst and Blackett.

It is only of late years that these countries have attracted English tourists, and many of them being ardent disciples of Isaac Walton, have been more intent on killing salmon than in studying the habits of the people. Even Mr. Laing's admirable volume does not introduce us to the inner life of the people, and Miss Bunbury has supplied this want. Her sketches of society in Stockholm are minute and graphic, not confined to the higher orders, but including every class. Her book is written in an easy, gossiping style, when she touches on domestic matters; but when she describes scenery it is more sustained. The church of Copenhagen, called the "Church of our Lady," adorned by the statues and bas-reliefs of Thorwaldsen, is, in the judgment of Miss Bunbury, more like "an elegant museum" than a religious edifice. "The building wants the characteristics of a church; the altar itself strikes me as being more like the place of a throne." Great praise is bestowed on the Gottenburg Canal, though the thing is somewhat of a misnomer, for "out of a length of 370 miles, only fifty consist of actual canal, and those in detached portions, partly cut through enormous granite hills, in order to string together, as it were the splendid natural waters, lakes, bays, and rivers, which our traveller calls it the "Venice of the north." The constitution of the Swedish Parliament is minutely described; and it is a curiosity to an English politician. The University of Upsala is then visited; and at the approach of winner, our authoress establishes herself in Stockholm, taking "board and lodging with a Swedish Countess, who bears no resemblance to the coroneted ladies of our aristocracy, but gets her living by keeping a family hotel. The preparations for winter made by this notable hus ewife are good illustrations of the domestic life of Sweden, and ingenious are the contrivances for keeping out the cold, and economising fuel. The class of servant-women are described as the best looking and the most graceful in the country. The law of pleasure prevades all classes. Noble old maids abound in Sweden, and divorces are obtained on mutual agreement, but must receive the Royal sanction. The lawyers are as numerous as the nobles, who generally enter the army; though the pay of a Lieutenant in the Royal Guards is said to be less than that of our foot soldiers. Wives take the titles of their husbands. Thus, you address the wife of a clergyman as priestess, and so with all ranks. Vanity and fickleness are faults in the national character. An animated picture is given of the Court of Sweden, and of the ailments there observed, and of the mode in which Jul-Afton, or Christmas-eve is celebrated throughout the whole country. Literary society scarcely exists at Stockholm, and there is not a single banker—the mercantile house of Arfvedson transacting money affairs for strangers. An old custom, called the Exchange Ball, is fully described; it is an annual festival, given by the burghers or corporation of Stockholm to the King and Royal family. On this occasion everyone has an equal chance of speaking to, and dancing with, Royalty. There is a curious law relating to congratulation. "Every householder is by law obliged to contribute one person to help in extinguishing a fire in his own quarter; and by the same law, the King of Sweden is bound to act as chief fireman on such occasions—at least, as their commander-in-chief. They say the Crown Prince is exceedingly active on such occasions; and the late King, Carl Johan, though he was subject in his later years to long sedentary fits, during which he would not leave his room, at the news of a fire would feel his warrior-spirit rekindle, mount his horse and gallop to the scene of action, and to the combat with the fire-king." A very lively and humorous sketch is given of a marriage among the middle classes, which Miss Bunbury attended. As soon as the ceremony was over, the bride had to kiss some hundred and fifty persons who were present, her husband receiving the last embrace. After supper, the crown had to be shaken off the head of the bride, which is done in a very romping manner, and so arranged that it may fall on the head of a bridesmaid already betrothed; after which the married men seize the bridegroom, and throw him towards the ceiling, to the great danger of the chandelier. But we must conclude, cordially recommending the fair authoress as a delightful companion to the scenery of Norway and Sweden, and as a most observant and discriminating guide to the manners, customs, and inner life of the people.

FERN LEAVES FROM FANNY'S PORTFOLIO. Illustrated by BIRKET FOSTER. London: Ingram, Cooke, and Co.

This is a book which the author justly characterises as a growth, not as a manufacture. There was no prior intention in her mind of writing a book at all; but what she saw, and thought, and felt, got fournalised, until a number of articles were, as it were, self composed on a great number of subjects. She offers to her readers (to quote her own words) a few *Fern Leaves* gathered at random in shady spots, where sunbeams seldom play, and which I little thought ever to press for your keeping." There is, in these same "Fern Leaves," a charming sensibility, a subtle beauty—what an old poet calls "a fine madness"—which is exquisitely suited to fragments and miscellanies. There is a vision feeling, too, calculated to touch and mend the heart. Of course, there is no elaboration; but a glancing, light tone of observation and reflection, falls on topic after topic, which suggests more—much more—than it expresses. It would be impossible to enter into detail on the multifarious contents of a book of this description—an example of its manner, however, is desirable. The following citation, from a paper entitled "The Test of Love," will give a better notion both of subject and style, than volumes of analytical remark. It implies, in addition, an instructive moral suitable to many cases.

THE TEST OF LOVE

"For charity's sake, take me in;" said the lively little Mrs Percy, with a look of more distress, as she peeped her bright face into my room. "If you'll credit it, my husband hasn't spoken five consecutive words since tea time; and I'm quite undecided whether to request to have the roof raised, so that I can breathe freer, or to go into a violent fit of hysterics. Matty," said she, with ludicrously solemn air, "I shouldn't be surprised if I had married the wrong man! Now, Edward is one of the best creatures in the world; there, that's it," said she, jumping up, "he's too good. I can't think of a fault that he has; he's awfully correct—a living rejoof to me. Do compassionate me, Matty; I have what the old ladies call a 'modest husband.' Now, isn't it a pity that goodness and stupidity generally go together?" said she, laughing. "Ned is so matter-of fact! Now, if I'm reading a book, and come across a passage that delights me, I always want to put my arms round the author's neck and kiss him. Well, I read it to Ned, and he says, quietly, without looking up from his newspaper—Yes, it is pretty good.' Oh, dear! he never gets up enthusiasm about any thing, except his dinner, and his daily pillaide, Matty,'—throwing herself on the sofa with a suppressed yawn."

"All is not gold that glitters,' Mary; and there are gems, of whose value the possessor is sometimes ignorant. These buttons, that dazzle in society, are mostly mere moths at home. Abroad they are elegant, refined, polished, graceful, full of repartee and wit; but, by their own hearth-stones, they are stupid, selfish, exacting, and unfeeling. You'd never recognise them. You remember Vivian ——? Well, that's his mental daguerreotype, in private he is the most unlovable of mortals."

"Well, this world is a humbug, Matty," said she, jumping up, "it's too fleeting, dissatisfied ones; and, by the way, Matty, how came you to be an old maid?"

"Simply because you appropriated the only man I ever wanted," was Matty's quiet reply.

This speech rushed to Mary's temples; she was by Matty's side in an instant; urging her to "full confession."

"Ah, I see, my little lady, your heart is in the right place, after all, else you would not be jealous. I have great hopes of you! Blessings often brighten' when we imagine they are 'about to take flight!' You kissed and never spoke a word of love to me in his life; I only wish that he had! I shall see enjoin secrecy upon you as to my preference, because I know very well you would not have him know for a kingdom! So I am safe. But seriously, Mary, you don't know how to value Edward. A few months ever in our sunny land will quite open your eyes to the worth of, or money—hardly earned could procure? Who, when wearied with business cares, still kept tireless vigil, till the stars faded away, at the bedside of the sick and suffering? Who gently, yet decisively, said, saying, "Save her! It is life or death with me, as well as Mary?" Who but the "matter-of-fact" Edward.

One day, after Mary was convalescent, I called to see her. She was looking very lovely, though pale and wasted. "Thank God you are spared to us!" said I, touching my lips to her forehead.

"After him, thank my husband," said Mary, with eyes liquid with feeling. "In this sick room I have learned a lesson I shall never forget. O Matty! there may be deep, strong love in the heart where deeds, not words, are the interpreters. Please God to spare my life, my poor love shall be his reward for this!" Mary kept her word.

Such sketches as these, so vivid, salient, and sparkling, will ensure for the volume a large reading public. It is beautifully embellished with illustrations by Birket Foster, and forms an elegant book for the drawing-room table or boudoir.

VICE-ADMIRAL DEANS DUNDAS, C.B., COMMANDER-IN-CHIEF OF THE MEDITERRANEAN SQUADRON.

VICE-ADMIRAL DEANS DUNDAS, C.B.

This distinguished officer, James Wortley Deans Dundas, Commander-in-Chief of the Mediterranean squadron, was born in 1785, and is son of James Deans, Esq., M.D., of Calcutta, by Janet, daughter of Thomas Dundas, Esq., of Kingask; great grandson of Charles, sixth Earl of Lauderdale; and nephew of Thomas Dundas, a general officer of distinction, who died in 1794. He assumed his present surname on the occasion of his marriage.

Of Admiral Dundas's services we quote the following *précis* in Mr. O'Byrne's "Naval Biographical Dictionary:"—

This officer entered the navy 19th March, 1799, as First-class Volunteer, on board the *Kent*, 74, Capt. William Johnstone Hope, bearing the flags, in succession, of Lord Duncan and Sir Richard Bickerton; in which ship he attended the expedition to Holland in August, 1799, and conveyed Sir Ralph Abercromby from Gibraltar to Egypt in December, 1800. He continued to serve as Midshipman, at the blockade of Alexandria, until transferred, in July, 1801, to the *Leda*, 38, Capt. George Hope, with whom he was soon afterwards ordered to Lisbon. In November, 1802, he joined the *Glenmore* frigate, Capt. John Maitland; and, accompanying that officer into the *Boadicea*, 38, was present in a very spirited skirmish with the French 74-gun ship *Dugnay Trouin*, also at the capture of *Le Vautour* national lugger, of 12 guns, and at the blockade of Rochefort. Being promoted (from the *Monarch*, 74, flag-ship in the North Sea of Lord Keith) to a Lieutenancy 25th of May, 1805, in the *Cambrian*, 40, Capt. John Poo Beresford, Mr. Dundas, in the course of the same year, assisted at the capture of three privateers, carrying in the whole 40 guns and 225 men. After officiating for a few weeks as Flag-Lieutenant in the *Leopard*, 50, to the Hon. George Cranfield Berkeley, on the North American station, he was awarded a second promotal commission, dated October 6, 1806. During nearly seven months' command of the *Beaumond*, 18, Captain Dundas was employed in attendance on the British Ambassador to the King of Sweden pending the siege of Stralsund, and was injured by the bursting of a shell while actively endeavouring to extinguish a fire which had broken out in the dockyard at Copenhagen a few nights after the surrender of that town to Lords Cathcar, and Gambier. Assuming Post rank, Oct 13, 1807, Captain Dundas was next appointed—about the same period, to the command, *pro tem.*, of the *Cambrian*, 40—March 9, 1809, to the *Tartar*, bearing the flag in the Baltic of Rear-Admiral Thomas Bertie—January 31, and September 8, 1813, to the *Venerable*, 74, and *Tyrannus*, 36, in the latter of which ships he conveyed Sir James Saumarez from Gottenborg to England, and captured, April 20, 1814, and February 18, 1814, the privateers *Zebra*, of ten guns and thirty-eight men, and *Fille de l'Orient*, of fourteen guns and ninety-seven men—August 16, 1815, to the *Tagus*, 38, on the Mediterranean station, whence he returned in January, 1819—August 6, 1820, to the *Prince Regent*, 120, flag-ship, of Rear-Admiral William Parker, with whom he served in the Tagus until the early part of 1832—and, April 6, 1836, to the *Britannia*, 120, bearing the flag of Sir Phillip Durham, at Portsmouth, where he continued until April 7, 1838.

Admiral Dundas's promotion to Flag rank, dates from November 23, 1841. He is a Deputy-Lieutenant for Berkshire, and sat in the last Parliament for Greenwich; was appointed Naval Aide-de-Camp to William IV. in 1831; a C.B. in 1839; a Lord of the Admiralty, under the Whig Administration, in 1841; and resumed his seat at the Board as one of the Naval Lords in 1846.

He married, 2nd April, 1808, his first-cousin Janet, only daughter and heiress of the late Charles Dundas, Lord Amesbury, by Ann, daughter and co-heir of Ralph Witley, Esq., of Aston Hall, county Flint. By that lady, who died 26th April, 1846, he had issue, with three daughters, two sons, of whom the eldest, Charles, an officer in the Coldstream Guards, was M.P. for the Flint district in 1838.

SIR JAMES BROOKE.—The *Singapore Free Press* of the 2nd of July says: "By late arrivals from Sarawak, we learn that Sir James Brooke was taken ill on board the *Wereat*, w ile on his passage from his place to Sarawak. On his arrival at Sarawak it was found to be smallpox, and for some time very great fears were entertained for his safety, as he appeared to be in a dangerous state, and no medical a d, except that of a native doctor, was available. The latest accounts, however, represent the crisis of the disorder as being apparently past, and it was hoped that he would soon be convale cent."

IMPROVEMENT OF RAILWAYS. The Crystal Palace Railway from New-Cross to the Exhibition is to be constructed in accordance with the plans of the Permanent Way Company, which, amongst other improvements, consists in making the rails into a continuous bar, called fish jointing. This method is not altogether new, it having been adopted for some while upon the Eastern Counties line, where the rest u were similarly convincing and economical, as shown by the various half yearly reports of the cost of maintenance, nearly fifty per cent of the labour being spared, and the entire absence of accidents testifying to its more vital principle of safety. To read or converse in a railway-carriage was formerly a matter of difficulty, but by this system neither is any onger a task. This fact is exemplified upon the Brighton line where a little below Croydon, and before reaching the Merstham Tunnel, there is about a mile of the new line laid. We are no nonger on it than the chance is most perceptible: exchanging an oscillating motion and clicking noise for a smooth road and a monotonous sound of much less intensity, so that both conversation and reading may be indulged in with comparative ease. The invention which has wrought this comfort and security is a patent belonging to a few engineers, of great practical experience, who have enrolled themselves in an association termed the Permanent Way Company, with the view of rendering the use of this and other patents belonging to them more accessible to the public.

THE PREVENTION OF FORGERY.—Mr. T. H. Saunders, of the Dreenth paper mills, Kent, has succeeded in manufacturing a paper which has long been sought for by the banking and mercantile interests. The old "water mark" has afforded the hint upon which the improvement has been made. But as in the water-mark the device was wholly hidden unless held to the light, in the new process the device is distinctly perceptible under any circumstances. Scroll work and arabesque ornament appears in comparison but a humble portion of the results attainable; the specimens completed comprising elaborate and successful tableaux in landscape, composition, and even portraiture. Although the discovery has been made public but a few days is has entered largely into a variety of channels, for the better security of paper documents as well as for decorative and fancy purposes.

FISHING HOUSES ON THE BOSPHORUS.

The crystal clearness of the waters of the Bosphorus is evidenced by the rude and simple apparatus of the Turkish fishermen, of which we present our readers with a Sketch. A few poles are driven into the beds of the stream, upon which a hut of the rudest description is constructed. Nets are stretched across the banks of the stream, and such is the transparency of the water, that the fishermen from their huts can see the fish in their nets, and haul them up without any further trouble. By this simple contrivance large captures of the finny tribe are made; the fishermen with true Eastern gravity smoking their pipes in the huts above while the nets are filling. The fish, when taken, are immediately sent off for the supply of the Faithful at Constantinople.

FISHING-HOUSES ON THE BOSPHORUS.

MOLDO-WALLACHIAN PEASANTRY.

THE accompanying Illustration portrays the costumes of the Moldo-Wallachian peasantry of the better classes. We are indebted to M. Demidoff's "Travels in Southern Russia," for the following account of the Wallachian husbandmen:—

The very appearance of the Wallachian peasant interests one in his favour; nor is this prepossession ill-founded, when we reflect on the long series of misfortunes which have afflicted this pastoral people for so many centuries. There is much to be done for the improvement of the manners of this robust race of peasants, who seem to have been expressly created for the labours of the field. Like Virgil's husbandmen, they would be happy did they but know the benefits which Heaven has showered upon this beautiful Roman land, the object of their pride, but which can continue noble and truly Roman only on condition of being rendered fertil and productive. *Magna parens frugum.* The Danube only awaits the grain of the Wallach an plains to pour fresh stores into the granaries of the Black Sea, and the Wallachians would produce much, and cheaply could they rid themselves of their habits of idleness and intemperance, and their love of holidays, too frequent in the religious observances of the rustic population. To eradicate these deplorable habits is the noblest task which an enlightened Government can propose to itself.

In Wallachia wells are numerous, and are invariably constructed in the manner represented in our Engraving. The trunk of a tree, hollowed out, lines the interior of the well, and prevents the outward walls from falling in. The great numbers and vast dimensions of the natural cylinders converted to this purpose afford an idea of the magnificence of the vegetation in the mountains whence they are brought. The water is brought up by means of a long lever, and the bucket employed is a block of oak scooped out. The ordinary food of the people consists of porridge made of the meal of Indian wheat or millet—a sort of polenta: meat or salt fish are almost unknown to them. Their principal spirituous beverage is a brandy distilled from plums:—

The Moldavians are robust, temperate, hard-working, and inured to the most opposite extremes of temperature. Their features differ from those of the Wallachian people: their countenances are less open; and

MOLDO-WALLACHIAN PEASANTRY

the habit they have preserved, of wearing their beards and hair long, gives an almost savage expression to their physiognomy, to such a degree, that at a distance they might be taken for those primitive statues of the Samnnians to be seen in museums of antiquity, or busts of the triumphs of Rome over the barbarian. Among the Wallachians, on the contrary, we meet with a larger development of stature, and a greater amount of beauty.

The Wallachian tongue is that spoken by the people the Bovards have for a long time past made use of the modern Greek, which was introduced by the Hospodars from Constantinople, and formed to its language of the court. At the present day the French language is very generally studied, and it would be difficult to find a family of any distinction in which both French and Italian were not spoken.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

Permit us, dear readers, a word more respecting *la question d'Orient*, and we have done. We give the following anecdote as a fresh instance of the extreme reverence for Louis Napoleon, and his jealousy of all participation in any secrets, so long as he chooses to keep them such. On the arrival, at St. Cloud, of the despatch which announced that many days fain to consider the conclusion of the affair, the *Chef de l'Etat* glanced over the contentswith an air of tranquillity amounting almost to indifference and, putting it in his pocket, forbade the bearer to speak of his mission in any way to any person. Not a word of the subject transpired the whole of that day. Lord Cowley departed in the evening for Chantilly. A certain journalist, supposed to be one of those best informed on all that passes at the palace, prepared a most belligerent article for publication. The Bourse was still in the state of alarm which for some months has been its normal condition, when the appearance in the *Moniteur* of the despatch in question announced at once to the Ministers of State and the passers in the street the intelligence that has so rejoiced the Bourse of Paris.

So carefully is this habit of discretion preserved by Louis Napoleon, that all intelligence, of whatever nature or importance, is confined within the closest possible limits, from even his own *entourage*, who are no better informed as to his plans or intentions, so long as he chooses not to make them public, than those the furthest removed from him.

The long-talked-of Fête, whatever remarks its inutility and its prodigious cost may reasonably give rise to, has been unquestionably as magnificent a spectacle, or rather series of spectacles, as could well be imagined. The weather, which threatened in the morning, gradually cleared as the day advanced, and concluded with a fine evening, so calm, that not a *lampion* flickered in all the acres of illumination—which for taste and splendour exceeded any we have ever seen, here or elsewhere.

A number of great Russian families are here at present; among others, that of the Prince Menschikoff. The Prince himself is expected to arrive in Paris at the end of August, to remain some months.

The labours in the Bois de Boulogne are progressing with the utmost activity. Some days since, the Emperor proceeded to visit them on horseback, and having, with the superintendent of the works, examined them in detail, left with him a sum of 2000 francs to be divided among the workmen employed on them.

The new decorations of the Grand Opéra—the solid simplicity of which, would it was supposed, produce an *ensemble* at once rich, novel, and tolerable—have, it appears, so signally failed in effect, when lighted, as to cause the re-decking of the house until the whole shall be done over again. The Ministers of State, accompanied by numerous high functionaries, several members of the Academy of Beaux-Arts, &c., having visited the theatre, which was lighted to the fullest extent, and arranged as for a representation, came to the conclusion that the general effect was much too simple for a theatre so recently devoted to parade and splendour; that the wood-work of a greenish-white, was not sufficiently relieved by the luxure of gold and silver employed to decorate it; that the change in the enlarging the boxes by the suppression of the gallery in front of them impaired the shape and beauty of the house; in short, the whole, with the exception of the ceiling, which was universally approved, was an *affaire manquée*, and must be recommenced from beginning to end. At the Vaudeville, the *débuts* of Flexmore, our compatriot, with his wife, the daughter of the celebrate clown Auriol, assembled many spectators. The extraordinary grace, agility, originality, and indefatigable force displayed by Flexmore, excite at once the admiration of the audience, to whom such a performance has been hitherto quite unknown. At the Cirque de l'Impératrice, an American rider, M'Cullum, has had considerable success. He certainly performs some very remarkable feats, and with great agility and grace; but the fatigue consequent on the effort is so evident as to cause a painful sensation to the spectators

A grand review of the troops in Paris, by the Emperor, took place on Sunday. The weather was magnificent, and the various corps vied with one another in enthusiasm. The National Guards and troops of the line occupied the whole avenue from the Port Maillot in the Bois de Boulogne to the Tuileries. It is supposed that there were 120,000 men under arms, including the greater part of the army of Satory. An immense crowd was assembled in the Champs Elysées. After the review, the Emperor and Empress appeared at the balcony of the Tuileries, where they remained for some time. They were well received, but without any demonstrations of enthusiasm.

On Monday the Emperor received at the Tuileries the clergy of Paris, the Diplomatic Corps, the Ministers and high dignitaries of the State, and the veterans of the Imperial army. When receiving the diplomatic corps, the Emperor said to the British Ambassador, "I thank the diplomatic corps for their congratulations. What delights me most is to see the peace of Europe firmly established for such at least do I consider the present, any sacrifice of dignity or selfesteem on the part of any nation." This remark of the Emperor was published next morning in the *Moniteur*, and made a favourable impression upon the Bourse. The official organ also announced to its readers that at the diplomatic dinner, given on Monday evening by the Minister for Foreign affairs, the health of the Emperor of the French was proposed by the British Ambassador, and that the toast was enthusiastically received by the guests.

The fêtes and illuminations, which are described elsewhere, went off with the greatest success, and at midnight it was ascertained from all quarters that the day had passed without a single accident. The shopkeepers and hotel-keepers of Paris have gained considerably by the influx of foreigners, particularly English, to witness the preparations, and assist at the national fête. It is calculated that 150,000 strangers arrived in Paris with this view.

The *Moniteur* publishes the report of the commission charged to examine the question relative to the execution of the will of the Emperor Napoleon I. The commission declares that the greater portion of the will is not practicable, owing principally to the vast amount of the bequests, but that a few specific legacies ought to be paid.

The instructions of the President of the United States to his representatives at the different foreign Courts that they should for the future appear on all occasions of public ceremony in plain clothes, and not in official costume, were carried into execution for the first time. Mr. Sanford, the Chargé d'Affaires of the United States, appeared at the soirée of the Emperor, as also at the dinner given previously by the Minister of Foreign Affairs in the plain dress of an American citizen.

The Emperor and Empress were to leave Paris on Thursday for Dieppe.

The Bourse opened freely on Wednesday, with every appearance of a further increase in the public securities. The announcement of a decline in the price of Consols in London produced a reaction, and the Three per Cents, which opened at 81f. 15c., fell to 80f. 90c., at which they closed for the end of the month. The Four-and-a-Half per Cents closed at 104f. 90c.

GERMANY

We hear from Vienna that the official journal of the 17th contains an Imperial decree, taking off the state of siege at Vienna and Prague.

The marriage of the Archduchess Marie with the Duke of Brabant, heir apparent to the Crown of Belgium, took place at Vienna on the 11th inst. The marriage ceremony was performed by the newly-appointed Archbishop of Vienna. The wedding gift of the Emperor was a diadem in brilliants, which her Imperial Highness wore at the ceremony. The youthful bride left Vienna on the 12th. Prince Adolphus Schwarzenburg, who was present as Austrian Ambassador Extraordinary at the marriage of Queen Victoria, accompanied the Duchess of Brabant to Brussels, as Imperial Commissioner, and the Countess Clom Martinitz as first Lady of the Bedchamber.

SWITZERLAND

A letter from Berne, of the 15th inst., states that the Government of Tessin having declared that it would not make any concessions to Austria, the Federal Council does not intend to assume the initiative in renewing negotiations with the Austrian Government.

THE TURKISH QUESTION.

(From our own Correspondent.)

CONSTANTINOPLE, August 5.

We are still in uncertainty here as to the result of the new proposition which has been made to the Court of Russia by the four powers, for the amicable adjustment of the grave question which has now been so long at issue. It is believed, in the quarters usually best informed, that this proposition is so framed as to meet all the just pretensions of the Czar in regard to the guaranteeing of the rights of Christian subjects, his own amongst the number; and therefore, to test the sincerity of his oft-repeated assertion that he has taken up this quarrel simply on the ground of what is necessarily due to his co-religionists, and not with any view to political aggrandisement. I must add, however, that the majority of opinions here are very far from sanguine of a favourable reception of this proposition; and, in the case of its rejection, it is presumed, unless some new pretence for further delay should occur, that immediate recourse will be had to less gentle methods of persuasion than those hitherto adopted—and, as I think, too long persevered in. As it is, supposing the reply—whatever it may be—to come in the course of ten days or a fortnight, there would be no time to lose. In October the winter season begins to set in; after which, as Russia is aware, military operations are out of the question.

Meantime the Turkish armaments are carried on with alacrity, and upon a scale commensurate with the occasion, and those who have the direction of them, and have had an opportunity of judging of their details, speak highly of the condition and discipline of the troops, and of the dispositions of their commanders. There is a strong camp at Schumla; and the Balkan passes are said to be in a thorough state of defence. The munitions of war and provisions are ample.

The Turkish fleet is still in the Bosphorus, opposite Bouyouk-déré and Therapia, where they are continually exercising in the handling of guns. The guns in the forts and earthworks along the mountain range are also well served. The other day I was present when a protracted cannonading was kept up from both land and sea; the firing being well sustained, and with precision as to time, to the end.

Great enthusiasm is said to prevail throughout the armaments, both sea and land; and some impatience begins to betray itself amongst the Musulman population generally, at the delay which has occurred in the settlement of this unhappy affair, and which they doubtless consider themselves quite capable of settling if left to their own resources. Indeed, many do not hesitate to declare that the negotiations are all a trick; and that it is a foregone conclusion with the Christians English, French, Austrians, Greeks, Armenians, and all, that the Turk (the poor Turks) are to be "done." The discontented occasionally wreak their spite upon the infidels by stoning and spitting at them; and sometimes beating them with sticks, and otherwise maltreating them. In justice to the Government it must be added that whenever such outrages come to their knowledge, the offenders are severely punished. Some fellows, who only a day or two ago maltreated an Armenian shopkeeper, have been sentenced to exile.

An Imperial manifesto has just been issued and read in all the mosques, informing the nation of the state of affairs with Russia, and the preparations made to resist her unjust pretensions; exhorting the people, but more especially the Musulman portion, to continue attending quietly to their own affairs as usual, conducting themselves in a peaceable and friendly manner towards their fellow-subjects of all creeds. (A copy of this proclamation will be found elsewhere.)

Intelligence has been received of the sailing of the Egyptian squadron, consisting of three ships of 96 guns, and several smaller vessels, bringing over the contingent of about 7000 men. Great activity is daily expected, and a camp has been prepared for them on the Asiatic side of the Bosphorus, opposite Therapia—the very spot where, in March, 1833, a body of Russian troops were encamped, who were sent over to assist the Porte against the revolted Egyptians.

It is now declared that the Sultan will not allow his Ambassador to leave Constantinople until the Russian troops shall have been ordered to evacuate the Principalities of the Danube. This is probable enough, and it is yet to be seen whether the English and French Ambassadors will be instructed to support the Porte in this not unreasonable decision, or whether they will be successful in endeavouring to persuade the Sultan to adopt a more conciliatory course.

A proclamation has been lately issued, of which we subjoin a translation from the Turkish original. A perusal of this proclamation will show the difficulty under which the Sultan labours—of resisting the aggression of Russia, without kindling the fanaticism of the Turks against his Christian subjects.

PROCLAMATION

The present proclamation showeth the state of affairs at Constantinople; and it is his Majesty's wish that it should be promulgated in the provinces of the Empire:—

The Sublime Porte and Russia having disagreed on certain points, the latter has suspended her relations, and recalled her Ambassador from Constantinople; and, moreover, has made great military preparations by sea and land; consequently, the Sublime Porte also has prepared herself for war, as has been already made known. The reason assigned by Russia for her dissatisfaction is the refusal of the Porte to accord by treaty certain religious privileges to the Greek Church. But those privileges were granted by his Majesty Sultan Mehmed the Conqueror, and observed during the reigns of the late Sultans, and were also confirmed by his present Majesty the Sultan of all benevolence, as well as by his predecessors. When his present Majesty and his Government of their own free will granted and confirmed these ancient immunities, who ever thought that they would be annulled? When a Government wishes to undertake the Protectorate of several millions of a neighbouring empire, it menaces its independence and interferes with its domestic affairs. The incongruity of such an act has been declared, but Russia would not forego her claim, and has even occupied Wallachia and Moldavia, crossing the Pruth with her troops, thus greatly annoying the Sublime Porte. Such a violation of treaties has startled forth, on the part of the Sublime Porte, a protest, which has been communicated to the different European powers, in which it is declared that such an act, contrary to treaty, will not be accepted by the Sublime Porte. When a question of such grave importance arises, affecting the independence of the empire, it ought to be arranged by negotiations and friendly mediation. It is not Russia's intention to make war on the Sublime Porte, but she has occupied the provinces as a guarantee until her demands are complied with. The Porte has received from the different European Powers friendly advice, especially from the maritime nations of England and France, upon whose friendship and good faith the Porte can rely, and it is certain that she will not accept anything that will affect her integrity or independence. Until it is seen what turn affairs will take, it has been deemed advisable to assume the defensive on the banks of the Danube and the frontiers of Anatolia.

Such is the dispute and the present state of affairs as regards Russia. On the part of the Government, troops and the munitions of war have been prepared. The Sublime Porte has tranquillised all her subjects, and has enjoined them to remain quiet in their several occupations of agriculture and commerce, and she requires of her subjects to obey all her commands. It has been already mentioned, the claims of Russia relate to the religious privileges of the Greeks. The Greek sect and their chiefs have personally nothing to do with this affair, but have, on the contrary, expressed their gratitude and thanks to their Government, and are sorry that such a question has ever been mooted; they must not, therefore, be looked upon as enemies. Armenians, Catholics, Protestants, and Jews are also the true and faithful subjects of our Lord and Padishah; the Greeks are so also; and they must therefore live in peace with each other.

In short, Moslem and all other subjects of the Porte must dwell together in harmony, and not think of things which are not their affair, nor do that which is not lawful, nor commit treason to their own hearts.

Here all the arrangements, proclamations, and order of affairs has been prepared in the presence of the Sheik-ul-Islam, and all the leaders of the Empire, of the Sacerdotal and Imperial Hierarchy, and Ulemahs who were at the Council of the Grand Vizier. Further, this proclamation has been sanctioned by the Mufty the Cadees, and all those who are not pleased with the arrangement, and shall act contrary to it, shall be considered insubordinate, and shall be severely punished

Here follow the signatures of all the principal officials of the Empire, civil, military, and religious.

Four important documents connected with the Eastern Question have been published:—1. The letter of the Prince of Moldavia to Redschid Pacha, June 25, informing him that the Russian Consul General at Bucharest had summoned him in the name of the Emperor to suspend his relations with the Porte, and withhold any further payments of the tribute. 2. The letter of the Consul-General above mentioned, dated June 23rd. 3. The despatch from Count Nesselrode to the Consul-General Katchinski, ordering the above measure, June 3rd. and 4. Letter from Redschid Pacha to Stirbey, Prince of Wallachia, July 25th. The two latter still have some interest, particularly the former of the two, as it will serve as a preliminary answer to Lord Clarendon's demand for explanations.—

COUNT NESSELRODE TO THE CONSUL-GENERAL KATCHINSKI.

St. Petersburg, June 3.

The military occupation of the Principalities is, as I have already informed you, to cause no change in the existing order of things as regards the civil administration and the *personnel* of the superior officers, unless the Hospodars themselves should consider the change of some *employés* necessary to the introduction of the greatest possible regularity in the various branches of the service, and particularly in that of providing for the General troops. There is still one question, however, on which we must make our views known beforehand to the two Princes, so that they may guide themselves accordingly. We have to speak of their relations to Constantinople and the Ottoman Ministry. These relations must necessarily be broken off on the day the military occupation of the land on the part of our troops commences; and, at the same time every action, every influence, on the part of the Sovereign power must for a time cease. Another consequence of the state of things will be the stopping of the tribute which these provinces are bound to pay the Porte. The sums which (the same as hitherto) have to be paid, must remain at the disposal of the Imperial Government, which reserves to itself to make what use of them it thinks proper.

You will communicate to the Hospodars the contents of this, which I have the Emperor's commands to inform you of.

REDSCHID PACHA TO STIRBEY, PRINCE OF WALLACHIA.

Constantinople, July 25.

PRINCE.—When Russia advanced her troops into the Principalities of Wallachia and Moldavia, she declared that she had no intention of changing the public arrangements which govern those provinces, or to alter the position which is guaranteed to them by so-many treaties; and the Sublime Porte, which trusted this declaration, thought it might leave your Highness, as well as his Highness the Prince of Moldavia, at your respective posts. We learn, however, from the letter which has been sent us by the Prince of Moldavia, that the Russian Court has issued an order that you, as well as the Prince of Moldavia, shall break off your relations with Constantinople, and keep back the settled tribute. This has surprised us excessively.

As the Russian Court has attacked the system of provinces in the point which immediately affects the power possessed of Sovereignty in them—in a word, in its very foundations the Sublime Porte sees clearly, that in this state of things the exercise of rightful authority, in a manner due to its holy and uncontested rights, is impossible in the Principalities of Moldavia and Wallachia. The Sublime Porte has, therefore, determined that your Highness, as well as his Highness the Prince of Moldavia, shall for the present quit the provinces, and this order has also been officially communicated to the great powers. You must, therefore, as to due to commands leaving from the Imperial throne, quit the provinces immediately; and should it happen that you not conform to these orders, the Sublime Porte will adopt such measures as shall appear suitable and conducive to its interests on the occasion.

I gladly embrace this opportunity, &c.

A letter from Jassy states that the Emperor of Russia has left it free to the Hospodars of Moldavia and Wallachia to obey the summons of the Sultan, or to remain in the Principalities. It was supposed that the Hospodar of Moldavia would proceed to Constantinople, but, according to a letter from Bucharest of the 9th inst., the Divan of Wallachia had requested the Hospodar not to leave the Principality at a time when his presence there was so much required.

Prince Gortschakoff, Commander-in-Chief of the Russian army in the Principalities, arrived at Bucharest on the 30th ult., and had a conference with the Greek Bishops on the subject of the three protectorates of the Holy Sepulchre. The Prince treated them with even greater kindness than he had shown the Hospodars.

The French and English fleets remain at Beshik Bay. The French ship-of-the-line *Friedland*, which, on the 28th of July, struck on the rocks near the Lapin isles (to the north of Tenedos), was got off with extreme difficulty by five war-steamers, her guns and masts having been previously removed. She will be taken for repair to the dock at Constantinople. The communication between the Turkish capital and Beshik Bay, by means of the English war steamers, is very frequent.

The Protestants and Armenian Catholics, in imitation of the other religious communities, have sent in an address to the Grand Vizier, in which they express their gratitude for the religious liberty which has been accorded them by the sultan.

AMERICA.

By the *Atlantic* we have advices from New York to the 6th inst. Among her passengers are the Hon. James Buchanan, Minister to the Court of St. James's, and the Hon. P. Soule, Minister to Spain. There is no political intelligence of consequence. The yellow fever has made dreadful ravages in New Orleans.

A body of United States' military had been ordered to Rio Grande. This movement is said to have been caused by the proceedings of the Mexicans.

O'Donohoe, the Irish convict, whorecently escaped from Australia, had been held to bail at Boston, for challenging the chairman of a festival held in honour of Meagher. O'Donohoe alleges that the chairman influenced him in the middle of a speech by ordering the gas to be extinguished. At the festival a letter was read from the Hon. E. Everett, apologising for his inability to attend.

Advices from Mexico state that the ravages of the Indians still continue in the States of Durango and Zacatecas, and the lands were being rapidly deserted.

THE RIVER PLATE.

The latest arrivals from South America announce that an unexpected and important change has taken place in the interminable hostilities on the River Plate. It will be remembered that under the administration of Rosas, the late Governor of the province of Buenos Ayres, and real head of the Argentine Confederation, Monte Video was invested for upwards of nine years by the forces of Oribe, assisted by Argentine troops; and it was not until after the intervention and mediation of the maritime powers of Europe had been repeatedly tried in vain, that a combined force of the two states north of the Plate with the Brazilian Government raised the siege of Monte Video, and restored the Banda Oriental to independence. But the liberating army under General Urquiza did not stop at this result. The State of Entrerios, and the military adventurers to pass the lives in the irregular and indefinite warfare, thought that the time was come to throw off the ascendancy of the province of Buenos Ayres and its sanguinary chief, Rosas. They crossed the rivers below Santa Fé and invaded the territory of Buenos Ayres. The army of Rosas was easily routed, and the Dictator, with his daughter, Manuelita, sought a refuge in disguise in a British vessel. It was then to be seen whether a more liberal and tolerant Government could be established in the Argentine Confederation, recognising the independence of each state for its own internal government, and instituting the foreign interests of the nation to a Federal authority. The result has up to this time been a total failure. Urquiza began his administration by some enlightened measures. He opened the navigation of the rivers, and he admitted the equal rights of the several provinces. But in the eyes of the community of Buenos Ayres he was viewed with detestation as a usurper and an intruder. In his turn he was compelled to have recourse to severe measures: the city rebelled, his office were driven out, and he once more proceeded to hostilities. The effect of this contest threatened for a time to be almost as injurious to the trade of Buenos Ayres as the long siege under Oribe had been to Monte Video; and these consequences were the more severely felt inasmuch as the previous war had thrown the largest trading interests to the south bank of the River Plate. But the struggle was not destined to have long a duration. Colonel Dias, who was charged by Urquiza to invade the place by land, suddenly passed over to the besieged inhabitants with a considerable portion of his forces; and at the same time the squadron which was blockading Buenos Ayres by sea declared the cause it professed to defend. It is said that an American who commanded this naval force received a sum of 60,000 sterling in hard dollars for the transfer of his services. It is amusing to find that, having deposited his plunder in one of the vessels of the squadron, the Yankee skipper left with the funds in his possession, and was compelled to pay a commission of 5 per cent for the recovery of the capital. It may be presumed, that this sum, which brought the war to a bloodless termination, was raised by the exactions of Urquiza, according to one account, General Urquiza had himself accepted a considerable sum of money to retire from the country. If this intelligence be confirmed, the war is for the present at an end; but there is less reason than ever to suppose that a firm or lasting Government has been established.

CALENDAR FOR THE WEEK.

SUNDAY, Aug. 21.—13th Sunday after Trinity.
MONDAY, 22.—Warren Hastings died, 1818.
TUESDAY, 23.—American War commenced, 1775.
WEDNESDAY, 24.—St. Bartholomew.
THURSDAY, 25.—David Hume died, 1776. Sir W. Herschell died, 1822.
FRIDAY, 26.—Prince Albert born, 1819. Trincomalee taken, 1795.
SATURDAY, 27.—Admiral Blake born, 1599; died, 1657.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 20, 1853.

It appears from the explanations made by Lord John Russell in the House of Commons, on Tuesday last, that the Turkish question is not yet so thoroughly settled as the world has been led to believe. There is, however, little or no reason to doubt that the dispute will speedily be arranged upon the basis announced in our last publication. It was greatly to have been desired that Lord John Russell, as the leader of the British House of Commons, should have assumed a bolder front, and spoken with a more decided tone against the wicked ambition of Russia, if he judged it advisable to say anything at all upon the subject. Much as the British people love and desire peace, they still more fervently love and ardently desire the preservation of the national dignity and honour. Our Government, with the best intentions, and with the firmest determination, to uphold unimpaired the independence of Turkey against unjust aggression, has contrived somehow or other to let it appear that they have been too soft-spoken, too fearful of giving offence to Russia, and less bold and reliant upon right and justice than the Government of France have been. It is perhaps the necessary consequence of our Parliamentary system that Ministers should be chary of expressing their minds upon negotiations still in progress, or of imparting to the world a knowledge of State documents before they have reached the final stage of a mutual agreement, or a positive and irreconcileable disagreement between the high contracting parties; but it is no consequence of the system that the Executive Government should be over-fearful of giving offence to any power on the face of the earth, however splendid and overwhelming it may be. In his brilliant and masterly reply to the anti-Turkish speech of Mr. Cobden—a speech that sounded oddly from the mouth of him who once talked of "crumpling up" the Russian empire as he would a piece of paper, Lord Palmerston spoke with the true temper and spirit of a British statesman. His Lordship impressed many of his auditors, as he will impress the majority of his countrymen, with the fact, that the Aberdeen Administration is fortunate in possessing in its Home Minister a statesman so renowned for his knowledge of foreign policy, and his super-eminent ability in dealing with it. Lord Palmerston, whose indomitable energy and sound judgment point him out as the fittest of living Englishmen to express the sentiments of the people on the subject of Russian domination, supplied what was wanting in Lord John Russell's speech. When the various State papers connected with the negotiations shall be given to the world, it may perhaps be found that Lord Clarendon, and the Administration in general, have assumed towards Russia a tone as high as that of Lord Palmerston. But in the meantime it is a subject for congratulation that, at an opportune moment, the man who so long and ably represented the foreign policy of Great Britain, and who is still one of the most influential and powerful members of the Administration, should have made it evident to all the world that there is no lack of spirit amongst Ministers or our people in relation to this question. Boldness is the one thing needful both in Great Britain and France at the present moment. The more resolved they are, the more the Czar will be weakened and intimidated. The more positive they are in their demands for an immediate evacuation of the Danubian provinces, the better chance for the future peace of Europe. Mr. Layard touched the right chord when he insisted that the Czar ought not only to be compelled to withdraw from the territories which he has invaded, but that he should be bound to indemnify Turkey for the expenses he had caused her to incur. It is likely enough that it is now too late to take a stand upon such a position as this; but the country will be glad to learn, as it does, from the lips of Lord John Russell, that the British Government will consider "no settlement to be satisfactory which does not include, or immediately lead to, the evacuation of Moldavia and Wallachia." When that shall be done, the basis of future efforts for the preservation of the peace of the world will be laid. Until that time, peace will, at the best, be but precarious, if not dishonourable

All doubt as to the introduction and success of a modified and imperfect form of Christianity into China, is set at rest by the latest intelligence received from that empire. The seeds of true religion have been sown in a marvellous manner; and there is much reason to hope that in the due and appointed time those seeds will bear their proper fruit in extending the civilisation of the Chinese, and bringing them more completely within the fold of Christendom. No event of our age, wonderful as are the circumstances which occur year by year, and almost day by day, to mark it above all previous ages, as a period of the most extraordinary activity of mind, is more calculated than this to cause serious reflection, both among religious and among worldly men. It may be questioned whether history records any occurrence so magnificent in the present, and full of such splendid promise for the future, as the genuine conversion to Christianity of the Chinese people would be—whether considered in its religious and moral, or in its social and political aspects. We must yet, however, learn more of the rebels (or of the Christian patriots—the new name given to them by the English residents in China) before we can be entitled to assume that Christianity in China has become a real, a permanent, and a general development of the national mind. In the meantime, any authentic particulars in relation to the leaders of the revolution will be read with interest by statesmen and politicians, as well as by humbler members of the Christian community. The name of the principal leader is not TIEN-TEH, as originally stated in Europe, but TSCHU KIU TAO. He is called TIEN-TEH by his followers—a designation which signifies "*Heavenly Virtue.*" He claims to be a descendant of TSCHU TSEN TSCHANG—a man sprung from the ranks of the people, who, in the year 1352, headed a revolt, and after a struggle of sixteen years, drove out, in 1368, the Mongolian dynasty, which then oppressed the native Chinese, and founded the dynasty of Ming. This great family gave the Chinese no less than sixteen Emperors, most of whom were men of ability and worth. The Ming dynasty remained at the head of the State until the year 1644, when it was, in its turn, expelled by the Tartars; and the Mantchoo dynasty of Tsing, of which the present—if he be not by this time the late—Emperor is the representative. We have seen no trustworthy description of the personal characteristics of TSCHU KIU TAO; but the Chinese represent him as a man of great coolness, sagacity, and courage. Next in command, as well as in influence, is HONG SIU TSUEN, surnamed TAI PING, or the "Mighty Prince of Peace." He is represented as a man of middle age, of a delicate and slender build, with an open and expressive countenance, and a sandy beard. Under him there are four Generals, called according to their local position, commanders of the East, West, North, and South. The two Ministers of State are FONG SCHI TSCHANG and SCHITAEKAI. The latter is said to be a man of erudition, and composes all the numerous proclamations of the Ming people. In another portion of our journal will be found a full account of all that is known in Europe on the subject of the rebellion; together with an abstract of the Christian books in circulation among the Chinese. Such a movement among a population of at least 360,000,000 of men is indubitably one for the success of which every lover of humanity must offer up his fervent aspirations.

In the course of the last three years pictured and printed records of the labours of Caroline Chisholm, in the cause of practical self-supporting colonisation, have repeatedly appeared in these columns. While her name was but little known in this country, beyond the dwellings of those humble persons to whose welfare she has devoted her life, we had the satisfaction of drawing attention to her objects and plans. The time has arrived when, after seven years of earnest, unremitting toil in England, Mrs. Chisholm considers that her work can be more beneficially prosecuted in Australia. The colony so little known six years ago—so little esteemed—has now become the "land of promise" to every working man. The time of famine—of labourers crowding the doors of docks and factories, in faint hope of employment—of workhouses filled with able-bodied as well as aged paupers—has passed away. The employers of labour have exchanged their fear of all-devouring poor-rates for a fear of a dearth of labour. In the intermediate period, armies of the strongest and most enterprising of our labouring population have sought and found in Australia competence and independence, if not fortune. Although, amid the vast array that left these shores, lured by golden visions, many have suffered cruel privations, and many more have been bitterly disappointed, the large majority of men trained to labour have succeeded beyond their expectations. It is among this class now spread over the gold-fields of the interior of the two gold colonies, separated from each other by thousands of miles, without roads, with rude means of conveyance, without the common comforts of civilised life, that Caroline Chisholm proceeds to exercise that influence which she has acquired by a long life of philanthropy.

Under these circumstances we are not surprised to find that the most eminent men of all parties have united to gather such a testimonial of national gratitude as will do honour to the country which has benefited so much by her exertions, and enable her to continue them.

For this object Statesmen and Bankers, Churchmen and Dissenters, personal friends, and those who only know of Caroline Chisholm through the records of the Press, have cordially joined. In so joining, they express their admiration of the past, their confidence in her future services, and the sense of the honour done to the country by such a woman. She is now leaving us for a long long journey. We are glad to feel assured, for the sake not only of the estimable lady whom it is intended to honour, but of the character of our nation, that so much self-denial, wisdom, courage, and energy as she has exhibited will meet with acknowledgment worthy of the British people.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Hon and Rev. F. N. Clements, to an honorary canonry in Durham Cathedral. The Rev J. A. Sellar, to a canonry in Perth Cathedral, and to the rectorship of the Cathedral Grammar-school. *Rectories:* The Rev. J. Buckley, to Sopworth, Wilts; the Rev. G. B. Dawson, to Gilbertstown, united to Ashcoe, county Carlow; the Rev. E. K. Elliott, to Broadwater, Sussex; the Rev. A. J. Maclean, to Charcombe, Somerset; the Rev. J. Nunn, to Thorndon, near Rye, Suffolk; the Rev. J. Rowlands, to Grimston, Norfolk; the Rev. E. Whitehead, to Godmanstone, near Dorchester; the Rev. C. B. Barrow, to Barwell, Leicestershire. *Vicarages:* The Rev. T. Brooke, to Ballyseedy, county Kerry; the Rev. F. Gipps, to Corbridge, near Hexham; the Rev. S. Newall, to Clifton-upon-Dunsmore, with Brownsover annexed, near Rugby; the Ven. J. Sandford, to Grimley, with Hallow annexed, near Worcester; the Rev. J. F. Pixey, to Bozeat, with the rectory of Stratton annexed, near Wellingborough, Northamptonshire; the Rev. W. H. Milner, to Horncastle, Lincolnshire; the Rev. W. S. Prout, to Lekenheath, near Brandon Ferry, Suffolk; the Rev. R. C. Hubberstey, to Helpstone, Northamptonshire; the Rev. E. Hanson, to Thaxted, Chelmsford.

TESTIMONIALS.—The following clergymen have recently received tokens of esteem and regard:—The Rev. J. H. Knapp, late curate of Kirk Deighton, Yorkshire; the Rev. G. E. Murray, rector of Southfleet, Kent; the Rev. S. Newall, late perpetual curate of Tunstall, Staffordshire; the Rev. C. P. Pixey, late curate of Sedgworth, Warwickshire; the Rev. R. Smith, late curate of St. James's, Whitnold, Derbyshire; the Rev. J. C. T. Stretch, late incumbent of Penk-hull, Stoke-upon-Trent (preceeding to Geelong, Port Phil ip).

A CABINET COUNCIL was held on Wednesday afternoon, at the Foreign Office, Downing-street. The Ministers present were the Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, the Marquis of Lansdowne, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir William Molesworth. The Council sat two hours and a half.

NORTHERN AND EASTERN RAILWAY. On Thursday, the half-yearly meeting of this company was held at the Bishopsgate station, J. Patterson, Esq., in the chair, and the usual guarantee of ten per cent from the Eastern Counties Company was declared

THE COURT.

There has been little to diversify the ordinary quiet routine of Court life during the past week at Osborne. On Saturday the Duchess of Kent arrived from Frogmore, on a visit to her Majesty and the Prince Consort.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, and Princess Alice, attended by the Ladies and Gentlemen in Waiting, went to Whippingham parish church. The service was performed by the Rev. George Prothero.

On Monday the Queen and Prince, the Princess Helena, and the Duchess of Kent, attended by Lady Augusta Bruce, the Hon. Mary Seymour, and the Hon. Captain de Ros, took a drive in two open carriages and four.

On Tuesday the Queen and Prince, and the Royal children, walked with Count Alexander Mensdorff-arrived in the course of the day, from the Continent, on a visit to her Majesty.

On Wednesday the Queen and Prince, accompanied by the Duchess of Kent, Prince Arthur, and Count Alexander Mensdorff, embarked on board the *Fairy*, and honoured the Cowes regatta with their presence. The Royal party afterwards proceeded to Spithead, and passed round the ships-of-war lying at anchor there. His Royal Highness Prince Adalbert of Prussia, arrived at Osborne on Wednesday afternoon, on a visit to Her Majesty. In the evening the Queen had a dinner party.

On Thursday her Royal Highness the Duchess of Kent left Osborne on her return to Clarence House, St. James's, where, after her arrival, she was visited by the Countess of Nenagh.

Yesterday (Friday) the Queen held a Privy Council at Osborne-house.

The route of the Queen from Osborne to Holyhead, on the 27th instant, will be from Southampton to Basingstoke, and thence by the Great Western to Leamington. From Leamington the Royal party will be transferred to the narrow gauge. From Leamington her Majesty is to proceed via Coventry and Nuneaton, and on by the Trent Valley to Stafford, Crewe, and Chester. During the time the Queen is at Leamington her Majesty will have to change carriages at Basingstoke and Leamington.

The Duke of Beaufort is staying at Cowes for the yachting season. His Grace has a cruise daily in his yacht, accompanied by the Ladies Somerset.

The Countess of Ellesmere, Lady Blanche Egerton, and Captain the Hon. A. F. Egerton, have arrived at Liverpool from New York. The Earl and the rest of the family are expected shortly.

Viscount Ingestre sailed from Liverpool, on Saturday last, for New York. It is his Lordship's intention, after making a tour of the United States, to visit the Havana, Jamaica, and other West India Islands.

OBITUARY OF EMINENT PERSONS.

SIR FREDERIC HAMILTON, BART., OF SILVERTON HILL, COUNTY LANARK.

The death of this venerable Baronet, who had attained the age of seventy-six, occurred on the 14th inst.

Sir Frederic entered the civil service of the East India Company in 1794, and was for some time Collector of Revenues for the District of Behar. He retired on the annuity fund in 1833. The branch of the great house of Hamilton which he represented was founded by Alexander de Hamilton, second son of Sir James Hamilton, of Cadzow, from whom sprang the Dukes of Hamilton.

Sir Frederic, who succeeded to the Baronetcy at the decease of his grandfather Sir Robert, in 1818, married 26th Feb., 1800, Eliza Diocre, youngest daughter of John Coffin, M.D., of Calcutta; and by her (who died 11th Feb., 1851) leaves seven children, the eldest son being the present Sir Robert North Coffin Hamilton, sixth Baronet of Silverton hill.

GENERAL SIR FREDERICK ADAM, G.C.B., G.C.M.G., COLONEL 21ST FOOT

This highly distinguished officer died suddenly on the 17th inst. He had been on a visit to his brother-in-law, Sir Charles Adam, at Greenwich Hospital, and was entering one of the railway carriages to return to London, when he suddenly ceased to exist.

Sir Frederick was son of the late Right Hon. William Adam, of Blair Adam, Lord-Lieutenant of Kinrossshire, Lord Chief Commissioner of the Jury Court of Scotland, by the Hon. Eleanora Elphinstone, his wife, daughter of Admiral Lord Keith. He entered the army in 1795, and served with great reputation in Holland, Egypt, Sicily, Calabria, Spain, and France. In Holland he was present at the actions of the 10th August, 10th September, and 20th September, 1799; and in Egypt, at those of the 8th, 13th, and 21st of March, 1801. He was severely wounded near Ascalon, 12th April, 1813; and, at the Pass of Ordal, had his left arm and hand broken. At Waterloo he received also a severe wound. The rank of General he attained 4th November, 1846. In 1824, he was appointed Lord High Commissioner of the Ionian Islands, and, from 1832 to 1838, was Governor of Madras. In 1815, he was sworn of the Privy Council. In addition to the insignia of Grand Cross of the Bath, and of St. Michael and St. George, conferred by his own Sovereign, he bore those of St. Theresa and St. Anne of Russia.

Sir Frederick Adam married, first, a Greek lady, who died in 1814; and secondly, in 1831, the daughter of the late John Maberly, Esq.

COAL IN EGYPT.—A letter from Alexandria of the 5th says that "a coal-mine has been discovered at Mount Sinai. The Viceroy seems much delighted, and at once has despatched engineers to the spot to send in a report.

INDICTMENT OF THE RIGHT HON. MAJOR BERESFORD, M.P., AND OTHERS.—An indictment has been preferred at the Central Criminal Court, and a true bill found, against Major C. W. Beresford, M.P., G. H. R. Cox, W. Cox, J. Marsh, A. Ashurst, J. Cox, Clabburn, J. Colow, J. Sharpe, T. Duggan, and R. Lander. The indictment is very long and special, and charges the defendants with having conspired to bribe the electors of Derby, and to carry the election by illegal and unconstitutional means. Mr. Edwin James, Q.C., is retained to conduct the prosecution, and Serjt. Thesiger for some of the defendants. The trial will take place at the next sessions of the Central Criminal Court. By the recent Act of Parliament, Lamplighters' elections for councillors cannot be removed by *certiorari* to the Court of Queen's Bench; but on affidavit that the defendant cannot have a fair trial in the county it is presumed, therefore, that the trial will take place at the Central Criminal Court, where the venue was found.

MILITARY KNIGHTS OF WINDSOR.—A vacancy has occurred in this honourable body, by the death of Lieut.-Col. John Lamb, of the 2nd Royal Veteran Battalion, who died at Windsor Castle, on the 12th inst. Mr. Lamb served with great credit for many years in her Majesty's 29th Foot; he was present at the battle of Roleia, Vimeira, and Talavera, for which he had the war medal and three clasps. The deceased veteran was the only surviving member of a family whose united military services extended over a period of a century; his father, grandfather, uncle, and two brothers having fallen in the service of their country.

BRETT'S PATENT SKETCHING APPARATUS.—Our attention has lately been called to a little contrivance, combining the apparatus employed by artists and tourists in sketching from nature. It is simple and ingenious, and particularly commends itself to the pedestrian by its portability, and indeed a comfortable seat.
